• • It is to be understood that the Wood Cuts have in	general been capied from diawings, sculptures, coms, or other works of
the period which they are employed to illustrate, but, among so gre	eat a number of subjects, it has not been possible to adhere to this rule
	that no suitable illustration of the custom or other matter described was in a few such cases a drawing of a subsequent period has been made

use of where there was reason to believe that it nevertheless conveyed a sufficiently accurate representation of the thing spoken of. An instance occurs at page 566, where in the Chapter on the Government and Laws of the Early Norman Period, the mode of granting lambs introduced or practised by the Compieror is illustrated by a drawing executed in the thinteenth century. In a few instances the age of the KS. is somewhat doubtful, and has been matter of dispute, but it is believed that no misconception as to any material point caff be necasioned by the use that has been made of any authorities as to which such abservace of opinion exists. The copies of modern historical unctures, it will of course be understood, have been given for other reusons altogether than their fidelity in regard to costume and other characteristics. An opportunity has been taken in the above Last of correcting a few misjurits in the files or descriptions of the Cuts,

#### INTRODUCTORY VIEW

OF THE

## ORIGINAL POPULATION AND PRIMITIVE HISTORY

OF

## THE BRITISH ISLANDS.

O question in history is more intricate and difficult than that of the original population of the British islands. The subject, indeed, in its various relations, is entangled with nearly all the darkest questions that perplex the primical autiquities of

our race. Every part of it has been a field of long and keenly waged controversy, where all the resources of learning and ingeninty, and, it may be added, all the beense of imagination and passion, have been called forth in support of the most irreconcilable opinions and systems; and still there is scarcely a leading point in the inquiry that can be said to be perfectly established, or cleared from all obscurity and confusion.

Yet, almost in direct proportion to its difficulty, and the degree in which it has exercised and baffled speculation, the subject is interesting and tempting to a liberal currosity. The connexion which it developes between the present and the remotest past—the extent of the space over which the survey of it carries us—the light, however faint and interrupted, shed by it upon that wide waste of the time gone by, which the torch of history has left in utter durkness—all combine to excite and lure on the imagination, and at the same time to give to the investigation much of a real utility and importance.

It will not be expected that we should here enter upon the more remote inquiries to which the subject, if pursued to its autmost extent, might conduct us; but it will be of importance to the understanding of much, especially of the earliest portion, of the history which is to follow, that the

reader should, in the first place, be put in possession of the clearest views that can be obtained with regard at least to the munediate parentage of each of the various races which appear to have occupied, or made a conspicuous figure in these islands, before the comparatively recent date at which it communeuces. - Even confined within the√imicathus marked out, the investigation is beset with difficulties; and in pursuing it, we are frequently obliged to be satisfied with such probable conjectures as we are enabled to make when deserted by everything like clear cyidence, aild left to grope our way among a crowd of doubts and perplexities in the diminest twilight. It may be of advantage that we should preface the exposition of the conclusions to which we have come, by a statement of the several sources from which evidence or conjectural intimations upon subjects of this kind, may be drawn; and of the general principles according to which our judgments ought to be formed.

 The most obvious species of evidence, in regard to the eyeuts that have happened in any particular country, or the actions and fortunes of natious and races of men, is the history of them? recorded either in writing or by monuments, at the time, or while the remembrance of them was still fresh. If we had such records in all cases, bearing sufficient marks of their authenticity and faithfulness, we should not need to have recourse to any other kind of cytdence, the inferences from which unist always be comparatively conjectural, uncertain, and vagare. 'A contemporary history of any past event is the nearest thing that can be obtained to the actual observation of it; and even for those aliving in the age in which the event takes place, what he exception only of the few persons who, may have been present on the occa on, very history or narrative constitutes the verye subformation which it is possible for them ... the con-

#### INTRODUCTORY VIEW OF THE PRIMITIVE

In the state of the world at which we are now arrived, with the mighty printing-press in perpethal operation everywhere like prother power of mature, it is not to be apprehended that any important movement in human affairs can bappen, at least in the civilized parts of the earth, without an account of it being immediately drawn up, and so multiplied and dispersed that it cannot fail to go down to posterite. Without any regular machinery established and kept at work for that purpose, the transmission of a knowledge of everything worth noting that takes place to all future generations, is now secured much more effectually than it ever was in those times when public functionaries used to be employed, in many countries, to chronicle occurrences as they arose, expressly for the information of after-ages. Such were the pontifical annihists of ancient Rome, and the keepers of the monastic registers in the middle age among ourselves, and in the other countries of Christendom. How meagre and valueless are the best of the records that have come down to us thus compiled by authority, compared with our newspapers, which do not even contemplate as at all coming within their design the preservation and handing down to other times of the intelligence collected in them, but limit themselves to the single object of its mere promulgation and immediate diffusion! So much more effectually do we somethes attain a particular end by leaving it to be provided for by what we may call the natural action of the social economy, than by any artificial apparates specially contrived to secure it in what may appear to us a more direct and shorter way. In the present case, the preservation of the memory of events, which in itself is an end that never could be expected strongly to engage the zeal of men in its accor**a**plishment, and therefore could not, genexally speaking, be well attained by being directly aimed at, is seenred, in the most complete and perfect form, through the intervention, and, as the mcidental consequence, of another endcavour, which is found to command, in abundant measure, the most active and eager excitions. The best history fer posterity is obtained out of materials which were originally provided without any view to that object at all. Nor is this true only of the written materials of lustory. The same is the case with nearly all the monuments and memorials of every kind of which history makes use. All have been produced, in the first instance, chiefly or exclusively for come other purpose than that of conveying a knowledge of events to posterity. Coms, at once the most distinct and the most enduring witnesses of public transactions, may be said to be wholly intended for the mere present accommodation of the community. So in general are works of architecture, which nevertheless often also eventually come to take their place among the most valuable of our historic evidences. Even a medal or a statue or other monument raised, pro-

- in honour of some particular event, while

· dmitted to have also in view the perpe-

the earth, with the exception of the two inconsiderable peninsulas of Italy and Greece, they have, for the most part, given us nothing beyond the most scanty and unsatisfactory notices. They scarcely, indeed, advert at all to any of the other European nations but themselves, fill the late period of the absorption of those races in the universal empire of Rome; and then we have merely, less or more fully detailed, the lustory of the generally very short process by which their subjugation was accomplished. Of the remoter antiquities of these races. the classic anthorities tell is searcely anything that is much to be depended upon; and, indeed, even of their own origin the Greeks and Romans have recorded little clse than fables. Still, such scattered notices as their writings contain, respecting the various nations with which they came in contact, are not to be neglected in considering the subject with which we are now engaged. The information with which they furnish as is no doubt frequently erroneous, and is always to be received with suspicion till found to be corroborated by other evidence, and by the probabilities of the case; but it may sometimes afford a clue to guide us in the investigation when other resources fail, Although a great deal of industry, learning, and ingenuity, has been expended in examining the testimomes of the Greek and Roman writers, respecting the ancient population of the British islands, perhaps all the passages that might be quoted in reference to the matter, from the entire series of these writers, have scarcely yet been brought so completely as they might be into one view, and considered both in their connexion among themselves, and as illustrating, or illustrated Next in directness among the evidences upon

tuation of the memory of the event, and the transmission of a knowledge of it to future ages, has

usually for its main cult the present ornament

and illustration of the city or country in which it

makes its appearance, and the gratification of those

who are to be its first beholders. Indeed, were motives of this selfish description wanting, we

should probably make very little provision for pos-

terity in anything; and yet, instigated as we actu-

ally are, how constantly and undringly are we making such provision in all things! Every year

that an advancing country continues to be inha-

bited, it is becoming a richer inheritance, in every respect, for all its future occupants. The ages,

however, which witnessed the dispersion and earhest migrations of the different races of the great

human family, have left us, for the most part, nei-

ther listory nor monuments. The only contem-

porary accounts that we have of the affairs of

ancient Europe are those that have been preserved by the Greek and Roman writers; and the portion

of history which has this been illustrated with any

degree of fulness is extremely limited. Of those countries which the writers in question were accus-

tonied to call barbarons, being all the countries of

by, the evidence derived from other somees. this subject to contemporary history (which is the only history that is not inferential and conjectural), is to be placed the testimony of tradition. Tradition is merely unrecorded history; but the circumstance of its being unrecorded-that is to say, of its being transmitted from one generation to another by no more secure vehicle than that of oral comminimization-very materially detracts, of course, from its trustworthiness and value. In the case even of a document or written history, it is not always easy to ascertain that it really is what A professes to be, that it is of the age assigned to it, and that it has not been corrupted or falsified; in the case of a tradition, this matter is always of much more difficult determination. may be affirmed that a tradition is almost universally nothing more than an emblematic or enigmatical representation of the facts on which it is founded; and frequently the raddle is so absurd or so obscure, that no ingenuity is capable of giving a satisfactory interpretation of it.  $\Lambda$  tradition is obviously much more exposed, in its descent through a long course of time, to all the chances of alteration and perversion, thun a written history; and the metaprorphosis which it undergoes is sometimes so complete, as to leave little or no intelligible trace of its original form or import. these accounts, the dependence that can be placed on this source of information respecting events of remote antiquity, must necessarily be, in most cases, very slight and 'ubious. Still the evidence of tradition is not altogether without its value in such inquiries as the prescut. When the tradition is tolerably distinct are its affirmations-when it appears to have prevailed for a long period, and to have been uniform in its tenor for all the time through which its existence can be traced-when it is found as the national belief, not of one merely, but of several countries or races—and when it lim-

of fable, so that it becomes a process of the greatest nicety and difficulty to extract the metal from the 3. The religion, the laws, the manners, and the customs of a people, with the memorials of what "these have been in past ages, constitute a species of evidence as to their origin, which, although it may be described as only indirect and circumstantial, is really much more valuable than the positive testimony of mere tradition. A tradition may be a pure invention or fiction; it may be nothing more than the creation of national vanity; even where, it has been honest from the first, it may be but an honest mistake p and it is anyays liable in its transmission through a succession of ages, to undergo charge and vitiation from many causes. But a current of cyidence furnished by all the most cha-

of such indications of the connexion between one pcople and another, as facts of the kind we are now adverting to may seem to supply. So many things in the notions, practices, and institutions, and an the general moral and social condition of a people, may arise from principles of universal operationmay be the growth of what we may call the common soil of luman nature—that a relationship between nations must not be too hastily presumed from resemblances which they may present in these respects. Besides, institutions and customs may be borrowed by one nation from another with which it has no connexion of lineage, or may be comnumerated by the one to the other in a variety of ways. If France or Spain, for instance, were to adopt the present political constitution of Great Britain, the establishment of that constitution in either of these countries would form no poof, some centuries hence, that the country in question had been peopled from England. The progress both of civilization and of religion has been, for the most part, quite independent of the genealogical connexion of nations; they have been carried from one country to another, not in general along the same line by which population has advanced, but rather by interconrse, either casually arising between two countries, or opened expressly for the monizes with other traditions relating to the same subject preserved in other parts of the earth, it is purpose of making such a communication. They evidently entitled to examination at least, if not to have been propagated at one time by friendly misimplicit acquiescence. Of the traditions, however, sionaries, at another by conquering armies. But still, when, in the absence of any other known which all nations have of their origin or remote ancestors, very few present all these characteristics. or probable cause sufficient to produce the phenomenon, we find a pervading similarity between Most of them probably contain some truth, but it is usually overlaid and confused by a large mixture two nations in all their grand social characteristics, we have strong reasons for inferring that they belong to the same stock. When such is the case, however, it will rarely happen that there are not also present other evidences of the relationship, of a different kind; the memory of it will probably be preserved, at least, in the popular traditions of the two countries; and the identity or resemblance of laws, religion, and customs, therefore, has usually to be considered merely as corroborative proof. 4. Some assistance may also be derived in such inquiries from an attention to the physical characteristics of nations. Where these happen to be very strongly marked, as in the case of the leading distinctions of the three great races of the Whites, the Malays, and the Negroes, they furnish very decisive evidence; but in regard to the mere subordinate varieties of the same race-and the con-

racteristic peculiarities of the national habits and

feelings, cannot lie. It may be misunderstood;

too much of too little may be inferred from it; we

may be deceived while considering it by our own

credulity, prejudices, or fancies; but we are at any

rate sure that the facts before us are really what

they seem to be. They are the undoubted charac-

teristics which distinguish the people; and the only

jucstion is, how did they originates or whence were

they derived? It is true that this is commonly far

from being an easy question to solve, and that we are very apt to be misletl in our interpretation

## INTRODUCTORY VIEW OF THE PRIMITIVE

troversy is commonly confined to that ground—the tests which they afford us are of much less value. There are probably no distinctions, for instance, between the Celtic and the Germanic races which would not, in course of time, be obliterated by the mere influence of chimate. It is with the several Celtic and Germanic races alone that we have to do in discussing the question of the population of the British islands, # It may be doubted if any of these could have long preserved a distinct physical appearance, when mixed together, as they would be; if the country is to be supposed to have been indebted for its population to more than one of them. They might, however, remain distinguishable from each other in that respect for some ture; and when Tacitus, for example, alleges the superior size and the red hair of the Caledonians of his time as a proof of their Scandinayan origin, and the dark complexions of the Silbres, who inhabited the south of Wales, as making it probable that they were of Spanish descent, he may have been justified in so reasoning in that age, when the supposed managrations, if they took place, would be comparatively recent, and the different tribes or nations that occupied the country remained still in general separate and unmixed. At the best, however, such indications can hardly be taken as anything more than a sort of makeweight-us something that may

<sup>to</sup> H = 0 —help to the ken other pools. That do demoistrate thirdy " Of course, in attempting to trace the migra-

- tions of nations, the relative geographical positions of the countries from one to another of which they are supposed to have proceeded, must not be overlooked—It is indispensable that the route assumed to have been taken shall be shown to be a natural and a probable one. The mere distance, however, of one country from another, is not the only consideration to be here attended to. Of two inhabited countries equally near to another part of the world as yet destitute of population, or not fully peopled, the inhabitants of that which is the most overcrowded, or those who are the farthest advanced ic civilization, or the most distinguished for their adventurous spirit and their habits of extended intercourse, will be likely to be the first to reach: and seize upon the unoccupied territory. It has been a disputed question whether the first migrations of mankind were made by land or by sea; but it does not appear that anything can be generally affirmed on the subject. Some tribes, however, seem to have been always more addicted to mayigation than others; and therefore they may be supposed to have, in very early times, accomplished voyages of a length which could not be probably presumed in the case of others. In so far as respects the British islands, however, whether we suppose them to have derived their population from : Ganl, from Scandinavia, or from Spain, there are
- would have to be traversed on any hypothesis. 6. Were the several descriptions of circum-

no difficulties presented by the breadth of sea which

stantial evidence already enumerated our only guides when described by the direct testimony of history, it would scarcely be possible to arrive at much certainty on any of the controverted questions relating to the pedigree of nations. But there is another species of evidence which is in many cases, in respect both of its distinctness and of the reliance that may be placed on it, worth much more than all those that have yet been mentioned put together. This is the evidence of Language. Their peculiar language indeed is, strictly speaking, only one of the customs of a people; but it stands distinguished from other customs in two particulars, which give it an important advantage for our present purpose. In the first place, although it may be admitted that there are certain general principles which enter into the structure of all languages, and also, possibly, that all existing languages are sprung from one original, the different degrees of alliance that subsist between different tongues are yet, in most cases, very distinctly marked; nor is it possible in the nature of things that there should be a pervading similarity between two tongues that have been formed quite apart from each other. There is not here any such common soil of the lunuan mmd as would of itself produce an identity of results in different countries, like what might very well happen, to a great extent, in the case of what are commonly called manners and customs, and even in that of laws and institutions. These last naturally admit of comparatively little variety of form. It would seem nothing at all wonderful, for example, that two nations which should never have had any connexion of blood or much intercourse with each other, should yet, at the same stage of their social progress, exhibit a considerable general resemblance in their political institutions and their systems of laws-a certain degree of civilization naturally resolving itself into nearly the same forms and arrangements, in these respects, by its own spontaneous action. The same is the case with many of the ordinary arts and customs of life. These are suggested by their obvious utility, and can hardly arise except in one and the same form everywhere; or, if we suppose them to have been derived by every people from some common source, their inherent simplicity would in like manaer preserve them from variation in their transmission through ever so long a period of time; and in this view also, therefore, they would fail to firmsh any indication of the degree of affinity between the races to which the possession of them was found to be common. But the sounds of articulate language admit of infinite variety, and there is, generally speaking, no natural connexion between the objects of thought and their vocal signs; so that for two nations that never had any communication with each other, to be found speaking the same language, or even two languages, the vogalularies of which, in any considerable degree, resembled each other, would be a phenomenon altogether miraculous and unaccountable. Nor could the preservation, down to the present day, of a strong resem-

the supposition of all existing languages having sprung from a common original; the insufficiency of such a merely primitive connexion to produce the resemblance supposed, is demonstrated by the great diversity of languages which actually subsists. We are entitled, therefore, to assume, that in all cases where we find this clear and decided relationship of languages, there must have been a comparatively recent connexion of blood, or long and intimate intercourse of one kind or another, between the races of people by whom they are spoken. For, secondly, it is another peculiarity of a national speech, that it is never adopted from another people on merely that slight acquaintance and communication which has symetimes sufficed not only to transfer a knowledge of the ordinary arts of civilized life, but to introduce into and establish in a country, whole systems of religion, of laws, and of philosophy. These things, as already observed, have frequently been conveyed from one part of the carth to another by a few mussionaries, or chance emigrants, or simply by the opportunities of commerce and travel. But languages have never been taught in this way. A people always derives its language either from its ancestors, or from some other people with which it has been for a long time thoroughly mixed up in the relations of social and domestic life. It would, we apprehend, be mipossible to quote an instance of an exchange of the popular speech of any country being produced by anything short of either the amalgamation, or at least the close compression, of one people with another, which is the result only of conquest. This can hardly take place without the history or memory of the event being preserved, and therefore there is little or no danger of a language thus imposed being ever mistaken for one derived in the ordinary way, or of any defiently being thereby oceasioned in the application of the general rule—that where the languages exhibit a strong resemblance to each other, the nations speaking them are of one stock. A person, for instance, visiting South Britam in the third or fourth century, would have found many of the people speaking Latin, and the people of France, or ancient Gaul, still speak a dialect of the Latin, for the modern French tougue is little else; but no considerate inquirer into such

blance between the languages of two particular

countries, be in any degree explained simply by

matters would ever conclude from these facts. in disregard of all other evidence, that the original population of Britain and of Ganl was Roman. The prevalence of the Roman speech is sufficiently accounted for, in these cases, by the Roman conquest and colonization of both countries, which are events that have left, and could not fail to leave, abundant memorials of themselves behind them, in a great variety of forms. 7. But there is still to be noticed another source of evidence sometimes available on the subject of the original population of a country, which is of kindred character to that derived from the language spoken in it, and of equal distinctness and trust-

topographical nomenclature of the country, or the language to which the most ancient names of places in it are found to belong. Names have all, some meaning when first imposed; and when a place is named, for the first time, by any people, they apply to it some term, in early times generally descriptive of its natural peculiarities, or something else on account of which it is remarkable, from their own language. When we find, therefore, that the old names of natural objects and localities in a country belong, for the most part, to a particular language, we may conclude with certainty that a people speaking that language formerly occupied the country. Of this the names they have so nmpressed are as sure a proof as if they had lett a distinct record of their existence in words engrissen on the rocks. Such old names of places often long outlive both the people that bestowed them, and ucarly all the material monuments of their occupaney. The language, as a veluele of oral communication, may gradually be forgotten, and be heard no more where it was once in inniversal use, and the old topographical nomenclature may still remain unchanged. Were the Irish tongue, for instance, atterly to pass away and perish in Ireland, as the speech of any portion of the people, the names of rivers and mountains, and towns and villages, all over the country, would continue to attest that it had once been occupied by a race of Celtre descent On the other hand, however, we are not cutitled to conclude, from the absence of any traces of their language in the names of places, that a race, which there is reason for beheving from other evidence to have anciently possessed the country, could not really have been in the occupation of it. A new people coming to a country, and subjugating or disposeessing the old inhabitants, sometimes change the names of places as well as all or many other things. Thus when the Saxons came over to this island, and wrested the principal part of it from its previous possessors, they seem, in the complete subversion of the former order of things which they set themselves to effect, to have everywhere substituted new names in their own language, for those which the towns and villages throughout the country anciently bore. this account the topographical nomenclature of England has ever since been, to a large extent, Saxon; but that circumstance is not to be taken as proving that the country was first peopled by the Guided by the principles that have been laid down, we will now proceed to explain those views

respecting the original population of the British islands which seem best to accord with the vorious facts bearing upon the question, and to form together the most consistent whole. It will be con-Ver ent to consider the soveral parts of the subject in the order of the population, I. of England; II. of Ireland; III. of Scotland; IV. of Wales.

I. For a long time, what was held to be the orthodox belief respecting the original population of the

# INTRODUCTORY VIEW OF THE PRIMITIVE

southern part of Britain; was the story of the descent of the first Britons from the Trojans, a colony of whom was supposed, after the destruction of their native city, to have been conducted to this island by

Bruths, a grandson of great-grandson of Æneas, more than a thousand years before the commencement of our era. The person who first made this story generally known was the famous Geoffrey ap-Arthur, Archdearon of Ilonmouth, and afterwards Bishop of St. Asaph, who flourished in the twelfth century; but there's no reason to suppose, as has been cometines asserted, that he was its inventor. His Latin history is, in all probability, what it professes to be -a translation of an Armonican original, entitled "Brut y Brenniodd, or a Chronicle of the Kings of Britain," which was put into lus hands by-bis friend Walter de Mapes, otherwise called Calenius, Archdeacon of Oxford, who had himself brought the manuscript from Bretague. The same legend, which is found in so amplified a form in Geoffrey's work, is more briefly detailed in various Instories of a much earlier date. The earliest

writer to whom it can be traced, appears to be the

Welsh priest Tysilio, who is believed to have flon-

rished in the latter part of the seventh century. The Brut (that is, the Chronicle) of Tysiho seems

to have been the prototype both of the work which

Geoffrey translated, and of many other similar

The Vanity of being supposed to be spring

performances.\*

from the Trajans was common, in early times, to many of the European nations; but the English probabily retained their belief in the notion to a later date than any of the rest. It is gravely alleged by Edward I., in a letter which he addressed to Pope Boniface in 1301, as part of the argument by which he attempts to establish the supremacy of the English crown over Scotland. As the Romans themselves pretended to a Trojan descent, it has been plausibly conjectured that the various natious brought under subjection by that people were mduced to set up the same clann, through an ambition of cimilating their conquerors; and at a later period it obviously fell in with the views or natural premdices of the churchmen, who were for the most part the compilers of our histories, to encourage an opinion which drew the regards of the people towards the ecclesiastical metropolis, as the head city of their race as well as of their religion. The acute and indicious Camden, at the end of the sixteenth century, was almost the first inquirer into our national Enternities who ventured to question the

long-credited tale; yet nearly a hundred years afterwards we find a belief in its trith still higering in the poetic imagination of Milton. Geoffrey makes Brutus and his Tropaus to have

found Britain nearly unmhabited, its only occupants being a few giants of the race of Cham, over whom the famous Gogmagog ruled as king; but another form of the fable settles a numerous population in the country at a much earlier date. "As we shall not doubt of Brutus's coming hither," says Hohnshed, " so may we assuredly think that he found the isle peopled, either with the generation of those which Albion the giant had placed here, or some other kind of people whom he did subduc, and so reigned as well over them as over those which he brought with him." Afbion is said to have been a son of Neptone, who took the island from the Celts, after they had occupied it for above three hundred years, under a succession of five kings, the first of whom was Samothes, the elde-t son of Japhet, and the same who is called by Moses Meshech, From Samothes, Britain received the first name it ever had, Samothea. Albion, and his brother Bergion, who was King of Ireland, were eventually conquered and put to death by Her-The inventor of this history appears to have been Annus or Namu, a Dominucan from of Viterbo in Italy, who published it about the end of the fifteenth century, in a forged work which he attributed to Berosus, a priest of the Temple of Belus, at Babylon, in the time of Ptolemy Philadelplms. It was afterwards taken up and further illustrated by the celebrated Eughsb Bishop Bale.

population of Britain, is that preserved in the Welsh poetical histories known by the name of the Triads, in allusion to the three events which each of them commemorates. "Three names," says the first Triad, " have been given to the ide of Britain since the beginning. Before it was mlmbited, it was called Clas Merddin (literally, the country with sea-cliffs), and afterwards, Fel Yms (the Island of Honey). When government had been imposed upon it by Prydam, the son of Acid the Great, it was called Thys Prydain (the Island of Prydain); and there was no tribute to any but to the race of the Cymry, because they first obtained it; and before them there were no more men alive in it, nor anything else but bears, wolves, beavers, and the oxen with the high prominence." \* The Cymry, or ancestors of the present Welsh, therefore were, according to this authority, the first inhabitants of Britam. Another triad (the fourth of the same series) states that their leader was Hu Cadarn, that is, Hugh the strong, or the mighty, by whom they were conducted through the Hazy, that is, the German Ocean, to Britain , and to Llydaw , that is Armorica, or Bretagne. It is added, that they came originally from the country of Summer, which is called Defredam, where Constantinople

is. Some interpreters have been inclined to go so far for Defrolam as to the island of Ceylon, one of the ancient names of which was Tabrobane; + and we shall find in the sequel that there is another theory, as well as that of the Welsh trieds, which connects the British islands with Ceylon, requent triads inform us, that the next people who came to Britain were the Lloegrwys, who came from the land of dwasgwyn, or Gascony, and were of the same race with the Cymry; as were also the mext colonists, the Brython, from the land of Llydaw (Bretagne). These, it is added, were called the three peaceful nations, because they came one to anoth i with peace and tranquility; they also all spoke the same language. From the Llorgrays, a ereat part of England received the name of Lloegria. Afterwards, other mations came to the country with more or less violence; according to the enumerat on of Mr Turner, "the Roman; the Gwyddyl Flich (the Pact ), to Alban or Scotland, on the part which his nearest to the Baltie; the Celyddon (Calcdonians), to the north parts of the island; the Gwyddyl, to other parts of Scotland; the Cor-Laulaid from Pwyll (p. rhaps Poland), to the Hunt-Let; the men of Galedin, or Flanders, to Wyth, the Saxons, and the Llychlymans, or Northmen."+ The triads, from facts mentioned in them, appear not to be older than the reign of Edward I, ‡ although they may bave been founded upon the fragments of earlier compositions; but even if they were of unich greater autientty, they could be no

this subject by modern inquirers, one supposes the furt colonizers, both of Britain and Ir land, to have been the Phoenicians. The original suggest i of this notion appears to have been Aylett Sammes, a writer of the latter part of the seventeenth century § It has been recently advocated, with considerable ingenuity, by Sir William Betham, who, however, is of opinion that the Phænicians were preceded in the occupation of both islands by the Calcidonians, atterwards called the Picts, whom he conceives to have been a people of Scandinavian origin, the Cumbri of antiquity. The Phoenicians he considers to be the same people with the Garl,

accounts of the first peopling of the country.

Notwithstanding any diversity of views, however, which may exist as to some of the remoter mounts of the investigation, it may be affirmed to he now admitted on all hands that the numerous population which the Romans found in the occu-

tain and those of Ga A, and that the latter were all along aided by the form a in their resistance to the Romans. The proximity of the one country to the other, inde d - the British court being visible from that of Ganl would almost alone authorize us to conclude that the one could for long remain unoccupied, after the other had been settled. Taciths, who had the hast opportunities of information, has expressly recorded that, in addition to an ideatity of religious rates, the languages of the Gauls and Britons were nearly the same; and evidence of this fact remains to the present day, in the Cellie character of the topographical nomenclature of the south, as well as of the other parts of Britam, in so far as it has not been obliter it d by the Saxon conquest. Bishop Percy has observed that in England, " although the names of the town, and villages are almost universally of Anglo-Saxon, derivation, yet the lalls, forcets, rivers, &c., have renerally retuned their old Calife names \*\*\* authority to anything more than the traditionary It is certainly possible that the country may, preyously to the arrival of the Gauls, have been occu-Of the theories which have been proposed upon pied by a people of different origin, who on that event were obliged to retire to the northern parts of the island, where they became the progerutors of the Caledonians; but it would be difficult to bring forward any satisfactory proof that such was the This supposed previous the bis not left behind it either say traces of its language, or any other monuments of its existence. Nothing remains, either on the face of the soil, or in the

and it appears also from he narrative, that a close

political alliance existed between the states of Bri-

Gaul. Everything of greatest antiquity that survives among us is Celtic. At the same time this view of the subject is not free from some difficulties, which it is fair to state. Cae ar, in the first place, in his account, makes a marked distinction between the inhabitants of the coast of Britain and those of the interior, not only describing the latter as much more side in their manners, and altogether less advanced in civilization than the former, but also expressly declaring them to be, according to the common belief at least, of a different race. He says that the tradition was, that they originated in the island itself; whereas the inhallmants of the maritane parts had care over from Belgium, and seized by violence upon the portion of the country which they occupicd. This statement unity be considered, at least, to establish the fact, that the occupation of the coast \* Preface to translation of Mallet's Northern Autiquities, L xxxix

by the Belgic invaders was a much more recent event than the colonization from which the people of the Interior had sprung. The phraseology of the account throughout is very precise in regard to the distinction intimated to exist between the two

races. For instance, it is said in one place that those inhabiting Kentwere by far the most civilized portion of the British population, and that in their enstons or general manner of life, they differed but little from the Gauls, while most of those in the interior sowed to corn, lived only upon milk and flesh, and were clothed myskins; and then the writer immediately proceeds to mention some other peculiarities as common to all the Britons. \* time he does not affirm that different languages were spoken on the coast and in the interior, but it so happens, that on the subject of language he says nothing whatever in his account of Britain He informs us, however, that Kent and the maritime portion of the country generally was inhabited by Belgians; and be had already stated in other parts of Inswork, first, that the Belgæ differed from the Gauls or Celts both in language, in institutions, and in laws,† and secondly, that they were a prople

for the most part of German descent, who had ac-

quired a settlement for themselves on the left bank

of the Rhipe by expelling the Gauls, by whom the

district was previously occupied. † In so far, there-

fore, as the testimony of Casar is worth anything,

it would been to nuply that the Britons whom he

describes were a German or Tentonic race, not a

Celtic. It is to be observed, that the urhabitants of

the maritume parts were the only portion of the people of Britain whom he had any apportunity of

seeking. But if this be the case, what is the value of his assimilation of the Britons to the Gauls, as proving the Celtic lineage of the former? Notwithstanding what Cresar has said in the passages we have just quoted, it has been a much controverted question to which of the two great races from whom the population of the principal part of Europe appears to be derived—the Celts or the Germans -- the ancient Belgie are to be considered as belonging. It has been argued, that when Caesar describes them as differing in language from the Celts, he must in all probability be understood as meaning only that they spoke a dif-Rerent dialect of the same language; and that that expression, therefore, is not to be taken as any evidence that they were not a Celtic people. must be admitted that the point is an exceedingly

sophy of the origin and connexion of nations; but \* De Bell, Gal v. 14 Tacitus also (Agiic. xi.) appears to have in his immediate view only the inhabitions of those parts of Butain which are nearest to France, when he describ s them as esembling

Geogi, lib. iv.

it is not yet very long since its importance came to be miderstood. The old writers on the subject of the Celts, all include both the Celtic and the Gothic races under that name.\* Attention seems to have been first called to the distinction in question by our countryman John Toland, 1 and it was afterwards much more fully unfolded by Bishop Percy.: The most elaborate discussion, however, the subject has met with, is that which it received from the late John Pinkerton, in all whose historical investigations the radical distinction between the Celtic and the Gothic races, and the inherent inferiority of the former, are maintained with as much zeal and vehemence, as if the writer had a personal interest in the establishment of the point The correctness of the new views, in so hat as respects the general position of the non-identity of the Celtic and Germanic nations, and also their importance to the chicidation of the whole subject of the original population of Europe, are now universally admitted, but perhaps in avoiding the error of their predecessors, there has been a tendeney on the part of modern writers to run into the opposite extreme, and to assume a more complete disconnexion between everything Celtic and everything Gothic, than can be reasonably supposed to have existed. It is to be recollected that both the Celts and the Goths appear to have come to the west of Europe, though at different times and by different routes, from the same quarter; both races are undoubtedly of eastern origin, and are admitted by all physiologists to have been branches of the same great paternal stem. Both are classed as belonging to the same Cancasic of Japetic family This being the case, the distriction between them, when they eventually found themselves planted alongside of each other in the different countries of Europe, could hardly bave been so complete in all respects as it is usually considered. Their languages, for instance, not with standing the striking dissimilarity both in vocabulary, in structure, and in genius, which they seem now to exhibit, may not have been by any means so unlike each other two thousand years ago, seeing that, according to all historic probability, they must have both sprung from the same common ancestral tongue. Referring to Schilter's 'Thesaurus Antiquitation Teutonicarum,' and Wachter's 'Glossarumu Germanicum," "these vastly learned authors," observes a late writer, "demonstrate, without intend-

ing it, that the Celtic and Teutonic languages had a . See Ph. Cluviet's Germania Antiqua, fol 1649, J. G. common ofigin. \*\*. Both the Celtic and the Teufome have been shown to enter largely into the composition of the Greek and Latin; and it has been lately conclusively proved by Dr. Pritchard, by a minute comparison of vocabularies and grammatical peculiarities, that the Celtic belongs to the same great family of Indo-European languages with the Sanskiri, the Greek, the Latin, and the German.+

Upon the whole, therefore, the probability seems to be, that although the inhabitants of the inland part of South Britain, at the time of the Roman invasion, were the posterity of a much earlier colomzation than that which had peopled the maritime parts of the island, yet both the tribes of the coast and those of the interior were of the same Celtic descent, and all spoke dialects of the same Celtic tongue. We find the evidences of this community of language and of lineage spread over the whole length of the country, from its northern boundary to the Channel; for the oldest names of natural objects and localities, even in the portion of this range which is commonly understood to have been eventually occupied by Belgic colonies, are equally Celtic with those that occur elsewhere. This circumstance must be considered as a testimony, in regard to the original population of the country, far outweighing the meagre and vague notices handed down to us upon the subject by Casar and Tacitis; and it is to be explained only by supposing either that the seats of the Belgie tribes in Britain had, before then arrival, been in the possession of a Celtie race, or that the Belgians, notwithstanding their German descent, had, before their invasion of Britain, become, by their long residence on the west side of the Rhune, more a Celtic than a Tenfonse people. If there was any difference of language between them and the other inhabitants of South Britain, it could scarcely have amounted to more than a difference of dialect. There is certainly, at least, no indication in the topographical nomenclatine of the country, that any Teutonic people, before the arrival of the Saxons in the fifth and sixth centuries of our 1 era, had ever occupied those parts of it of which they then came into possession. It is not unlikely that a few settlements may have been effected, m very early times, on the west coast by the Spamards, and on the east coast by congrants from the opposite Scandinavian regions; but, with these exceptions, there appears to be little reason to doubt that the whole of what is now called England was first occupied by a Celtic population, which came over in successive swarms from the neighbouring country of Gaul. Some speculators have even attempted to show that Britain was originally united by land to Gaul. 1 At any rate, it may be assumed that the first migration from the one to the other took place at a very early period, most probably considerably more than a thousand years before the

commencement of our era. The Belgic coloniza tion of the southern coast seems to have been an event of historic memory- that is to say, not yet transformed into the shape of fable—in Cosm's day, and, therefore, we may suppose it to have bappened within two or three centuries preceding tlat date.

The name Britannia, by which our island was known among the Greeks and Romans, was doubtless formed from the name in use among the matives themselves. With respect to its origin and meaning many conje tures have been proposed, a long list of which may be seen in Camden. Geoffrey of Monmonth, of course, and the other retailers of the story of Britis and his Trojans, derive it from the name of that leader. seen from one of the Welsh trads quoted above, that it is deduced by those authorities from an early king of the country- the first, it is affiringd, by whom a regular government was established in It—Prydam, the son of Aedd the Great. fables are descrying of no attention; and equally worthless and palpably absurd are most of the other etymologies which have been suggested by the laborious ingeninty of learned word-torturers. Among the more plansible interpretations may be mentioned that of Whitaker, who contends that Britin, which he conceives to be the origin of the Greek and Roman Britannia, was not the name of the island but of its mhabitants, and that it is a plinal word, of which the singular is Brit, signifying divided or separated. The Britin, therefore, he translates the separated people, or the emigrants; and he supposes that name to have been given them by their kindred in Gaul, whom they left in order to occupy the island, This account of the matter, however, we believe. has not gamed much acceptance among Celtic scholars. Yet it is not very distant from the notion of Sa William Betham, who conceives the term Britanina to have been formed from the Celtic Brit daorne, that is, painted people—the name, he says, which "the Phænician Gallic colony," on their arrival, bestowed upon the wild natives of Scandmaxian extraction whom they found in possession of the country. Whitaker adverts to the application of the word Brit in the sense of painted; it is the same word, he observes, with Brill or Brechan, the name still given to his fartan pland by the Scotch Highlander, and signifying properly a garment marked with divided or variegated co-The anonymous author, also, of the lately published volume entitled "Britainia after the Romans," (the work of a scholar and a man of talent, who is apts however, to bave more charity for his own crotchets than anight be expected from his contempt for those of other people,) strenuously maintains the denivation of the name Briton from a Walsh, and, as he concerves, old British, word sig-

The Eastern Origon of the Celtic Nations, Sco. 1831. 1 See the position learnedly montained in a dissertation, De Britannia wouldan pean Insula, prefixed to Musgawe's Autopotates Britannia Relgiére, 3 vols. 8 vol. 1719. It will appear presently that Mr. Whallket, in his Genume Organ of the Britons Asserted (1773).

has, without any view to the establishment of the spots, suggested that the term Britin means, profectly, the separated people, or the emigrants, as he explains at. This epathet would be belied accounted for upon the supposition of the actual separation of the two countries by the intervention of the sea.

his authority is of no weight, has, nevertheless, the merit of surmising this true Clymology. There can be little doubt that the element lan in Britanina is the same word which we find form-

ing a part of to many other names of countries, both ancient and modern, such as Mauri-tau-a, Aqm-tim-in, Lusi-tim-in, Kun-du-tan, Afghanstan, Kuzis-tan, Lyanis-tan, Ilando -tan, &c appears to signify merely a land or country, though it is not, we believe, found in that sense is any eresting dialect of the Chine, and for anything that is known, at may after all be really Daoine, people, as suggested by Sar Will am Betham. Bruit, again, is the Celtasterm for the, or metal concraby; so that Brint-tan, or, as smoothed down by the Greeks and Roman , Britannia, signifies altogether the metal or tin land - an epithet which would be nationally bestowed upon the country, from the cureram tenic or which it probably first became known to other nations. The meaning of the name is exactly the same with that of the Greek Cassiterals, by which alone the British islands were knewn to Hérodotus 11 If the traces of an original Celtic population are still to be found over the greater portion of the south of British, such traces are much more abundant, and more distinctly legible, over the

whole of Ireland. The ancient topographical no-

ment lating of that country is exclusively Celtic, as

the speech of a large proportion of the people still

continues to be. A Celtic race, therefore, must

either have formed the original population of the

country, or must lawe become its predominant

population in very ancient times. Whence was this race derived? The traditional Instory preserved among the Irish people makes the island to have been possessed by three nations in snewscion - the Firbolgs, the Tuath de Danans, and the Milesians, or Scots-the last-mentioned of whom it represents as the progenitors of the present Celter population. The question of who these races were has given occasion to endless controversy. What is certain is, that both the Pubolgs and the Tuath de Danans existed in the country within what may be properly called the historic period. The Firholds are gainrelly believed to have been a Belgic colony or mvading band; and the Triath d. Dairens a Scandinavian people. Another theory, however, makes the latter, and not the Milesians, to be the Celtic people, from whom have descended the great bulk of the present population of the island. There come to us through the long night of the past many strange glimmerings of an extraordinary

civil zation existing in Treland in a very remote antiquity, and of a wide-spread renown which the island had once enjoyed as a peculiarly-favoured seat of letters, the arts, and roligion. That during a considerable portion of the period which we are accustomed to call the dark ages, the light of learnmg and philosophy contained to slame in Irchard after it had been extinguished throughout all the

Instorians of modern Europe, must be regarded as a fact as well established as any other belonging to that period. From about the beginning of the seventh till towards the close of the eighth centmy, Ireland, under the name of Scotia, was undoubtedly the recognized centre and head of European scholarship and civilization. This is abundantly proved by the testimony of contemporary writers in other countries, as well as by the remaining works of the early theologisms and philosophers of Christian Ireland themselves. But long before this Christian civilization, there would seem to have been another period, when the arts existed in that country

connstance has been little noticed by most of the

in a high state of advancement, in the midst of surrounding barbarism. If there were no other evidences of this than those extraordinary erections, the Round Towers, which are still found standing in so many places, the inference would not be easily resisted. The argument derived from these buildings is very short and direct. We have evidence which cannot be questioned, not only of their existence in the twelfth century, but of their great antiquity even at that date. Gualdus Cambreusis, who then visited Ireland, describes them in such terms as show that the momory of then origin had been already long lost among the people. If, as has been supposed by come writers, they had been creeted by the Danes, who occupied part of the island two or three centuries before, this could not have been the case. But the notion that the Danes were the architets of the Round Towers of Ireland is altog ther unt nable on other grounds. No similar structures are to be found, nor any trace of such ever having existed, either in the native country of the Danes, or in any other country in which they ever obtained a settle-Nay, in Ireland itself, it is curious enough, that while Round Towers are found in many parts of the country where the Danes never were, in other pacts which these invaders are well known to have occupied, there are none. Nor can these Round Towers with any probability be looked upon as Christian monuments; there are no such build-

which is will ascertained to have taken place in the early part of the filth century. But for some centuries at least preceding that date there is certamly no reason to believe that there existed in Ireland any such superior civilization or knowledge of the arts as would account for the erection of the Round Towers. On the contrary, it appears probable, from all the facts that can be collected, and all the contemporary notices that have come down to us, that at the time of the invasion, and during the occupation of Britam by the Romans, the Irish

mgs in any other part of Christendom, nor any-

where, indeed, throughout the western world, if

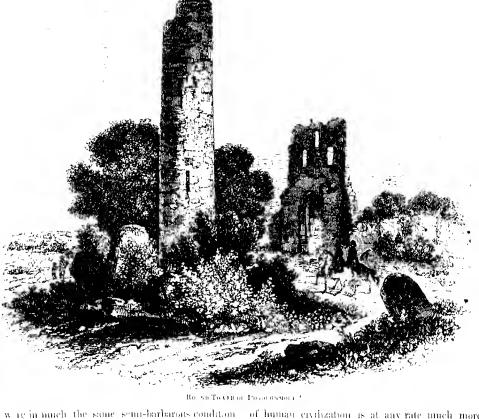

we except Scotland, which, from many other evidences, appears to have been in part colonized

from Ireland. We are forced therefore to ascend

m search of their origin beyond the date of the

establishment of Christianity in the latter country,

#### HISTORY OF THE BRITISH ISLANDS.

with the Britons. The princitive civilization of Ireland, therefore, whether under the rame, or, what is more likely, under a different dominant race, must be sought for in a yet more remote antiquity. The only structures that have been anywhere found similar to the Irish Round Towers are in certain countries of the remote east, and espeerafly in India and Persia. This would seem to indicate a connexion between these countries and Ireland, the probability of which, it has been attempted to show, is corroborated by many other comcidences of language, of religion, and of customs, as well as by the voice of tradition, and the light, though faint and scattered, which is thrown upon the subject by the records of lustory. The period of the first civilization of Ireland then would, under this view, he placed in the same early ago of the world which appears to have witnessed, in those oriental countries, a highly advanced condition of the arts. and sciences as well as flourishing institutions of ; religious and civil polity, which have also, in a similar mahner, decayed and passed away. Nothing can be more certain than that the first period

of human civilization is at any rate nucli more nuclent than the oldest written histories we now possess. The civilization of Egypt was on the decline when Herodotus wrote and travelled, nearly twenty-three centuries ago. The vast architectural monuments of that country were of venerable antignity, even when lus eye beheld them. The carliest civilization of Phienieri, of Persia, and Hudostan, was, perhaps, of still more ancient, We know that the navigating nation of the Phænicians had, long before the time of Herodotas, established flourishing colonies, not only in the north of Africa, but also on the opposite coast of Spain. Even the foundation of Marseilles, on the coast of France, by a Greek colony, has not been stated by any authority to be more recent than six hundred years before the commencement of era, and there are some reasons for believing a town to have been established there at a much carlier date. There is, therefore, no such improbability as is apt to strike persons, not conversant with such investigations, in the supposition that Ireland also may have been colonized by a civilized people at some very remote period. It seems, in-

### INTRODUCTORY VIEW OF THE PRIMITIVE

deed, to be searcely possible otherwise to account either for the Round Towers, or for the other relies and memorials of a formerly advanced state of the arts which the country still contains—the extensive coal-works and other mining exervations which appear in various places, and the many articles of ornamental workmanship in gold and silver which have been found in almost every part of the island, generally brined deep in the soil—all imquestionsably belonging to a time not comprehended within the range of the historic peri It is remarkable, and may be taken as some con-

firmation of the evidence afforded by circumstances of another kind which appear to indicate a conngxion in very ancient times, between Ireland and the east, that nearly all the knowledge of the country of which we find any traces in the Greek and Roman writers seems to have been derived from organtal sources. If the Orphic poem on the voyage of the ship Argo be of the age to which it has been assigned by some of the ablest critics, namely, five hundred years before the birth of Christ, it is there that we have the first mention of Ireland by its Celtic name. The writer speaks of an island which he calls Icrnis, as situated somewhere in the Atlantic; and, from various passages of his poem, he is believed to have had much of his information from the Phæmeians. He makes no mention of Broam, Herodotus, a century later, had only heard of the British islands by the descriptive epithet of the Cassiferides, or Tin Islands. Erato-thenes, in the third century before Christ, appears not to have been aware of the existence of Ireland, although the island is mentioned by the name of Lerne, in a work attributed to Aristotle, and which has been supposed to be at least of the age of that philosopher, who flourished in the fourth century before the commencement of our cra. † Polybras, in the second century before Christ, just notices Ireland On the other hand, Ptolemy, who is known to have composed his work from materials collected by the Tyrian writer Marmus, gives us, in his Geography, a more full and accurate account of Lieland than of Britain. Another very curious notice of Ireland is that which has been preserved in the Latin geographical poem of Festus Avienus, a writer

See these and other arguments to the same effect, copiously illustrated, though applied to the mandenance of somewhat varying hypotheses, in the several publications of General Vallancey, Lord Rosse's Vadination of the Will of the Right Homomode-Henry Flood, Dr. Villanneva's Pheemetan Treband, translated by the the Mr. H. O'Binen, M. O'Binen, Magnemos and learned, though occasionally rather famellal, work on the Round Towers (2nd edit 8xo, Land, 1831). Sir Wiftiam Betham's Gapl and Cymbri (3xo, Dublia, 1831), and the first volume of Mr. Thomas Moore's History of Irecland (12mo Lond 1835)—a work net more distinguished by those gives—femposition which were to have been expected from its emission. Leomposition which were to have been expected from its eminent author, than by extensive erudition and varied and laborious re

of the fourth century, but who tells us expressly

that be drew his information on the subject from

the Punic records. Avienus gives us the only ac-

count which we possess of the voyage made by the

Carthagipan navigator Himileo to the seas north

of the Pillars of Hercules, at the same time that

out in the opposite direction from the same straits. These voyages seem to have been undertaken about a thousand years before our era. In the parrative given by Avienns, which is a very slight sketch, the islands with which the Carthagmans were wont to trade and designated the  ${
m GE}$  strummides, by which name is supposed to have been meant the Scilly Islands;\* and two days' sail from these is placed, what is said to have been called by the ancients, the Sacred Island, and to be inhabited by the nation of the Hiberm. The island thus described there can be no doubt is Ireland. either to the Œstrummdes or the island of the Hiberni (it is not very clear which is intended), is said to extend the island of the Albiones, that is, Bii-The existence of an abode of science and the arts, and the seat probably also of some strange and mysterious religion, placed in the mudst of the waters of the farthest west, and withdrawn from all

Hanno, whose Periplus has come down to us, set

the rest of the civilized world, could bordly have failed, however obscurely and imperfectly the tale might have been runnonred, to make a powerful impression upon the fancy of the magniative nations of antiquity. Some speculators have been disposed to trace to the Ireland of the primeval world, not only the legend of the famous island of Atlantis mentioned by Plato and other writers, but also the still earlier fables of the Isle of Calypso, and the Hesperides, and the Fortunate Islands, and the Elysian Fields of Homer and other ancient poets. " The fact," observes Mr. Moore , " "that there existed an island devoted to religious rites in these regions, has been intimated by almost all the Greek writers who have treated of them; and the position in Gery instance assigned to it, answers perfectly to that of Ireland. By Plutarch it is stated that an envoy despatched by the Emperor Claudius to explore the British Isles, found, on an island in the neighbourhood of Britain, an order of magi accounted holy by the people; and manother work of the same writer, some fabulous wonders are related of an island lying to the west of Britain, the inhabitants of which were a holy race; while, at the same time, a connexion between them and Carthage is indistinctly intimated." passage which Strabo has extracted from an ancient geographer, it is expressly stated that in an island near Britain sacrifices were offered to Ceres and Proscipine, in the same manner as at Samothrace. in the Egean, the celebrated isle where the Phœnicians had established the Cabiric or Guebre worship, that is, the adoration of the sun and of fire, which they again appear to have received from the Persians. "From the words of the geographer quoted by Strabo," continues Mr. Moore, "combined with all the other evidence addreed, it may be inferred that Ireland had become the Samothrace, as it were, of the western seas; that thither the · See a enrious interpretation of this name in Davies's Celtic Re-

The Writer says that in the sea heyond the Pil-lars of Hercules (the Straits of Gibraltar) are two large islands, called the British Islands, Albion and Ierne.

searches, p. 228. † History of Ireland, i. 13.

times,"

Cabiric gods hall been wafted by the early colonizers of that region; and that, as the mariner used, on his departure from the Mediterranean, to breathe a prayer in the Sacred Island of the East, so in the seas beyond the Pillars, he found another Sacred Island, where, to the same tatelary detties of the deep, his yows and thanks were offered on his safe arrival."

But the most envious of all the legends preserved. by the classical writers, which have been supposed to allude to Ireland, is the account given by Diodorns Siculus of the Island of the Hyperboreaus, on the authority, as he says, of several investigators of antiquity, and especially of Hecatæus, an author who is believed to have flourished in the sixth centmy before our exa. The island, in the first place, as stated to be in the ocean over against Gaul, and under the arctic pole - a position agreemy with that assigned to Ireland by Strabo, who describes it as situated beyond Britam, and as scarce habitable tor cold. It is affirmed to be as large as Sicily, which is a sufficiently correct estimate of the size The soil, the narrative goes on to say, is so rich and fruitful, and the climate so temperate, that there are two crops in the year. Mention is then made of a tamous temple of round form, which was here erected for the service of Apollo, whom the mhabitants worshipped above all other gods, his mother Latona having been born in the island, Here seems to be an evident reference to the Round Towers, and the Cabure religion, of which they were in all probability the temples. The remainder of the account contains apparent allusions to the skill of the inbabitants in playing on the harp, and to their knowledge of astronomy, a study which has always been associated with the worship of the sim. Upon the supposition that this relation refers to Treland, the famous Abaris, who is said to have come from the Hyperboreans on an embassy to Athens, six centuries before the commencement of the Christian era, and of whose learning and accomplishments so many wonderful stories are told by various anthors, would be an

Irishman.\*

These, and other seeming indications of an oriental connexion have appeared so irresistible to many of the ablest and most laboritions inquirers into the antiquities of Ireland, that, however variously they may have chosen to shape their theories in regard to subordinate details, they have found themselves obliged to assume an early colonization of the country by some people of the east, as the leading principle of their investigations. Whatever question there may be, however, as to who this people were, it is agreed on all hands that they were a people speaking the present Irish language. The popular tradition, which makes the

Milesians or Scots to have been a Scythian colony. considers them nevertheless to be Gael, or, Gamls. Colonel Vallancey, who in his latter days adopted the hypothesis that the original Irish people were a colony of Indo-Scythians, and demed that they were either Gam's or Celts, maintained at the same time that the Irish was not a Gallic or Celtic tongue. Mr. O'Brien, who deduces the Trish population from Persia, makes the Irish to have been the ancient language of that country. Finally, Su Wilham Betham and others, whose system is that Ire= land was colonized by the Pheenicians, contem? that the ancient Phoenician or Phinic language was the same with the modern Trish, and hold themselves to be able to make out that point from the remains of it which we yet possess. In particular, they supply, by the aid of the Irish tongue, an interpretation of the celebrated scene in Punic, in the "Pæmilis" of Plautis, which has at least a vers imposing plausibility. + "The complete identify of the Phænician and Irish languages," observes Sir William Betham, "explains, makes palpable, and elucidates, not only the history and geography of Europe, but most of the ancient maritime world, and in fact removes every difficulty to the acquirement of correct notions of the events of the earliest

There can be no doubt, it may be here observed, that the Irish is a Celtic tongue, and essentially the same with that which was anciently spoken by the chief part of the population both of Gant and of the south of Britain. Colonel Val ance: an others who have doubted or denied this identity have been misled by taking it for cranted that the true representative of the Celtic tongue of the ancient. Britons and Gants is the modern Welsh, which, as we shall presently have occasion (e-notice more particularly, appears really to be a different language altogether.

It may also be remarked that there does not appear to be my irreconcilable discordance between the two principal modern theories on the subject of the ancient connexion of Ireland with the East, namely that which attributes the colonization of the country to the Phoemcians, and that which deduces the people, together with their language and their religion, from Persia. It is far from improbable • that the Pheenicians were originally a Persian peo-The ancient writers generally bear testimony to the fact that the district called Phornicia, at the extremity of the Mediterranean, was not then ongmal seat. They seem to have found then way thither from some country faither to the east or the south-east. Herodotus makes them to have been Chaldreans, and Strabo brings them from the neighbourhood of the Persian Galf. Their teligion, as has been already observed, appears to have

<sup>\*</sup>For a mure complete examination of the narrative in Diodouts Steulus, see O'Brien's Round Towers, giaps by and xvin. Tolond, however, conceives the island of the II Sperborenen to be "the great island of Lewis and Harris, with its appendages, and the adjacent island of Skyr," in the Hebrides, Chistory of the Druds, p. 155, Sc.) The identity of the Celtic people and the Persians, and of the Celtic and Persian Linguages, is also considered by Pellonfact as admitting of no doubt. See his Historic des Celtes.

admitting of no doubl. See his Historic des Celles ;

† This underpretation was hist polished by the late Geneeal Vallangey, by whom, however, it appears to have been obtained, though that fact was not acknowledged, from a manuscript of an Irish scholar of the name of Nevarlant. It is given in the most complete form in Sir W. Betham's Gael and Cymbir, pp. 112-138.

been the same Cabiric or Guebre worship which prevailed among the aucient Persians. The popular tradition brings the progenitors of

the people of Ireland immediately from Spain, making that country one of the principal restingplaces of the Gaelic of Mile ran race in their pro-

gress from the East. This view also would sufficiently harmonize with the supposition that Ireland was indebted for its carliest civilization and its lan-

guase to the Phoenecians, who had settlements in Spain, and are expressly stated by Strabo and other ancient writers to have carried on a trading intercourse from very remote times with the British Islands. The Irish traditional lustory, however, u is to be observed, brings the Spanish colonizers of the country not from Gades, which Strabo speaks of as the place from which the voyages to Britain were chiefly made, but from Gallina, at the opposide extremity of Spann. Particular mention is made of a lighthouse which stood in the neighbornhood of the port now called Corunna, and was of great service in the navigation between that coast and Irclana; and a remarkable coincidence has been noticed between this part of the tradition and an account given by Ethicus, the cosmographer, of a lofty pharos, or lighthouse, stamlmg formerly on the sea-coast of Galbera, and, as his expressions seem to amply, serving as a beacon in the direction of Britain. Whatever may be thought, indeed, of the share that either the Phæni-

cums or some other eastern people may have had in coloniang Ireland, or at least in communicating to the country its carliest civilization and religion, bitle doubt can be entertained that the great body of the Celtic progenitors of its present population was derived, not, as in the case of Britain, from Gaul, but from Spain. Even some of the British tribes, as we have already limited, were probably of Spanish extraction. Tacitus, as has been observed above, conjectures that the Sibires, who inhabited the south of Wales, had come from Spain, from their swarthy countenances, their coiled hair, and the position of the district in which they dwelt, facing that country. Ireland, from its position, in like manner, offered the most inviting field for the occupation of colonists from the same quarter. "Many of the names of the aucient Irish tribes, as recorded by Ptolemy, are the same with those of tribes forming part of the Spanish population.

"So irresistible, indeed," observes Mr. Moore, " is the force of tradition in favour of a Spanish colonization, that every new propounder of an hypothesis on the subject is forced to admit this event as part of his scheme. Thus Buchaman, in supposing colonies to have passed from Gaul to Ireland, contrives to carry them first to the west of Spain; and the learned Welsh antiquary, Lhuyd, who traces the origin of the link to two distinct sources, admits one of those primitive sources to have been Spanish. In the same manner, a late writer, \* who, on account of the remarkable similarity which exicts between his country's Round Popular History of Ireland, by Mr. Whitty, Part I.

banks of the Caspian, yields so far to the current of ancient tradition, as, in conducting his colony from Iran to the west, to give it Spani for a resting-place. Even lunes, one of the most acute of those writers who have combated the Milesian pretensions of the Irish, yet hows to the universal voice of tradition in that country, which, as he says, peremptorily declares in favour of a colomzation from Spain." \* At the same time, as Mr. Moore has elsewhere

Towers and the Pillar-temples of Mazanderan,

deduces the origin of the Trash nation from the

remarked, there are sufficient evidences that Gothie tribes from Germany have effected settlements in Ireland as well as the Celts from Spani. This would be proved by Ptolemy's map of the country alone, in which there are several tribes set down whose names clearly indicate them to have been of Tentoric origin There is every reason to believe. indeed, as we shall have occasion to show in the sequel, that the most famous of all the Irish traces, the Scots, -a people who seem to have eventually established a dominion over all the other races in the island, were not Celts, but Germans or Goths. Notwithstanding these mixtures, however, the mass of the population remained essentially Celtic, as it had been from the first; and so thoroughly was the Celtic character impressed upon and worked into the whole being of the nation, that it speedily fused down, and assumbated everything foreign with which it came in contact. "It cannot but be regarded as a remarkable result," observes Mr. Moore, "that while, as the evalence adduced

strongly testifies, so many of the foreign tribes that

in turn possessed this island were Gothic, the great

bulk of the nation itself, its language, character,

and institutions, should have remained so free from

change; that even the conquering tribes them-

selves should, one after another, have become mingled with the general mass, leaving only in

those few Tentonic words, which are found mixed

up with the native Cehie, any vestige of their once separate existence. The fact evidently is, that,

long before the period when these Seythic myaders

first began to arrive, there had already poured,

from the shores of the Atlantic into the country, an abundant Celtic population, which, though but too ready, from the want of concert and coalition. which has ever characterized that race, to fall a weak and easy prey to successive hands of adventurers, was yet too numerous, as well as too deeply unbued with another strong Celtic characteristic, attachment to old habits and prejudices, to allow even conquerors to innovate materially either on their language or their usages." † According to Sir William Betham, the proper Celtie name of Ireland is not, as commonly stated, Erm, but Eure, of which Erm is the gemtive, and which is pronounced prechely as Iar, a word still in common use, and signifying the west, the end, everything last, beyond, the extremity. So, he observes, we find by the Periplus of Hanno . Ilistory of Ireland, i. 18. + Ibid. 1, 29,

that the last Phœnician settlement on the west coast of Africa was \* called Cerne, pronounced Kerne, or Herne, being the same word with Erm. Strabo also tells us that the promontory forming the most western point on the coast of Spain was called Jerne. Jerne and Jerms are among the forms which the Celtie name of Ireland assumes in the pages of the Greek and Roman authors. The same original has, without doubt, also given rise to the forms Juverma and Hiberma, and to the common Latin names for the people Hiberii and Hiberniones. The derivation of the Celtie name of Ireland from a word signifying the extremity,

or the remotest point, is as old as the time of

It is an important part, however, we ought to

Camden.

note, of Mr. O'Brion's theory, that this name is nearly the same word with Iran, the old and still the native name of Persia. Iran, he says, means the Sacred Land, and Irm the Sacred Island. support of this explanation be quotes a statement by Sir John Malcolm, to the effect that he had been told by a learned Persian that Eir or Eer siginfied in the Pahlayi, or court dialect of Persia, a behever, and that that was the root of the name of the country. The uniform spelling of Erin, or Irm, in the oldest manuscripts, according to Mr. O'Brien, is Eirm \*

III. The most ancient name by which the northern part of Britain was known, appears to have been Caledonia. We have no evidence, however, that this name was in use among the inhabitants of the country themselves. It seems to have been that which was employed to designate them by the southern Britons, from whom no doubt the Romans learned it. Caoill signifies wood in Celtic, as  $\kappa \tilde{a} \lambda \sigma v$ , kalon, (which appears to be the same word,) does in Greck; and the Caledonni of the Roman writers has been supposed, with much probability, to be merely a classical transformation of Caoill daom, hterally, the people of the woods, or the wild people. The meaning of the term, indeed, is exactly expressed by the modern word savages, in French sauvages, in Italian selvaggie, the original of which is the Latin silva, a wood.

If it could be shown that the northern Britons of the time of the Romans called themselves Calcdonians, or Caoill daoin, this circumstance would afford some evidence that they were a Celtic people. But the name in itself, if the commonly received interpretation of it be correct, does not appear to be one which a people would be very likely to adopt as their national appellation. Notwithstanding this probably Celtic name, therefore, by which they were known to the Romans and to the southern Britons, the Caledonians may not have been a Celtic race.

As the south of Britain was in all probability chiefly peopled from Ganl, and Ireland chiefly from Spain, so it has been conjectured that the main source of the original population of North Britain was in like manner the part of the conti-. The Round Towers, chap. ix.

nent immediately apposite to it, namely, the north of what was then called Germany, including modern Holland and Denmark, and also Norway and Sweden, or the region anciently comprehended under the general name of Scandinavia as already noticed, expressly tells us that the red hair and big bones of the Caledomans asserted their German origin. If this view be correct, the earliest occupants of the North of Britain were a people not of Celtic, but of Tentonic race. • In the later days of the Roman domination the

name Caledomans appears to have gradually fallen into disase, and in their stead the Piets appear on the scene. Everything connected with the Pictstheir name, their language, their origin, their final lustory-has been made the subject of long and eager controversy. But it may now be said to be agreed on all hands that, whether we are to consider them as having been Gothic or Celtic, the Picts were really of the same stock with the Cale-The Picts are mentioned for the first time about

the beginning of the fourth century, by Emmenius, the anthor of a Panegyric on the Emperor Constantine, who speaks of the Caledonians as being a tribe of Picts: Caledones alique Picti-- the Caledomains and the other Picts—is his expression, About a century later Ammanus Marcellmus describes the Picts as divided into two nations, the Dicaledones, or, according to another reading, Deucalcdanes, and the Vecturiones. Upon this passage, a late writer, who holds that both the Caledomans and the Picts were Celts, observes-" The term Deucaledones is attended with no difficulty. Duchandldaoin signifies, in the Gaelic language, the real or genuine inhabitants of the woods. Du, pronounced short, signifies black; but pronounced long, signifies real, genuine; and in this acceptation the word is in common use; Du Erinnach, a genuine Irishman; Du Albinnach, a genuine Scotsman, The appellation of Deucaledones served to distinguish the inhabitants of the woody valleys of Albam, or Scotland, from those of the cleared country on the east coast of Allium, along its whole extent, to certain distances westward along its mountains in the interior parts of the country. These last were denominated, according, to Latin pronunciation, Vecturiones; but in the months of the Gael, or native inhalitants, the appellation was pronounced Uachtarich." \* We do not find, however, that any explanation of this last term is attempted further than the following: "That a partion of the country was known in ancient times by the name of Uachtar, is evinced by the well-known range of hills called Drinin-Uachtar, from which the country descends in every direction towards the inhabited regions on all sides of that mountainous range." + Sir William Betham, also, explaining the names recorded by Marcellinus from the Welsh, will have the Thoughts on the Origin and Hescent of the Gael. By James Grant, Eq. of Corrimony. Svo. Lond. 1828, p. 276.
 † Ibid. p. 277.

also, derives the Latin appellation from the old rang of the Picts, which he conceives to have been Petthi, or Penthwyr, a word that in Wel-li is said to signify those that me out or exposed, the people of the open country, I. In Scotland the name is

he says, in that language, having the same dispute-

tive effect with the particle distin English; while

he considers Vecturiones to come from the two

words  $U_{C_i}$  chief, and Degen, lord, and to signify a

superior realing or the chief district, the residence

of the  $Uer^{\prime}eyen$ , or sovereign prince. Pinkerton considers the Latin Vectoriones to be a corruption of Peolitin or Pelitin, which is the form in which the name Picts was anciently written \* Chalmers, still pronounced Pechts, or Pechs, with a strong enumeration of the guttimal. After all, the name Picti may not improbably be merely the common Latin term signifying paints d, bestowed upon the porthern fanharians, from their rustom of dveing or talogous their bodies, for the existence of which there is abundant evidence. The Latin writers themselves reem to have generally understood the mone in this sense. With resaid to the language of the Picts, Bede,

writing while that name was still then recognized

national designation, distinctly informs as that if

was different from that of the Britons. He has also pre erved one Pictish word, and that does not

belong to the Gaelic cither of Ireland or Scotland.

So, when the Irish saint, Columba, in the sixth

contury, went to the court of the Pictish king, for

the pulpose of converting that Prince and his sub-

jests to Christianity, it is expressly recorded by

las biographer, Adomian, in more than one passage, that he croploved an interpreter. But the strongest proof or all is derived from the old manes of places, which throughout the whole of that part of Scotland formerly constituting the kingdom of the Piets, me not Irish or Gache, but belong to another language. The same is also the case with the names of the Pictish kings, several lists of which have been preserved. The people therefore that originally occupied the territory in quesfrom would appear not to have been a Celtic race. The kingdom of the Piets, which subsisted under that designation in an independent state, till the

finddle of the math century, extended, as is well known, along the cast coast of Scotland, from the Firth of Forth borthwards. As for the country to the south of the Forth and the Clyde, it did not properly belong to acciout Scotland at all. But while the Piets thus occupied the lowland country, the fully country to the west was undoubtedly in the possession of a people of genume Celtie lineage, the progenitors of the present Scottish Highlanders. Of those writers who consider the Caledonians to have been Celts, several hold that the modern

\* Inquiry into the History of Scotland preceding the Reign of Materian III C + Caledonia, i, 203.

son in the introduction prefixed to his celebrated translation of the Poems of Ossian (1762), and also by his relation, Dr. James Macpherson, in his Dissertations on the Caledonnais, &c. which the translator of Ossum edited (1768). these writers contend that the Picts also were the descendants of the same Caledonians; or, in other words, that the Highlanders and the Lowlanders

were really the same people— a fact which would make it extremely difficult to recount for the complete distinction between the two, which we find meserved in all the historical notices that have come down to us respecting them. The Scottish Highlanders consider themselves to be of Trish descent, as Dr. James Macpherson admits. In these respects their own traditions perfectly agree with the unitorm voice of the traditional history of Ireland. It may now indeed be said to be admitted on all hands that the Scottish Highlanders are the descendants of a band of Irish who settled in Argyleshme about the unddle of the third century, under a leader named Carbry Ruda, the lord of a territory in Antram, named after himself, Dahrada. The descendants of these Irish colonists, about the beginning of the sixth century, founded in that district of Scotland what was long called the Dalrnadic kingdom, or kingdom of the Dabrendim, and which eventually, on the seizme of the Pictish throne, by Keimeth Macalpine, in the year 843, became the kingdom of all Scotland. This is the

doubted or called an question either among themselves or by others. Their own name for their language is Erse or Ersh, that is, Irish. They designate themselves Gael, and they call the Irish by the same name at this day. Of the origin and meaning of the term Gael, it does not appear possible to give any satisfactory account. The Irish tradition is that the name is derived from Gaodhal (pronounced Gael), grandson of Feme Farsa, the first great leader of the colony, variously designated Milesian, Scotte,

and all the ablest modern incomers.

view concurred in by Imies, O'Connot, Chalmers,

of the Macphersons, the Irish origin of the Scottish

Highlanders does not appear ever to have been

Indeed, until the appearance of the publications

Gache, and Phoenician, from which the Celtic population of Ireland is sprung. It has been supposed by some that the word Gael, or Galli, is really the same with Celtre (pronounced Keltre),, as well as with Galate, the name given to the inhabitants of Galatia, or Gallo-Gracia, in Asia Sir William Betham conceives that the Phoenicians, long before the Christian era, called themselves Gael and Gaeltach, from the latter of which names the Greeks and Romans formed their Keltoi and Celtre. Others, however, think Celtre to be a corruption of Cavillich, which signifies a Highlanders are the descendants of those earliest woodland people, from Caoill, wood, already menoccupants of North Britana. This, for instance, The commonly received classical deriva-

> tion of the name Celts is from the old Greek word, used by Homer, Kelas, Kelas (originally Kelets), a

the word ought rather to be deduced at once from the verb Kελλφ, Kello, to move about, from which κελης is itself considered a derivative. The wandering character of the race would go to vindicate this ctymology; but we do not know that there is any Celtic word corresponding in sound and sense to the Greek Κελλω. Casar tells us that the people of ancient France, whom the Romans called Galli, were called Celtie in their own language; and Pansanias also testifies that the ancient name of the Ganls was Celts. Herodotus, who mentions the Celts, is silent as to the Gauls.

The words Garel and Galli have also been by

some supposed to be identical with the modern

names Waldenses or Walloons, and Waelsh or

horse, the Celts being, it is said, everywhere dis-

turguished for their skill in horsemanship. Perhaps

Welsh. Nothing certainly is more common than the conversion of the sound q into w or qw, and therefore the name Waelsh, by which the Saxons were latterly wont to designate the alien race who occupied the western corner of South Britam, might possibly be merely a corruption of Gael. At the same time, as the Welsh never have called themselves Gael, it would be somewhat difficult to account for the Saxons bestowing upon them that name, if it was thereby intended to identify them with the Gael of Ireland and of Scotland. can be no doubt that the word Welsh is the same with the modern German Waelsch, which is still applied in that language to designate generally all strangers or foreign nations. The Italians, in particular, are called at this day Waelsch or Welsch by the Germans, then language the Welsh tongue, Precisely in the and then rountry Welsh land. same way our German ancestors, the Saxons, called the race of distinct blood and language who occupied the west of England Welsh, and the district they inhabited Wales.

What original connexion there may have been

between the two words Gael and Waclsh (or Wacl,

as it may perhaps have been in its simplest form), when the Celtic and Tentonic tongues were less widely divided than they eventually came to be, we shall not take upon us to conjecture. If any relationship could be established, it might perhaps help us to the true meaning of the name Gael. is worth remarking that there appears to be another genume Celtie word, which, from the similarity of its sound, is apt to be conformed with the word Gael, but to which is attributed exactly the signification of the German Waelsch. This fact is obscurely noticed by Buchanan, who states that the aucient Scots divided all the nations of Britain into Gaol and Galle, which names be translates by the Latin Galli and Gallacci. But the matter is more clearly explained in the following passage. from a modern work :—" Gaoll, in the Gaelic language, signifies a stranger. All the inhabitants of the kingdom of Scotland, whose native language is not Gaelic, are by the Gael called Gaoill; Gaoll, nom. singular; Gaoill, nom. plural, that is, strangers; so Gaolldock is the country of the Scots who speak

landers who speak Gache. Cathness, that part of the northern extremity of Scotland which has been for many centilities inhabited by Anglo-Saxon colomes, is called by the Gael, Gaolithao, the quarter of strangers; and, for the same reason, the Hebrides, after their conquest by the Danes, got the name of Insegaoll, which signifies the islands inhabited by strangers. Chemistances of a like noture gave the names of Galloway and Galway to the districts of country known by these appellations in Scotland and Ireland." ! The author of \* Bijtannia after the Romans' conceives that Wal and Gaul are the same word, and is convinced "that the words Wal, Wealh, Welsch, and Walsch were all primarily applied to that extensive family of tribes which we distinguish from the Tentonic towards the west, and that whenever at obtained the general force of stranger or forceguer, it had been among such tribes of Tentons as had then little collision with any other description of foreigners." † But how will thus theory account for the Gael themselves calling foreigners Goott ? But all this while who and whence were the

English, as Garldoch is the country of the High-

Scot - 2 and from whom has North Britain received the name of Scotland? In the first place, it is to be observed, that down to the eleventh or twelfth century the name Scotia was appropriated not to what is now called Scotland but to Ireland, and by the Scots was meant the Irish, or at least a people dwelling in that country. This is now universally admitted. The Scots are first mentioned by Ammianns Marcellums under the year 360, as fighting in alliance with the Picts. If these Scots were a British people, they must be supposed to have been a portion of that band of colouists from Ireland, who, as already mentioned, had a short time before this obtained a settlement in Argylesbire. But it is far from being certain that the Scots spoken of by Marcellinus, and whom, on another occasion, he describes as per diversa ragantes -- vagabondizing from one place to another, as the words may be translated-were not native Irish who had come over expressly for the purpose of the predatory, expeditions in which they are represented as having been engaged. We find, at any rate, that the tribes of the north of Britain were sometimes joined in their attacks upon the Roman province by bands of Scots, who are expressly stated to have come from Ireland. Thus, the poet Clandian, describing the chastisement inflicted by Theodosius, in the year 368, upon the Saxons, Picts, and Scots, says that of the last-mentioned people icy Ireland (glacialis Ierne) wept the beaps that were slaughtered. We have seen above that the notion of Ireland commonly entertained among the Greeks and Romans was that the island was situated very far to the north, which accounts for the epithet There made use of. Amother expression in the poem, proceeding from the same misconception, occurs in the passage if which it is affirmed that \* Grant's Origon of the Gael, p. 154.

• D

<sup>+</sup> Britannia after the Romans, p. lxxvni.

INTROLUCTORY VIEW OF THE PRIMITIVE

Theodosius, in pursuing the flying Scats, broke with his daring oars the Hyperborean waves. This

Cibson's Camden,

"When Scots came thundering from the Irish shores,
And the ocean trembled, strick with health oats."

And the ocean trembled, struck with hostify outs."

It may be considered, then, not to adjust of

It may be considered, then, not to admit of any dispute, that the Scots were originally an Irish people. "It is certain," observes Camden, "that the Scots went from Ireland into Britain. Orosius, Bede, and Eginhard bear indispitable testimony that Ireland was inhabited by the Scots." Bede, indeed, who yet had never heard of North Britain being called Scotland, expressly informs us that the nation of the Scots first came into that part of Britain which belonged to the Picts, from Ticland, under their leader Reuda—the Ruada mentioned m a preceding page. As the country eventually received its kings, so it also rescived its name from these Irish colonists. The proper Scots, accordingly, Camden describes to be those commonly called Highlandmen; "for the rest," he adds, "more civilized, and inhaliting the eastern part, though comprehended under the name of Scots, are the farthest in the world from being Scots, but are of the same German origin with us English." The name Scot has been usually supposed to be the same with Scythian, and to be a Celtic term siguifying a scattered or wandering people. It has been suggested, however, that it may be a frun-

cated form of the Welsh Ysgo-do-gion or Ysgotiand, which names appear to have been applied to the Scots by the Welsh in the twelfth century, and to be derived from Ysgawd, signifying shade, as if meaning a people of the woods. \* We doubt, at all events, the derivation from Ysgawd. But having found the Scots settled in Ireland before they were known in Britain, we have still to endcayour to discover when and whence they found their way to the former country; and these are much darker questions. The Irish traditionary account, as we have seen, is, that the Scots, or the Milesians, were that great nation who, arriving in Ireland, many conturies before the birth of Christ, brought with them the present Irish or Gaehe language, and became the progenitors of the great body of the present Irish population. But, to pass over all the other improbabilities involved in this legend, it is sufficient to remark, that the account of the geography of Ireland given by Ptolemy, sufficiently proves that there were no Scots in Ireland  $\epsilon$ at the time when Marinus of Tyre collected the

materials from which that, writer drew his informa-

tion. And still more decisive is the evidence of a

of St. Patrick," written so recently as the middle of the fifth century, from a passage in which it appears that even then the Scots were a distinct race from the Hiberionaces, or great body of the Irish people. The manner, however, in which they me here spoken of, as well as the ascendancy which their name afterwards acquired, would seem to imply that they formed a superior class; and the probability is, that they were really a foreign people who, perhaps a century or two at most before our era, had effected a settlement in the country by force, and eventually reduced the natives to subjection. One supposition, that proposed by Wlntaker in his History of Manchester, is, that the Scots were emigrants from Britain, and cousequently Celts; but this hypothesis is entirely unsupported by evidence, and is directly contrary to the muform tenor of the Irish tradition respecting the people in question, which peremptorily asserts them to have been of Scytlic or Germanic race. Pinkerton, Wood (in his "Juquiry into the Primitive Inhabitants of Ireland "), and others, conceive the Scots to have been Belgians; but the whole course of early Irish Instory, as Mr. Moore has remarked, " runs counter to this conjecturethe Belgæ and Scoti, though joining occasionally as allies in the field, being represented throughout as distinct races." On the whole, we are disposed to agree with this last-mentioned writer, that the Scots were really a tribe of Scythians, that is, a people from Germany, or the north of Europe, who arrived in Ireland subsequently to the Pubolgs or Belgie, and that they were therefore of Teutome blood and language. Although they appear to bave in course of time reduced all the other inbabitants of the island under their authority, and to bave given their name to the whole country, their numbers were probably very small as compared with those of the original Celtic population. Hence the language of the country continued to be Celtic, and eventually, both in this and in other particulars, the conquering tribe came to be inclied down among the mass of those whom it had subdued—inst as after the Norman invasion England still continued to be essentially a Saxon conntry. It is not therefore necessary to conclude from the facts of the Highlanders of North Britim being sprung from a colony of Irish, and of that country mheriting from Ireland the name of Scotland, that the Irish progenitors of the Scottish Highlanders were of the Scotic race properly so called; long before the name of Scoti was transferred to the Highlanders of North Britain, it had cutirely lost its original distinctive meaning, and was applied to all the people of Ireland indiscriminately. The Irish colonists of Scotland, for anything that is known, may not have even had a drop of Scotic or Scythic blood in their veins. It is certain, at least, that they were Celts or Gael in speech, and that their descendants to this day have never called themselves Scots, or anything else but Gaol. In distinguishing themselves from the Irish, the

work of mignestioned authenticity," The Confession

Britannia after the Romans, p. Ixiii.

Scottish Highlanders designate that people Gack Exinmich, or Gael of Erm, and themselves Gael Albimuch, or Gael of Albin. Albin, or Albion, appears to have been anciently the name of the whole island of Great Britain, and that by which it was first known to the Greeks and Romans. The writer of the geographical treatise ascribed to Aristotle, to which we have referred in a former page, says that the two British islands were called Alluon and Icrne. Pliny intimates that, the whole group of islands being called Britannia, the former name of that then called Britannia was Albion. Eustathms, the commentator on the Greek geographical poem of Dionysius Periegetes, tells us that the British islands are two in number, Ouerma and Alouion, or Bernia and Albion. Albium, according to Mr. Grant, means in Gaelic white or fair island. "The Gael of Scotland and Ireland," he observes, "never knew any other name for Scotland than that of Albinn; it is the name used by them at this day; the appellation of Scotia, or any appellation similar to it in sound, is entirely inknown to them. The Gael have preserved, and apply at this day to the kingdom of Scotland, the most ancient name known to the Greeks and Romans, to denominate the whole island of Great The ctymology of the name serves to show that it was denominated Albain by the continental Gauls, and was naturally called by them tbe Fair or White Island, from the chalky appearance of the British coast opposite to the nearest part of the coast of ancient Gaul." \* An old name given to the island by the Welsh is stated to have been Innis-uen, which also in their language sig-

IV. The Welsh, as every one is aware, have been in the habit of regarding themselves as the genuine descendants and representatives of the ancient Britons, who possessed the whole of the southern portion of the island before the arrival of the Saxons, and were indeed the same people that inhabited the country when it was first invaded by the Romans, and had probably occupied it for many preceding centuries. This descent being assumed, the Welsh language has generally been held to be a Celtic dialect, and essentially the same that was spoken by the original Britons, only muxed with some words of Latin derivation, which it is supposed to have received from the intercourse of those who used it with the Roman colonists.

unies the Fair or White Island.

It would probably be difficult to produce any direct evidence for these nations; but they have been, until very recently, the almost universally

received faith among the students of British anti-

Yet it is certain, in the first place, that no trace is to be found in the notices of Britain by the Greek or Roman writers, of any people or tribe settled in the district now called Wales, from which the Welsh can with any probability be supposed to have sprung. They exhibit no marks which would lead us to suspect their progenitors to have been the Silures, whose swarthy countenances and curled hair gave them to Tacitas the appearance of a Spanish race. The Welsh have always called themselves Cymry; there is no resemblance between this name, and either that of the Sihres, or that of the Demetre, or that of the Ordovices, the only British tribes whom we read of, either in Ptolemy, or in any of the historians of the Roman wars, as occupying Wales in the time of the Romans.—Indeed, no name resembling the Cymry occurs anywhere in the ancient geography of the island, so far as it is to be collected from these authorities. It is not pretended that this appellation has been adopted by the Welsh since the time of the Romans; if therefore the people bearing it were then in the island, and more especially if they formed, as the common account would seem to miply, the most ancient and illustrious of all the tribes by which the country was occupied, how did it happen that they wholly escaped notice? How are we to account for the fact of tribes with other appellations altogether being set down by contemporary geographers and historians in the very district which the Cymry claim as their proper and ancient residence?

But further, it clearly appears, and has been acknowledged by some of the ablest and most learned of the Welsh antiquaries themselves, that the district now called Wales must have been inhabited in ancient times by another race than the present Welsh. The oldest names of natural objects and localities throughout Wales are not Welsh. This was long ago stated by Humphrey Lhuyd, and has been since abundantly established.

Llutyd's statement is that the old names throughont Wales are Trish; and until very lately it was . universally assumed that the Welsh and the Irish were only two dialects of the same Celtic speech. It was unquestionable that the Irish and Scottish? Gaelic was, as its name imports, the language of the ancient Gacl or Celts ; and as no doubt was entertained that the Welsh, as descendants of the old Britons, were a Celtic race, it was taken for granted that their language also was only another sister dialect of the Celtic. But it would seem that this too was another notion adopted without any evidence, and indeed in the face of evidence, if it had been looked into, quite sufficient to disprove it. It would not, we apprehend, be possible to quote, in support of the asserted identity of the Welsh and Irish, or Gache, the authority of any writer who had really made himself master of the two languages, or even examined them attentively with the view of ascertaining in how far they resembled or differed from

Thoughts on the Gack, p. 297.

I The author of "Britannia after the Romans," however, contends that we must consider the ancient and correct boint of Albion to be Albioni or Albion. "Norther p too h," he is pleased to say, "its capable of mutation into w; nor is the converse possible." The Romans, he proceeds, modified the sound of the world "to suit the extending virusibatel by their own language, but not existing in the Greek, albus, whice. And they harped upon that does so long, that it was adopted in the island itself why; it was then province." Albivion, he is singlessed to think, is the 1 awd of Gwion, which appears to have been a mome of "the Hermes, or Mercury, whom the ancient Britons reveged above all other derives, and who (in the alchemic supersitions) presided over the permutations of nature, "—pp. lxiv—lxviii.

language was Celtic.

tion made ont?

But how is this demonstra-Altogether by the assumption,

never for a moment suspected to be unfounded or

doubtful, that the ancicut British Celtic tongue is still substantially preserved in the modern Welsh.

All the instances addiced by Cainden, and the

much longer list enumerated by Chalmers, are in-

stances of Pictish names of places which are not "Irish or Gaelic, but Welsh. Chalmers even shows

that on the country, after having been occupied by

which they have deliberately considered, and which some of them, at least, possessed all the necessary qualifications for deciding. The same opinion that had been first expressed upon the subject by the Tearned and acute Bishop Percy, an Englishman, has since been maintained as not admitting of any doubt both by the Welsh antiquary Roberts, and the hish O'Connor, and has also been adopted by the German Adelung, and finally, to all appearauce, manswefably established by Sn William Betham, who has devoted many years to the study of both languages. All these authorities declare in substance that the Cyntraeg tongue spoken in Wales, and the Gache spoken in Ireland and Scotland, exhibit little resemblance even in vocabulary, and, to use the words of Dr. O'Connor, "cue as different in their syntactic construction as any two tongues can be." It may be added, that this seems also to have been the opinion of the late learned Grueral Vallancey. This view of the Welsh language throws an enfirely new light upon other points that have given occasion to a world of controversy. We have already seen that nearly all inquirers are agreed in considering the Picts to have been of the same race with the ancient Caledonians. But it bad still contymicd to be a keenly agitated question, whether the Piets were a Celtic or a Tentonic people. Without entering into any detail of this long controversy, in which the Celtic origin of the Picts bas been maintained by Camden, Lloyd (Bishop of St. Asaph), the very learned and able Father limes, and the late George Chalmers, in his elaborate work entated "Calcdonia," while the opposite side of the question has been supported by Archbishop Usher, Bishop Stilling fleet, and the late John Pinkerton, to whom may be added, Dr. Jamieson, in The Introduction to his Scottish Dictionary; we shall merely remark, that the assertors of the Tentonic Imeage of the Prets bave evidently all along had the best of the argument on all other grounds, excepting only on the important ground of the evidence afforded by the language of the lost people,

All the historical evidence is in favour of their Teutonic or Gerrarie descent. Still, if it could be

clearly proved that they spoke a Celtie language,

that smale fact would go far to prove them to have

been Celts, notwoth-tanding even all the direct lis-

this Camden and his followers conceive not to

admit of any doubt, from the remains of the Pictish

language which are still to be collected, and Chal-\*

mers especially has, by a minute examination of the old topographical nomenelature of the part of Scot-

land formerly occupied by the Picts, completely,

as he thinks, established the position that their

torical testimony there is to the contrary.

each other, and whether they were properly to be

regarded as belonging to the same or, to different

stocks. On the other hand, we have in demal of ther relationship the distinctly pronounced judg-

ment both of Welshmen, of Irishmen, and of m-

quarts having no partialities of origin to influence their conclusions, all speaking upon a question

> the Picts, falling into the possession of the Celtic Scots, the Welsb, or, as he calls it, the Cambro-

British name was in some cases changed into a Celtic name of the same import. The Welsh Aber, for example, applied to places situated at the months of rivers, is found to have in this way given place in several names to the corresponding Gaelic term Inver. In examining the list of the Pictish kings, the same writer observes that the names of those kings are not Trish, and, "consequently," he adds, "they are British" "they are," he says elsewhere, "undonbtedly Cambro-British." And in like manner, the single Pictish word which Bede has preserved, Pengyahel, the name of the place where the Pictish wall commenced, is acknowledged to be not Gaelic, but Welsh. The opinion expressed by Caniden and Innes, that the Picts were Welsh, may therefore be admitted, without the consequence which they supposed to be involved in it, that either were Celts, being at all established. On the contrary, it would appear from what has been said above, that the fact of the language of the Picts having been the same with that spoken by the present inhabitants of Wales, is the best of all proofs that the former people were not Celts. It comes in confirmation of all the other arguments, bearing, upon the question, the decided tendency of which is to make it probable that they were a Tentome race. Here, then, we have two remarkable facts; the

one, that the part of England now occupied by the Cymry, as the present Welsh call themselves, was apparently not occupied by them in abelient times; the other, that the part of Scotland known to have constituted what is called the Pictish kingdom, was in ancient times occupied by a people speaking the same language with the modern Welsh. It seems impossible to resist the conclusion, that the same Cymry who are now settled in the west of England were previously settled in the east of Scotland --in other words, that the present Welsh are the descendants of the Picts. Usher has, without reference to the evidence of

language, and increly upon the strength of the historic testimony and the general probabilities of the case, advanced the opinion that the Piets were Cumbrians. The name of Cymri, borne by the Welsb, has long ago suggested a belief that they are a remnant of the ancient Cimbri. Their own traditions, as we have already seen, make them to have been conducted into Britain by their great leader,

Hu Cadaru, across the German Oceak. Bede ex-

pressly states that the Picts came from Scythia, a

somesus, or Peninsula of Jutland, among the rest. Bede also informs us, that, before arriving in Britam, the Piets were driven towards Ireland, and touched in the first instance at that island,

one time all the regions forming the north of mo-

this relation the venerable Saxon historian is confirmed by the Tush bardic histories, which, in like, manner, represent the Picts to have sought a settlement in Ireland, before they resorted to Britain. Finally, it may be mentioned as a curious confirmatom of the identity here assumed of the Cumbri and the modern Welsh, that the only word which has been preserved of the language of the former people, namely, the term Mormarusa, which Plux quotes as meaning the Dead Sea, appears to be Welsh, Mor in that language signifying the sea,

That the Welsh, indeed, were in very ancient

Strath-Clyde, sufficiently attests his northern and

HISTORY OF THE BRITISH ISLANDS. voired, as we went along, both to note the princiname which, as is well known, comprehended at pal of the various opinions that have been enterdern Germany and Denmark, the Cumbric Chertained on the many obscure and difficult questions it presents, and to collect, from the lights of history and the evidence of facts together, what appears to be the most consistent and otherwise probable conclusion on each controverted point. The following may be given as a simmary of the views that have been offered. Beginning with Treland, it may be affirmed that everything in that country indicates the decidedly Celtic character of its primitive papulation; and taking the geographical postato of the island along with the traditions of the people, we can have little doubt that the quarter from which elnefly it was originally colonized was the opposite permisula of Spani. That settlements were also effected in various parts of it, before the dawn of recorded history, by bodies of people from other parts of the continent -- from Gaul, from Germany, from Scandmaym, and even possibly from the neighbouring coast of Britain -is highly probable; but although several of these foreign bands of other blood seem to have acquired in succession the dominion of the country, their munbers do not appear in any instance to have been considerable enough to alter the thoroughly Celtic chaincter of the great body of the population, of their language, of their customs, and even of their institutions. Thus, the Scots, who appear to have been organally a Tentonic people from the northern parts of the European continent, although they eventually subjugated the divided native Tosh so completely as to impose their own name upon the island and the whole of its inhabitants, were vet them-elves more trely subjugated, by being melted down and absorbed usto the mass of the more numerous Celtic race among whom they had settled. The invosion of Ireland by the Seits, and the subsequent intermixture of the conquerors with the conquered, resembled the subjugation of Saxon Britam by the Normans, or still more nearly that of Celtie or Romanized Gaul by the Franks, in which latter ease the conquerors, indeed, as happened in Ireland, gave then name to the country, but the native inhabitants in turn gave their lansame to the conquerors. In this manner it happened that the Trish, after they came to be called Septs, were really as much a Celtic or Gache people as ever. The Scots from Ireland who colonized the western coast of North Britain, and came at last to give their name to the whole of that part of our island, were undoubtedly a race of Gael. They were called Scots merely because the whole of Ireland had, by that time, come to be known by the name of the country of the Scots, who had obtained the dominion of it. The original population of ancient Caledonia, however, appears to have been of Gothie lancage, and to have come from the opposite coasts of Germany, and what is now called Long after the arrival of the Irish Scots in the western part of the country, this original Gothic race, or possibly another body of settlers who had subsequently poured in from the

same quarter, retained, under the name of the Picts, the occupation and sovereignty of by far the greater portion of what is now called Scotland. But most probably some ages before they were deprived of their Scottish sovereignty by the successful arms or intrigues of the king of the Highland Gael, bands of Picts appear to have established themselves in the west of England, where they came eventually to be known to their Saxon neighbours by the name of the foreigners, or the Welsh. The Welsh, however, still do and always. have called themselves only the Cymry, which appears to be the same name with that of the Cumbri or Cummeru, so famous in ancient times; and taking this circumstance, along with the tradition they have constantly preserved of their original emigration into Britain from a country on the other side of the German Ocean, there scens to be every reason for concluding that the Cymry of Britain, called by their neighbours of other blood at one time Picts (whatever that name may mean), at another Welsh, are really the remnant of the Cimbri of antiquity. There remains ofily to be noticed the original population of the rest of South Britain, or of that part of the island

now properly called England. It can hardly admit of a doubt that the whole of the south of Britain was originally colonized mainly from the neighbouring coast of Gaul. Some bands of Germans may have settled along the east coast, and some Celtic tribes from Spain may have established themselves in the west; but the great body of the inhabitants by whom the country was occupied when it first became known to the Romans were in all probability Celts from Gaul. We are inclined to think that even the Belgic tribes who, some centuries before Cæsar's invasion, appear to have obtamed the possession of the greater part of the south coast, were either really of mixed German and Celtic Inicage, or had adopted the Celtic tongue from the previous occupants of the territory, with whom they intermixed after their arrival in Britain, and who were probably much more numerous than their invaders. There does not seem to be any evidence either that what are called the Belgic tribes of Britain spoke a different language from the rest of the natives, or that any people speaking a Gothic dialect had ever been spread over any considerable portion of the south of Britain in the e early times.

## BOOK I.

THE BRITISH AND ROMAN PERIOD; FROM B.C. 55 TO A.D. 449,

#### CHAPTER I.

NARRATIVE OF CIVIL AND MILITARY TRANSACTIONS.

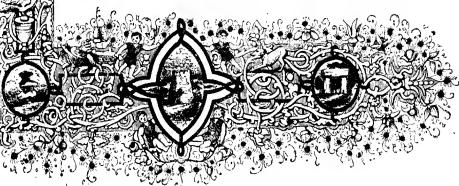

H E conquests of Julius Caesar in Gaul brought h in within sight of the coast of Britan, and laving established

the Roman

authority in the nearest countries on the continent, which are now called France and Belgium, it was almost as natural for him to aim at the possession of our island as for the masters of Italy to invade Sacily, or the conquerors of Italia the contiguous island of Ceylon. The disjunction of Britain from the rest of the world, and the stormy but narrow sea that flows between it and the main, were circumstances just sufficient to give a bold and romantic character to the enterprise, without being read barriers to a skilful and courageous ge-

neral. But there were other motives to impel Ciesar. Britain, or the far greater part of it, was inhabited by a people of the same race, language, and religion as the Gauls, and during his recent and most ardness campaigns the islanders had assisted their neighbours and kindred of the continent, sending important aid more particularly to the Veneti, who occupied Varines in Bretagne, and to other people of Western Garl who hved near the seacoast Cresar, indeed, says hunself that in all les wars with the Gauls the enemies of the Republic had always received assi\dance from Britain, and that this fact made him resolve to pass over into the island. This island, moreover, seems to have had the character of a sort of Holy Land among the Celtic nations, and to have been considered the great centre and stroughold of the Druids, the revered priesthood of an iron superstition that bound men, and tribes, and nations together, and inflamed them even more than patriotism against the Roman con-

querors. With respect to Drudism, Britain perhaps stood in the same relation to Gaul that the island of Mona or Anglescy bore to Britain; and when the Romans had established themselves in Gaul they had the same motives for attacking our island that they had a gentury later when they had fixed themselves in Britain, for falling upon Apglesey, as the centre of the Druds and of British umon, and the spurce of the remaining national resistance.

It is to be remembered, also, that, whatever may have been the views of personal ambition from which Caesar principally acted, the Romans really laid the best of all pleas for then wars with the Ganls, who had been then constant enemies for centuries, and originally their assailants. Their possession of Italy, indeed, could not be considered as secure until they had subdued, or at least incpressed with a sufficient chead of their arms, the ficice and restless nations both of Gaul and Germany, some of whom -down almost to the age of Casar—had not ceased occasionally to break through the barrier of the Alps, and to carry fire and sword into the home territories of the republic. These and the other northern barbarians, as they were called, had had their eye upon the cultivated fields of the Italic permisula ever souce the irruption of Bellovesus in the time of the elder Tarquin; and the war the Gauls were now carrying on with Caesar was only a part of the long contest which did not terminate till the empire was overpowered at last by its natural encunes ucarly five centuries afterwards. In the meantime it was the turn of the Gauls to find the Roman valour, in its highest condition of discipline and efficiency, irresistible; and the Britons, as the active allies of the Ganls, could not expect to escape sharing in their chastisement.

According to a curious passage in Suctonius, it was reported that Cæsar was tempted to invade Britain by the hopes of finding pearls.\* Such an inducement seems scarcely of sufficient importance, although we know that pearls were very highly esteemed by the ancients, and Plmy, the naturalist, tells us that Cæsar offered or dedicated a breastplate to Venus ornamented with pearls which he pretended to have found in Britain. . Caesar might be tempted by other real and more valuable productions, and he could not be ignorant of the existence of the British lead and tin which the Phæmicions had imported into the Mediterranean ages before his time, and in which the Phocrean colony of Massilia or Marseilles was actually carrying on a trade. Casar lumself, indeed, says nothing of this; but within a few miles of our coasts, and among a people with whom the British had constant intercourse, he must have acquired more information than appears respecting the natural fertility of the soil, and the mineral and other productions of the island. From evident reasons, indeed, the Gauls in general might not be very communicative on these subjects; but among that people Cæsar had allies and some

steady friends, who must have been able and ready to satisfy all his inquines. This subservient instrument Comins, who will presently appear upon the scene, must have possessed nuch of the information required. His love of conquest and glory alone neight have been a sufficient incentive to Cæsa, but a recent and philosophic writer assigns other probable motives for his expeditions into Britain,—such as los desire of dazzling his counttrymen, and of seeming to be absorbed by objects remote from internal ambition by expeditions against a new world, or of furnishing himself with a pretence for prolonging his provincial command, and keeping up an army devoted to him, tall the time should arrive for the execution of his projects against liberty at Rome.

JULIUS CASAR.
From a Copper Com in the British Museum.

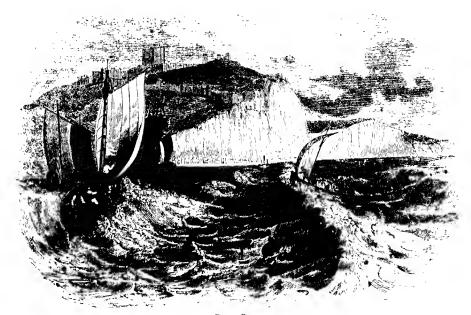

Whatever were his motives, in the year 55 before Christ, Cæsur resolved to cross the British Channel, not, as he has bunself told us, to make then a conquest, for which the season was too far advanced, but in order merely to take a view of the island, learn the nature of the inhabitants, and survey the coasts, harbours, and landing-places. He says that the Gails were ignorant of all these things; that few of them, except merchants, ever visited the island; and that the merchants themselves only knew the sea-coasts opposite to Gaul. Having called together the merchants from all parts of Gaul, he questioned them concerning the size of the island, the power and customs of its inhabitants, their mode of warfare, and the harbours they had capable of receiving large ships. He adds, that on none of these points could they give him information; but, on this public occasion, the silence of the traders probably proceeded rather from unwillingness and caution than ignorance, while it is equally probable that the conqueror received a little more information than he avows. He says, however, that for these reasons he thought it expedient, before he embarked himself, to dispatch C. Volusenns, with a single galley to obtain some knowledge of these things; commanding him, as soon as he had obtained this necessary knowledge, to return to head-quarters with all haste. He, then himself marched with his whole army into the territory of the Morini, a nation or tribe of the Gauls who inhabited the seaconst between Calais and Boulogue,—"because thence was the shortest passage into Britain." Here he collected many ships from the neighbour-

me ports. Meanwhile many of the British states having been warned of Cæsar's premeditated expedition by the merchants that resorted to their island, sent over ambassadors to limi with ini offer of hostages and submission to the Roman authority. ceived these amhassadors most kindly, and exhorting them to continue in the same pacific intentions, sent them back to their own country, dispatching with them Comius, a Gaul, whom he had made king of the Atrebatians, a Belgic nation then settled in Artois. Casar's choice of this envoy was well directed. The Belgie at a comparatively recent period had colonized, and they still occupied, all the south-castern coasts of Britain; and these colonists, much more civilized than the rest of the islanders, no doubt held frequent commercial and friendly intercourse with the Atrebatians in Artors,

and the rest of the Belgie stock settled in other places. Casar lunself says not only that Comius was a min in whose virtic, wisdom, and fidelity he placed great confidence, but one "whose authority in the island of Britain was very considerable." He therefore charged Comius to visit as many of the British states as he could, and persuade them to enter into an ultimee with the Romans; informing them, at the same time, that Casar intended to visit the island in person as soon as possible.

C. Volumenus appears to have done little service. with his galley. He took a view of the British coast as far as was possible for one who had resolved not to quit his vessel or trust himself into the hands of the natives, and on the fifth day of his expedition returned to head-quarters. such information as he had Cæsar embarked the infantry of two legions, making about 12,000 men, on board eighty transports, and set sail from Portis Itins, or Witsand, between Calais and Boulogne. The cavalry, embarked in eighteen other transports, were detained by contrary winds at a port about eight miles off, but Casar left orders for them to follow as soon as the weather permitted. This force, however, as will be seen, could never make itself available, and hence mainly arose the reverses of the campaign.

At ten o'clock on a morning in autumn (Halley, the astronomer, in a paper in the Philosophulal Transactions, has almost demonstrated that it must have been on the 26th of August) Cæsar reached the British coast, near Dover, at about the worst

DOVER CLIFFS

possible point to effect a handing in face of an enemy, and the Britons were not disposed to be friends. The submission they had offered through their ambassadors was intended only to prevent or retard invasion; and seeing it fail of either of these effects, on the return of their apibassadors with Comius, as Casar's envoy, they made that prince a prisoner, loaded him with chains, prepared for their defence as well as the shortness of time would permit; and when the Romans looked from their ships to the steep white cliffs above them, they saw them covered all over by the armed Finding that this was not a convenient landing-place, Casar resolved to lie by till the third hour after noon, in order, he says, to wait the arrival of the rest of his fleet. Some laggard vessels appear to have come up, but the eighteen transports, bearing the cavalry, were nowhere seen. Cæsar, however, favoured by both wind and tide, proceeded at the appointed hour, and sailing about seven miles further along the coast, prepared to land his forces, on an open, flat shore, which presents itself between Walmer Castle and Sandwich.\* The Britons on the cliffs perceiving his design,

Horsley (in Britannia Romana) shows that Casar must have eded to the north of the South Foreland, in which case the landing must have been effected between Walmer Castle and Sandwich. Others, with less reason, think he sailed southward from the South Foreland, and landed on the flats of Romacy Marsh.

followed his motions, and sending their cavalry and war-chariots before, marched rapidly on with then main force to oppose his landing anywhere. Caesar confesses that the opposition of the natives was a bold one, and that the difficulties he had to encounter were very great on many accounts; but superior skill and discipline, and the employment of some military engines on board the war-galleys, to which the British were maccustomed, and which projected missiles of various kinds, at last triumphed over them, and he discinbarked his two legions. We must not omit the act of the standard-bearer of the tenth legion, which has been thought descrying of particular commemoration by his general. While the Roman soldiers were hesitating to leave the ships, chiefly deterred, according to Cæsar's account, by the depth of the water, this officer, having first solemnly be sought the Gods that what he was about to do might prove fortunate for the legion, and then exclaiming with a loud voice, "Follow me, my fellow-soldiers, unless you will give up your eagle to the enemy! I, at least, will do my duty to the republic and to our general!" leaped into the sea as he spoke, and dashed with his ensign among the enemy's ranks. The men instantly followed their heroic leader; and the soldiers in the other ships, excited by the example, also crowded forward along with them. The two armies were for some

Nor were the invaded people slow in perceiving

time mixed in combat; but at length the Britons withdrew in disorder from the well-contested beach. As their cavalry, however, was not yet arrived, the Romans could not pursue them or advance into the island, which Casar says prevented his rendering the victory complete.

The native maritime tribes, thus defeated, sought the advantages of a hollow peace. They de-

Снар. I.] -

sought the advantages of a hollow peace. They despatched ambassarlors to Caesar, offering hostages, and an entire abmission. They liberated Commis, and restored bun to his employer, throwing the blame of the barsh treatment his cuvoy had met with upon the multitude or common people, and entreating Casar to excuse a fault which proceeded solely from the popular ignorance. The conqueror, after reproaching them for sending of their own accord ambassadors into Gaul to sue for peace, and then making war upon him, without any reason, forgave them their offences, and ordered them to send in a certain number of hostages, as security for their good behaviour in future. Some of these hostages were prescoted immediately, and the Britons promised to deliver the rest, who lived at a distance, in the course of a few days. The native forces then seemed entirely disbanded, and the several chiefs came to Caesai's camp to offer allegrance, and negotrate or intrigue for their own separate interests.

On the day that this peace was rouclided, and not before, the unlineky transports, with the Roman cavalry, were enabled to quit their port on the coast of Gaul. They stood across the channel with a gentle gale; but when they neared the British coast, and were even within view of Caesar's camp, they were dispersed by a tempest, and were finally obliged to return to the port where they had been so long detained, and whence they had set out that morning. That very night, Caesar says, it happened to be full moon, when the tides always rise Inghest—" a fact at that time wholly unknown to the Romans'''—and the galleys which he had with him, and which were hauled up on the beach, were filled with the rising waters, while his heavier transports, that lay at anchor in the roadstead, were cither dashed to pieces, or rendered altogether unfit This disaster spread a general confor sailing. sternation through the camp; for, as every legionary knew, there were no other vessels to carry back the troops, nor any materials with the army to repair the ships that were disabled, and, as it had been from the beginning, Casar's design not to winter in Britain, but in Gaul, he was wholly unprovided with corn and provisions to feed his Suctomus says, that during the mine years Cæsar held the military command in Gaul, annelst a most brilliant series of successes, he experienced only three signal disasters; and he comits the almost entire destruction of his fleet by a storm in Britain, as one of the three.

The operations of the Roman troops had intherto been almost confined to the Medderranean, where there is no perceptible ride. Yet, dwing their raty on the const of Gaul, on the opposite side of the channel, they ought to have become acquainted with these phenomena. Probably they had never attended to the irregularities of a spring-tide.

the extent of Casar's calamity, and devising means to profit by it. They plainly saw he was in want of cavalry, provisions, and ships; a close inspection showed that his troops were not so numerous as they had fancied, and probably fannharized them in some measure to their wailke weapons and demeanors; and they confidently hoped, that by defeating this force, or surrounding a and cutting off their retreat, and storying them, they should prevent all future invasions. The chiefs in the camp having previously held secret consultations among themselves, retired, by degrees, from the Romans, and began to draw the islanders together. Casar says, that though the was not fully apprized of their designs, he partly guessed them, from their delay in sending in the hostages promised from a distance, and from other circumstances, and instantly took measures to provide for the worst. He set part of his army to repair his shattered fleet, using the materials of the vessels most injured to patch up the rest; and as the soldiers wrought with an indefatigability shiting the dangerous argency of the case, he had soon a number of vessels fit for sea. He then sent to Gaul, for other materials wanting, and probably for some provisions also. Another polition of his troops lie employed in foraging parties, to bring into the camp what corn they rould collect in the adjacent country. This supply could not have been great, for the natives had everywhere gathered in their harvest, except in one field; and there, by lying in ambush, the Britons made a bold and bloody attack, which had well ingli proved fatal to the invaders. As one of the two legions that formed the expedition were cutting flown the corn in that field, Caesar, who was in his fortified camp, suddenly saw a great cloud of dust in that direction. He rushed to the spot with two cohorts, leaving orders for all the other soldiers of the legion to follow as soon as possible. His arrival was very opportune, for he found the legion, which had been surprised in the corn-field, and which had suffered considerable loss, now surrounded and, pressed on all sides by the cavalry and war-chariots of the British, who had been concealed in the He succeeded in bringing. neighbouring woods off the engaged legion, with which he withdrew to his intrenched camp, declining a general engagement for the present. Heavy rams that followed for some days, confined the Romans within their intrenchments. Meanwhile the Bistish force of horse and foot was micreased from all sides, and they gradually drew round the intrenchments. Carsar, anticipating their attack, • marshalled his legions outside of the camp, and, at the proper moment, fell upon the islanders, who, he says, not being able to sustain the shock, were soon put to In this victory le attaches great importance to a body of thirty horse, which Comius, the Atrebatian, had brought over from Gaul. Romans pursued the fugitives as far as their

strength would permit; they slaughtered many of

them, set fire to some houses and villages, and then returned again to the protection of their camp. On the same day the Britons again sued for peace, and Caesar being anxious to return to Gaul as quickly as possible, "because the equinox was approaching, and his slaps were leaky," granted it to them on no harder condition than that of doubling the number of hostages they had promised after their first defeat. He did not even want for the bostages, but a fair wind springing up, be set sail at midnight; and arrived safely in Gaul. Eventually only two of the British states sent their hostages; and this breach of treaty gave the Roman commander a ground of complaint by which to justify his second myasion.

In the spring of the following year (B.C. 54) Carsar again embarked at the same Portus Itius for Britain. This time peculiar attention had been paid to the build and equipment of his fleet: he had 800 vessels of all classes, and these carried five legions and 2000 cavalry,—an invading force in all not short of 32,000 men.\* At the approach of this formillable armament the natives retired in dismay from the coast, and Cæsar disembarked, without opposition, at "that part of the island which he had marked out the preceding summer as being the most convenient landing-place." This was probably somewhere on the same flat between Walmer Castle and Sandwich, where he had landed the year hefore. Having received intelligence as to the direction in which the Britons had retired, he set out about midnight in quest of them, leaving ten cohorts, with 300 horse behind him on the coasts to goard his camp and fleet. After a larried night-march, he came in sight of the islanders, who were well posted on some rising grounds behind a river, -probably the Stour, near Canterbury. The confederate army gallantly disputed the passage of the river with their cavalry and chanots; but being remilsed by the Roman horse, they retreated towards the woods, to a place strongly fortified both by nature and art, and which Casar judged had been strengthened before, on occasion of some nisternal native war, "for all the avenues were se-

cured by strong barricades of felled trees had upon
 \* In this calculation on allowance of 500 is made for suckness,

At this period the infantry of a legion,

one another." This strong-hold is supposed to have been at or near to the spot where the city of Canterbury now stands. Strong as it was, the soldiers of the seventh legion (the force that had suffered so much the preceding campage in the corn-field) carried it by means of a mound of earth they cast up in front of it; and then they drave the British from the cover of the wood. The evening closed on their retreat, up which they must have suffered little loss, for Caesar, fearful of following them through a country with which he was unacquainted, strictly forbade all pursuit, and employed his men in fortifying their camp for the night. The Roman eagles were scarcely displayed the following morroug, and the trumpets had hardly sounded the advance, when a party of horse brought intelligence from the coast that nearly all the fleet had been driven on shore and wrecked during the night. Commanding a necessary balt, Cresar flew to the sea-shore, whither he was followed by the legions in full retreat. The misfortune had not been exaggerated; forty of his slips were irretrievably lost, and the rest so damaged that they seemed scarcely capable of repair. With his characteristic activity, he set all the carpenters of the army to work, wrote for more artisans from Ganl, and ordered the legious stationed on that coast to build as many new ships as they could. Apprehensive alike of the storms of the ocean and the fierce attack of the natives, Caesar ordered that all his ships should be drawn up on dry land and inclosed within his fortified camp. Although the ancient galleys were small and light compared to our modern men-of-war, and the transports and tenders of his fleet in all probability little more than sloops and barges, this was a laborious operation, and occupied the saldiers ten days and nights. Having this secured his fleet, he set off in pursuit of the enemy, who had made a good use of his absence by increasing their army, and appointing one cluef to the supreme command of it. The choice of the confederated states fell upon Cassivellanmis (his Celtic manie was perhaps Caswallon), whose territories were divided from the maritime states of the river Thames, at a point which was between seventy and eighty miles from Ciesar's camp on the Kentish const. This prince had hitherto been engaged in

cosualties, and deficiencies

when complete, amounted to 6100 men

ROMAN GALLEY - Taken from the Model presented to Greenwich Hospital by Lord Anson \*

almost constant wars with his neighbours, whose affection to him must have therefore been of recent date and of somewhat doubtful continuance; but he had a reputation for skill and bravery, and the dread of the Romans made the Britons forget their quarrels for a time, unite themselves under his sommand, and intrust him with the whole conduct Cæsar found him well posted at or near to the scene of the last battle. Cassivellaunus did not wait to be attacked, but charged the Roman cavalry with his horse supported by his chariots. Clesar says that he constantly repelled these charges, and drove the Britons to their woods and hills; but that, after making great slaughter, venturing to consinue the pursuit too far, he lost some men. It does not appear that the British retreated far; and some time after these skirmishes they

gave the Romans a serious check. Sallying unexpectedly from the wood, they fell upon the soldiers, who were employed as usual in fortifying the camp or station for the might, and cut up the advanced guard. Cæsar sent two cohorts to their aid, but the Britons charged these in separate parties, broke through them, routed them, and then retired without loss. A military tribine was slam,—and but for the timely arrival of some fresh cohorts the conflict would have been very disastrous. Even as it was, and though Cæsar covers the fact by a somewhat confused narrative, it should appear that a good part of his army was beaten on this occasion. He says that from this action, of which the whole Roman army were spectators, it was evident that his heavy-armed legions were not a fit match for the active and light-armed Britons, who

The construction of Roman galleys has been more completely investigated since Lord Anson's time, but as this model was prepared with great care, and is open to public inspection, we give an engraving of it.

[Book I.

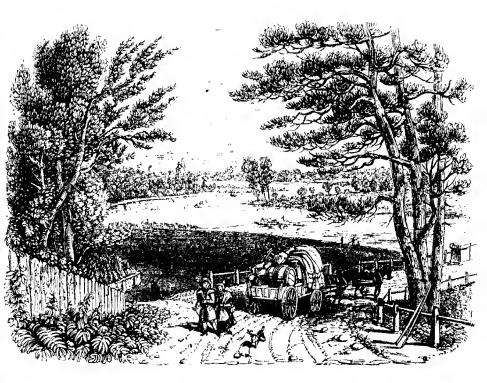

always fought in detachments with a body of reserve in their rear, that advanced fresh supplies when needed, and covered and protected the forces when in retreat; that even his cavalry colld not engage without great danger, it being the custom of the Britons to counterfeit a retreat, until they had drawn the Roman borse a considerable way from the legions, when, suddenly leaping from their chariots, they charged them on foot, and, by this unequal manneer of fighting rendered it equally dangerous to pursue of retire.

The next day the Britons only showed small bodies on the fulls at some distance from the Roman camp. This made Cresar believe they were less willing to skirmish with his cavalry; but no sooner had he sent out all his caralry to forage, supported by three legions (between horse and foot this foraging party comprised considerably more than half the forces he had with him), than the Britons fell upon them on all sides, and even charged up to the solid and impenetrable legions. The latter bold step was the cause of their rum: the superior arms, the defensive armour, and the perfect discipline of those masses, rendered the contest too unequal; the British warriors were repulsed, -- thrown off like waves from a mighty rock,—confusion ensued, and, Caesar's cavalry and infantry charging together, atterly broke the confederate army. The conqueror informs us that after this defeat, the auxiliary troops, which had repaired from all parts to Cassivellaumus's standard, returned severally to their own homes; and that during the rest of the campaign the enemy never again appeared against the Romans with their whole force.

These severe contests had not brought Cassar for

These severe contests had not brought Cæsar far into the interior of the island; but now he followed up Cassivellaunus, who retired, for the defence of his own knigdom, beyond the Thames. Marching through Kent and a part of Surrey, or the beautiful country which now bears those names, the Romans reached the right bank of the Thames, at Cowaystakes, near Chertsey\* in Surrey, where the river was considered fordable. The passage, however, was not undisputed: Cassivellaumus had drawn up his troops in great numbers on the opposite bank; he had likewise fortified that bank with sharp stakes, and driven similar stakes into the bed of the inver, vet so as to be concealed or covered by the water. Of these things Casar says he was informed by prisoners and deserters. It should appear that he overcame the obstacles raised at the ford with great case; he sent the horse into the

• This point, like most of the other holdings mentioned by Caesac, has been the subject of disjuite. We venture to its it where we do, on the ardharity of Camden, and Mr. Gabe, a writer in the Avelocologia, vol. n. 0.183.

Caesar soon appeared with his legions before the

capital of Cassivellamus; and he says that though

the place seemed very strong both by art and nature, he resolved to attack it in two several points

He was once more successful: the Britons fled to

another wood, after a short stand, and the Romans took many prisoners and vast numbers of cuttle .

Though thus defeated in the inland districts, Cas-

sivellamms still hoped to redeem the fortunes of his country by a hold and well-conceived blow, to be

struck on the sea-coast. While the events related

were passing beyond the Thames, he dispatched messengers to the four princes or kings of Can-

tunn (Kent), to instruct them to draw all their

forces together, and attack the camp and ships of

the Romans by surprise. The Kentish Britons'

obeyed their instructions, but, according to Casar,

the Romans, sallying from their entreuchments,

made a great slanghter of their troops, took one of

the princes prisoner, and returned in safety to the

camp. At the news of this reverse, the brave

Cassivellaunus lost heart; he sent ambassadors to

sue for peace, and availed himself of the mediation

with Casar of Comms, the king of the Atrebatians,

with whom, at one time or other, he appears to have

had friendly relation. The Roman general, as we

have noticed, states that the authority or influence

would be currous to see how he exercised it in

favour of his Roman patron; hut here we are left

in the dark. Casar turned a ready ear to the over-

tures of Cassivellannus, and granted Inni peace on

of Comms in the island was very considerable.

In many respects the towns of the Cm-

river before, ordering the foot to follow close behind them, which they did with such rapidity flat, though nothing but their heads appeared above water, they were presently on the opposite bank, where the enemy could not stand their charge, but The rest of his army having disbanded, Cassivellamins now retained no other force than 4000 war-

always keeping at a distance from their main body, and retiring, when attacked, to woods and inaccessible places; whither also be caused such of the inhabitants as lay on Caesar's line of march, to withdraw with their cattle and provisions. Being perfectly acquainted with the country, and all the roads and defiles, he continued to fall upon detached parties; and the Romans were never safe, or masters of any ground, except in the space covered by their entrenched camp or their legions. On account of these frequent surprises, Cresur would not permit his horse to forage at any distance from the legions, or to pillage and destroy the condity, nuless where the foot was close at hand to support them. The fatid want of union among the petty states into which the island was frittered, and the hatred some of them entertained against their former enemy Cassivellaumis, now, however, began to

chariots, with which he horassed the Romans,

CHAP. I.]

appear and to disconcert all that chief's measures The Tripobautes, who dwelt in tor resistance Essex and Middlesex, and who formed one of the most powerful states in those parts, sent ambassodors to Casar. Of this state was Mandubratus, who had fled to Cresar into Gard, in order to avoid the fate of his father, Imanuentins, who had held the sovereignty of the state, and whom Cassivellaunus had defeated and put to death. The ambassadors entreated Casar to restore their prince, who was then a guest in the Roman camp, to defend hun and them against the fury of Cassivellaumis, promising, on these conditions, obedience and entire submission in the name of all the Trinobantes. Cresar demanded forty hostages, and that they should supply his army with corn The general does not confess it, but it is very probable that, through the wise measures of Cassivellaunus, the Romans were at this time sorely distressed by want of provisions. The Trinobantes delivered both the corn and the hostages, and Cæsar restored to them their prince. Immediately upon this, other tribes, whom Cæsar designates the Cenimagni, Segontiaci, Ancalites, Bibroci, and Cassi, also sent in their submission. Some of these people informed Cæsar that he was not far from the capital of Cassivellaunus, which was situated amidst woods and marshes, and whither multitudes of the British had retired with their cattle, as to a place of safety. This town is

supposed to have been near to the site of St.

Alban's, and on the spot where the flourishing

such easy conditions, that some writers have been induced to believe he was heartily fired of the For himself be only says that he harassing war. was in a lurry to return to Gaul, on account of the frequent insurrections in that country. He merely demanded hostages, appointed a yearly tribute (the amount of which is nowhere named, and which was probably never pand), and charged Cassivellaunus to respect Mandabratius and the Trinobantes. Having received the hostages, he led his troops back to the Kentish coast, and crowding them into his ships as closely and quickly as he could, he set sail by night for Gaul, fearing, he says, the equinoxal storms which were now at hand. He tells us he had many prisoners; but he certainly did not creet a fort, or leave a single cohort Behind him, to secure the ground he had gained in the island.\* Tacitus, writing 150 years later, says distinctly, that even Julius Casar, the first who entered Britan with an army, although he struck terror into For the preceding part of our omnati (Casa Gallico, from book ty cb 18, to book y ch, 19 (inclusive)

after. Though called a town, and a capital, it appears from Caesar to have been nothing but a thick wood or labyrinth, with clusters of houses or

the islanders by a successful battle could only maintain himself on the sea-coust;—that he was a discoverer rather than a conqueror. He only saw a small portion of the island; but the farther he got from the coast and the Belgic colonics, the

more fierce and barbarous he found the natives. We have dwelt more particularly on these campaigns, as we have the accomplished general's own account to guide us, and as many of his details may be applied to explain the other Roman wars which followed, when there was no Cresar to describe in the closet his exploits in the field. The sequel, indeed, when we must follow professional historians, who were never even in Britain, is comparatively uninteresting and monotonous. We shall, therefore, set down the great results, without embarrassing the reader with unnecessary details; but at this point it will be well to pause, in order to offer a few general remarks, which will equally clucidate the past and future campaigns of

the Romans in our island.

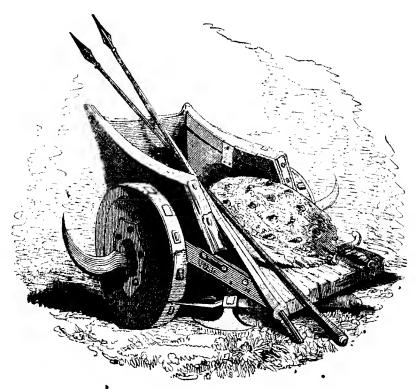

The contest which had thus taken place between the British bands and the famed Roman legions at a period when the discipline of those corps was most perfect, and when they were commanded by the greatest of their generals, was certainly very unequal; but less so (even without taking into account the superiority of numbers and other advantages, all on the safe of the invaded,) than is generally imagined and represented. A brief examination of the arts and practices of war of the

two contending parties may serve to explain, in a great measure, what is past, and render more in telligible the events which are to ensue. The first striking result of such an examination is a suspicion, and indeed a proof, that the Britons were much farther advanced in civilization than the sayage tribes to which it has been the fashion to compare them Were this not the case, the somewhat imsuccessful employment against them, of so large an army as that of Cæsar, would be disgraceful to the Roman name. Their war-chariots, which several times produced tremendous effects on the Romans, and the use of which seems at that time to have been peculiar to the Britons, would of themselves prove a high degree of mechanical skill, and an acquaintance with several arts. These cars were of various forms and sizes, some being rude, and others of curious and even elegant workmanship. Those most commonly in use, and called Esseda, or Esseda, by the Romans, were made to contain each a charioteer for driving, and one, two, or more warriors for fighting. They were at once strong and light; the extremity of their axles and other salient points were armed with scythes and hooks for cutting and tearing whatever fell in their way, as they were driven rapidly along. The horses attached to them were perfect in training, and so well in hand, that they could be driven at speed over the roughest country, and even through the woods, Chich then abounded in all directions. The Romans were no less astomshed

at this dexterity than at the number of the chariots. The way in which the Britons brought the chariots into action, was this: at the beginning of a battle they drove about the flanks of the enemy, throwing darts from the cars; and, according to Cæsar, the very dread of the horses, and the noise of the rapid wheels, often broke the ranks of his When they had succeeded in making an legions. impression, and had winded in among the Roman cavalry, the warriors leaped from the chariots, and fought on foot. In the menutime, the drivers retired with the chariots a little from the combat, taking up such a position as to favour the retreat of the warriors in case of their being overmatched. "In this manner," says Cæsar, "they perform the part both of rapid cavalry and of steady infantry; and, by constant exercise and use, they have arrived at such expertness, that they can stop their horses when at full speed, in the most steep and difficult places, turn them which way they please, run along the carriage-pole, rest on the harness, and throw themselves back into their chariots with incredible dexterity."

For a long time the veteran legions of Rome could not look on the clouds of dust that announced the approach of these war-chariots without trepidation. The Gauls had once the same mode of fighting, and equally distressed the Romans with their war-chariots. Nearly 300 years before the invasion of Britain, when the Gauls were established in parts of Italy, and in close alliance with the Sammites, a successful charge of the Roman cavalry was repulsed, and the whole army thrown into dismay, by a mode of fighting to which they were utter strangers: "A number of the enemy," says Livy, "mounted on chariots and cars, made towards them with such a terrible noise, from the trampling of the horses and the rolling of the wheels, as affrighted the horses of the Romans, imaccustomed to such operations. By this means, the victorious cavalry were dispersed, and men and horses, in their headlong flight, were thrown in heaps to the ground. The same cause produced disorder even in the ranks of the legions: through the impetuosity of the horses, and the carriages they dragged through the ranks, many of the Roman soldiers in the van were trodden or bruised to death; and the Gauls, as soon as they saw the enemy in confusion, followed up the advantage, nor allowed them breathing-time." \* The use of war-chariots, however, seems to have fallen out of fashion among the Gauls, during the long period that had,

\* Tit. Liv., 1. x, o. 5

BRITISH WAR CHARIOT, SHIR'D AND SPEARS - De Loutherbourg.

Book J.

them, in describing his many battles with that people on the continent. -

The existence of the accessories—the books and sey hes attached to the wheels of axles - has been questioned, as neither Cresar, nor Tacitus, nor any early writer, with the exception of the geographer Pomponras Mela (who wrote, however, in the first ecutury), expressly impitions them in describing the war-chariots. Weapons, answering to the description, have, however, been found, on the field of some of the most ancient battles. Between the Roman invasion under Cæsar, and that ordered by the Emperor Claudius, the cars or chariots of the British attracted notice, and were exhibited in Italy. They were seen in the splendid pageantry with which Caligula passed over the sea from Putcoh to Bane, on his mole and bridge of boats. The emperor, Suctomins tells us, rode in a chariot drawn by two famous horses, and a party of his friends followed, mounted in British chariots. Probably Caesar had carried some of the native war-cars to Rome, as currosities, just as our navigators bring the canoes of the Indians and South-Sea Islanders to England. At subsequent periods, the war-chariots of the Britons were frequently alluded to by the poets as

well as historians of Rome. The ancient Britons were well provided with borses, of a small breed, but hardy, spirited, and yet docale. Their cavalry were armed with shields, Broad-sevords, and lances. They were accustomed, like the Gauls, and their own chariot-men, to dismount, at fitting seasons, and fight on foot; and their horses are said to have been so well trained, as to stand firm at the places where they were left, till their masters returned to them. Another common practice among them was, to mix an equal number of their swiftest foot with their cavalry, each of these foot-soldiers holding by a horse's mane, and keeping pace with him in all his motions—Some remains of this last custom were observed among the Highland clans in the last century, in the civil wars for the Pretender; and in more modern, and regular, and scientific warfare, an advantage bas often been found in mounting

infantry behind cavalry, and in teaching cavalry

to dismount, and do the duty of foot-soldiers. great fondness for horses, and a skill in riding

...them, and breaking them in for cars and chariots,

were observable m all the nations of the Celtic race.

The scythe-armed cars of the Britans may be

assumed as one of the many links in that chain

which seems to connect them with Persia and the

East, where similar vehicles were in use for many

The infantry of the Britons was the most mimerous body, and, according to Tacitus, the main strength of their armies. They were very swift of foot, and expert in swimming over rivers and crossing fens and marshes, by which means they were enabled to make sudden attacks and safe retreats. They were slightly clad; throwing off in battle the whole, or at least the greater part, of whatever

defeat when they came to close combat. Their swords were long and unwieldy, without points, and only meant for cutting - awkward and offenceless weapons compared to the compact, manageable, cut-and-thrust swords of their enemies, which could be used in the closed melec. But an important circumstance, which throws the advantage still more on the side of the Romans, is, that while their weapons were made of well-tempered steel, the swords and dirks of the Britons were, in all probability, only made of copper, or of copper mixed with a little tm. We are told that the swords of their neighbours, the Gauls, were made of ropper, and bent after the first blow, which gave the Romans a great advantage over them. A prodigious number of warlike implements, as axes, swords, spear-heads, all made of copper, or of copper mixed with tin, and known among untiquaries by the general name of " Celts," have been dug up in different parts of our island; but we are not aware of the discovery of my dungs of the sort made of iron, that can safely be referred to the manufacture of the ancient Britons. In the alisence of metals, they used bones and flints to t.p. their arrows, their spears, and lances black stones, perforated to receive a wooden hundle, served them as maces or battle-axes. These are the very weapons of savages; and perhaps those which have been found in such abundance buried in the earth, are much more ancient than the period

defensive armour, carrying nothing of that sort

but a small light shield; and this, added to their swiftness, gave them, in some respects, a

great advantage over the heavily-armed Romans,

whose foot could never keep pace with them This,

indeed, was so much the case in the ensuing wars,

that the turn of a battle was often left to depend,

not on the legions, but on their barbaran auxili-

aries, some of whom were as lightly composit as

the Britons themselves. In coming to their offen-

sive arms, we reach a point where they were decidedly inferior to the Romans; and a cause, per-

haps, as principal as any other, of then invariable

of Casan's invasion, or were only used at that and later periods in the interior and northern parts of the country. In addition to their clumsy sword, the British infantry carried a short durk and a spear. The spear was sometimes used as a missile weapon, having a leather thong fixed to it, and retained in the hand when thrown, in order that it might be recovered again; at the butt-end of this spear was sometimes a round hollow ball of copper, or mixed copper and tin, with pieces of metal inside, and, shaking this, they made a noise to frighten the horses when they engaged with cavalry.

With the exception of the Druds, all the young Pinen among the Britons and other Cfltic nations were trained to the use of arms. Frequent hostilities among themselves kept them in practice, and

CHAP. I.] CIVIL AND MILITARY TRANSACTIONS. 37
hunting and martial sports were among their prin- rate band, commanded by the chieftain or head of

of the warriors of one clan, commanded each by its own chictain; they were commonly formed in the shape of a wedge, presenting its sharp point to the enemy; and they were so disposed, that they could readily support and relieve each other. The cavalty and chariots were placed on the wings, but small flying parties of both maneuvired along the

then travelling chariots and their waggons, with their respective families in them, in order that

those vehicles might serve as barriers to prevent

attack in those directions, and that their courage

anght be inflamed by the presence of all who were

In the rear and on their flanks they fixed

cipal occupations in their brief periods of peace.

Even in tactics and stratagetics, the more difficult

parts of war, they displayed very considerable talent and skall. They drew up their troops in

regular order, and if the form of a wedge was not

the very best for infantry, it has been found, by the Tinks and other Eastern nations, most effective for

cavalry appointed to charge. They knew the importance of keeping a body in reserve; and in

several of their battles they showed skill and

promptitude in out-flanking the enemy, and turn-

ing him by the wings. Their infantry generally

occupied the centre, being disposed in several

lines, and in distinct bodies. These corps consisted

most dear to them. Some of the native princes displayed eminent abilities in the conduct of war. According to the Roman writers, Cassivellaumus, Caractaens, and Galgacus all formed combined movements and cularged plans of operation, and contrived stratagenes and surprises which would have alone benout to the greatest captams of Greece and Rome. Their choice of ground for fighting upon was almost invariably indicions, and they availed themselves of their superior knowledge of the country on all occasions. In the laborious arts of fortifying, defending, or attacking camps, castles, and towns, they were, however, deficient. Their strongest places were surrounded only by a shallow ditch and a mid wall, while some of their towns had nothing, but a parapet of felied trees placed lengthwise. While the Roman camps, though occapied only for a night, were strongly fortified, their own camps were merely surrounded by their

cars and waggons, -- a mode of defence still common

among the Tartar and other nomadic tribes in Asia.

But, as the Roman war proceeded, we frequently

find them giving more attention to the defence of

then night camps; and some of the more perma-

nent positions they took up were strengthened with

deep ditches and stone walls.

The armies of the ancient Britons were not divided into bodies, mixed, but distinct as a whole, consisting each of a determinate number of men recrinted from different families and in different places, and commanded by appointed officers of various ranks, like the Roman legious and our modern regiments; but all the fighting-men of each particular clair or great family formed a sepa-

great a disposition in the warriors to look up or ly to the head of their own claim, or at furthest to the king of their own limited state.

Far different from these were the thoroughly organized and inter-dependent masses of the Roman army, where the commands were nicely defined and graduated, and the legions (each a small but perfect army in itself) acted at the voice of the consul, or its one supreme clinet, like a complicated engine set in motion by its

main-wheel. As long as Rome maintained hermilitary glory, the legions were composed only of

free Roman citizens, no albes or subjects of con-

quered nations being deemed worthy of the honour

of fighting in their ranks. Each legion was divided into horse and foot, the cavalry bearing what is

considered, by modern scientific writers, a just pro-

portion, and not more, to the milantry. Under the

old kings a legion consisted of 3000 foot, and 300

horse; under the consuls, of 4200 foot, and 400 horse; but under Casar and the emperors it

amounted to 6100 foot, and 726 horse. Lake our

that faimly. By this system, which had other disadvantages, the command was trutered away into

minute fractions. All the several clans which

composed one state or kingdom were commanded in cluef by the sovereign of that state; and when

two or more states formed as alliance and roade

war in conjunction, the king of one of these states was chosen to be generalissing of the whole.

These elections gave rise to palousies and dissen-

sions, and all through the system there were too

many divisions of command, and power, and too

regiments, the legions were distinguished from each other by then number; being called the first, the second, the third, &c. In the early ages of the republic they had no more than four or five legions kept on foot, but these were increased with nucrease of conquest and territory, and under the empire they had as many as twenty-five or thirty legions, even in time of peace. The industry of each legion was divided into ten cohorts. The first cohort, which had the custody of the eagle and the post of honour, was 1105 strong; the remaining nine colloits had 555 men each Instead of a long, awkward sword of copper, every soldier had a short, manageable, well tempered Spanish blade of steel, sharp at both edges as at the point; and he was always instructed to thrust rather than cut, in order to inflict the more fatal wounds, and expose his own hody the less. In addition to a lighter spear, the legionary earned

the formidable pilum, a heavy javelm'six feet

long, terminating in a strong trlangular point of

steel, eighteen inches long. For defensive armour

they were an open belinet with a Jofty crest, a

breast-plate or coat of mail, greaves on their legs,

and a large, strong shield on their left arms. This

shield or buckler, altogether unlike the small,

round, basket-looking thingsused by the Britons, was

four feet high, and two and a half broad; it was

framed of a light but firm wood, covered with

bull's hide, and strongly guarded with bosses or plates of iron or bronze.

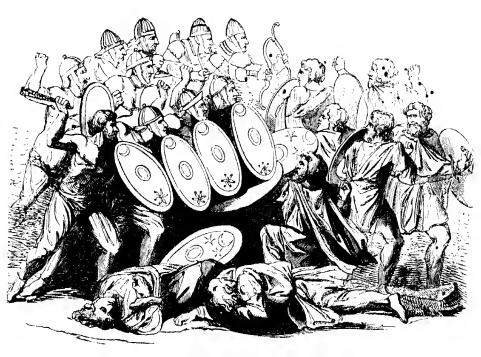

The cavalry of a legion was divided into ten troops or squadrons; the first squadron, as destined to act with the strong first cohort, consisting of 132 men, whilst the nine remaining squadrons had only 66 men each. Their principal weapons were a sabre and a javelin; but at a later period they borrowed the use of the lance and iron mace or hammer from foreigners. For defensive armour they had a beliet, a coat of mail, and an oblong shield. The legions serving abroad were generally attended by auxiliaries raised among the provinces and conquests of the empire, who for the most part retained their national arms and loose modes of fighting, and did all the duties of light troops. Their number varied according to circumstances, being seldom much inferior to that of the legions; but in Britain, where mention of the barbarian anxiharies constantly occurs, and where, as we have intimated, they performed services for which the legions were not calculated, they seem to have been at least as numerous as the Roman sol-Three legions, say the historians, were competent to the occupation of Britain; but to this force of 20,478 we must add the auxiliaries, which will swell the number to 40,956. Gauls, Bel-

gians, Batavians, and Germans were the hordes that accompanied the legions in our island.

Such were the main features and appointments of the Roman legions in their prime, and such they continued during their conflict with the Britons, and long after all the southern parts of our island were subjugated by their might. They were afterwards sadly diminished in numbers and in consideration. They lost their discipline; the men threw off their defensive armour as too heavy for them to wear; changes were made in their weapons; and, not to notice many intermediate variations, a legion, at the final departure of the Romans from Britain, consisted only of from 2500

to 3000 indifferently armed men.

After the departure of Cæsar, Britain was left undisturbed by foreign arms for nearly one hundred years. But few of the events that happened during that long interval have been transmitted to us. We can, however, make out in that dim obscurity that the country, and more particularly those maritime parts of it occupied by the Belgæ, and facing the coast of Gaul, made considerable advances in civilization, borrowing from the Gauls, with whom they were in close communication, some of those useful and elegant arts which that people had learned from the Roman conquerors,

While Vespasian, his second in command, who was afterwards emperor under the same name, employed himself in subduing Vectis (the Isle of Wight) and the maritime states on the southern 1 crificed. and castern coasts, Aulus Plautius prosecuted a long and, in good part, an undecisive warfare with the inland Britons, who were still commanded by

\* Dio Cass. (in the abridgmerk by Xiphilinus), lib.lx. Suctonius in C. Cland, c. Avii.

Vespasian thoroughly reduced no more of the island than what hes to the south of the Thanes, with a narrow strip on the left bank of that river; and when Plantins was recalled to Rome, even these territories were over-run and thrown into confusion by the Britons. Ostornis Scapula, the new propractor, on his arrival in the island (A.D. 50), found the affairs of the Romans in an all but hopeless state; then allies, attack d and plundered on all sides, were falling from them, the boldness of the imsubdued states was rapidly increasing, and the people they held in subjection were tipe for But Ostorms, who had probably brought reinforcements into the island, was equal to this emergency: knowing how much depends on the beginning of a campaign, he put himself at the head of the light troops, and advanced against the maranding enemy by rapid marches. The Britons, who did not expect be would open a campaign in the winter, were taken by surprise, and defeated with great loss. It should appear from Tacitas that Ostorins at onec recovered all the country, as far as the Severn, that had been conquered, or rather temporarily occupied, by his predecessor Plantus; for the great historian tells us, mimediately after, that he erected a line of forts on the Sabrina (Severn) and the Antona (Nene); but it is more probable that this advance was made by a series of battles, rather than by one hasty blow struck in the winter by the light division of his Ostorius was the first to cover and protect the conquered territory by forts and lines, the line he now drew cut off from the rest of the island nearly all the southern and south-castern parts, which included the more civilized states who had either submitted or become willing albes, or been conquered by Plantins and Vespasian. It was by the gradual advance of lines like these that the Romans brought the whole of England south of the Tyne, mider subjection. Ostorias, also, adopted the cantious policy of disarming all such of the Britons within the line of forts as he suspected. This measure, always odious, and never to be carried into effect without shameful abuses of power, particularly exasperated those Britons within the line, who, like the Iceni, had not been conquered, but, of their own good and free will, had become the allies of the Romans. Enemies could not treat them worse than such friends,—the surrender of arms was the worst consequence that could result from defeat in a war which they had not yet essayed. It would also naturally occur to them that if the Romans were permitted to coop them up within military posts, and sever them from the rest of the island, their independence, whether unarmed or armed, was completely sa-The Iceni, a brave tribe, who are supposed to have dwelt in Norfolk and Suffolk, took up arms,

[Book I.

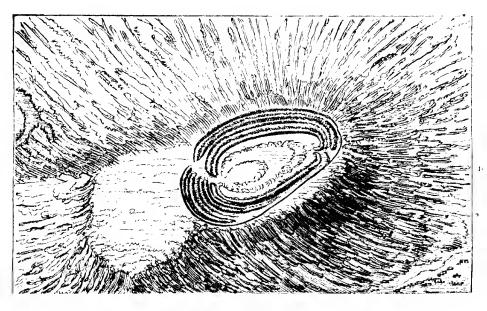

Between them both, Flautus and

formed a league with their neighbours, and chose their ground for a decisive battle. They were beaten by Ostorius, after having fought obstinately

to the last and given signal proofs of courage. After the defeat of the Icem and their allies, the Romans marched beyond their line of demarcation against a people called the Cangi, and, Tacitus says, got within a short march of that sea that hes between Britain and Ireland, Free the pursuit of this thind enemy, Ostorius was recalled by a rising of the Brigantes, who occupied Yorkshire, with parts of Lancashire and the adjoining counties. Having subduck these in their turn, and drawn a<sup>3</sup> camp and fixed a colony of veterans among them, Ostorius marched rapidly against the Silures,—the mhabitants of South Wales, -- the fiercest and most obstmate enemies the Romans ever encountered in South Britain. To their natural ferocity, says Tacitus, these people added the courage which they now derived from the presence of Caractacus His valour, and the various turns of his fortune, had spread the fame of this heroic chief throughout the His knowledge of the country, his admirable skill in the stratagems of war, were great advantages; but he could not bone, with inferior forces, to beat a well-disciplined Roman army. He therefore retired to the territory of the Ordovices, which seems to have included within it nearly all North Wales. Having drawn thither to his standard all who considered peace with the Romans as another word for slavery, he resolved to wait firmly the issue of a battle. According to the great historian, be chose his field with admirable art. It was rendered safe by steep and craggy hills. parts where the mountains opened and the easy

acclivity afforded an ascent, he raised a rampart of massy stones. A river which offered no safe ford flowed between limit and the enemy, and a part of his forces showed themselves in front of his ramparts.

As the Romans approached, the chicftans of the confederated British clans rushed along the ranks exhorting their men, and Caractacus animated the whole, exclaiming, "This day must decide the fate of Britain The era of liberty or eternal bondage begins from this hour! Remember your brave ancestors who drove the great Caesar lumself from these shores, and preserved then freedom, their property, and the persons and honour of then wives and children!" There is a lofty hill in Shropshire, near to the confluence of the rivers Columnid Teme, which is generally believed to be the scene of the hero's last action. Its ridges are furrowed by trenches and still retain fragments of a loose stone compart, and the hill for many centuries has heen called by the people Caer-Caradoc, or the castle. or fortified place of Caradoc, supposed to be the British name of Caractacus. Ostorius was astomshed at the excellent arrangement and spirit he saw, but his numbers, discipline, and superior arms once more gamed him a victory. Tacitus says that the Britons, having neither breast-plates nor helinets, could not maintain the conflict, -that the better Roman swords and spears made dreadful havoe, that the victory was complete. Caractacus escaped from the carnage; but his wife and daughter were taken prisoners, and his brothers surrendered

BRITISH CAMP AT CARR-CARADOC .- From Roy's Military Antiquities.

soon after the battle. The hero himself did not, however, escape long, for having taken refuge with his stepmother, Cartismantha, queen of the Brigantes, that heartless woman caused him to be put in chains, and delivered up to the Romans. From the camp of Ostorus he was carried, with his wife and all his family, to the foot of the Emperor's throne. All Rome—all 1

patient to gaze on the indomitable Briton, who for nine years had bidden defiance to the masters of the world. His name was everywhere known, and he was everywhere received with marked respect. In the presence of Claudus, his friends and family quailed and begged for mercy; he alone was superior to raisfortune: his speech was manly without being insolent,—his countenance still un-

CARACTACUS AT ROME,-Puseli.

altered, not a symptom of fear appearing—no sorrow, no mean condescension; he was great and dignified even in rum. This magnammons believiour no doubt contributed to procure him milder treatment than the Roman conquerors usually bestowed on captive princes; his chains and those of his family were instantly struck off. At this cross Tactus leaves him, and his subsequent his

tory is altogether unknown.

Their sangunary defeat and the loss of Caractacus did not break the spirit of the Silures. They fell upon the Romans soon after, broke up their fortified camp, and prevented them from their fortified camp, and prevented them from prefect of the camp, with eight centurions and the hravest of his soldiers, was slam; and, but for the arrival of reinforcements, the whole detachment would have been sacrificed. A foraging-party, and

the strong detachments sent to its support, were routed; this forced Ostorius to bring his legions into action, but, even with his whole force, his success was doubtful and the loss of the Silures very mconsiderable. Continual and most harassing attacks and surprises followed, till at length Ostorius, the victor of Caractaens, sunk under the fatigue and vexation, and expired, to the joy of the Britons, who boasted that though he had not fallen in battle, it was still their war which had brought him to the grave. The country of the Silares, intersected by numerous and rapid rivers, heaped into mountains, with winding and narrow defiles, and covered with forests, became the grave of many other Romans; and it was not till the reign of Vespasian, and more than twenty years after the death of Ostorius, that h was conquered by Julius Frontinus.

For some time the Roman power in Britain was stationary, or, at most, it made very little progress mider Aulus Didnis and Veranus, the immediate successors of Ostorius. Indeed, under these governors, the Emperor Nero, who had succeeded his father Clandins, is said to have scriously entertained the thought of withdrawing the troops and abandoning the island altogether,—so profitless and uncertain seemed the Roman possession of Britain.

But the next governor, Paulinus Suctomis, an officer of distinguished merit (a.b. 59-61), revived the spirit of the conquerors. Being well aware that the island of Mona, now Anglesey, was the chief sent of the Draids, the refage place of the defeated British warriors and of the disaffected generally, be resolved to subdue it. In order to facilitate his approach, he ordered the construction of a number of flat-bottomed boats; in these he transported his mantry over the strait which divides the island from the main (the Menar), while the cavalry were to find their way across, partly by fording and partly by swimming. The Britons added the terrors of their superstition to the force of their arms for the detence of this sacred island the opposite shore," says Tacitus, "there stood a wildly-diversified host; there were armed men in dense array, and women running among them, who, in dismal dresses and with disbevelled hair, like turies, carried flaming torches. Around were Drinds, pouring forth curses, lifting up their bonds to heaven, and striking terror, by the novelty of their appearance, into the hearts of the Roman soldiers, who, as if their limbs were paralyzed, exposed themselves motionless to the blows of the enemy. At last, aroused by the exhortations of then leader, and stunnlating one another to despise a frantic band of women and priests, they make their easet, everthrow their fees, and burn their in the fires which they themselves had kindled for others. A garrison was alterwards placed there among the conquered, and the groves sacred to their cruel superstition, were cut down."

But while Suctonius was engaged in securing the sacred island, events took place in his rear which went far to commit the safety of the entire cuspire of the Romans in Britain. His attack on the Draids and the grove of Mona could not ful to exasperate all the British tribes that clung to their ancient worship; other and recent causes of provocation were particular to certain of the states. The Romans, in the colonies they had planted in the island, indulged too freely in what are called the rights of conquest; they treated the Britons with crucky and oppression; they drove them from their houses, and adding insult to wrong, called them by the opprobrious names of slaves and captives. these acts the veterans or superiors were actively seconded by the common soldiery, -a class of men who, in the words of Tacitus, are by their habits of life trainer to licentiousness. The conquerors, toe, had introduced priests of their own creed; and these, "with a pretended zeal for religion, devoured the substance of the land." Boadicea, widow of

king Prasutagus, and now queen of the Iceni, probably because she remonstrated against the forcible seizure of the telestory her husband bequeather her, or possibly because she attempted to resist the Romans in their plunder, was treated with the ntmost barbarity: Catus, the procurator, caused her to be scourged, her daughters to be violated in her presence, and the relations of her deceased husband to be reduced to slavery. Her imbested-of wrongs, the dignity of her birth, the energy of her character, inade Boadicea the proper rallying point; and immediately an extensive armed league entrusted her with the supreme command. Boadicca's own subjects were joined by the Trinobantes; and the neighbouring states, not as yet broken into a slavish submission, engaged in secret councils to stand forward in the cause of national liberty. They were all encouraged by the absence of Suctonius, and thought it no difficult enterprise to overrun a colony undefended by a single fortification. Tacitus says (and the statement is curious, considering their recent and ancertain tenure) that the Roman governors had attended to improvements of taste and elegance, but neglected the weeful,—that they had embellished the province, but taken no pants to put it in a state of defence. The storm first brist on the colony of Camalodmium, which was laid waste with fire and sword, a legion which marched to its relief being cut to pieces. Catas, the procurator, terrified at the fury his own enermuties had mainly excited, fled, and effected his escape into Ganl | On receiving the news of these disasters, Suctonins Imrried across the Menai strait, and marching through the heart of the country came to London, which city, though not yet digmfied with the name of a Roman colony, was a populous, trading, and prosperous place. He soon found he could not maintain that important town, and therefore determined to evacuate it, in order to scenre the rest of the provinces. The inhabitants, who foresaw the late of the fair town, implored him with tears to change his plan, but in vain. signal for the march was given, the legions defiled through the gates, but all the cutzens who chose to follow their cagles were taken under their protec-They had scarcely cleared out from London when the Britons entered; of all those who from age, or weakness, or the attractions of the spot, had thought proper to remain behind, scarcely one escaped. The inhabitants of Verulamium were in like manner utterly annihilated, and, the carnage still spreading, no fewer than 70,000. Romans and their confederates fell in the course of a few days. The infurnated insurgents made no prisoners, gave no quarter, but employed the gibbet, the fire, and the cross, without distinction of age or sex.

Sactonius, having received reinforcements which made his army amount to about 10,000 men, all highly disciplined, chose an advantageous field, and waited the battle. The Britons were also reinforced, and from all quarters: Tacitus says they were an incredible multitude; but their ranks were swelled and weakened by women and children.

BOADICEA HARANGUING THE BRITISH TRIBES .- Stothard.

They were the assailants, and attacked the Romans in the front of their strong position.

Previously to the first charge, Boadicca, mounted in a war-chariot, with her long vellow han streaming to her feet, with her two minied daughters beside her, drove through the ranks, and harangued the tribes or nations, each in its turn.\* She reminded them that she was not the first woman that had led the Britons to battle; she spoke of her own irreparable wrongs, of the wrongs of her people and all their neighbours; and said whatever was most calculated to spirit them, against their prond And licentious oppressors. The Britons, however, were defeated with tremendons loss; and the wretched Boadicca put an end to her existence by taking poison. As if not to be behind the barbarity of those they emphatically styled barbarians, the Romans committed an indiscriminate massacre, visiting with fire and sword not only the lands of those who had joined the revolt, but of those who were thought to have wavered in their allegiance. Tacitus estimates the number of the Britons who were thus destroyed at 80,000; and in the train of war and devastation followed farme and disease.

 Dio has described her costume as heing a platted funic of various colours, a chain of gold round her waist, and a long mantle over all, Die Nic. apud Xiphil. But the despondence of sickness and the pangs of hunger could not induce them to submit; and though Suctionals received important reinforcements from the continent (acording to Tacitus, by the directions of the emperor Nero, 2000 legionary soldiers, 8 auxiliary cohorts, and 1000 horse, were sent to him from Germany), and retained the command some time longer, he left the island without finishing this war; and notwithstanding his victories over the Drinds and Boadicea, his immediate successors were obliged to relapse into mactivity, or merely to stand on the defensive, without attempting the extension of their dominions.

Some lifteen or sixteen years after the departure of Suctomis the Romans recommenced their forward movements, and (v.p. 75—78) Julius Frontinus at last subdued the Silures. This general was succeeded by Chœus Julius Agricola, who was fortunate, as far as his fame is regarded, in having for his son-in-law the great Tacitus, the partial and cloquent recorder of his deeds. Exaggeration and favour apart, however, Agricola appears to have had a skill in the arts both of peace and war. He had served under Suetonius during the Boadicean war; he was beloved by his army, and well acquainted with the country; and now, before he left the supreme command, he completed the conquest

way Frith. The Tau, he says (the Tans of Tacı-

of South Britain, and showed the victorious cagles of Rome as far north as the Grampian hills. One of his first operations, which proves with what tenacity the British held to their own, was the reconquest of Mona; for scarcely had Suctomus turned his back when they repossessed themselves of that island. Having made this successful beginning, and also chastised the Ordovices, who had cut a division of cavalry to pieces, he endeavoured by mild measures to endear himself to the acknowledged proyuccals of Rome, and to conciliate the British tribes generally, by acts of kindness. " For," says Tacitus," the Britons willingly supply our armies with recruits, pay their taxes without a murnur, and they perform all the services of government with alacrity, provided they have no reason to complain of oppression. When injured, their resentment is quick, sudden, and impatient;

they are conquered, not spirit-broken; they may be

At the same time Agricola endeavoured to subdue their fierceness and change their erratic habits,

reduced to obedience, not to slavery," \*

by teaching them some of the useful arts, and accustoming them to some of the luxuries of civilized He persuaded them to settle in towns, to build comfortable dwelling-houses, to raise halls and temples. It was a capital part of his policy to establish a system of education, and give to the sons of the leading British chiefs a fincture of polite letters. He praised the talents of the pupils, and already saw them, by the force of their natural genms, outstripping the Gauls, who were distmguished for their aptitude and abilities. Thus, by degrees, the Britons began to cultivate the beanties of the Roman language, which they had before disdained, to wear the Roman toga as a fashionable part of dress, and to indulge in the luxuries of baths, porticos, and elegant banquets. In the second year of his government (a.d. 79), Agricola advanced into the north-western parts of

he erected fortifications composed of castles and ramparts.

In his third campaign (A.D. 80) Agricola led his army still further north; but the line of march, and the degree of progress made in it, are not easily ascertained. The outlines presented to us by Tacitus are vague and industinct, which may be ascribed both to the generality of that writer's language, and to the limits of his information.

Britain, and partly by force and more by clemency,

brought several tribes to submission. These are

not named by Tacitus, but they probably dwelt in

the heart of the country to the east of the Ordovices

aml the Silures.

Wherever he gamed a district

It is the opinion of a late writer,\* however, that Agricola, setting out from Mancumium, the Manchester of present times, led his army towards the north-western coasts, and not towards the north-eastern, as is commonly stated; and that after traversing parts of Lancashire, Westmoreland, and Cumberland, he came to the Tau, which this writer contends was not the fiver Tay, but the Sol-Chalmers, Caledonia.

tus) was a British word, eiginfying an estuary, or any extending water; it might equally nuply the Solway, the Tay, or any other estuary. Besides, it was the plan of this cautious general, it is argued, to advance, by degrees, and fortify the country as he advanced; and we accordingly find from spending the remainder of this season in building a line of forts, in the most convenient situations for keeping possession of the territory he had gamed. raising of a part, if not of the whole of that rainpart drawn right across the island, from the Solway to near the mouth of the Tyne, and called Agricola's Wall, is supposed to have taken place in this year. It must be confessed, however, that the tenor of Tacitus's narrative, and some of his expressions in particular, require considerable straining before we can reconcile them with this account. In the first place, it is to be observed, that he speaks of Agricola's march to the Taus in his third summer, as merely an inroad, the effects of which were to discover the country, to lay it waste, and to strike terror into the inhabit-It appears to be clear that the occupation of it was not at that time attempted or thought of, Then, when the historian proceeds to relate the operations of the next campaign, he expressly informs us that the country which Agricola employed this fourth summer in taking possession of and fortifying, was that which the had thus in the preceding summer overrun. No words are used which can imply that he penetrated into any new country in his fourth compaign; the statement distmetly is, that he only occupied and secured what

way, his fourth summer (a.d. 81) was employed in exploring and overrunning the century extending from that aim of the sea to the Friths of Clyde and Forth, and in securing, as usual, the advance he had thus made. Tactus describes the place where the waters of the Glotta and Bodotia (the Friths of Clyde and Forth) are prevented from journing only by a narrow neck of land, and tells us, that Agricola drew a chain of forts across that isthmus. These forts are supposed to have stood in the same line where Lollus Urbirus afterwards created his more compact rampart, and not far from the modern causal which connects the two estuaries.

But in making this advance, Agricola seems to

According to the view, however, which supposes

him not till now to have ever been beyond the Sol-

he had already surveyed and laid waste.

have neglected the great promontory of Galloway, which lay between the Solway and the Clyde, and was then occupied by the Novantæ, and, in part, by the Selgovæ and Dannii; we mean more particularly the country now included in Wigton, Kirkcudbright, Damfries, and Ayrshiræ. In his fifth campaign (A.D. 82), therefore, he thought it prudent to subdue these tribes, who, in the advance he contemplated for the next year beyond the Frith of Forth, would, from their western position, have been in his rear. He accordingly invaded "that part of Britain," says Tacitus, "which is opposite

HISTORY OF ENGLAND.

Galgacus, who ranks with Cassivellaums and Caractacus, as one of the beroes of the British At the opening of his seventh and last campaign (A.D. 84), when Agricola moved forward, he found

been dug up; and on the hill above Ardoch Moon, are two enormous heaps of stones, called Carnwochel, and Carnlee probably the sepalekral can us of the Caledonians who fell in the battle.\* The host of Galgacus fought with great obstimacy and bravery; but they were no more able to resist the disciplined legions of Rome in a pitched battle, than their brethren the southern Britons had They were defeated, and pursued with great loss; and the next day nothing was seen in front of the Roman army but a silent, and, described country, and houses involved in smoke and flame. Tactus relates that some of the flying natives, after tears and tender embraces, killed their wives and children, in order to save them from slavery and the Romans. In the battle the Caledonans used war-chariots, like the southern Britons; and the Roman writer mentions their broadswords and small targets, which remained so long after the peculiar arms of the Highlanders. The victory of Agricola, however valueless in its results, was complete; and, though Tacitus does not record his death on the field, he speaks no more of the brave

In the course of these two campaigns north of the Forth the Romans seem to have derived an uncommon degree of assistance from their fleet, which was probably much better appointed and commanded than on any former occasion. After defeating Galgaeus, Agricola sent the ships from the Frith of Tay to make a coasting voyage to the north, which may very properly be called a \* Cholmers's Catedonia, b. I. ch. jii. Roy's Military Antiquities, plate 10. Stobie's Map of Perth

extend his conquests to the north-east, beyond the Fight of Forth. His fleet had already sinveyed the coasts and harbours, and his naval officers showed him the mo-t commodions passage,—at Inchgarvey, as it is supposed,—where he seems to have been met by a part of his fleet, and wafted over to the advancing bount in Fife, now called Northferry + 'Other writers, however, suppose that he marched along the southern side of the Forth, to a point where the river was narrow and fordable, and crossed it somewhere near Stirling. It is possible that both courses may have been adopted by different physicians of the troops. On the north side of the Forth the troops were attended and supported by the slips; so that their march must have been along the east-coast. The fleet kept so near the shore, that the mariners frequently landed and escamped with the land forces—each of these bodies entertaming the other with marvellous tales of what they had seen and done in these unknown seas and regions. Having crossed the Frith of Forth,  $\Lambda {
m gricola}$ found lumself, for the first time, fairly engaged with the real Caledonians—a people, at the least, as herce and brave as any he had butherto contended with. They were not taken by surprise, nor did they want to be attacked. Descending from the upper country, as Agricola advanced into Fife,

strong bands of them fell upon the new Roman

forts on the istlanus between the Forth and Clyde,

fence. Soon after, they made a night attack on the muth legion, one of the divisions of the main

army, and nearly succeeded in cutting it to pieces,

trenched. This camp was probably situated at Loch Ore, about two miles to the south of Loch

Leven, where ditches and other traces of it are still

and, without any other successful exploit, the Ro-

mans wintered north of the Fifth of Forth, in Fife,

where their fleet supplied them with provisions,

and kept open their communications with the forts

camp can still be traced for a considerable distance; weapons, both British and Roman, have

voyage of discovery; for though nearly a century and a half had passed since Casar's invasions, the Romans were not yet quite certain that Britain was an island, but thought it might have joined the European continent either at the extreme north or north-cast, or at some other, to them, unknown Agricola's fleet doubled the promontory of Carthness and Cape Wrath, ran down the western coast from the end of Scotland to the Land's End in Cornwall, then turning to the cast, arrived safe at the Trutulensian harbour (supposed to be Sandwich), and sailing thence along the castern coast, returned with glory to the point from which it had started, having thus, according to Tacitus, made the test certain discovery that Britain was an island, The tears and imagination of the mainiers were

The tears and imagination of the marmers were no doubt much excited during this periphis; and Tacitus, who probably heard the recital from his rober-m-law Agricola, and some of the officers of the fleet, was not proof against exaggeration. He tills us that the cluster of islands called the Oreades, till then wholly unknown, was added to the Roman empire (he omits all mention of the Hebrides); that Thule, which had lain concealed in gloom and eternal snows, was seen by the navigation, and that the sea in those parts was a staggish mass of stagnated water, hardly yielding to the stroke of the oar, and never agitated by using and storms?

Agricola did not keep his armiv, this second winter, north of the Friths; but withdrawing them by easy marches, put his troops in cantonments behind his works on the isthmus, if not behind those on the Solway and Tyne. Soon after this he was recalled from his command by the jealous, tyrannical Domitain. There is no evidence that Agricula left miv garrison on the north of the Frith of Forth; and it appears probable that most of the forts thrown up in the passes of the Grampians to check the meansions of the Celedonians, remains of which still exist at Coupar-Angus, Keithock, Harefaulds, Invergowrie, and other places, were either temporary encampments made on his march northwards, or were erected at a later period by the emperor Severns, and never maintained by the Romans for any length of time. The great difficulty in these regions was not the act of advancing, but that of remaining; and the poverty of the country was, no doubt, as good a defence as the valour of its inhabitants.

It was under Agricola that the Roman dommion in Britain reached its utmost permanent extent; for a few hurried marches, made at a later period, farther into the north of Caledonia, are not to be counted as conquests or acquisition of territory. For the long period of thirty years the island remained so tranquil that scarcely a single mention of its affairs occurs in the Roman annals; and we need scarcely remark that, as Instory has usually been written, the silence of historians is one of the best proofs of a nation's happiness.

HADRIAN.

Copper Com of Hadram, from one in the British Museum.

But in the reign of Hadrian\* the Romans were attacked all along their northern frontiers by the Caledonians, and the whole state of the island was so disturbed as to demand the presence of that energetic emperor (a.n. 120). The conquests of Agricola north of the Tyne and Solway were lost, his advanced line of forts between the Forth and the Clyde swept away, and Hadrian contented hinoself, without either resigning or reconquering all that territory, with raising a new rampart (much stronger than that drawn by Agricola) between the Solway Frith aid the German Ocean. Perhaps it would have been wise in the Romans to have kept to this latter line; but in the following reign of Antonian Pins (a.n. 138), the governor of Britain, Lollaus Urbicus, advanced from it, drove the barbarians before him, and again fixed the Roman frontier at the isthmus between the Clyde and Forth, where he erected a strong rampart on the line of Agricola's The prætentura or rampart of Lollaus

<sup>•</sup> In a general description of the Roman empire, under Trajan, the immediate predecessor of Hadrian, Appair says that the empirer possessed more than one half of Burjui, that he neglected the rest of the island as uscless, and derived no profit from the part he pos-

Urbicus consisted of a deep ditch, and an earthen wall raised on a stone foundation. There were twenty-one forts, at intervals, along the line, which,

from one extremity to the other, measured about thirty-one miles. A military road, as a necessary appendage, ran within the rampart, affording an easy communication from station to station. The opposite points are fixed at Caer-ridden on the Forth, and Dunglas on the Clyde. The works

DUNTOCHER BRIDGE,

appear to bave been finished about A.D. 140; and, notwithstanding the perishable materials, the mound can be traced after the lapse of seventeen Among the people, whose traditions have always retained some notion of its original destination, it is called Græme's or Graham's Dyke. Inscribed stones have been discovered there, recording that the 2nd legion, and detachments from the 6th and the 20th legions, with some auxiliaries, were employed upon the works.\*

It had been the boast of the Romans, even from the time of Agricola, that this fortified line was to cover and protect all the fertile territories of the south, and to drive the enemy as it were into auother island, barren and barbarous like themselves. But the northern tribes would not so understand it: in the reign of Commodus (a.n. 183) they again broke through this barrier, and swept over the country which lay between it and the wall of Hadran, and which became the scene of several sangumary battles with the Romans. About the same time a mutinous spirit declared itself among the legions in Britam, and symptoms were everywhere seen of that decline in discipline and military virtue which led on rapidly to the entire dissolution of the Roman empire. Shortly after, the succession to the empire was disputed with Severus by Clodius Albinus, the governor of Britain. nucqual contest was decided by a great battle in the South of France; but as the pretender Albimus had drained the island of its best troops, the northern tribes took that favourable opportunity of breaking into and desolating the settled Roman provinces. These de tractive rayages continued for years, and cost the lives of thousands of the civilized British subjects of Rome.

and though oppressed by the gout and other maladics, resolved to lead an army in person against the northern barbarians. Having made great preparations, he landed in South Battain, and almost immediately began his march to the northern frontier, which was once more marked by the walls of Agricola and Hadrian, between the Solway Frith and the month of the Tyne. The tremendous difficulties he encountered as soon as he crossed that line, sufficiently show that the country beyond it had never been thoroughly conquered and settled by the Romans, who invariably attended to the construction of roads and bridges. Even so near to the walls as the present county of Durham the country was an impassable wilderness. Probably there is some exaggeration in the number, and a part of the victims may have fallen under the spear and javelins of the natives; but it is stated that Severus, in his march northward, lost 50,000 men, who were worn out by the incessant labour of draining morasses, throwing raised roads or eauseways across them, cutting down forests, levelling mountains, and building, bridges. By these means he at length penetrated farther into the heart of Caledonia than any of his predecessors, and struck such terror into the native Roy's Milit, Antiq.

The Emperor Severus, in his old age (a.n. 207),

claus or tribes, who, however, had most prudently avoided any general action, that they supplicated for peace. He went so far to the north that the Roman soldiers were unich struck with the length of the summer days and the shortness of the nights; but the Aræ Finium Imperii Romani, and the extreme point to which Sevenis attained in this ardudus campaigm, seems to have been the end of the narrow promontory that separates the Murray and Cromarty Friths, the conqueror of explorer still leaving Ross, Sutherland, and Carthuess, or all the most northern parts of Scotland untouched.\* The uses of this most expensive nulitary promenade (for, with the exception of the road-making, it was nothing better) are not very obvious; no Roman army ever followed his footsteps, and he himself could not maintain the old debatable ground between the Tyne and the Forth. Indeed, after his return from the North, his first care was to erect a new frontier barrier in the same line as those of Agricola and Hadrian, but stronger than either of them, thus acknowledging, as it were, the uncertain termic the Romans had on the country beyond the Solway and the Tyne. For two years the Romans and their auxibaries were employed in building a wall, which they vainly hoped would for ever check the meursions of the northern clans. The wall of Agricola, which has been so fre-

quently alluded to, was in reality a long bank or mound of earth, with a ditch, on the borders of which he built, at unequal distances, a range of forts or castles. This work very nearly extended from sea to sea, being about seventy-four miles long; begimming three miles and a half cast of Newcastle, and ending twelve miles west of Carlisle existing thirty-seven years, this work, which had been much injured, was repaired (about A D. 121) by Hadrian, who added works of his own to strengthen it. He dag an additional and much larger ditch, and raised a higher rampart of earth, making his new works run in nearly parallel lines From the date of these operations with the old. and repairs the name of Agricola was lost; and the whole, to this day, has retained the name of Ha-Irian's Wall + During the unicty years that intervened between the labours of Hadrian and those of Severus, the rampart, not well calculated to withstand the frosts and rains of a cold and wet climate; had, no doubt, suffered extensively, and the barbarians had probably broken through the carthen mound in more places than one. Severns—in this surpassing his predecessors—determined to build with stone: the wall he raised was about 8 feet thick and 12 high to the base of the battlements, so that, viewed in profile, a section of it would appear much like a chair, the main part forming the seat and the embattled part the back. To the wall were added, at unequal distances, a number of stations or towns, 81 castles, and 330 castelets or turrets. At the ontside of the wall (to the north) was dug a ditch about 36 feet wide and from 12 to 15 feet deep. Severus's works run nearly parallel with the other 4 Hutton. · Chalmers Calcdonia.

two (those of Agricola and Hadran), he on the north of them and are never far distant, but may be said always to keep them in view: the greatest distance between them is less than a mile, the nearest distance about 20 yards,—the medium distance 10 or 50 yards. Exclusive of his wall and ditch, these stations, castles, and turrets, Severus constructed a variety of roads,—yet called Roman roads,—24 feet wide and 18 inches high in the centre, which led from turret to turret, from one

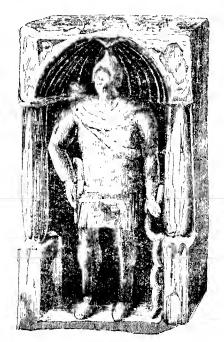

castle to another, and still larger and more distant roads from the wall, which led from one station or town to another, besides the grand military way (now our main road from Newcastle to Carli le), which covered all the works, and no doubt was first formed by Agricola, improved by Hadmar, and, after lying neglected for 1500 years, was made complete in 1752.8

As long as the Roman power lasted this barrier

was constantly garrisoned by armed men. The stations were so near to each other that, if a fire was lighted on any one of the hulwarks, it was seen at the next, and so repeated from bulwark to bulwark, all along the line, in a very short time.

Severus had not finished his works of defence when the Caledonian tribes resumed the offensive. The iron-hearted and iron-framed old emperor marched northward with a dreadful vow of extermination; but death overtook him at Eboracum (York), in the early part of the year 211. racalla, his son and successor, who had been serving with lnm in Britain, tired of a warfare in which he could gain comparatively little, hopeless perhaps of ever succeeding in the so-frequently-foiled attempt of subjecting the country north of the walls, and certainly anxious to reach Rome, in order the better to dispose of his brother Geta, whom his father had named co-heir to the empire, made a hasty peace with the Caledonians, formally ceding to them the debatable ground between the Solway and Tyne and the Friths of Clyde and Forth, and then left the island for ever.

After the departure of Caracalla there occurs another long blank,—supposed to have been a tranquil interval,—for during nearly severely years history scarcely devotes a single page to Britain and its affairs. The formidable stone rampart of Severus had, no doubt, its part in preserving the tranquillity of the southern division of the island, but it was not the sole cause of this happy

The territory ceded by Caracalla, extending eighty miles to the north of Severus's wall, and averaging in breadth, from sea to sea, not less than seventy miles, was, in good part, a fertile country, including what are now some of the best lands in Scotland. The clans left in possession of this valuable settlement would naturally acquire some taste for the quiet habits of life,—would imbibe some civilization from the Roman provincials on the south side of the wall,—and then their instructive love of property and quiet would make them restrain, with arms in their hands, the still barbarous mountaineers to the north of their own territory, whilst their own civilization, such as it might be, would make some little progress among the clans in that direction. And it certainly did happen that, even when the Roman power had long been in a state of decrepitude, no great or decisive invasions took place from the north to the south, until the Seots, a new enemy, pouring in from Ireland with an overwhelming force, drove clan upon clan, and advanced beyond the wall of Severus. This latter event ought always to be taken in connexion with the growing weakness of Rome to account for the catastrophe which followed.

• Though it has been generally overlooked, there is another, and a great cause too, which will help to account for the tranquillity enjoyed in the South, or in all Roman Britain. Caracalla imparted the freedom of Rome, and the rights and privileges of the Roman citizen, to all the provinces of the

empire; and thus the Briton exempted from arbitrary spoliation and oppression, enjoyed his patrimony without fear or challenge.\* Such a boon merited seventy years of a grateful quiet.

When Britain re-appears in the annals of history, we find her beset by fresh focs, and becoming the scene of a new enterprise, which was frequently repeated in the course of a few following years. In the reign of Diocletian and Maximinian (A.D. 288), the Scandinavian and Saxon pirates began to ravage

the coasts of Gaul and Britain. To repress these marauders, the emperors appointed Carausius, a Menapian, to the command of a strong fleet, the head-quarters of which was in the British Channel. The Menapians had divided into several colonies: one was settled in Belgium, one in Hibernia, one in

the islands of the Rhing, one at Menevia (now St. David's), in Britain,—and Carausius was by birth either a Belgian or a Briton,—it is not very certain which. Wherever he was born, he appears to have been a bold and skilful naval commander. beat the pirates of the Baltie, and enriched himself and his marmers with their plunder. It is suspected that he had himself been originally a pirate. He was soon accused of collusion with the enemy, and anticipating, from his great wealth and power, that he would throw off his allegiance, the emperors sent orders from Rome to put him to death. The wary and ambitions sailor fled, in time, with his fleet to Britain, where the legions and auxiliaries rallied round his victorious standard, and bestowed upon him the imperial diadem. The joint emperors of Rome, after seeing their attempts to reduce

lum repelled with disgrace to their own arms, were fam to parchase peace by conceding to him the government of Britain, of Boulogue, and the adjoinmg coast of Gaul, together with the prond title of Emperor. Under his reign we see, for the first time, Britain figuring as a great naval power: Carausius built ships of war, manned them in part with the intrepid Scandinavian and Saxon pirates, against whom he had fought; and, remaining absolute master of the Channel, his fleet swept the seas from the mouths of the Rhine to the Straits of Gibraltar. He struck numerous medals, with inscriptions and

BRITISH COIN OF CARAUSIUS.

perors, but a surer executioner rose up in the person of a friend and confidential minister. He was mmrdered in the year 297, at Eboracum (York), by Allectus, a Briton, who succeeded to his insidar curpire, and reigned about three years, when he was defeated and slain by an officer of Constantins Chlorus, to whom Britain fell in succession on the resignation of Dioeletian and Maximian (A.D. 296). In this short war we hear of a strong body of Franks, and Saxons, who formed the main strength of Allectus's army, and who aftempted to plunder London after his defeat. Thus, under Carausins and Allectus, the Saxons must have become acquainted even with the interior of England. Constantius Chlorus died, in the summer of A.D. 306, at Eboraeum, or York, a place which seems to have been singularly fatal to royalty in those days. Constantine, afterwards called the Great, then began his reign at York, where he was present at his,

CONSTANTINE THE GREAT. From a Gold Com in the British Museum.

father's death. After a very doubtful campaign north of the wall of Severns, the details of which are very meagre and confused, this prince left the island, taking with him a vast number of Britisl youths as recruits for his army. From this time to the death of Constantine, in 337, Britain securs again to have enjoyed tranquillity.

The Roman power was, however, decaying; the removal of the capital of the empire from Rome to Constantinople had its effects on the remote provinces of Britain, and, under the immediate successors of Constantine, while the Frank and Saxon pirates ravaged the ill-defended coasts of the south, the Piets, Scots, and Attacots—all picutioned for the first time by historians in the earlier part of the fourth century—begun to press upon the northern provinces, and defy Severus's deep ditches and wall of stone. As the Scots came over from Ireland in boats, and frequently made their attacks on the coast line, it seems not improbable that in some instances their depredations were mistaken for, or mixed up with those of the Saxons. According to our insufficient guide,\* however, it was the Picts

and Scots alone, that, after breaking through the wall of Severus, and killing a Roman general, and Nectaridans, the "Count of the Saxon Shore" in the reign of Julian the Apostate, were found, about three years after (A.D. 367), in the time of the Emperor Valentmian, pillaging the city of London

(Augusta), and carrying off its inhabitants as slaves. Theodosius, the distinguished general, and father of the emperor of that name, repelled these invaders, and repaired the wall and the ruined torts in different parts of the south; but the northern districts were never afterwards reduced to order or tranquillity, and even for the partial and temporary advantage they obtained, the Romans \*were compelled to follow the host of pirates to the extremity of the British islands, "when," as it is expressed in the verses of the poet Clandian, upon this achievement, "the distant Oreades were dienched with Saxou gore," By watching these occurrences, with others that

were equally fatal, step by step, as they happen, we shall be the better able to understand how Britam, when abandoned by the Roman legions, was in so reduced and helpless a state as to fall a prey to the barburians. If that fact is presented to us in an isolated minmer, it almost passes our comprehension; but, taken in connexion with great causes and the events of the two centuries that preceded she Saxon conquest, it becomes perfectly intelligible. 'Following an example which had become very prevalent in different parts of the disor-

gamzed empire, and which had been first set in Britam by Carausius, several officers, relying on the devotion of the legions and auxiliaries under their command, and supported sometimes by the affection of the people, cast off their allegiance to the emperor, and declared themselves independent sovereigns. It was the fashion of the servile historians to call these provincial emperors " tyrants," or usurpers, and to describe Britain especially as being "insula tirannorum fertilis"-an island fertile in usurpers. But, in sober truth, these provincial monarchs had as pure and legitimate a basis for their authority as any of the later emperors of Rome, in whose succession hereditary right and the will of the governed were alike disregarded, and whose election depended on the chances of war and the caprices of a barbarian soldiery; for the right of nonmation to the vacant empire so \* long assumed by the Prætorian bands, and which right, questionable as it was, was still certain and ascertainable—still something like a settled rule was soon overset, and disallowed by the men of all nations in arms on the frontiers. If a pretension had been set up for purity of Roman blood, or a principle established that the sovereign should be at least a Roman born, there would have been a line of exclusion drawn against the provincial officers; but so far from this being the case, we find

Roman emperors were barbarians by race and blood-natives of Illyria and other more remote provinces, while several of the most distinguished of their number sprung from the very lowest orders

of society. The most noted of the provincial emperors or pretenders that raised their standard in Britain was Maximus (a.d. 382); certainly a man of rank, and probably connected with the imperial family of Constantine the Great. If not born in Britain, he was of British descent, and had long resided in the island, where he had repelled the Picts and Scots. Brave, skillul, and exceedingly popular in Britam, Maximus might easily have retained the island, but his ambition induced him to aim at the possession of all that portion of the Western Roman empire which remained to Gratian; and this eventually not only led to his rum, but inflicted another dreadful blow on British prosperity. He withdrew nearly all the troops, and so many of the Britons followed him to Gaul, that the island was left almost defenceless, and utterly deprived of the flower of its youth and nobility. Many of these were swept off on the field of battle, many prevented by other causes from ever returning home. Gaul and Germany also gave willing recruits to the army of Maxmus, who was left, by the defeat and death of Gratian, the undisputed master of Britain, Gaul, Spain, and Italy. He established the seat of his government for some time at Treves, and is said to have declared Victor, his son by a British wife, his partner in the empire of the west —a proceeding which could scarcely fail of gratifying the host of Britons in his army. But Theodosius, called the Great, the emperor of the east, marched an overpowering army into the west, and, after being defeated in two great battles, Maximus retired to Aquileia, near the head of the Adriatic

was betrayed to the conqueror, who ordered him to be put to death in the summer of 388. Theodosius the Great now reunited the Roman empires of the east and west. While Maximus was absent, conquering many lands, the Scots and Picts renewed their depredations in Britain. We are wearied of this sad repetition, but the moment of crisis is now at hand. Chrysantus, an able general, and the lieutenant of Theodosius in Britain, wholly or partially expelled the invaders. Soon after this, Theodosius the Great died (A.D. 395), and again divided, by his will, the empire which his good fortune had reunited. Britain, with Ganl, Italy, and all the countries forming the empire of the west, he bequeathed to his son, 11onorius, a boy only ten years of age, whom he placed under the guardianship of the famous Stilicho, who fought long and bravely, but in vain, to prop the falling dignity of Rome. Theodosius was scarcely cold in his grave, when Picts, Scots, and Saxons again sought what they could devour. licho claimed some temporary advantages over

them, but the inflated verses of his panegyrist

gulf, on the confines of Italy and Illyria, where he

While these events were passing in Britain

from being a poet equal to Virgil.\*

(A.D. 403), the withered majesty of Rome was shrouded for ever: Africa was dismembered from her empire; Dacia, Parmonia, Thrace, and other provinces were laid desolate; and Alarie the Goth was ravaging Italy, and on his way to the eternal In this extremity, some Roman troops which had been lately sent into the island by Stilicho, were hastily recalled for the defence of Italy, and the Britons, again beset by the Picts and Scots, were left to shift for themselves. The islanders seem to have felt the natural love of independence, but there was no unanimity, no political wisdom, and probably but little good princaple among them. Seeing the necessity of a common leader to fight their battles, they permitted the soldiery to elect one Marcus emperor of Britain (x n. 107); and, shortly after, they permitted the sarae soldiery to dethrone him, and put him to death. The troops then set up one Gratian, whom, in less than four months, they also deposed and Then third choice fell upon Constantime, an officer of low rank, or, according to others, a common soldier. They are said to have chosen him merely on account of his bearing the imperial and auspicious name of Constantme; but he soon showed he had other properties more valuable than a name; and had he been contented with the sovereign possession of Britain, he might possibly have foiled its invaders, and reigned with peace and some glory. But, like Maximus, be aspired to the whole empire of the west, and, like Maximus, he fell (A.n. 411), after having cansed the loss of vast numbers of British youths, whom he disciplined and took with him to his wars on the continent. At one part of his short career, Constantine made lumself master of nearly the whole of Gaul, and put his son Constans, who had previously been a monk at Winchester, in possession of Spain. the course of this Spanish campaign, it is curious to

remark, that in Constantine's army there were two bands of Scots or Attacotti. Soon after the fall of Constantine we find Ge rontins, a powerful chief, and a Briton by birth, caltivating a close comexion with the Teutonic tribes; and, at his instigation, the harbarians from beyond the Rhine, by whom we are to understand the Saxons, continued to invade the unhappy island. Such underhand villanies are always common in the downfall of nations (but can the Romanized Britons fairly be called a nation?); and we find other chiefs, worse than Gerontius, in secret league

with the more barbarous Picts and Scots. It appears that after the death of Constantine, Honorins, during the short breathing-time allowed lum by his numerous enemies, twice sent over a few troops for the recovery and protection of Britain, the sovereignty of which he stillaclamed; but his exigencies soon obliged him to recall them, and about the year 420, nearly five centuries after Claud. de Bello Gallico. Notitia Imperii, sect, xxxviii.

The Britons had already deposed the magistroses appointed by Rome, proclaimed their independence, and taken up arms for that defence against their invaders which the emperor could no longer give; but the final disseverance was not accompanied by reproach or apparent ill-will. On the contrary, a mutual friendship subsisted for some time after between the islanders and the Romans; and the emperor Honorins, in a letter addressed to the states or cities of Britain, seemed formally to release them from their allegiance, and to acknowledge the national independence. For some years after the departure of the Ronaus? the historian has to grope his way in the dark; nor is it easy to determine the precise condition of the country. It appears, however, that the free minicipal government of the cities was presently overthrown by a multitude of military chiefs, who were principally of British, but partly of Roman origin. It was a period to appreciate the warrior who could fight against the Scots and Picts rather than the peaceful magistrate; and the voice of civil liberty would be rarely heard in the din of war and inva-In a very few years all traces of a popular government disappeared, and a number of petty chiefs reigned absolutely and tyranically under the poinpous namic of kings, though the kingdoms of few of them could have been so large as a secondrate modern county of England. Instead of muting for their general safety, at least until the invaders were repelled, these roitelets, or kinglings,

made wars upon each other in the presence of a

common danger; and, unwiser even than their far

less civilized ancestors in the time of Casan, they

the best part of it during nearly four centuries, the Roman emperors, finally abandoned the island.

many writers,—the miserable weakness of Britain on the breaking up of the Roman government. Other eauses of decline, however, had long been at work. Almost from the first establishment of the Roman power, the British youths raised as recruits were drafted off to the continent, where they were disciplined, and whence few ever returned. H was contrary to the policy of the Romans to teach the provincials the arts of war, and establish them as troops in their own country. The soldiers of Bri tain were scattered from Gaul to the extremities of the empire; the sedeutary and unwarlike remained at home. All this, we think, may account for the absence of a well-disciplined force in the time of Moreover, during nearly a century and a half, the drain upon the population for the purposes of Roman war must have been prodigious. In 308 Constantine took with him a vast number of Britons to the continent; this example was followed as the

enemies of the empire increased in number and

audacity, or as one pretender disputed the imperial crown with another; and we have shown, at periods so recent as A.D. 383 and 411, how the pride and flower of the youth were sacrificed in foreign warfare. The exterminating inroads of the Scots and Picts, which began early in the fourth century, and lasted, almost without intermission, until long after the departure of the Roman legions in the fifth century, must have fearfully thinned the population in the north, where arms were most wanted. The curses that destroy mankind were many, and there were none of the blessings that tend to their increase. Gaul and other provinces with which Britain traded, were in as bad a condition as herself, and thus an end was put to foreign commerce, while the internal trade of the country was gradually destroyed by divisions and wars which made it unsafe for the inhabitant of one district to transport his produce into the next, although only at a few miles distance. Under such a state of things, moreover, agriculture would be neglected, for men would not sow in the sad uncertainty whether they or the enemy should Famine and pestilence ensued; and Britain, in common with the greater part of Europe, where the same causes had been in operation, was still further depopulated by these two scourges.

We can scarcely credit Gildas, who wrote about the middle of the sixth century, when he asserts that, at the departure of the legions, the Britons

were sunk in such helplessness and ignorance that they could not repair the stone wall of Severus without the guidance and assistance of Roman workmen; but we can understand how they could not nmster forces sufficient to man that rampart, and also how the Picts and Scots should render it of no avail by turning the wall on its flanks, and landing in its rear at such distances as best suited their convenience. To maintain an adequate garrison against a vigilant and restless enemy, along a line upwards of seventy miles in length, would demand a very large disposable force. The northern barbarians would not hesitate to launch their boats in the Solway Frith, or at the month of the Tyne, north of the wall, and, by sailing south, pass that rampart at one of its extremities, and land on the coast within the wall, or ascend rivers, where that defence, left far in their rear, could present no obstacle to their progress. Their rudest coracles might have performed this coasting service in fine weather; but it is not improbable that during their occasional connexions with the Teutonic or Saxon pirates, who had made some progress in naval architecture, the Scots came into possession of larger and better vessels. An obvious fact is, that from the arrival of the latter people from heland, the

rampart of Severus began signally to fail in an-

by means of their shoals of boats, we shall generally, in regard to their earlier inroads, be nearer But the time was now come when such stratagems, or circuitous courses, were nunecessary, and the Scots and Picts leaped the ditches and scaled the ill-defended walls at all points. The fertile provinces of

though, perhaps, if, instead of taking the usual ex-

pression of their breaking through the wall, we read

that they turned it at one or other of its extremities,

the south tempted them forward till they reached the very heart of the country, which they racked with a most barbarous hand. It was not their object to occupy the country and settle in it as conquerors (had such been their plan the Britons would have suffered less); their expeditions were forrays; they came to plunder and destroy; and the booty they carried off, season after season, was a less serious loss than the slaughter and devastation that marked their advance and retreat. At this horrid crisis the more southern and least exposed parts of the island appear to have been occupied by two great parties or factions, which had absorbed all the rest, but could not come to a rational understanding with each other. One of these was a Roman party, including, no doubt, thousands of Roman citizens who had remained on

the estates they had acquired, and the many native

families that must have been connected with them

by marriage and the various ties of civil life; the

other was a British party, composed, or pretending

was inevitable.

rions Vortigern. It is not very clear whether, when it was determined a third time to implore the aid of the Romans, both these parties consented to that measure, or whether Aurelius Ambrosius did not take it upon himself, as his rival Vortigern did the ealling in of the Saxons only three years The abject prayer, however, entitled 'The Groans of the Britons,' and addressed to Ætius, thrice consul, was sent to the continent (A.D. 441). "The barbarians," said the petitioners, "chase us into the sea; the sea throws us back upon the barbarians; and we have only the hard choice left us of perishing by the sword or by the waves." But Ætius, though as great a warrior as Stilieho, was then contending with Attila, a more terrible enemy even than Alaric, and could not afford a single

on Rome thus fell to the ground. Religious controversy and the mutual hatred that inflames men when they fix the charge of heresy on one another, completed the anarchy of Britain. This is also a very common though a very strange concomitant with the fall and last agonies of nations; and the Britons, like the Jews some centuries before, and like the Greeks at Constantinople,

cohort to the supplicants, whose last, faint reliance

Gallic Bishop, who was sent over by the Pope to decide the controversy, their ruin might have been delayed; but his was a sofitary instance. Germanus, who had been a soldier before be became a priest, sallied out with a number of Britons, and to the shouts of Hallchijah, if we may believe the narrative of the Venerable Bede, cut up a party of Picts that were plundering the coast. But this Hallelujah victory, as it was called, was far from being sufficient to stay the march of the myaders, and at length Vortigern took his memorable step, and called the Saxons to his assistance—a fierce and predatory people who had frequently ravaged the island, sometimes by themselves, at others in union with the Picts and Scots, whom they were now to oppose. The people of Armorica or Brittany had already set the example, and, more fortunate than, their neighbours proved in the end, they had succeeded, by means of some Saxon allies, in maintaining the independence, and scenring the tranquillity of their country. It may be suspected that, even at this extremity, Vortigern applied for the aid of foreign arms, as much for the purpose of destroying the Roman party in the island, as for the expulsion of its invaders; and this suspicion, though not proved,

sumed their time in theological subtleties and dis-

putations when the enemy was at their gates, and

their last defences were falling above their heads,

Had some of the disputants been animated with the same martial spirit as Germanus of Auxerre, a

gains some strength from their past and existing disputes, from the reports of the deadly hatred and bloody conflicts which ensued between Aurebus Ambrosius, the head of the Roman party, and Vortigern, and from the circumstance that Aurelius, from the first landing, made head against the Saxons, while his enemy lived in peace and amity with them for some time. But, whatever were his motives, Vortigern

(a.p. 449) called the hardy freebooters of the Baltic and northern Germany, and they came most readily at his call. The story of a formal embassy to the court or general assembly of the Saxons and the pathetic speeches put into the mouths of the British envoys, seem to be pure inventions of the Three chiules (keels), or long old historians. ships, were eruising in the British Channel, under the command of two hrothers, distinguished warriors or pirates among the Saxons, who are called Hengist and Horsa, though it is possible those may not have been really their names, but designations merely derived from the standards they bore.\* appears to have been on the deek of these maranding vessels that the Saxons received the invitation, which eventually led to the conquest of a great kingdom. Vortigern appointed his ready guests to

Hengst, or Hengst, signifies a stallion; and Horsa, or Hross, does not require any explanation. It may be remarked, however, that in Danish, hors signifies not horse, but a mare. The snow-white steed still appears as the energy of Kent, in England, as it amenutly did in the shield of the "Old Saxons" in Germany. Hence the White Horse is still boine on the royal shield of Brunswick-Hanover,—Palgrave, Hist, chap, ii,

dwell in the east part of the land, and gave them the Isle of Thanet for their residence, an insulated and secure tract to those who, like the Saxons, had the command of the sea; for the narrow, and, at

times, almost invisible rill which now divides Thanct from the rest of Kent, was then a channel of the sea, nearly a mile in width. From this date begins the history of the Saxons in Britain.

## CHAPTER II.

## THE HISTORY OF RELIGION.

Section L.—Drumism.

HERE are two views under which the history of religion may form a part of the history of a country or a people. There is the history of religious opinion, and there is the history of the established church considered as one of the institutions of the state. There never probably

was a period in the history of this country when religion was more mixed up with civil affairs than in that earliest period of which we are now treating. Among the ancient Britons the ministers of religion appear to have been also the chief legislators and administrators of the law, as well as almost the sole depositories of whatever knowledge and civilization existed in the country. As, however, no British Instory, properly so called, of any kind, has been ? reserved, all the information that can be given in regard to the religious system which we have reason to believe then prevailed, is such a general account of it as we are enabled to present of the state of the island and its inhabitants in those remote ages in other respects. But even for this our materials are scanty and unsatisfactory; much of the subject is concealed in a darkness which we can have no hope of piercing; and there is so much of fanciful speculation and conjecture in the interpretation that has been put upon the few facts from which we must deduce our conclumons, that at the best the endeavour to shape them into order and meaning is very like tracing pictures in the clouds.

The ancient religion of the Britons is generally believed to have been the same with that of their Gallie neighbours and kinsmen. It is proper, however, to observe, that the scepticism of some modern historical writers has carried them so far as to incline them to doubt whether the Druidism of Ganl ever generally prevailed in Britain. pears from the narrative which has been given of the Roman conquest, that there were Druids in the island of Anglesey; but it is rather remarkable that no ancient author has expressly mentioned the existence of Druidism in any other part of the country. Both Cæsar and Pliny, indeed, have spoken of the British Druds generally; but their expressions may very well refer merely to the Druidism of Anglesey, or even, as has been suggested, to that of Ireland, which, as Pliny himself informs us, was included under the name of the British islands. If the matter therefore depended entirely on the testimony of the Greek and Roman writers, the common opinion would scarcely rest, earlicient grounds. But the general prevalence of Drudism in Britain appears to be abundantly established both by the material monuments of that system of religion which are spread over all parts of the country, and by popular customs and superstitions, derived from the same source, which have either survived to our own day, or have only recently disappeared.

Cæsar, the of all the ancients has given us the fullest and clearest account of the Druids, expressly records it to have been the common opinion of the Gauls that the Druidical discipline was discovered or invented in Britain, and from thence brought operatio Gaul; and he adds that those of the Gauls who wished to obtain a more perfect knowledge of the system were still wont to pass over into Britain to study it. Although, therefore, his sketch professes to relate only to the Druidism of Gaul, we may safely assume that it is in general equally appheable to that of Britain. The Drinds, according to Cæsar, formed throughout the whole of Gaul one of the two honourable classes of the population, the Equites, or mulitary order, forming the other. The office of the Druids was that of presiding over sacred things, of performing all public and private sacrifices, and generally of directing all religious They were also the teachers of great numbers of youth, who resorted to them for instruction in their discipline. But the function which procured them the highest honour was that which they discharged as the judges by whom were determined almost all disputes or litigations, both public and private. If any criminal act was done, if any murder was committed, if any difference arose about an inheritance or the boundaries of land, the decision lay with them; they appointed the reward or the penalty. But even in this capacity of administrators of the law, religion was the instrument they made use of to enforce obedience to their sentences. Whoever he was, whether a private individual or a person discharging a public office, that on any occasion refused to abide by their decree, they interdicted him from being present at the sacrifices. The exercise of this power, resembling the modern ecclesiastical weapon of excommunication, inflicted a punushment of the greatest severity. The person interdicted was held all offices of honour.

the protection of the law, and was excluded from

The Druidical hierarchy, it is plain from this account, held in their hands the regulation and control of by far the most important part of the

HISTORY OF ENGLAND.

internal amairs of the community, thus occupying a position in the state very similar to that formerly head in many countries by the Christian priesthood; but, if anything, still more commanding than that was, even in the darkest period of modern history. It was distinctly another power, if not superior to the civil power, at least certainly not in any respect in subjection to it.

Cæsar goes on to tell us that there was one head Draid set over the whole body, who was elected to his place of supreme authority by the suffrages of the rest, whenever it happened that there was no single individual of their number whose merits were so pre-eminent as to prevent all competition for the vacant dignity. The struggle, however, among the partisans of various candidates for the primacy sometimes came to a contest of arms. The Druids of Gaul were wont to hold a meeting at a certain time of every year in a consecrated place in the territory of the Carmites, which was considered to be the central region of Gaul; and hither all people flocked who had any litigations, and submutted themselves to their decisions and judgments. The spot here referred to is supposed to have been

Chartrain, now stands; and here it is thought the chief Druid had his residence. The seat of the Druidical primacy in Britain is conjectured to have been the isle of Anglesey. Cæsar goes on to state that the Drnids were not accustomed to take part in war, nor did they pay any taxes, cujoying both exemption from military service and freedom from all other public burdens. The consequence of these privileges was, that numbers of persons both came of their own accord to be trained up in their discipline, and were sent to them by their parents and relations. A part of the education of these pupils was said to consist in learning by heart a great number of verses, and on that account some of them remained twenty years at their studies; for the Druids did not deem it right to commit their instructions to writing, although, in most other things, and in both their publicand, private affairs of business, they used, Caesar seems to say, according to the reading of most manuscripts of his text, the Greek characters. Even if the epithet Greek is an interpolation here, as some critics have supposed, the important part of the statement remains unaffected, namely, that the Druids were familiar with the art of writing.

Cæsar supposes that they refrained from commit-

ting their religious doctrines to writing for two

reasons: first, because they did not wish that the

knowledge of their system should be diffused

among the people at large; secondly, because they

gence in acquiring knowledge, and the exercise of the power of memory, are relaxed under a sense of the security which written characters afford. He then proceeds to give an account of the doctrines taught by the Druids. The chief doctrine which they inculeated was that commonly known by the name of the metempsychosis or transmigration of souls, a favourite principle of some of the most ancient religious and philosophical creeds both of the east and of the west. They asserted that when a man died his spirit did not perish, but passed immediately into another body; and this article of faith, by its power of vanquishing the fear of death, they considered to be the most efficicious that could be instilled into the minds of men for the excitement of heroic virtue. discussed and delivered to their pupils many things respecting the heavenly bodies and their motions, the magnitude of the universe and the earth, the

thought that the learners, having written characters

to trust to, would bestow less pains in enlivating their memory, it generally happening that dili-

[Book I.

nature of things, and the force and power of the immortal gods. The whole nation of the Gauls, Cæsar remarks, was greatly given to religious observances ; and on that account those persons who were attacked by any serious disease, or were involved in the dangers of warfare, were accustomed either to immolate human victims, or to vow that they would, and to employ the Druids to perform these sacrifices; their opinion being that the gods were not to be propitiated, unless for the life of a man the life of a man were offered up. There were also sacrifices that on which the town of Dreux, in the Pais de of the same kind appointed on behalf of the state. Sometimes images of wicker work, of immense size, were constructed, which, being filled with living men, were then set fire to, and the men perished in the flames. They regarded the destruction in this manner of persons taken in the commission of theft or robbery, or any other delinquency, as most agreeable to the gods; but when the supply of such criminals was insufficient, they did not hesitate to make victims of the innocent. The account is concluded by a short enumeration of the divinities worshipped by the Gauls. The chief object of their adoration, it is stated, was Merenry: of this god they had numerous images; they regarded him as the inventor of all arts, as the guide of men in highways and in their journeys, and as having the greatest power in everything belonging to the pursuits of wealth and commerce. After him they worshipped Apollo, Mars, Jupiter, and Minerva, holding nearly the same opinion with regard to each as other nations; namely, that Apollo warded off diseases—that Minerva was the first instructor in manufactures and handicrafts-that Jupiter was the sovereign of the inhabitants of heaven-that Mars was the ruler of

To him, when they came to the determina-

tion of engaging in a battle, they commonly de-

voted whatever spoil they had taken in war; out

of what remained to them after the fight, they

sacrificed everything that was alive, and gathered

the rest together into one spot. Heaps of things thus put aside in consecrated places were to be seen in many of the states, and it was rarely that any person was so regardless of religion as to dare either secretly to retain any part of the spoil in his own possession, or to take it away when thus laid up: for such a crime there was appointed a very severe punishment, accompanied with torture. is added that all the Gauls believed themselves to be descended from Father Dis or Pluto, saying that the fact was declared to be so by the Druids.

that account, they reckoned time not by days but by mights, so regulating their birthdays, and the beginnings of months and years, that the night came first and then the day \* Such is the outline of the Druidical superstition and system of ceclesiastical polity which has been left to us by this accurate and sagacious observer, not writing from hearsay, but describing what he saw with his own eyes, or had otherwise the best opportunities of learning on the spot. Of all the writers in whom we find any notices of the discipline or doctrines of the Druids, there is perhaps scarcely another who can be regarded as speaking to us on the subject from his own observation. We have no reason to suppose that any of the rest ever was in a country where the Druidical religion was established. Some of the ancient anthorities who are commonly referred to can scarcely be con-

the account given by Casar may be affirmed not to be contradicted in any material particular, by those supplied to us from other quarters; but his sketch is a rapid and general one, and other ancient writers have enabled us to fill it up in various parts with some enrious and interesting details. Such of these as seem to be most deserving of attention, we shall now proceed to notice. It is remarkable that Cæsar nowhere makes any

mention of the sacred groves and the reverence paid. I

sidered as even the contemporaries of Druidism

As in these circumstances was to be expected,

cither in Britain or Gaul.

to the oak, which make so great a figure in most of the other accounts of Druidsm. Among various derivations which have been given of the name of the Druids, the most probable seems to be that which brings it from Drui, the Celtic word for an oak, corruptly written in the modern Irish Droi, and more corruptly Dram, but without the pronunciation being altered, and making in the plural Druidhe+ Drui is the same word with Drus, which signifies an oak in the Greek language; and also, indeed, with the English tree, which in the old Mæsogothic was triu. The name Dryades given to their nymphs or goddesses of the woods by the Greeks, is only another form of the name Druids, given to their priests of the woods by the It is curious that Diodorus Siculus calls the philosophers and theologians of the Gauls, by which he evidently means the Draids, Saronides; the original signification of the Greek word Saron,

according to Hesychius, being an oak. † Toland, p. 17. Cæsar de Bello Gallico, vi. 13, 14, 16, 17, 18.

" If you come," says the philosopher Seneca, writing to has friend Lucilius," to a grove thick planted with ancient trees which have outgrown the usual altitude, and which shut out the view of the heaven with their interwoven boughs, the vast height of the wood, and the retired secrecy of the place, and the wonder and awa inspired by so dense and ambroken a gloom in the midst of the open day, impress you with the conviction of present deity." These natural feelings of the human mind were taken advantage of and turned to account by the Druids, as we find them to have been in the other most primitive and simple forms of ancient superstition. Pliny informs us that the oak was the tree which they principally venerated, that they chose groves of oak for their residence, and performed no sacred rites without the leaf of that The geographer Pomponius Mela describes them as teaching the youths of noble families, that thronged to them in caves, or in the depths of forests. We have seen that when (a.d. 61) Suctonms Panlimis attacked and made himself master of the isle of Anglesey, he cut down the Drudical groves, "hallowed," says Tacitus, " with crnel. superstitious; for they held it right to stain their altars with the blood of prisoners taken in war, and

to seek to know the mind of the gods from the fibres of human victims." † The poet Lucan, in

a celebrated passage on the Druids and the doc-

times of their religion, has not forgotten their

sacred groves:--"The Drunds now, while arms are heard no more, Old my steries and harbarons rites restore, A tribe, who singular religion love. And having the lonely process of the grove. To these, and these of all mankad alone. The gods are sure reveal'd, or sure unknown. If dwing motoris' downs they sing aught, No ghosts descend in dwell in dreadful night; No parting souls to grisly Pluto go. Nm seek the dream submt shades below; But forth they fly, immortal in then kind And other bodies in new worlds they find And other bodies in new worlds they find. Thus hife to even must its endless hace, And like a line Death but divides the space, A stop which can but for a moment hast. A point hetween the future and the past. Thin e happy they beneath then northern skies, Who that worst lear, the fear of death, despines. Hence they no cores for this final being feel, But rush undanited on the pointed steel. Provide approaching fate, and havely seem To space that life which must so soon return. \*4

No Druidical grove, we be neve, now remains in any part of Great Britam; but within little more than a century, succent oaks were still standing around some of the circles of stones set upright in the earth, which are supposed to have been the temples of the old religion. In the parish of Holywood in Dumfries-shire, for instance, there is such a temple, formed of twelve very large stones, inclosing a piece of ground about eighty yards in diameter, and although there are now no trees to be seen near the spot, "there is a tradition," says an account of the parish published in 1791, " of their existing in the last age;" and it is added, "many of their roots have been dug out of the ground by the present minister, and he has still † Tue. An. xiv. 30.

‡ Pharsalia i. 462; Rowe's translation. See also, in. 339, &c.

\* M. A. Seneum Epist. 41,

one m bis possession." \* As far as can be gathered from the vestiges of such of these sacred inclosures as remain least defaced, they seem in their perfect state to have generally consisted of the circular row or double row of stones in the central open space (the proper lucus, or place of light), and beyond these, of a wood surrounded by a ditch and a mound. A holy fountain, or rivulet, appears also to have usually watered the grove. The reverence for rivers or streams, and more especially for springs or wells, is another of the most prevalent of ancient superstitions; and it is one which, having, along with many other Pagan customs, been adopted and sanctioned, or at least tolerated, by Christianity as first preached by the Roman missionaries, and being, besides, in some sort recommended to the reason by the high utility of the

object of regard, has not even yet altogether passed away. The cultivation, too, or the decay from lapse of time, which has almost everywhere swept away the antique religious grove, has for the most part spared the holy well. In the centre of the circle of upright stones is sometimes found what is still called a *cromlech*, a flat stone supported in a horizontal position upon others set perpendicularly in the earth, being apparently the altar on which the sacrifices were offered up, and on which the sacred fire was kept burning. The name *cromlech* is said to signify the stone for bowing to or worshipping. Near to the temple frequently rises a *carnedd*, or sacred mount, from which it is conjectured that the priests were wont to address the people.

The Platonic philosopher Maximus Tyrius, tells us that the Celtic nations all worshipped Jupiter

Kits Cory House, a Crowlech, near Aylestoid, Kent.

under the visible representation of a lofty oak, But the most remarkable of the Drudical superstitions connected with the oak, was the reverence pand to the parasitical plant called the mistletoe, when it was found growing on that tree. Pliny has given us an account of the ceremony of gathering this plant, which, like all the other sacred solemmties of the Druids, was performed on the sixth day of the moon, probably because the planet has usually at that age become distinctly visible. It is thought that the festival of gathering the misthetoe was kept always as near to the 10th of March, which was their New Year's Day, as this rule would permit. Having told us that the Druids believed that God loved the oak above all the other trees, and that everything growing upon that tree came from heaven, he adds, that there is nothing they held more sacred than the mistletoc of the oak. Whenever the plant was found on that tree, which it very rarely was, a procession was made to it on the sacred day with great form and pomp. First two white bulls were bound to the oak by their horns; and then a Druid clothed in white mounted the tree, and with a knife of gold cut the mistletoe, which mother, standing on the ground, held out his white robe to receive. The sacrifice of the victims and festive rejoicings followed. sacredness of the mistletoe is said to have been also a part of the ancient religious creed of the Persians, and not to be yet forgotten in India; and it is one of the Druidical superstitions of which traces still survive among our popular customs.

Virgil, a diligent student of the poetry of old religious, has been thought to intend an allusion to it by the golden branch which Æneas had to plack to be his passport to the infernal regions. Indeed the poet expressly likens the branch to the mistletoe:-

" Quale solet silvis brumali frigore viscum Fronde virere novê, quot non sun seminat arbos, Et crocoo fetu teretes circumdato francos; Tulis erat species auti frondentes opacê llice; sic leni crepitabat bractea vento."

AC w uz 900

As in the woods beneath mid winter's snow Shoots from the oak, the fresh-leaved mistletoe, Girding the dark stem with its saffron glow; So spring the bright gold hom the dasky rind, So the leff rustled in the faming wind.

The entire body of the Druidical priesthood ap. pears to have been divided into several orders or classes; but there is some uncertainty and difference of opinion as to the characters and offices of Strabo and Ammianus Marcellinus are the ancient authorities upon this head; and they both make the orders to have been three—the Druids, the Vates, and the Bards. Marcellinus calls the Vates, according to one reading, Euhages, which is most probably a corruption, but according to another Eubates, which is evidently the same with Strabo's Ouates, or Vates. It is agreed that the Bards were poets and musicians. Marcellinus says that they sang the brave deeds of illustrious men, composed in heroic verses, with sweet modulations of the lyre; and Diodorus Siculus, who does not include them among the theologians and philoso-

phers whom he calls Saronides, also mentions them in nearly the same terms. He states that they composed poems, some of which were celebrations, and others invectives, and sung them to the music of an instrument rescribling the Greek and Roman lyre. The Vates, according to Strabo, were priests and physiologists; but Marcellinus seems to assign to them only the latter office, saying that they inquired into nature, and endeavoured to discover the order of her processes and her sublimes@secrets. The Latin word rales, it may be observed, although frequently used for a poet, and sometimes indeed for a person of very emment skill in other intellectual arts, seems properly to have always implied something prophetic or divine. Such is said also to be the signification of the Celtic Faidh, which, in modern

Irish, is used for a prophet, and is believed to have been in former times the name of an order of soothsayers or sacred poets both in Ireland and in Scot-The Drinds Strabo speaks of as combining the study of physiology with that of moral science; Marcellinus describes them as persons of a lofter genius than the others, who addressed themselves to the most occult and profound inquiries, and rising in their contemplations above this human seene declared the spirits of men to be immortal. Some modern writers, disregarding altogether these ancient authorities, have conjectured that the Druids, as forming the cluef order of the hierarchy, had under them first the Bards, whom they make the same with the Saronides, and to have been poets and musicians; secondly, the Euliages

GROUP OF ARCH-DRUID AND DRUIDS

or Enbages, who studied natural philosophy; and, thirdly, the Vates, who performed the sacrifices. It is at least highly probable that all these classes were considered as belonging to the Druidical body \* A remarkable fact mentioned by Marcellimis is that the Druids, properly so called, lived together in communities or brotherhoods. however, cannot have been the ease with all the members of the order; for we have reason to behere that the Druids frequently reckoned among their number some of the sovereigns of the Celtic states, whose civil daties of course would not permit them to include in this monastic life. Divitiacus, the Æduan prince, who performed so remarkable a part, as related by Cæsar, in the drama of the subjugation of his country by the Roman arms, is stated by Cicero to have been a Druid. Cicero tells us that he knew Divitiacus, who was wont both to profess to be familiar with that study of nature which the Greeks called physiology, and to make predictions respecting future events, partly by augury, partly by conjecture. † Strabo records it to have been a notion among the Gauls that the more Druids they had among them, the more plentiful would be their harvests, and the greater their abundance of all good things; and we may therefore suppose that the numbers of the Druids were

verv consaderable. Toland, who in what he calls his "Specimen of the Critical History of the Celtic Religion and Learning," has collected many currons facts, and who probably had anthorities of one kind or another for most of the things he has advanced, although they were unfortunately reserved for a subsequent work of greater detail, which never appeared, has given us the following account of the dress of the Draids. Every Draid, he informs us, carried a wand or staff, such as magicians in all countries have done, and had what was called a Druid's egg (to which we shall advert prescutly) hung about his neck inclosed in gold. All the Druids wore the hair of their heads short, and their heards long; while other people wore the hair of their heads long, and shaved all their beards with the exception of the upper lip. "They likewise," he continues, "all wore long habits, as did the Bards and the Vaids (the Vates); but the Drinds had on a white surplice whenever they religionsly officiated. In Ireland, they, with the graduate Bards and Vaids, had the privilege of wearing six colours in their brenchms or robes (which were the striped bracese of the Gauls, still worn by the Highlanders); whereas the king and queen might have in theirs but seven, lords and ladies five, governors of fortresses four, officers and young gentlemen of quality three, common soldiers two, and common people one. These particulars appear to have been collected from the Irish traditions or  ${f B}$ ardic manuscripts.

VOL. L

It is commonly said that there were Druidesses as well as Draids, and some modern writers have even given us a minute account of the several de grees or orders of this female hierarchy; but the notion does not seem to rest upon any sufficient authority. On the contrary, Strabo expressly tells us that it was a rule with the Drinds, which they most strictly observed, never to communicate any of their secret doctrines to women, having no faith, it seems, in the doctrine held by some of the moderns, that a woman can keep a secret. Vopiscus, indeed, relates that the Emperor Λn-

relian on one occasion consulted certain female fortunc-tellers of Gaul, whom this historian calls Drindesses, and that one of these personages also another time delivered a warning to Alexander Severns; but the women in question•seem to have been merely a sort of sibyls or witches. The art of divination, as we have already seen from the example of Divitiacus, was one of the favourite pretensions of the Druidical, as it has been of most other systems of superstation. The British Draids, indeed, appear to have professed the practice of magic in this and all its other departments. Pliny observes that in his day this supernatural art was cultivated with such astonishing ceremonies in Britain, that the Persians themselves might seem to have acquired the knowledge of it from that island. In the Irish tongue a magician is still called Drui, and the magic art Druidheach, that is Druiglity, as it might be literally translated. \*-In the Irish translation of the Scriptures the magicians of Egypt are called the Druids of Egypt, and the same name is given to the magi or wise men from the east mentioned in the gospel of St. Matthew. Æhan tells as that the Draids of Gaul were liberally paid by those who consulted them for their revelations of the future, and the good fortune they promised. Among their chief methods of divination was that from the entrails of victims offered in sacrifice. One of their practices was remarkable for its strange and horrid cruelty, if we may believe the account of Diodorus Siculus. In sacrificing a man they would give bim the mortal blow by the stroke of a sword above the diaphragm, and then, according to rules which had descended to them from their forefathers, they would draw their predictions from inspection of the posture in which the dying wretch fell, the convilsions of his quivering limbs, and the direction in which the blood flowed from his body. A wild story is told by Plutarch, in his Treatise on the Cessation of Oracles, about a discovery made by a person named Demetrius, of an island in the neighbourhood of Britain, inhabited by a few Britons who were esteemed sacred and inviolable by their countrymen. Immediately after his arrival, it is affirmed, the air grew black and troubled, and strange apparitions were seen; the winds rose to a tempest, and fiery spots and whirlwinds appeared dancing towards the earth. Demetrus was told that all this turmoil of the elements was occasioned

Strabo, iv. Ammian. Marcell. xv 9; Diod. Sic v. 31; Toland's History of the Drinds, pp. 24-29; Rowland's Mona Antiqua, p. 65, Borlace's Counsall, p. 67, Macphegon's Dissertations, p. 203; Bordle's Historic de Provence, i. 68; Fosbroke's Encyclopædia of Antiquities, p. 662.

of the Helpides, and that the persons inhabiting it

were Dimids, who thus affected a commerce with the world of spirits and supernatural powers. Somewhat rescrabling this account is that given by Mela of the island of Sena, which he describes as situated in ill@ Bratish sed, opposite to the coast inhabited by the Os mi, and which is believed to be the ide of Seco, men the coast of Britany. It was tamons, accombing to the ancient geographer, for the oracle of a certain Gallie divinity priestesses, who were called Barrigemae, were said to be muc in number, and to have vowed perpetual regimity. They were thought to be rigdowed with various singular powers, such as that of raising the waves and winds with their songs, of changing themselves into whatever an mods they chose, of Chealing diseases which were increased by the skill of others, and of knowing and predicting future events; these, however, they revealed only to ma-

rmers who came on purpose to consult them. is highly\*probable that the moon was the deity which was here worshipped \* There is reason to believe that the Draids, like other ancient teachers of religiou and philosophy, had an esotene or secret doctaine, in which the members of the order were instructed, of a more refined and spiritual character than that which they preached to the multitude. Diogenes Lacitus acquants as, that the substance of their system of faith and practice was comprised in three precepts, namely, to winship the gods, to do no evil, and to behave confageously. They were reported, however, he says, to teach then philosophy in engmatic apophthegms - Mrla also expresses limiself as if he intended us to understand that the greater part of their theology was reserved for the initiated, One doctrine, he says, that of the immortality of

we find the practice of self-immolation also prevalent in Ludia, along with a belief in the soul's transmigration, under the Brahmannal system of religion. Perhaps we may derive some assistance in solving the difficulty, from the statement which has been little noticed of Diodorns Siculus. This writer, speaking of the Ganls, says that they beheyed that the souls of the dead returned to animate other bodies after the lapse of a certain number of years. In the mean time, it seems to have been thought, they lived with other similarly disembodied spirits in some other world; for it is added that, in this belief, when they birried then dead they were wont to address letters, to their deceased friends and relations, which they threw into the finieral pile, as if the persons to whom they were addressed would in this way receive and mad Other writers, in their account of the Dinidical doctrine of the immortality of the soul, expressly allium that the spirits of the dead were thought to empy their future existence only in another world \* There has also been some thispute as to whether the Draidwal meteringsychosis included the frausing ration of the soul into animals, as well as from one to another lumpar form ! It has been competined that the fundamental principle of the Diridical esoteric doctrine was the belief in one God - For paquilin effect, however, this opinion, if it ever was really held even by the untrated, appears to have been from the first wrapped up and disguised in an investment of materials in. as it was presented by them to the gross appreheasion of the vulgar. The simplest, purest, and mo \$ ancient form of the public religion of the Daniels, seems to have been the worship of the cele tad

luminaries and of fire. The sim appears to have been

immortality of the soul taught by the Druids, was

which he was distinguished as a divinity to the paganism of the East 1. We have already had occasion to notice their observance of the moon in the regulation of the times of their great religious testivals. These appear to have been four in number; the first was the 10th of March, or the sixth day of the moon nearest to that, which, as already mentioned, was their New Year's Day, and that on which the ceremony of cutting the imsletor was performed; the others were the 1st of May, Madsummer Eve, and the last day of October On all these occasions the chief celebration was by fire On the eye of the festival of the 1st of May, the tradition is, that all the domestic fires throughout the country were extinguished, and lighted again the next day from the sacred fire kept always burntriends who had died, would throw themselves into ing in the temples. "The Celtic nations," observes Toland, "kindled other fires on Midsummer eve, which are still continued by the Roman \* Amman Marcel lib.xx. † See Barlase's Antiquities of Cornwall, pp. 94, 95, and Fos-broke's Encyclopredia of Antiquities, n 662 † The author of "Butanna after the Ramma," however, demos that the Celtic Beh or Belmus has any condexion with the Oriental Baal or Bel.

Don Martine, Religion des Gaullois,

position that the doctrine on the subject of the

with the view of thus accompanying them to their new scene of life. It does not seem to be easy to reconcile these statements with the common sup-

the soul, they published, in order that the people might be thereby animated to bravery mwar. The language of this writer would rather imply, that

what they promised was merely the continuance of existence in another world. The people, he tells

us, in consequence of their belief in this doctrine, were accustomed when they buried their dead to burn and inter-along with them things useful for the living; a statement which is confirmed by the common contents of the barrows or graves of the anceant Britons He adds a still better evidence of the strength of their faith. They were wont, it scenis, to put of the settlement of accounts and the exaction of debts, till they should meet again in the shades below. It also sometimes happened, that persons not wishing to be parted from their

adored under the same name of Bel or Baal, by

the funeral piles of the objects of their attachment,

Catholics of Ircland, making them in all their grounds, and carrying flaming brands about their condichls. This they do likewise all over France, and ne some of the Scottish isles These Midsummer fires and sacrifices were to obtain a blessing on the finits of the earth, now becoming ready for gathering; as those of the 1st of May, that they might prosperously grow; and those of the last of October were the thanksgiving for finishing their harvest". In Ireland, and also in the north of Scotland, the 1st of May, and in some places the 21st of June, is still called Beltem or Beltune, that is, the day of the Bel Fire; and unitations of the old superstitious ceremonies were not long ago still merally performed. In Scotland a sort of sacrifice was offered up, and one of the persons present, upon whom the lot fell, leaped three times through the thances of the fire. In Ireland the cottagers all drove their cattle through the fire. Even in some parts of England the practice still prevails of lighting fires in parisbes on Midsimmer eye.4

The adoration of thre was the adoration of what was conceived to be one of the great principles or soveregic powers of nature. Water was another of the element, or ultimate consistents of things, as they were long decimed to be, which appears to have been in like manner held sacred, and in some soft worshipped. There is reason to believe that at the sum and noon, although sometimes worship.

shipped together, but at other innes their 1802 and contending votaries, so the adorers of water were sometimes considered as the opponents of those of fire. We know, at len f, that contests took place between them in the East, and there are some traces to be detected of the eparation and routinal aversion of the two creeds, also in the West All these differences, no doubt, originated in the preferences, gradually more and more displayed, by some persons for one, by others for another, of several imaginary deibes which had been all at first the objects of a common worship, till at last the preference became an exclusive adoption, and the god of the rival sect was either altogether deprived of divine honours and veneration, or, what was more in accordance with the spirit of superstition, was denomiced as a depion or power of cyil, and as such still behaved in, though with trembling and abhorrence. But atter this state of things had lasted for some time, it might naturally enough! happen, in favourable circumstances, that the divided creeds would lay aside their hostility and again coalesce; the worship of Baal, for instance, thus recombining with that of Ashtaroth, or the adorers of fire and those of water consenting to how! down and make their offerings together to both deities. Some indication of such a reconcilement as this last, seems to be presented in the doctime. according to Strabo, held by the Drinds respecting the destroy of the material world, which they taughts was never to be entirely destroyed or annihilated, but was nevertheless to undergo an endless succes-

STONFHENGE.

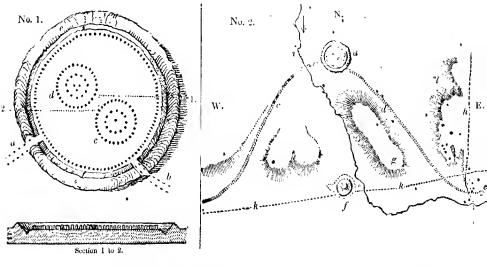

sion of great revolutions, some of which were to be effected by the power of fire, others by that of

Another of the most remarkable principles of promitive Drindism appears to have been the worship of the Serpent; a superstition so widely extended, as to evince its derivation from the most ancient traditions of the human race. Pliny has given us a curious account of the anguinum, or serpent's egg, which he tells us was worn as their distinguisling badge by the Drinds. He had himself seen it, he says, and it was about the biguess of an apple, its shell being a cartilagmous incrnstation, full of little cavities like those on the legs of the polypus. Marvels of all kinds were told of this production. It was said to be formed, at first, by a great number of scrpents twied together, whose hissing at last raised it into the air, when it was to be eaught, ere it fell to the ground, in a clean white cloth, by a person mounted on a swift horse, who had immediately to ride off at full speed, the enraged serpents pursuing him until they were stopped (as witches still are supposed to be in the popular fauth) by a running water. If it were genuine it would, when enchased in gold and thrown into a river, swim against the stream. All the virtues also of a charm were ascribed to it. In particular, the person who carried it about with him was ensured against being overcome in any dispute in which he might engage, and might count upon success in his attempts at obtaining the favour and friendship of the great. It has been conjectured on highly pro-

bable grounds, that the great Druidical temples of Avebury, of Stonehenge, of Carnac in Britany, and most of the others that remain both in Britain and Gaul, were dedicated to the united worship of the sun and the serpent, and that the form of their construction is throughout emblematical of this combination of the two religious.\*

But, however comparatively simple and restricted may have been the Druidical worship in its earliest stage there is sufficient evidence that, at a later period, its gods came to be much more numerous. Casar, as we have already seen, mentions among those adored by the Gauls, Mercury, Apollo, Mars, Jupiter, and Minerva. It is to be regretted that the historian did not give us the Celtic names of the deities in question, rather than the Roman names which he considered, from the smillarity of attributes, to be their representatives. Livy however tells us that the Spanish Celts called Mercury, Teutates; the same word, no doubt, with the Phæmcian Taaut, and the Egyptian Thoth, which are stated by various ancient writers to be the same with the Hermes of the Greeks, and the Mercury of the Latins. † Mercury is probably, also, the Oriental Budha, and the Scandmavian Woden; the same day of the week, it is observable, being in the Oriental, the Northern, and the Latin countries respectively, called after or dedicated to these three names. Hesus appears to

have been the Celtic name for Mars. Apollo seems to have been considered the same with the Sun, as he also was by the Greeks and Romans, and to have been known by the name of Bel, the same with the Oriental Baal. Jupiter is thought to have been called Jow, which means young, from his being the youngest son of Saturn, whom both Cicero and Dionysius of Halicarnassus affirm to have been also adored by the Celtte nations. Bacchus, Ceres, Proscrpine, Diana, and other gods of Greece and Rome, also appear to have all had their representatives in the Druidical worship; if, indeed, the

classic theology did not borrow these divinities from the Celts. Another of the Celtic gods was Taranis, whose name signifies the God of Thunder.

The earliest Druidism seems, like the kindred superstition of Germany, as described by Tacitus, to have admitted neither of covered temples nor of sculptured images of the gods. Inpiter, indeed, is said to have been represented by a lofty oak, and Mercury by a cube—the similarity of that geometrical figure on all sides typifying that perfect truth and unchangeableness which were held to belong to this supreme deity; but these are to be

<sup>3</sup>[Book L

bothly torms of the gods, but only as emblematic illustrations of their attributes  $\sqrt{\Lambda} t$  a later period, loweyer, material configurations of the objects of

considered not as attempts to mutate the supposed

worship seem to have been introduced. Gildas speaks of such images as still existing in great numbers in his time, among the inconverted Britons. They had a greater number of gods, he says, than the Egyptians Themselves, there being hardly, a river, lake, mountain, or wood, which had not its Stonttaucen has given an engraving of an image of the god Hesns, and another of another Celtie goil, whose name appears to have been Cernamos, from has-reliefs found under the choir of the church of Nôtte Dame, at Paris, in 1711. An the preceding page we have inserted copies of both With regard to the peculiar forms of the Drindical worship, little information has come down to us. Plmy has merely recorded that, in offering the sacrifice, the officiating priest was wont to pray to the divinity to send down a blessing upon the of-Popular tradition has preserved the me-

more of the practice by the worshippers of the Deasud or Deisol, which consisted in moving round,

As for the human sacrifices of which Cac ar speaks, his account is fully borne out by the first-

dark with the junce of the wood

momes of various other ancient authors. Strabo describes the image of wicker or straw, in which, be say, men and all descriptions of cattle and heasts were roasted together He also relates, that sometimes the victims were cruedied, sometimes shot to death well arrows. The statement of Diothorns Siculus is, that criminals were kept under ground for five years, and then offered up as sortibre to the god by being nupaked, and birned in great lives, along with quantities of other offerings. He adds, that they also unmolated the prisoners they had taken in war, and along with them deyoured, burned, or an some other manner destroyed likewise whatever eattle they had taken from their commes. Plutarch tells us, that the morse of songs and initial instruments was employed on these occasions to drawn the cries of the sufferers. I 19my is of apinum that a part of every human victim was are by the Drinds, but what reason he had for thinking so does not appear, nor does the suggosition seem to be probable in itself. Upon the subject of the practice of human sacrifice it has been observed, that "if we rightly consider this

point we shall perceive that, shocking as it is, it is

vet a step towards the humanizing of savages; for

the mere brute man listens only to his ferocions

passions and horrid appetites, and slays and devours

all the enemies be can conquer; but the priest, persnading him to select only the best and brayest as

† De Superstitume,

the last degradation of human nature." \* The origin of Druidism, and its connexion with other aucient creeds of religion and philosophy, have given occasion to much enrious speculation.

Diagenes Lacrinis describes the Drinds as holding

the same place among the Gauls and Britons with

that of the Philosophers among the Greeks, of the Magi among the Persians, of the Gymnosophists among the Indians, and of the Chaldeans among the Assyroms - He also refers to Abstotle as affirming in one of his lost works that philosophy had not been taught to the Gauls by the Greeks, but had originated among the former, and, from them, had passed to the latter. The introduction into the Greek philosophy of the doctroic of the Metempsychosis is commonly attributed to Pythagoras, and there are voltons passages in ancient authors which make mention of, or allude to some connexion between that philosopher and the Druids Abarrs, the Hyperboreau, as has been noticed above, is by many supposed to have been a Diaid; and he, lambheus tells us, was taught by Pythagoras to find out all both by the science of numbers ! Marcellinus, speaking of the conventual associaturns of the Drouds, expresses himself as if he conceived that they so lived in abedrence to the commands of Pythagmas; "as the nuthority of Pythagoras bath decreed," are his words of Others athered that the Greenin phakesopher derived his phalosophy from the Drunds. A report is preserved by Clement of Alexandra that Pythagaras, in the course of his travels, studied under both the Drinds and the Brahumis § The probability is that both Pythagoras and the Dinids drew then philosophy from the same fountain. Several of the ablest and most laborous among the modern investigators of the subject of Druidism have found themselves compelled to adopt the theory of its Oriental origin. Pelloutier, from the numerous and trong resemblances presented by the Dinidical and the old Persian religion, concludes the Celts

and Persians, as Mr. O'Brien has lately done, to be the same people, and the Celtic tongue to be the ancient Persic. The late Mr. Renben Burrow, distinguished for his intimate acquaintance with the Indom astronomy and mythology, min paper in the Asiatic Researches, decidedly prononnees the Druids to have been a race of emigrated Indian philosophers, and Stouchenge to be evidently one of the Temples of Budha ¶ — It may be recollected that some of the Welsh antiquants have, on other grounds, brought their assumed British ancestors from Ceylon, the great scat of Budhism,\*\* The same origin is also assigned by Mr. O'Brien to the primitive religion and civilization of Ticland. This question has been examined at great length in a " Dissertation on the Origin of the Druids," by Mr. Maurice, who, considering the

 Pelloutier Hist, des Celtes, in. 4.

to the conclusion that "the celebrated order of the Drinds, anciently established in this country, were the mimediate descendants of a tribe of Brahmins situated in the high northern latitudes bordering on the vast range of Cancasus; that these, during a period of the Indian empire, when its limits were most extended in Asia, mingling with the Celto-Scythan tribes, who tenanted the immense deserts of Grand Tartary, became gradually incorporated, though not confounded with that ancient nation: introduced among them the rites of the Bradanni religion, occasionally adopting those of the Seythans, and together with them finally emigrated to the western regions of Europe."\* It must be confessed that the Druidical system, as established in Gaul and Britani, has altogether very much the appearance of something not the growth of the constry, but, superinduced upon the native barbarism by importation from abroad. The knowledge and arts of which they appear to have heen possessed, seem to point out the Druids as of foreign extraction, and as continuing to form the depositories of a civilization greatly superior to that

of the general community in the midst of which

they dwell. It was quite natural, however, that Druidism, supposing it to have been originally an

imported and foreign religion, should nevertheless

gradually adopt some things from the idolatry of a

different form which may have prevailed in Britain

and Gaul previous to its introduction, just as we

find Christianity itself to have become adulterated

mescane countries by an infusion of the beatherism

with which it was brought into contact. On this

hypothesis we new perhaps best account for those

apparent traces of the Druidical religion which are

to be detected in some Celtic countries, where, at the

same time, we have no reason to behave that there

ever were any Drinds. It has been contended that although there were no Draids mowhere except in Butam and Gaul, the Druidical religion extended over all the north and west of Europe † It is probable that what have been taken for the doctimes or practices of Druidism in other Celtic countries, were really those of that elder mative superstition from which pure Druidsm eventually received some intermixture and corruption. The Germans, Cresar expressly tells us, had no Dunids; nor is there a vestige of such an institution to be discovered in the ancient history, traditions, customs, or monuments of any Gothic people 14 was probably indeed confined to Ireland, South Britain, and Ganl, until the measures taken to root at out from the Roman dominions seem to have compelled some of the Druids to take refuge in other countries. The emperor Tiberms, according to Plmy and Strahe, and the emperor Claudins, according to Suctomis, issued decrees for the total abolition of the Drindical religion, on

human sacrifices in which it indulged its votaries.

the prefext of an abhorence of the atrocity of the

customs of their private life and the whole system of their state economy, and which they carried with them, almost as a part of themselves, or at least as the very living spirit and sustaining power of their entire polity and civilization, into every foreign land that they colonized. In this far island, too, as in the elder homes of poetry and the arts,

An age high been when Earth was proud Of lustre too literise. To be sustained, and mortals bowed of he front in self-defence."

Beside the rnd grandeur of Stonehenge, and surrounded by the gloom of the sacred groves, glittering temples, displaying all the grace and pomp of finished architecture, now rose to Jupiter, and Apollo, and Diana, and Venus; and the air of our northern clime was peopled with all the bright dreams and visions of the mythology of Greece. A temple of Minerva, and probably other sacred edifices, appear to have adorned the city of Bath: London is supposed to have had its temple of Diana, occupying the same natural elevation which is now crowned by the magnificent Cathedral of St. Paul's; and the foundations and other remains of similar monuments of the Roman Paganism have been discovered in many of our other ancient towns. But perhaps no such material memorials are so well fitted to strike the imagination, and to convey a lively impression of this long past state of things, as the passage in the Annals of Tacitus in

which we find a string of prodigies recomited to have happened in different parts of the province of Britain immediately before the insurrection of Boadicea, just as the same events might have taken place in Italy or in Rome itself. First, in the town of Camalodunum, the image of the goddess Victory, without any apparent cause, suddenly falls from its place, and turns its face round, as if giving way to the enemy. Then, females, scized with a sort of prophetic fury, would be heard monrnfally calling out that destruction was at hand, their cires penetrating from the streets both into the curia, or council-chamber, and into the theatre presentation, in the air, of the colony laid in runs was seen near the mouth of the Thames, while the sea assumed the colour of blood, and the receding tide seemed to leave behind it the phantoms of human carcases. The picture is completed by the mention of the temple in which the Roman soldiery took refuge on the rushing into the city of their informated assarfants, -of the undefended state of the place, in which the elegance of the buildings had been more attended to than their strength, - of another temple which had been raised in it to Clandrus the Divine, and, finally, of its crew of rapacious priests who, mider the pretence of religion, wasted every man's substance, and excited a deeper indignation in the breasts of the imhappy natives than all the other cruelties and oppies sions to which they were subjected.

Three views, copied from Hôrshey's Bulanma Romana, of a splendid bronze bowl, or paters, found in Wiltshire, and supposed to here been used for the joint bibation of the chief magistrates of the five Roman towns, whose names appear on its margin.

Axernar result, bowever, of the Roman invasion of Britam was the introduction into the island of the

INTRODUCTION OF CHRISTIANIAN

interesting and gratifying to find recorded. from the obscurity that pervade the ecclesiastical records of the first centure, and the unobtrusive silence with which the commencing steps of the Christian faith were made, it cannot be accounted strange if Bulan, a confirm at that time so remote and in-gintheant, should have the beginning of her religious listory involved in much ideranity. The investigations of the curious however have. partly by bold conjectures and partly from monkish becode, attempted to show how Britain either was, or night have been, Christmuzerl. Some have attributed the work to St. Peter, some to James the son of Zebedee, and other, to Smore Zelotes. but for so important an affine at the apostleship of the island the majority of writers will be contented

with reclassive personal town St Paul, and they er and their a sungition upon the fact that seximal of the most arrive years of his life are not accomited for in the Acts of the Apostles. They think that therefore some part at least of this interval must have been employed among the Britains. By otheragain, such inter or personages as Aristoliulus, who is incidentally mentioned by St. Paul, " Joseph of Arounthea, and the disciples of Polycorp, have been honomed as the founders of Clurchanny in British Some of these accounts would maply that Brutch Christanity is as old a the apostolic age; and, although this point too must be considered as yety uncertain, a few slight collateral facis have been adduced as affording evalence that the island contained some converts at that early date. This, about the middle of the first century, we find Pompoma Guecma, a Bratish lady, and wafe of the Proconsul Plantus, accused of being devoted to a strange and gloomy superstition, by which it has been thought, not improbably, that Christianity is unplied; and Claudia, the wife of Pudeus the squator, a British buly culogised by Martial, Lis suppored by some to have been the person of the same name mentioned by St Paul \$ All that can be regarded as well e tablished is. that at a comparatively early period Christianity found its way into the British islands. Even before the close of the fact century, not only Christian

refugees may have fled thither from the continent to escape persecution, but Christian soldiers and civilians may have accompanied the uivading armies. The path thus open I, and the work com-The America of 1 Romans, 831-10, ‡ Epg

VOL. I.

THE HISTORY OF RELIGION. meneral, an occarre missionaries, from the operation of the same case e, would follow, to extend the sphere of action and increase the minder of the converts. Columnstances, too, were peculiarly \$cyourable in Britain for such a successful price is s The priceding subtle and influential presthood of Drugdism, who might have the most effectually opposed the new tanta, had been easly destroyed be the swords of the conquerors, and the latter were too intent upon achieving the complete subject on of the country, to concern their clyes about the transition of the inhabitants from our system of religious organous to another. In this manner is would appear that Christian communitie were gradually barned, buildings set apart for the purposes of public worship, and an certesustical revernment established. But the same of semidy that pervades the origin of Chre-bandy in British, extends over the whole of its early progress. Unfortunately, those morarshe wraces who attempted to compile its listory were more erger to discover minacles than facts. Eyea of the venerable Bede, if must be admitted that his credulity any cars to have been, at least, equal to his honesty. The tayounte legend with which these writers denomin then history of the first centuries of the Braish clinicle is that of king Lucius, the son of Coilus According to their account, Linus was king of the whole island, and, having consented to be haptized at the rastance of the Roman emperor, he Became so carns at for the conversion of his geople that he sent to Eleuther us, Inship of Reine, for a ristance in the important work. In consequence of this application several learned doctors were sent, by whose instrumentally pagarasm was abolished throughout for a-land, not Clare transfer established in its room. They aid, moreover, that three archbishaps and twee ex-eight by 'rips were established, for the government of the Bratish claudi, upon the times of the pagent becomeby; and that to them were made over, not only the revenues of the former priesthood, but also large adds oual means of support. Not to waste a moment or pointing out such unpossibilities as a king of the whole island at this tane, or a heathen emperor labouring for his conversion un conjecti with a Roman bishop, we see dunly shadowed both in this monkish legend, some petty British king or chieftam, in vassalage to Rome, who, with the aid of Roman missionaries,

effected the conversion of his tribe. A passing

allusion, in the writings of Tertullain, gives as a more distinct idea of the state of Claustianity

m Britain than can be obtained from any such mar-

ratives as this. In his work against the Jew.,

written a.b. 209, he says that "even those places

in Britain hitherto maccessible to the Homan acms

have been subdued by the gospel of Christ " From

this sentence we may form a conjecture as to the

extent to which the new religion had spread even at

this early period. It must have been planted for a

considerable time in the South, and obtained a

material accordancy before it could have pene-

trated beyond the northern boundary of the pro-

vince. We cannot suppose, however, that in earcounstances so thack more manyourable it could make much progress in these karbarous regions. The wild tribes of Scotland, still unconquered, were

also distincted, or employed in nimbral hostility; and the native priesthood possessed an uilluence that would materially unpede the success of the new We discover accordingly tout, at a much later period, Kentigern and Columba found the Scots and Picts still heathers. The expressions of Tertidlian, however, him very possibly refer to the exfension of Christianity, not so much to Scotland, as to Ireland, in which latter part of Britain, for so it was then accounted, there are other reasons for supposing that this religiou reckoned some converts even at that carrly period. As yet, the remoteness of Britain, and the sup-

pression of the Draids, bad equally preserved its

chumble church from Joreign and domestic perseention; but the time arrived when it was to share in those afflictions which fell to the lot of the Christian world at large. Diocletian, inspired with hatred and jeulousy at the predominance of docdrines which were supposed to menace all civil authority, addres ed lunself to the entire destruction of Christianity, and edicts were published in every part of the cupire for the suppression of its rites, and the persecution of its followers. In a storm so universal Britain was no longer overlooked; and St. Alban, the first martyr of our island, perished, with many others whose names have not been recorded. This event, according to Bede, took place in the year 286; but if it really hoppened in the great persecution under Diocletian, a date at least seventeen or eighteen years later must be assigned to it. Although Constantius, who at this time directed the affairs of Britain, was favoritably rachied towards the Christians, he don't not oppose the unperad mandate; and however be nught indirectly allegate its severities, yet the inferuor magistrates had no such scruples. One nicident at this time betraved his friendly disposition towards the persecuted. Assembling the officers of his bon chold, he announced to them, the pleasure of the emperor, requiring the dismission of the Christians from office, and gove those who were of that religion their choice either to renomice then ciced or resign their situations. Some of them, unwilling to make the required sacrifice, abjined then laith; upon which Constantius discharged them from his service; declaring that those who had renounced their God could never prove true to a nin-ter.\* This persecution continued to rage in Britam, according to Gildas, for the space of two

church was restored to its former tranquillity. Of the bistory of Christianity in our islant during the third ceptury we know little or nothing; those subtle or racomprehensible religious disputes which agitated the churches of the East and West appear to have been of too refined a character for the simple understandings of the Britons; and Ly these we may perhaps assume, from the silence of lustory, that they remained nearly immolested. From the time of the accession of Constantine, however, in the beginning of the fourth century, the luther to seebided church of Britain seems to lawe become impled to the civilized world, and to have been considered as making a part of the spiritial empire which he established. In the year 314, Eborus, bishop of Yeak, Restantas, la hop of London, and Adelphrus, bishop of Rubborough, attended the conneil at Arles , and as three bishops formed the full representation of a province, it appears that Butain was thus placed on an equality with the churches of Spain and Gaul. The bluetality of Constantine gave apportunities to the eccles institute of acquaring wealth and distinction, of which many were easer to avail themselves, but while, in Italy and the East, they gradually began to rival the nomp of temporal princes, nothing of this kind was exhibited in Britain. In fact, we are rather justified in the conclusion that the British hishops had hitherto been, and still continued poer, on account not only of the national poverty, but of the partial conversion of the people, many of whom still remained attached either to the classic d or dimdical worship. This view is corroborated by a circumstance that occurred as the succeeding teign. When Constantins offered to maintain the bishops of the West from the royal revenues, only

as suddenly as it had commenced, and the British

rest rejected it. This would seem to imply that the British hishops imist have been but indifferently provided for from other sources. It has generally been supposed that, during the fourth century, the British church was considerably tainted with those comptions in doctrine that so bagely overspread the continental chinches; and that Arramsin, so triminghant in the West, extensively prevailed in our island; and in proof of this Gildas is quoted, who describes the progress of that heresy among his countrymen with many mournful amplifications. In opposition to the statement of Gildas, St. Jerome and St. Chrysostom frequently albide, in their writings, to the orthodoxy of the British church. This contradiction may perhaps be reconciled by the supposition that while these fathers regarded merely the national creed, the lustorian described the private interpreand mountains. But at last Diecletian, having laid tation of its doctrines which may have been cherished by certain ecclesiastics. It must be acknowledged that, during this century, the bishops of Britain, if we may believe the account of Facundus,\* exhibited in one instance

\* Facund. v. 30. Du Pin Hist, Cent. iv.

those of Britain acceded to the proposal, while the

years, during which immbers of the Christian

clunches were destroyed, and multitudes who

escaped from death were obliged to fly to the forests

down the purple, and compelled his colleague

Maximum at the same time to abdicate, a per-ecu-

tion that had been conducted upon a more regular

system than any that had preceded it, and had

a universal conformaty

but a weak and compromising spirit. At the conneil of Armmunn, summoned by Constantius, in the year 359, they are asserted to have allowed themselves to be influenced so much by the persnasions or threats of the emperor, as to subscribe to scattments in favour of Ariamsm; but, upon their return to Britain, they ha tened to retract these concessions, and renew their allegiance to the Nacean creed. These carcumstances would seem to show, that though the doctrines of Arms may have been partially cherished, yet they were inpopular, and that the body of the church remained comparatively orthodox and undivided only ostensible difference by which the British church was distinguished, during this period, from the churches on the continent, was, its observing the Assatic computation of time, in keeping Easter, instead of the Romans a distinction frivolous in itself, but unportant in its consequences at a later period, when the Reman pontiffs laid claim to universal rule, and sought to secure it by enforcing

ni power and splendour, the same results were exhibited in Britain as in other countries; and while the Italian and Greek infused into the Christian faith the classical Paganism of his fathers, the Briton leavened it with his ancestral Drindheal superstitions. To these also were added the religious follies that were now of general prevalence. Pdgrimages to the Holy Land became fashionable, and were performed by numerous devotees. The orders of monks also became more numerous, though they were obliged, from the poverty of the country, to procure their subsistence by manual labour.

After the Christian church had been established

In the fifth century, the opinions of Pelagius, most probably a native of Tichard, were zealously disseminated through the British islands, by his disciples and countrymen, Agricola and Celestius; and we are told by Bede, that, alarmed at the rapid progress of these doctrines, but mable to refute them, the British ecclesiastics implied assistance

from the bishops of Gaith. The latter sept Germamis, bishop of Auxeric, and Lupic, Jushop of Troyes, to their aid, who arrived in Britain about the year 429. After having been welcomed by the orthodox clergy, they appointed a meeting for public disputation with the Pelagians. The latter, according to the narrative of the venerable historian, came to the areas in exect pomp, and advo-, cated their cause with the most showy therone, but Garmanns and Lupus, when it was then fur i to reply, so overwhelmed them with arguments and authorities, that they were completely silenced, and the whole assembly transplied in their discourfiture. Bede was too orthodox and too credulous to have doubted the tradition, if it had affirmed that the arguments of the Gallie bishops, on this occasion struck their antagonists dead as well as dumb. But these bishops were skilled in the bandling of

other weapons as well as those of controverse. Wo have aheady related how the nubbary force of the South Britons, being led on by Germanus against the Scots and Piets, put the barbarians to flight with shouts of "Hallchijah" Havnig. thus conquered the temporal as well as the spiritual enennes of Britain, the bishops departed. In a short time, however, the narrative proceeds, the buffled Pelagians again raised their heads, and then cause became more trumphant than before A fresh application was in consequence much to, the victorious Germanis, the British bishophaving, as it would seem, profited little by the arguments with which he had formerly defended then cause. He returned in 146, accompanied by Sevene, hishop of Treves; and this time, not contented with merely scleneing the Pelagians to the moment, he procured the banishment of their leaders from the island; and thus peace and order were restored for the short interval that preceded the arrival of the Saxons - It would appear, therefore, that, equally distincted and helpless, the church and the state were at the pers obliged to invoke aid against their domestic edver-Bede has garmshed the whole of the cenal with many miraculous encumstances, which we have not considered it necessary to retain

### CHAPTER III.

## HISTORY OF THE CONSTITUTION, GOVERNMENT, AND LAWS.

## SECTION I.

#### POLITICAL DIVISIONS OF THE BRITISH NATIONS.

EFORE proceeding to the sketch which the brief notices of the ancient writers enable us to give of the form of government that appears to have prevailed in Britain before the Roman-Conquest, it will be convenient to take a rapid survey of the

manner in which the country was divided among the several nations or tribes that inhabited it These tribes were not only distinguished by different names, and by the occupation of separate territories, but they were to a certain extent so many different races, which had come to the island from various districts of the opposite contment, and still continued to preserve themselves as annused with each other as they were in their original seats. Thus Caesar tells us that the several bothes of Belgians which he found settled on the sea-coast, although they had imited to wrest the tract of which they were in possession from the previous inhabitants, had almost all retained the distinguishing names of their mother states; and the come thing no doubt had been done in most instances by the earlier settlers from Gaul and elsewhere

We derive all the direct information we possess respecting the ancient Bratish nations partly from Caesar, Tacitus, Dio Cassins, and the other authors who have given us details of the military operations of the Romans in the island, and partly from certain professibly peographical accounts of it. One of these is that contained in the great geographical compulation of the celebrated Piolemy of Alexandria, who write in the early prit of the second century. but who, as we have already observed, is believed to have drawn the neiterals for much of his work, and for the portion of it relating to the Braish islands in particular, from sources of considerably greater antiquity. We may probably regard his description, therefore, as, in part at least, applicable to the country rather before Casar's invasion than after the Roman conquest; in other words, rather as it was known to the Phœnicians than to the Romans. It is evident, however, that Ptolemy must have made a good many additions to his original Tyran authorities from later accounts. Another detailed description of Britain is that con-

tained in what is called the Itinerary of Autonomis, a most valuable survey of all the roads throughout the Roman empire, evidently drawn up by public anthority, and the last additions to which do not appear to have been made later than the beginning of the fourth century, while its original compilation has been ascribed, on probable grounds, to the time of Julius Csesar. It presents us with a view of the high roads and chief towns of South Britain during the most flourishing period of the Roman occupation. Another ancient accumit of Roman Britain of undoubted authenticity is that found in the work entitled "Nontia Imperawhich is an emmeration of the civil and military establishments of all the provinces of the rupper, brought down, according to the title, to beyond the times of Arcadius and Honorus - In the case of Britim, the Notitia may be understood to give in the imperial establishment at the latest date at which the island formed a part of the Roman cerpire. It has preserved the names (though me fortimately merely the names) of the several 1165 vinces into which Roman Britain was divided, and of the several military stations. Lastly, there is a remarkable performance, professing to be a ocographical account of Britain in the time of the Romans, drawn up from the papers of a Remen general, by a Benedictine monk of the fointeenth century named Richard of Chencester. Of the existence of Richard of Chencester there is no doubt; we have other works from bis pen, of which some have been printed, and others remain in ma-It may also be admitted, that if he really nusempt wrote the present work, he did not, in its composition, draw upon his own learning or ingenuity, which appear to have been unite integral to such an achievement, but transcribed what he has se' down from some other document. The only reasonable doubt is, whether the work be not altogether a modern forgery. It was never heard of till the year 1757, when the discovery of the manuscript was amionneed by Mr. C. Bertram, Professor of the English Language in the University of Copenhagen, and a copy of it transmitted to this country to Dr. Stakely, by whom an extract, containing the mo-t material part of the work, was immediately printed. The whole was published the same year at Copenhagen by Mr Bertram. The original manuscript, bowever, we believe, has never since been seen, and no trace of it was to be found among Mr Bertram's papers after his death. On the other hand, the

CHAP. III.] CONSTITUTION, GOVERNMENT, AND LAWS.

contribution to our knowledge of ancient Britain. Richard of Chencester's description, which is accompanied by a undely-drawn map, contains much information, if we could be assured of its trustworthmess, especially respecting the geography of the northern part of the island, which is not to be to the short appear to be very consistent with the northern found either in Ptolemy or the Itinerary Cæsar, in his two descents upon Brutain, saw no more than a corner of the country. The farthest point to which be penetrated was the capital of

Carsivellaums, which is generally supposed to have

stood on the site of the now inned town of Vern-

internal evidence has appeared to many persons to

be in favour of the authentierty of the work; and it

has been very generally received as an important

lam in the vicinity of St Alban's, in Hertfordshae, Caesar hunself describes the dominions of this prince as lying along the worth bank of the Thames. at the distance of about eighty unles from the sea, by which he probably means the east coart of Kent, from which he began his march. Unfortimately we are nowhere told of what people Cassivellanings was king. The only British nations incutioned by Casar are the people of Cartum, the Timobantes, the Ceaningm, the Segontaci, the Ancalites, the Bibroes, and the Cassi — All these must have dwelf in the part of the country which be hastily overran. Cuntum was umborbtedly Kent, so called from a Celtic word signifying a head or promoutory. The Saxons, it has been observed, called Kent Cantirland, whence our present Canterbury; and we may therefore conjecture that the original name of the district was Cean-tir, that is, the head or protroding part of the land, the same word with Cantire, the name still borne by the long peninsular tract which forms the south-western extremity of Argyleshire.

"Vanguard of Laberty " exclaims a modern poet,

"Ye men of Kent, of a soil that dolb solvence brow counst the coast of France !!" Ptolemy, it may be noted, sets down London or as

he writes the name, Londmunn, as one of the towns of the Cantn; and from this at has been conjectured, with much probability, that the original London stood on the south side of the Thames. mentions no such place; but indeed he has not recorded the name of a smale British town Trinobantes, called by Ptolemy the Trinoantes, occupied Essex, and, probably, the greater part of Middlesex, London on the north bank of the Thames, therefore, the proper foundation of the present British metropolis, was one of their towns. Geoffrey of Monmonth's story, however, about that people having derived their name from Trinovant, that is, New Troy, the original name of London,

Of the other tribes mentioned by Cæsar none are noticed, at least under the same names, by any other authority except Richard of Circucester. enumerates the Bibroei, the Seguntaci, and the Casso, whom he calls the Cassu. The Bibroci are commonly

Celtic, a powerful people.

cannot be received. Trinobantes is said to mean, in

supposed to have been the inhabitants of Berk lure, and to have left then name to that county, the Segontiaci of Hampshire; and the Cassi of Hert-

the Leem mentioned by Richard and also by Tacitus, and with the Semini of Ptolemy, who appear to have inhabited the shires of Norfolk; Suffolk, and Cambridge; and the Ancalides with the Atrebatu of Ptolemy and the Attrebates of Richard, whose residence is placed in Wiltshure If this latter notion be well founded, it is probable that the name, which only occurs once in Casar, has not come flown to us as he wrote it; for he was well aequainted with the Atrebates of Belgie Gaul (the amment occupants of the territary of Artors), of whom this British people are supposed to have been a colony, and could not have mistaken the papie when it met him again bere. Du the whole, it must be confessed that nothing can be more misatisfactory than these attempted adenofications of the tribes of whom Casar speaks: We should be inclined to think that they were not spread over nearly so great an extent of territory as they are by this account made to occupy of them, except the Cantii, who are not ice ided to have submitted, would almost appear, from the

merely dependent upon the Trinobantes, whose

policy in making terms with the Roman general

they are stated instantly to have followed, and that is really all that is said of them. We do not believe that any of them ever formed part of the

confederation organized to oppose the invasion, at

ford, one of the hundreds of which, that in which

SL Alban's stands, still returns the name of Casin

The Caser would therefore appear to have been the

subjects of Cassivellaumis, if Vernlam was his

capital; but the supposition, it must be admited,

rative of Casar, in which the Cassi are, stated to

have made their submission along with order

tribes, while Cassivellaunus still held out. The

Cemmagni have been supposed to be the same with

the head of which Cassachaums was According to Ptolemy, who, after all, is the only authority upon whem unich dependence can be placed, the space of a which the tribes mentioned by Caesar, and by no other writer, if we east uside the very suspicious authority of Richard of Circucester, have been commonly diffused, appears to have been fully occupied by other tubes. The following is the order in which he enumerates the several nations inhabiting what we now call South? Britain, with the mininer in which he appears to distribute the conutry among them

 The Brigantis Their territory is described as extending across the island from sea to sea, and it appears to have comprehended the greater part of the modern counties of Durham, York, Cumberland, Westmoreland, and Lancashire. Brigantes were considered the most powerful of the British nations. Among their towns mentioned by Prolemy are Eborneum, now York, and Ismann, now Aldborough, reduced to a small vil-

		amore the nations in the south of the Cetyen labor and the Trinobantes appears also rleady to
•	7 The Simen and de withed as adjacent to the clast, and are imposed to have occupied Norfolk, Suffolk, and Cambradee. They are cooperfused, as has been already exted, to be the same with the Icent, of whom mention is made by Tactus. Prolemy assigns to them only me town, and to that he gives the name of Uenta or Venta, which appears to have been a common British name for the capital of a state. The Venta of the Simen or Icen is supposed to have been at Caister, near Norwich.  The Ticnonness (or Timobantes, as they are called by Cresa and Tactus), the next nation mentioned, are placed more to the castward than the Simen; and the may suggest a doubt as to these last being really the same with the Icent, who appear, from the Limerary, to have certainly inhabited Norfolk. Probably, however, Ptolemy erroneously supposed the coast of Ee-Fy to stretch farther to the east that that of Norfolk and Suffolk. He places Camulodanem, the capital of the Tri-	43 The Canari are described as adjacent to the Atrebati, and as extending to the castern coast of the island. These two states, therefore, probably met somewhere in the north part of Suriev Besides Londmunn, Ptolemy mentions Darmeumin (behaved to be Canterbiny) and Rutopie, the Rutipie of the Timerary (probably Richborough, near Sandwich), as towns of the Cantin.  11. The Regar are next mentioned, and are stated to be to the south of the Atrebath and the Cantin. They therefore occupied Surrey, Sussex, and probably the greater part of Hampshire.  15. The Brillow are described as situated to this south of the Dobum, and are supposed to have possessed the eastern part of Sometset, Wilts, and the western part of Hampshire. Their towns were Venta Belgarium, generally behaved to be Winchester; Ischalis, probably Rehester; and the Hot Springs (in Latin, Aquae Cabide), undoubtedly Bath.  16. The Dirrorwice's are described as sonth-
	mainter, half a degree to the east of the Venta of the Sunem.—Camulodanum, or, as it is called in	west from the Belgæ. Their's at was the present Dorsetshire, which still preserves their name, sig-

milying in the Celtie the dwellers by the water. Their town Diminim is supposed to be the present

Dache-ier 17. The DUNSONII (or Dammonn, as they are

called in the Hinerary) close the list, and are described as occupying the we tern extremity of the island. They were the inhabitants of Devon, Cornwall, and the west of Somerset; then some Dunin, or, as it would be in Celtic, Duyn, probably still subsisting in the modern Devon. Their capital

was Isea Dumnomorum, supposed to be the present Exeter. Of course, although we have thus undicated the localities of the several tribes by the names of our

present counties, it is not to be understood that the ancient boundaries were the same as those of these

comparatively modern divisions. But to ascertain the preese line by which each territory was equarated from those adjacent to it, is now as most instances utterly impossible. All that can be astempted is, to determine, generally, the part or the country in which each lay. In a good roung cases the evidence of inscriptions and of other remains has confinded Ptdeniy's account, and, making allowance for a very corrupt text, it mey be efficiend that his distribution of the several meanit brides tates has not been proved to be erroring. in any material repret by the discoveries of this and that have from time to time been made. do not be be vertical view of the ancient geography. at least of the southern part of the reland, on the whole, so complete, so distinct, and so accordant at once with the testimous of history and of monuments, as that which he has given us, is to be obtuned from any other source, or from all other existing somers of information combined. tribes incottoned by Richard of Cheneester, in addition to those enumerated by Prolemy, within the space we have now been surveying, are, the Sepontraci, Aucadites, Bilance, and Cassii (as already noticed), the Herbit in Sometset-frac, the Combin in Devonshire, the Voluntii and Sistimfii on Lancashire, and the Rheim in Survey and Suse. x: 'on these last are probably intended to be coustdered the same people with the Regar of Pelemy. Richard's list also includes the Caugman, empired

no means belos to make the passages in which they are mentioned by the ancient Instorians more intelligible. Ptolemy's description of North Britain is, in various respects, not so satisfactory as that which he has given of the southern portion of the island. In particular, his account is rendered obscure and confused by a strange mistake into which he has fallen, as to the direction of the land, which he ex-

to be the same with the Care, mentioned by Taciins, and with the Congain of Dio. There, how-

but to have been those of the youth of each tiple,

hending a portion of Argyle and the greater part of

CONSTITUTION, GOVERNMENT, AND LAWS.

Dunbartonshire. Another name mentioned by some later writers, and not occurring in Ptolemy, is that of the Mæata. This term, of the meaning of which different in-

terpretations have been offered, appears to have been a collective name given to the tribes included between the wall of Antonians Pius, which joined the Friths of Forth and Clyde, and that of Seycrus, extending from the Solway Frith to the month of the Tyne. These tribes were, the Novantæ, the Selgovæ, the Gadeni, the Otadem, and, m part, the Damnii. In a loose way of speaking, the Mæatæ and the Caledonn seem to have come at length to be used as a general expression for all the tribes beyond the more limited Roman province: the Mæatæ being understood to mean the inhaditants of the comparatively level and open country; the Calcdonii, those who dwelt among the woods and mountains of the north and From about the beginning of the fourth ceutury, we begin to find the Calcdomans and Mæatac giving place to the new names of the Scots and A late writer has, from this and other considerations, inferred that the Piets were the same people with the Miestie;\* but perhaps all that we are warranted in concluding is, that the same proinment place which the fierce Irish tribe of the

cessors in the occupation of the same tract of

It may here be convenient very shortly to re-

The efforts of Claudius and the two first governors, Anhis Plantius and Ostorius Scapula, had, by A.D. 50, either subdued by force or otherwise obtained the submission of all the nations included within the line of forts by which Ostorius may be said to have in some degree-connected the opposite estuaries of the Wash and the Severn; namely, (taking them in the order of Ptolemy's enumeration,) the Catycuchlani, the Icem (supposing this people to be the same with the Semini), the Trinobantes, the Dobuni, the Atrebatii, the Cantri, the Regni, the Belgre, the Durotriges, and the Dum-Some of these, however, were not so completely reconciled to the yoke as not afterwards to make repeated attempts to regain their independence; and, in fact, it was not till about A.D. 64 or 65, under Petronius Tarpilianus, that the whole of this section of the island, now known by the name the Prevince, could be said to be brought into a

state of entire subjection and tranguillity. Mean-

those parts. It was not till the reign of Vespasian (A.D. 70-78) that the Brigantes were subdied by Petifius Cerealis, and the Solures by Julius Fron-Agricula assumed the government A.D. 78, and the same summer completely conquered the Ordovices and the island of Anglesey. In the course of the next three years he appears to have reduced to subjection all the nations to the south of the rampart which he constructed between the Friths of Forth and Clyde, with the exception only of those inhabiting the part of the west coast nearest to Ireland,—the Novantae and the Selgovæ in all probability,-whom, however, he reduced in his next campaign. This was really the numest extent to which the conquest of the country by the Romans was ever carried. Agricola, indeed, afterwards defeated the Caledonians in the famous battle fought at the foot of the Grampians; but it is not alleged that the victory was followed by any permaneut results, or that even a single new tribe, the Horesti only excepted, made their submission for the moment. Certainly no establishments were ever attempted by the Romans beyond the Forth; nor were the conquests made by Agricola long maintained even up to that limit. Within twenty or thirty years after his time, we find the emperor Hadrian abandoning everything beyond the Solway. Automms Pms, indeed, soon after extended the province to its former boundary; but it was found impossible effectually to reduce the turbulent native occupants of the country between the two walls; and in the beginning of the second century, the attempt to hold if may be said to have been finally given up, first by the ejection of the new burrier between the Solway and the Tyne by Severus, and, a few years afterwards, by the formal cession of the greater part of the disputed territory by Caracalla. After thus, although the legions may have been sometimes found in conflict with the barbarians, perhaps, at a considerable distance beyond the wall of Severus, yet there seems to be no ground for believing that the Roman power ever renewed the attempt to gain a footing in these outer regions. The common hypothesis that, after this time, in the decline and rapidly accumulating difficulties of the empire, a new province, whether under the perof Valentia or of Flavia Cæsariensis, was formed in this part of the island, cannot be received upon the slight evidence that is brought forward in its support. At all events, if any such province was really established, as is assumed, in the latter part of the fourth century, it is quite impossible that the extension of the empire in that direction could have been more than nominal. When the northern tribes, on the final retirement of the imperial legions not many years after this, poured at upon the provincials, we hear of no obstruction whatever that they met with till they came to the wall of Severus.

while, beyond the boundary of the Province, in-

'emsions had been made into the territories of the

Brigantes in the north, and of the Silures, the Or-

dovices, and the people of Anglesey in the west:

but no permanent impression had been made in

HISTORY OF ENGLAND.

subjugation by the Romans, were so far from being united into one community that they were very generally at war one with another, yet there are circumstances which indicate that, to a certain extent, many of them felt themselves to have a common interest as the occupants of the same country. Even their intestine wats would of necessity often array them into opposing confederacies, and thus establish among them the habits and feelings of a mutual relationship and dependence. But it is not easy to form a judgment as to the range of territory over which, in such a state of society, any connexion, or even any communication, was kept up between the various tabes. Perhaps their intercomise with each other was carried on between points more remote from each other than we should be at first inclined to suppose. The nations to the both of the Thames and the Severn, or rather we ought probably to say of the Severn and the Wash, appear evidently to have been all accustomed to co-operate on emergeneits, and to consider themselves as in some sort forming one society: although even when pressed by a common danger, their differences of origin may have afforded great facilities for fomenting divisions between those of Belgie descent, for instance, and the aborigmes (as Cæsar ealls them) of the interior; and the minibitants of Devon and Cornwall, withdrawn within their peninsula, may-be supposed to have been apt to feel less interest than the rest in the general cause. But even the Brigantes in the north seem early to have taken a part in the resistance to the Roman invasion; and, on more than one occasion, we find them apparently acting in concert with the insurgent tribes within the conquered territory or with the yet unsubdued combatants in the west. The notion of a common nationality, however, even in its faintest form,

seems scarcely to have extended beyond the Bri-

gantes; the ruder occupants of the bleak and wild

country farther to the north were probably always

although we do not find any actual association of

the tribes of the north and south, as thus dis-

tinguished, we should perhaps be in error if we

were to assume that they kept up no intercourse

with each other. If any reliance is to be placed on

the correctness even of the general import of the

speech which Tacitus puts into the mouth of the

Caledonian General Galgacus, we must suppose

that, the events which had happened in South

Britain, since the arrival of the Romans, were both

well known, and had excited a deep interest beyond

the Grampians. Galgacus, in rousing the valour of

his followers, makes his appeal throughout to feel-

ings which he assumes to be common to all Bri-

tons, and he alludes to the revolt of the Trinobantes

under Boadicea, and to other passages of the con-

quest of the souther ribes, as to transactions that

were familiar to all his hearers.

regarded as the people of another land,

Although the native British tribes, before their [

SECTION II.

THE GOVERNMENT AND LAWS OF THE ANCIENT

BRITONS BEFORE THE INVASION OF THE ROMANS.

WE learn from Cæsar, whose account is confirmed
by other writers of good authority, that the government of the ancient British initions was, in form at

[Book I.

ment of the ancient British nutions was, in form at least, monarchical. We are scarcely, however, entitled to assume that each of the tribes or nations we have enumerated had its own king or chief, and formed, in all respects, a distinct and independent state. The same sovereign may in some cases have governed several tribes; or, on the other hand, what is described as a single district inhabited only by one people, may have been divided into several sovereigntics. Casar, for instance, mentions four langs in Kent; and yet no geographer, or other anglent writer, has apoken of \*that territory as occupied by more than one nation. Of the rules of succession to the royal authority little is known. We are informed, however, that they made no distinction of sexes in the succession to the royal office; differing in this from the tribes of the Germanic stock. We have examples of British female sovereigns in Boadicea and Cattis-

mundua.

But though the form of government was monarchical, the British princes appear to have possessed but a small portion of the substance of sovereignty. One of their chief prerogatives was that of commanding the forces of their respective tribes in the time of war. But even then their authority was very much circumscribed by their nobility, and still more by their priests. The Drinds, as we have already had occasion to observe, were possessed of very great power among the rude Britons, almost, it would appear, as much as was possessed by the Egyptian priesthood; insomuch that the government among the ancient Britons was more properly a theogracy than either a monarchy, anistocracy, or democracy.

Dio Chrysostom says, speaking of the Celtic

Dio Chrysostom says, speaking of the Celtic nations generally, "Their kings are not allowed to do anything without the Druids; not so much as to consult about putting any design into execution without their participation. So that it is the Druids who reign in reality; and the kings, though they sit on thrones, feast in splendour, and live m palaces, are no more than their instruments and ministers for executing their designs." But the government appears to have had also a mixture in it of popular elements. Ambiorix, king of a people of Gaul, made this excuse to Cæsar for having assaulted his camp :- "That it had not been done with his advice or consent; and that his government was of such a nature that the people had as much power over him as he had over them." The British princes made a similar excuse to Cæsar for having seized and imprisoned his ambassadors,—that is, they laid the blame upon the multitude. These slight infinations, however, are not sufficient to

enable us to form any opinion as to the share which Tactt, Agric, xvi.

the people really had in the government. With regard to the power of the Drinds we have more distinct information.

Among most rude nations the laws receive their force from being regarded as the express commands of their gods. Where a particular order of men are supposed to be the only persons to whom the gods have communicated the knowledge of their commands, this order of men are of course the only persons capable of declaring and explaining those commands to the people. In a word, they are the sole legislators of that people. Moreover, the violations of these laws being considered as violations of the will of heaven, the punishment of such violations could not be committed to any but the immisters of heaven,—to wit, the order of men

above specified. In an early state of society a very large proportion of these laws are penal, consequently punishment is the chief employment of the judicial office. Consequently, too, we have the same men who have declared the law as the ministers, and as it were the secretaries of the gods, executing it in virtue of the same privilege. That is, we have the same men performing the legislative and judicial functions. Among the ancient Britons these vast powers were enjoyed by the Druids.

Of the times, places, and forms of the judicial proceedings of these ghostly judges little or nothing is known. Most of the notices preserved by

Drod, Sieul v. 31.—Strabo iv. p. 107. (Lutetiæ 1629.)—Cæsar-B. G. vi. 13, 16.

Aron Drom in his fulfoudicial Costume, and wearing the Breastplate of Judgment, it monnering Sentence.

HISTORY OF ENGLAND.

Druidical system. The courts of justice in which

the Druids presided were, there can be little doubt, like their temples, open to the sky. The vestiges

of that in which the ancef British tribunal is sup-

posed to have been held are still to be traced in the 1sle of Anglesey, and are thus described by

Rowland: - " In the other end of this township (of

Tre'r Dryw), wherein all these rums already men-

tioned are, there bist appears a large cirque or

theatre, raised up of earth and stones to a great height, resembling a horseshoe, opening directly

to the west, upon an even, fair spot of ground.

This circuit or theatre is made of earth and stones, carried and heaped there to form the bank. It is,

within the circumvallation, about twenty paces over; and the banks, where whole and imbroken,

Bryn-Gwyn, or Biem-Gwyn, r. c. the supreme or royal tribinal." It appears from Cæsar that the

extraction of evidence by torture was a form of

indicial procedure sometimes resorted to among

the Gauls, and most probably it was also in use

among the Britons Cresor tells us that it was

applied by the Ganls in the case of women who

were suspected of having occasioned the death of

their husbands; but he does not say that this was

the few laws of the Gauls which he expressly men-

tions is, that when a woman was found guilty of

this crune, she was delivered to the flames, and

put to death by the aid of exericiating forments.

We may here observe that, notwith-tanding what is related respecting the promiscious concubinage

in use among the Britons, the marriage connexion appears still to bave been distinctly acknowledged and protected by the law. The history of Cartismondia, whose subjects rose in re-

volt against her and drove her from her king-

the only case in which it was applied.

don. The sovereign of this kingdom bas nothing which he can properly call his own, but he has the free use of all the possessions of all bis subjects. The reason of this regulation is, that he may not be tempted to acts of oppression and injustice, by the desire or hope of necreasing his possessions, since be knows that he can possess nothing. This prince is not even allowed to have a wife of this own, but he has free access to the wives of all his subjects, that, having no children which he knows to be his own, he may not be prompted to encroach on the privileges of his subjects, in order to aggrandize his family " It is curious that this was one of the means devised by Plato in his Republic, to guard against the same evil. Solmus, however, is not a writer of any authority, and, although most of his stone, are stolen, no confirmation or trace of this very strange statement is, we believe, to be found anywhere else. It is not unlikely that he may be merely here exercising his invention in giving "a local habitation and a name " to the philosophical fiction of Plato,

Section III THE GOVERNMENT AND LAWS OF ROMAN BRITAD

dom, in their indignation at her profligate abou-The transformation of South Britain into a Roman omment of her husband's bed, shows the general province necessarily swept away the native governfeeling that was entertained opon this subject. ment, and established another in its place; the least Caesar also informs us that among the Gails the husbands had the power of life and death both over of the novel characteristics of which was, that it was a government of foreigners. It was a sudden their wives and their children. Another Gallic substitution of the institutions of civilization for law relating to marriage which he mentions is, those of a condition itearly approaching to barthat, whatever dowry the hasband received with his barism. The Romans were certainly, as a nation, the greatest practical statesmen whom the world Among other people and itsbas vet beheld, duals have from time to time arisen who have exhibited vast genius in devising schemes of government, or have shown great capacity for admiinstration. But among the Romans alone there existed mititations which were able to ensure a succession of men who were systematically taught to "sway the rod of empire." The celebrated lines of their great poet were no mere poetical rhapsody

—-no vain and empty boast.—

Excudent alu spirantur mollius mra, Credo equidem', vivos ducent de marmore valtus;

Orabunt causas melius, reclique mentas

Describent radio, et surgentia sidera dicent

wife, he added to it an equivalent amount; the whole then continued the common property of the tames long as both lived, and, after the death of either, devolved, with all accumulations, upon the survivor. It also appears from his account of the Drinds, already quoted, that theft and some other ernnes were punished capitally, according to the laws administered by these judges. Their system of law, there can be little doubt, was of as sanguinary a character as their system of feligion, of which it made a part. Of the taxes paid by the Britons to their kings we know nothing further than that the Drinds, as already mentioned, took care to be exempted from \* Mona Antiqua, pp. 89, 90,

CONSTITUTION, GOVERNMENT, AND LAWS. To regere imperm populos, Romane, memento;

Hæ tila ernal artes, preisque imponere morem, Parcere subjectis, et debeltare superbos.

And when the stars descend, and when they rise. Bur, Rome, 'tis thrue alone, with awful swny, To rule mankind, and make the world obey;

Let others licited mould the running muss

And soften into flesh a marble face Plead better at the bar, describe the skies,

Of metals, and inform the breathing brass,

Disposing peace and war thy own majestic way. To tame the proud, the letter'd slave to hee, These are imperial arts, and worthy thee The Roman was probably the wisest oligarchy

that ever existed. In Rome, unlike what we have seen happen in other oligarchies, the education of the ruling class was as carefully attended to, as jealously watched over, as the preservation of their privileges. The Roman patrician was carefully and systematically instructed in the art of war, and in such, and such only, of the arts of peace as were to be the source of power, the foundation of donnoton over those who anned at universal dominion.

Thus, they made then law, and above all their

actiones legis, -their law of procedure -- a mystery

into which a pleberan could never penetrate, but

with which they themselves took care to be familiar.

Thus among the Romans we sometimes see the

most various and apparently (at least to our modern notions on the subject) inconsistent qualities united in the same individual. Without bringing forward cases such as that of the all-accomphished Julius Caesar, of men of great power and extent of original genus, we might cite instances from the Roman annals of the same man being juris-consult, general, public professor of law, pontifex maximus, consul, dictator \* When we consider that to these various accomplishments were added in the Roman on iron discipline, and a contage, cool, steady, collected, we shall not wonder that his march was to uninterrupted victory and universal empire Long after a military de-potism had succeeded to the power of that mighty obgarchy, Rome still

continued as much of her ancient policy as required that able men, though no longer so exclusively selected from one class, should be appointed to govern her provinces and command her armies. We have only to look at the result to be convinced that Britain was not an exception to this salutary

The ministers of the Roman state, whether called republic or empire, the representatives of the majesty of the Roman name, were educated soldiers, jurisconsults, statesmen; and whatever might be their errors and their vices—and they were, no doubt, many—they conquered, and, up to a certain point, civilized a large portion of the world. In a greater degree than any\_other people have done, the Romans communicated to the nations they conquered (not merely, as is often falsely asserted, their vices, but) whatever of the blessings of civilization they themselves possessed.

It is interesting to an inhabitant of Great Britain at the present day, to reflect that, towards the Gravinie Oug., hb.i. cnp. 47 et eeq. See also Heinecen Historia

Jugis Romani.

the decline of the empire, the distinctions between them were obliterated, and they were all invested with equal rights.—However, from the importance of the subject, it is fit that we should say something of the rise and progress, as well as of the leading characteristics of the minicipia. we come to treat of the military government of the province, we shall have to say something of the colonies. One leading distinction between them, noted by Aulus Gellins, we may mention here, that the colomes were sent out from, the municipal taken into, the Roman state. The Romans, in their conquests, so far pursued a

| beginning of the Christian era, more than 1500

years ago, this island actually possessed, for a period of above 300 years, nearly the whole of the

Roman civilization; that, in the second and third

centuries of the Christian era, the inhabitants of

Britain enjoyed personal secrenty; and, after the

payment of the Roman taxes, security of property,

arts and letters; elegant and commodious buildings; and roads, to which no roads they have had

since could bear comparison, till the Establishment of the present radways. As we lock along the

line of the Greenwich rathoad, and contemplate its

massive yet elegant arches, -its compact and solid

masonry,—its non highway, and the ponderous yet

compact carnages that fly along it, and reflect that

the whole kingdom will soon be intersected with

similar gigantic structures, we feel as if the times

of Roman enterprise, as regards vastness of design and durability of workmanship, had returned

is an inquiry of no common importance and in-

terest to attempt to learn what were the principal

features of that civilization which rose so early,

and, after lasting some three centuries, was so

into colonies, minicipia, and Latin cities; but, in

The Roman settlements were originally divided

rapidly and totally destroyed,

different system from that of most of the ancient nations, that they neither sought to exterminate nor reduce to slavery the nations they conquered. is the opinion of M. Guizot, whose opinion on most points of the philosophy of Justory is entitled to great respect, that this difference arose from the situation of most of the neighborring tribes on which Rome at first made war. They were assembled in towns, not dispersed over the conn-At first, the Romans did not venture to leave their former inhabitants in the conquered towns. They were occupied either by soldiers, or by mbabitants taken from Rome. Cære was the first which preserved its laws and magistrates, and icceived, in part at least, the rights of Rome † This example soon became general. There were different degrees, however, of the privilege; and it was only the highest degree that conferred the

right of vosing at Rome like the Romans—The

towns of the last class, whose entizens were thus

admitted to all the rights of Roman citizens, were

<sup>\*</sup> Essus sur l'Histoire de France, Paris, 1931 Prenner Lesai, Du Régime Maineipal dans l'Empre Romain, p. 5, et seif + Liv. lib v. cap i

lege came in to diminish their numbers. Conse-

quently, the weight pressed with increased and

increasing force on those that remained, till it ultimately annihilated the order; and, for a season, a

middle class may be said to have disappeared from

among mankind. And as luman society, without

that middle class, is as infum as any fabric of

which the extremities are not bound together, or

are bound but by a rope of sand, it is not sur-

prising that the Roman world should have fallen an easy prey to the hordes of warlike barbarians

Besides the main incorporation, each city con-

tained various colleges, or corporations of ope-

vatives, who held, says Sir Francis Palgrave, an

ambiguous station between slavery and freedom.

In these societies employments were hereditary,

so that the son of the handicraftsman became a

foreign to our present purpose to enter into an ac-

count of these Roman guilds; but we refer the reader who wishes for more information respecting

them, to the elaborate and learned discussion on

the subject contained in the tenth chapter of Sir

Francis Palgrave's work on the "Rise and Progress of the English Commonwealth." That

member of the college by birth or easte.

that poured in upon it. \*

rights and duties: the former were exercised upon the spot; the latter were transported to Rome, and 1. The religious worship.

Thence arose in those towns a separation between the minicipal rights and dunes, and the political

could only be exercised within its walls. principal matters which remained local were- 2. The administration of the municipal property and revenues. 3. The

police, to a certain extent; with 4. A few judicial. functions specially connected with it. All these local afters were regulated either by individual magistrates, named by the inhabitants, or by the emin of the town, that is, the college of

decuriones, or inhabitants possessed of a territorial revenue to a certain amount. In general, the magistrates were named by the curia, though sometimes by all the inhabitants. As a necessary consequence of slavery, there were few free men who were not admissible into the curia. decurrency were called currates. When the Roman government from an aristocracy was changed into an absolute monarchy, the

chief men of the municipia, who had repaired to

Rome for the purpose of exercising their political

powers, and from a natural ambition to share in

the government, having no longer the same motive to go to Rome, remained at their respective mimicipia. Thus the minicipia obtained a portion of the importance which Rome lost. This was the flourishing time of the Roman immerpia. Their importance during this epoch is attested by the number of laws regarding them, and the attention bestowed upon them by the jurisconsults. But this epoch of their Instory was, in process of time, succeeded by another far less prosperous. The imperial despotism had difficulties to struggle with which required vast sums of money. On one side were the barbarians, who were either to be bought off, or beaten. In either case money was wanted—in the first, to pay the barbarians; in the

second, to pay the soldiers who fought them. the other side was a vast and mercasing populace, to be fed, annised, and kept under. In order to obtain resources, an administrative machinery was created, capable of extending its action everywhere, but vast and complicated, and consequently itself a source of great expense. The revenues of the towns, as well as those of individuals, came to be in this way laid under contribution. At different times the emperor seized a great quantity of municopal property. Nevertheless, the local burdens for which that property was intended to provide, remained the same, or rather went on increasing, from the micrease of the population. When the revenues of a ammicipality were insufficient for its

expenses, the members of the curia (or corporation)

were obliged to provide for them out of their pri-

most effectually for the total ruin of the empire.

prince of jurisprindential expositors, Heineceius, has also written a work, "De Collegns et Corporabus Opificum." When the Romans had established themselves in Britam, they proceeded, according to their usual policy, to make Verulanium a municipana, or free town, bestowing on the inhabitants all the privileges of Roman citizens. When this first happened, the municipal system was in the second stage or epoch of the progress which we have

briefly traced above, that is, it was in its flourishing London, too, though it does not appear to have been a municipium, nor even distinguished by the name of a colony, was, we are informed by Tacitus, † famous for its trade, enjoying, no doubt, some of the advantages of the Roman Municipia. The fact in this particular instance of Britain. agrees with and illustrates the general fact stated above. In a few years the two places above named were crowded with inhabitants, who were all zealous partisans of the Roman government. these facts are demonstrated by what happened to these two cities in the great revolt under Boadicea. The revolted Britons, as already related, attacked with fury London and Vernlamium, on account of their attachment to the Romans, and destroyed no

vate property. Thus the station of decurio became

<sup>\*</sup> In the above brief account of the Roman municipin, we have chiefly followed the Essay of M Guzzat, above quoted, † Annal, 1th xiv. cap. xxxiii. His words are, "Londonium—cognomento quidem colouis, non-tusigne, sed copia acgotationium et commeatoam maximé celet re" He expressly calls Vesulquinium a manicipum. See also Suctumis, Vit Neton cap xxxis. Both Tactus and Suctorius use the words rivinia et vocurum,—while chiefic is vice for a Vivalquinium as the color of the Vivalquinium and suctorium. a source of ruin to the se who held it, that is, to all the inhabitants in easy circumstances of all the municipia of the empire. And thus was destroyed the middle class of citizens, and the way prepared civium may refer to Verulamium, socierum to London. See also Horsley's Britannia Romana, pp. 16 and 28.

and Verulamnum. The principal towns of every

Roman province, besides, as we have already stated,

being governed by laws and imagistrates similar to

those of Rome, were adorned with temples, courts of

usually displayed by conquering states in their con-

duct towards the coggnered. "Doctus," he says

of Agricola, " per aliena experimenta, parum profice

armis, si injuriar sequerentur;" -- taught by the

experience of others, that little was gained by arms,

if success was followed by injurges. The edict of Hadram, however, promulgated, A.D. 131, and called

the perpetual edict, had no doubt the effect of

mitigating the tyranny of the provincial presidents,

since it contained a system of rules by which they

were to regulate their conduct in their judicial

capacity, and by which the administration of justice

the emperor Hadrian to the final departme of the

Romans out of this island, was about 300 years;

and during that period the laws of Rome were

firmly established in all the Roman dominions in

Britain. In our sketch of the immerpal institutions

we have aheady given the substance of a portion of

those laws, and in what remains to be said we

shall have to allude to others. Most of them were embodied in the Theodosian Code, by com-

mand of the emperor Theodosius, about the year

Roman law in the lifth century. It was a collection

of the constitutions of the emperors from Constan-

time to Theodosius the younger. † Independently of those constitutions, the law of the Twelve Tables;

the ancient senatus-consulta, and plebiscita; the

edicts of the practors, or rather the perpetual edict

of Hadrian, which had superseded these; and,

lastly, the response prudentum, the opinions of the inrisconsults, formed part of the Roman law. In-

deed, in the year 426, by a constitution of Theodosins the younger and Valentinian, the works of

five of the great princonsults, Papiniamus, Paullus,

Gains, Ulpannis, and Modestinus, and of four others secundo toco, Scievola, Salums, Julianus,

and Marcellus, had expressly received the force of The Theodosian Code, however, doubtless

contained the most important portion of the law of

the empire, and is also the document which throws most light on that epoch, particularly when aided

by the very learned commentary of Jacobas Go-

thofred. To attempt to give any detailed account

of that vast body of laws in this place would evi-

This code did not, however, as Montesquieu seems to suppose, constitute the whole body of the

was rendered umform throughout all the empire.\*

That populousness also, in so short a time after

the establishment of the Romans in the island, is a sufficient proof of the wise policy of the Romans, in reconciling the conquered people to their domination, by their municipal institutions; for the wonder is, not that a part of the Britons made the revolt above alluded to, but that so many of them were already quetly settled, along with the colonists sent out from Italy, or their descendants, in London

instice, theatres, statues, and other public buildings and monuments, in unitation of that mighty citythus imitating the external and physical, as well as the internal and moral characteristics of their me-"The country was replete," says Sir tropolis. Francis Palgrave, "with the monuments of Roman magaincence. Malmesbury appeals to those stately rums as testimonics of the favour which Britain had enjoyed; the towers, the temples, the theatres, and the baths, which yet remained undestroyed, exexted the wonder and admiration of the chronicler and the traveller; and even in the fourteenth eentiny, the edifices raised by the Romans were so numerous and costly, as almost to excel any others on this side the Alps. Nor were these structures among the least influential means of establishing the Roman power. Architecture, as cultivated by the ancients, was not merely presented to the eye; the art spake also to the mind. The walls covered with the decices of the legislature, engraved on brouze, or sculptured in the marble; the triumphal arches, crowned by the statues of the princes who governed the province from the distant Quirind; the te-selated thoor, pictured with the mythology of the state, whose sovereign was its pontiff-all contributed to act upon the feelings of the people, and to unpress them with respect and submission. The conquered shared in the fame, and were exalted by the splendour of the victors.''\* The government of Britian, so long as it formed only one province, is supposed to have been com-

mitted, according to custom, to a single president, whose powers appear to have at first been almost discretionary, and but little controlled even by the established laws of the empire. It is sufficiently clear, from what Tacitus says in his Life of Agricola, that the government of the Romans in Britain, before the arrival of Agricola, was extremely onpressive. That excellent person employed his first winter in redressing the grievances of the Britons, which had been so great as to occasion frequent revolts, and render a state of peace more terrible to them than a state of war. One remark of Tacitus, in describing the course of policy pursued by his father-in-law, seems to contain nearly the whole secret of the Roman art of governing their provinces, as distinguished from the barbarous imbecility \* Rise and Progress of the English Commonwealth, vol. i. part i. p 323. 4to, London, 1832.

dently be futile. It is almost imnecessary to add that the corpus juris, or body of law, promulgated by Justinian, contains in substance much of what was in the Theodosian Code, as well as an the works of those

great juriscousults. And although we cannot join in the admiration expressed by some for the "regular order" of that digest, where order there is none, we must needs admit that, as a body of law, rit remains a monument of the good sense of that illustrious people, and of their great practical talents for government and legislation.

[Book I.

The court of the vicar of Britain, who resided

chiefly at London, was composed of the following

officers —a principal officer of the agents; a prin-

cipal secretary; two cluef accountants; a master of

the prisons; a notary; a secretary for despatches; an assistant; under-assistants; clerks for appeals;

title of the vicar of Britain was Spectabilis, and the

ensigns of his office were a book of instructions in

a green cover, and five castles, representing the five provinces under his jurisdiction, and placed within a

line which imitated the triangular form of the island. Two of the provinces—probably the two

most northerly-were governed by persons of con-

sular dignity, the three others by persons styled presidents. The court, or more properly harcau,

of each of these governors was almost an exact

copy, on a smaller scale, of that of the vicar of the diocese and of the prefect of the prefecture.\*

regard to the various subordinate administrative

complete example of pure and sample administrative despotism. There is no independence for the func-

tionaries; they are subordinate one to another, up to the emperor, who has the absolute disposal of

their destiny. There is no appeal for the subjects

against the functionaries, but to their superiors We meet with no co-ordinate powers destined to

act as checks upon one another; everything pro-

ceeds according to a strictly graduated scale; and

yet M. Guizot thinks, and not a few will agree with

hun, that this administrative machinery of the im-

perial despotism was less grievous to those who lived under it than the powers which preceded it,--

whether the short-lived, but on that account more

rapacious, tyranny of the Roman procousul, republican at least in name, or the barbarons oppression

of their native rulers,—their ignorant and ferocious chieftains, and fanatic priests. With respect to the

administration of the laws, the Roman governors had the sole judgment of all causes, without other

appeal than to the emperor. In the first ages of

the empire, and conformably to the ancient customs,

he to whom the jurisdiction belonged, whether

prætor, governor of the province, or minucipal ma-

gistrate, when a case came before him for trial, did

of the Roman law, by the discovery of a copy of the Pandects of Justinian at Amalphi, A.D. 1137. Von Savigny, in his History of the Roman Law during the Middle Ages, has completely proved that the Roman law had never perished, and therefore that the story of its resuscitation by the discovery of the Pandects at Amalphi in the twelfth century is en mesus. Andeed, more than half a century before the appearance of the work of You Savigny, Hemecons had arrived at nearly the same conclusion, though he did not go into such fulness of detail as Von Saviguv, † But the reported discovery of the Pandects, and the rapid effects ascribed to that one cause, bear about them something of that air of the upracolous which has always found such favour with mankind.

For the purposes of administration, the Roman territories in Britain were, about 150 years after its

first occupation by these conquerors, divided into two proxinces, to which three more were afterwards added. The only notice of these divisions which can be perfectly depended on, so far as it goes, is contained in the "Notitia," already mentioned, a document which is of about the same date with the Theodosian Code; † but all that we learn from this document is, that the names of the five provinces were Flavia Cæsariensis, Britanina Prima, Britaunia Secunda, Valentia, and Maxima Cæsariensis. As to the parts of the island to which these names were respectively applied, we are altogether in the It is even doubtful whether they were all contained within the wall of Severus, or whether one of them (but which is matter of conjecture) did not comprehend the space between that rampart and the wall of Antoninus. Richard of Circucester adds a sixth province, to which he gives the name of Vespasiana, and which he makes to extend from the wall of Antoninus to the Moray

the other provinces of the Roman empires, varied with the extent of that empire. We shall now give an account of it when it was in its most complete and extensive form. In the fifth century, the emperor Constantine the Great divided the whole Roman empire into the four prefectures of the East, Illyricum, Italy, and Ganl, over each of which he established a prefect.§ Each of these prefectures was subdivided into a certain number of dioceses, each of which was governed, under the prefect, by an officer called the vicar of the diocese. The diocese of Britain, as well as those of Gaul and

Horsley's Britannia Romana. § Hemeren Hist Jim Romani, lib i. § 365, -- Noteta Imperia, with Panenolus's Commentary,

they called extraordinariæ cognitiones. Diocletian formally abolished the institution of the judex in the provinces; it no longer appeared but as an exception to a rule; and, in the time of Justinian,

it seems to have fallen completely into desuctude.\* From this it will appear that, in Britain as elsewhere, the governors had two sorts of duties:-1. They were the emperor's ministers, intrusted with the collection of the revenues, with the command and recruiting of the armies, with the management of the imperial posts, and, in a word, of every relation in which the emperor stood to his subjects; 2. They had the administration of justice. † The administrative and judicial departments were thus,

contrary to some of the most important principles of good government, strictly combined; the Roman emperors not being of the opinion of George III., when he declared that "he looked upon the independence and uprightness of the judges as essential to the impartial administration of justice,as one of the best securities of the rights and liberties of his subjects, --- and as most conducive to the homur of the crown."! When the Romans conquered a people, they generally pursued with them one of two modes;—

they either imposed on them an annual tribute, or \* they took from them their lands, colonizing them from Rome, or restoring them to the conquered people on the condition of their paying a certain proportion of the revenue of them to the conquerors, Those treated in the former manner were called tributarn; those treated in the latter, rectigates. At first Britain belonged to the former class, but afterwards to the latter. The *vectigates* mid from their arable land a tax called decuma, from their pasture a tax called *scriptura*, and from their ports atax called portorium § The decume, as the name implies, was properly

a tithe; but this proportion varied, being sometimes less, sometimes more, than a tenth, according to the exigencies of the occasion and the poverty and fertility of the country. | Afterwards, under the emperors, the proportion was settled by the Canon frumentarius, or law for supplying Rome, and afterwards Constantinople, with corn. grievances in the manner of levying this tax imposed upon the inhabitants of Britain were remedied by Agricola.\*\* This tax was also levied on other things besides corn, such as vineyards and or-

The Romans also levied a tax on pasture-grounds and fruits. This tax was called scriptura, because the collector of it wrote down in his books the number of the cattle. † Under the emperors, this tax was partly levied in kind. 12 This tax, when

supposed to have contributed to the great revolt under Boadicea.\* Another important tax was the portolia, or customs, which in Britain are said to have been remarkably heavy. Another was raised from nunese of every description. Besides these, there were various other taxes, which pressed heavily on the

conquered people. The charge of collecting all these taxes was committed to an imperial *procurator*, who had the superintendence of all the inferior officers employed in this branch of administration; and in Britain. as elsewhere, the principal taxes were let to farmers at a yearly rent. We have the authority of Tacitus, that the Britons were exposed to grievous extortions in the raising of them. The troops which the Romans stationed in Bri-

tain to secure their conquest were, according to their

first imposed on them, proved very oppressive to

the Britons, their property chiefly then consisting

in cattle, and they being obliged to borrow money

from some of the wealthy Romans at an exorbitant

rate of interest. Seneca is said to have lent the Bri-

tons above 322,000l.; and less demanding it with

rigour at a time when they were unable to pay is

usual policy, collected from many distinct and remote provinces of the empire, and differed from the Britons and from each other in their manuers and languages.‡ About the same time that the changes which have been described were made in the civil administration of the empire, a similar change was made in the government of the unbtary establishment. Constanting the Great deproved the prætorior prefects of their nulitary command, and appointed in their stead two new officers called magistri militum, one of whom had the command of the cavalry, the other of the infantry, had not their ordinary residence in Britam; but the Roman troops there were communided under them by the three following officers: 1. Comes Littoris Saxonici per Britanniam, the Count of the Saxon

shore in Britain. 2. Comes Britanna, the Count of

3. Dux Britanniarum, the Duke of Bri-

Wherever the government is a pure despotism, the principal officers of state will be, at least to a certain extent, the private friends or associates of the monarch, or individual in whose hands is lodged These will be his comselthe sovereign power. Thus, in the courts of the lors and his mimsters. middle ages, as we shall have occasion to reneak hereafter, those who held offices about the king's person, many of which we should consider includ,

were, in effect, the king's ministers. In fact, the

more modern practice was borrowed from the later

Roman and Byzantine emperors. In the courts of

the Roman emperors, from Augustus downwards, these counsellors were styled Comites Augustales, or Comites Augusti, companions of the emperor, from their constant attendance on his person. They were divided into three orders or degrees. they left the imperial court, to take upon them the government of a province, town, or eastle, in the exercise of any office, they were no longer called Countes Augustales, but Comites of that province, town, cast'e, or office. \* Of this the Comites Britanmarum, the Counts of Britain, and the Countes Littoris Saxomei per Britanniam, the Counts of the

Saxon Shore in Britain, were examples. The Counts of Britain † are supposed to have had the command originally of about 3000 foot, and 600 horse, in the interior parts of Britain. But afterwards these forces seem to have been withdrawn, or stationed on the frontiers; for, in the

esection of the Notitia, where the court of this officer is described, there is no mention of any forces un-

ler his command. ‡ In the third century the south and east coasts of

Britain began to be much infested by Saxon prrates; and thence it is supposed to have got the name of Littus Saxonicum, the Saxon shore. § To protect the country from these pirates, the Romans not only kept a fleet on these coasts, but also built a chain of forts, which they garrisoned. The officer who commanded in chief all these forts and garrisons, was called Comes Littoris Saxonici per Britanniam, the Count of the Saxon Shore in Britam. These forts were nine in number, and were situated at the following places: 1. Branodunum, Brancaster. 2. Gariannonum, Burghcastle, near Yarmouth, both on the Norfolk coast. 3. Othona,

\* Selden's Titles of Honour, p. 211, et seq. Du Cange, Gloss, voc.

† Str Francis Palgrave (Rise and Progress of the English Commanwealth, vol. i. part 1 p. 359) says that the Comites Britanniarum are conjectured to have been the supreme commanders of the diocese. This, too, is the opinion of Brady, (Hist, p. 41) We do not think this conjecture well founded. There appears reason to believe (see particularly Cod. Theod. hb. vi. t. 14 l. 3, and Gothofied's Commentary upon it) that generally the dux was a military officer of superior rank to the Comes. The law referred to is for the express purpose of placing certain Countes prime ordine rei militaris upon an equality with the duces, with the special exception of two—the "duces

district, commonly on the frontiers ‡. Such was the Dux Britanniarum, the Duke of Britain, who had command on the northern frontier over thirtyseven fortified places, and the troops stationed in them. Twenty-three of these forts were situated on the line of Severus's wall, and the other fourteen at no great distance from it § In these thirty-seven forts about 14,000 foot and 900 horse were stationed. The court of the Duke of Britain was exactly similar to that of the Count of the Saxon Shore, which has been described above. The Roman soldiers were not less remarkable for their industry than for their discipline and valour. These several bodies of troops, composing

the standing army of the Romans in Britain, be-

sides performing the then important services of

guarding the coasts against the Saxon pirates, pre-

serving the internal tranquillity of the country, and

protecting the northern frontiers from the meur-

sions of the Scots and Picts, executed many of those

noble works of utility and ornament, the vastness

and durability of which, though only contemplated after numerous hordes of destroying barbarians

have swept over them, have excited the astonish-

ment and admiration of every successive generation

Ithanchester, not far from Malden, in Essex, now

Ægyptvet Pontica " 1 Notitia, 72, lib. il., edit of Pancaolus on this subject Sir Francis Palgrave has the following remark: " It has been conjectured that this extensive tract was so denominated, in consequence of being continually exposed to the incursions of the Saxous; but is it not more reasonable to assume that they had already fixed themselves in some portion of the district? For it is a strange and anomalous process to name a country, not from its mhabitants, but from its ussailants, and on the opposite "littus Saxonicum," afterwards included in Normandy, they had obtained a permanent domicile in the neighbourhood of Baieux"—Rise and Progress of the English Commonwealth, vol i part i. p 384. And yet the reader will remark, that the Roman forts were all situated on the very verge of the organ, some of them on places which it has since overflowed.

# CHAPTER IV.

## HISTORY OF THE NATIONAL INDUSTRY.

NDER this title we propose to present a view of the state and progress, in each period, of all those arts commonly called the useful arts, the object of which is to make provision for the maintenance and physical accommodation of buman life, and which in every country must

necessarily employ the labours of the great body of its inhabitants. The cultivation of the earth and all other modes of procuring food,—the different handicrafts and manufactures practised by the people,the means of communication and conveyance made nse of by them,—their internal trade and foreign commerce, will fall to be here considered. Some of these applications of skill and industry constitute the indispensable foundation on which the whole of the national civilization stands; the rest may be said to form the main body of the fubric. All else that can be added to adorn and elevate the social condition of man depends for its existence upon these; for the fine or ornamental arts are to the necessary or useful arts only what the pillars, and sculptures, and domes, and pinnacles of a building are to the apartments within, to which indeed they may be made to serve for something more than mere decorations, but without which to decorate, and in part also, it may be, to support and cover, they never would have appeared.

As in nearly everything else relating to the British islands during the period at present under review, so with regard to the arts of life practised by the natives, our knowledge is extremely limited and imperfect. No written records, or other literary remains, either of the Britons or of the Gauls, have come down to us. A small number of seattered notices in the Greek and Roman writers, few of whom had any good opportunity of ascertaining the facts of which they make mention, while the subject was probably not one about which they felt much interest, make up all the direct information we possess. Our other lights are to be extracted, from the few ruined monuments and other almost obliterated relies and memorials of the primitive Britons which the waste of time has spared, the fragments of a wreck which scareely tell us anything positively or distinctly, and many of which do

nothing more than afford some mystic hints for fancy and conjecture to work upon.

In distributing our scanty materials, we will begin by noticing the intercourse and traffic which appear to have been maintained with this island an early times by foreign nations, the facts belonging to this part of the subject constituting our first knowledge of the ancient Britons, and the natural introduction to an examination of the internal condition of the country.

The small beginnings, hidden in the depths of ancient time, of that which has become so mighty a thing as British commerce, have an interest for the imagination, the same in kind with that belonging to the discovery of the remote spring or rill which forms the apparently insignificant source of some famous river, but as much higher in degree as the bistory of human affairs is a higher study than the history of inanumate nature.

The Phænicians, the great trading people of autiquity, are the first foreigners who are recorded to have opened any commercial intercourse with the British islands. There are some facts which make it probable that this extremity of the globe was visited even by the navigators of the parent Asiatic states of Sidon and Tyre. Tm, a product then to be obtained only from Britain and Spain, was certainly used in considerable quantities by the civilized nations of the earliest times. It was the alloy with which, before they attained the knowledge of the art of giving a high temper to iron, they hardened copper, and made it serve for warlike instruments and many other purposes. A mixture of copper and tin, in due proportions, was perhaps fitted, indeed, to take a sharper edge as a sword or spear than could have been given to iron itself, for a long time after the latter metal came to be known and wrought. It is certain at least that swords and other weapons fabricated of the compound metal continued to be used long after the introduction of iron. This composition was really what the Greeks called chalcus and the Romans aes, although these words have usually been nuproperly translated brass, which is compounded not of copper and tin, but of copper and zmc. There is no reason to suppose that zmc was at all known to the ancients; and if so, brass, properly so called, was equally miknown to them. What is commonly called the brass of the Greeks and Romans, being, as we have said, a mixture of copper and tin, is not brass, but bronze. This is the material, not only of the ancient statues, but also of

Carthage.

mental and useful. It was of this, for instance, that they fabricated the best of their mirrors and reflecting specula; for the composition, in certain proportions, is capable of taking a high polish, as

many of their other metallic articles both orna-

well as of being hammered or filed to a sharp and hard edge in others. This also is the material of

which so many of the Celtic autiquities are formed, and which on this account is sometimes called Celtic brass, although it might with as much propnety be called Greck brass, or Roman bråss. – In like manner the swords found at Canna, which are supposed to be Carthagman, are of bronze, or a composition of copper and tin. Tin, too, is supposed, with much probability, to have been used by the Phoenicians at a very early period in those processes of dyeing cloth for which Tyre in particular was so famons. Solutions of tin in various acids are still applied as mordants for fixing colours in "clotle. Tin is understood to be mentioned under the Hebrew term oferet, in the Book of Numbers;\*\* and as all the other metals supposed to have been then known are enumerated in the same passage,

at would be difficult to give another probable translation of the word. This would carry the knowledge and use of tin back to a date nearly 1500 years antecedent to the commencement of our era. At a much later date, the prophet Ezechiel is supposed to mention it under the name of bedil as one of the commodities in which Tyre traded with Tarshish, probably a general appellation for the conutries lying beyond the Pillars of Hercides. age of Ezekicl is placed nearly six centuries before the birth of Christ; but we have evidence of the knowledge and employment of tin by the Phænicians at a much earlier period in the account of the crection and decoration of the Temple of Solomon, the principal working employed in which—and among the rest the makers of the articles of brass, that is, bronze, and other metals—were brought from Tyre. The oldest notice, or that at least professing to be derived from the oldest sources, which we have of

the Phæmean trade with Britain, is that contained in the narrative of the voyage of the Carthaginian navigator Himileo, which is given us by Festus Avienus.† This voyage is supposed to have been performed about 1000 years before the commencement of our era. Humleo is stated to have reached the isles of the Œstrymnides within less than four months after he had set sail from Carthage. Little doubt can be entertained, from the description given of their position and of other circumstances, that these were the Scilly islands. The Œstrynmides are placed by Avicans in the neighbourhood of Albion and of Ireland, being two days' sail from the latter. They were rich, he says, in tin and lead. The people are described as being numerous, high-spirited, active, and eagerly devoted to trade: yet they had no ships built of timber wherewith to make their voyages, but in a wonderful manner

effected their way along the waters in boats con-

† See ante, p. 14.

• xxx1, 22.

of voyages of considerable length made in such vessels as those here described at a much later It is observable that in this relation neither the Estrymnides, nor the Sacred Isle of the Hiberni, nor that of the Albianes in its neighbourhood, appear to be spoken of as discoveries made by Himilco; on the contrary, the Isle of the Hiberin is described as known by the epithet of the Sacred Isle to the ancients, and the resort for the purposes of traffic to the (Estrynmides is declared to have been a custom of the inhabitants of Tartessus and

suppose the skins or Indes were distended by wickerwork which they covered, although that is not

mentioned. There are well-authenticated accounts

No mines of any kind are now wrongld in the

Scilly islands; but they present appearances of aucient excavations, and the names of two of

them, as Camden has remarked, seem to infimate

that mining had been at one time carried on in them. They may in early times have produced

lead as well as tin; or, these metals here ob-

tained by the Phænicians or then colonists of

Tartessus and Carthage, may have been brought

from the neighbouring peninsula of Cornwall,

which produces both, and which besides was most probably itself considered one of these islands. Pliny, it may be noted, has prescrized the tradition, that the first person who imported lead (by which name, however, he designates both lead and (m) from the island of Cassiteris was Midacritus, which has been supposed to be a comption of Melicartus, the name of the Phoenician Hercules. Cassiteris means merely the land of tin, that metal being called in Greek cassiteron. The next notice which we have of the trade of the Phænicians, or their colonists, with Britain, is that preserved by Strabo. His account is, that the traffic with the isles called the Cassiterides, which he describes as being ten in number, lying close to one another, in the mann ocean north from the Artabri (the people of Galheia), was at first exclusively in the hands of the Phœnicians of Gades, who carefully concealed it from all the rest of the world. Only one of the ten islands, he states, was uninhabited; the people occupying the others wore

long as those of goats. They led a pastoral and wandering life. He expressly mentions their mines both of tin and lead, and these metals, he adds, along with skins, they give to the foreign merchants who resort to them in exchange for earthenware, salt, and articles of bronze. We may here observe that the geographer Dionysius Periegetes gives the name of the Isles of the Hesperides to the native country of tin, and says that these isles, which he seems to place in the neighbourhood of Britain, are inhabited by the wealthy descendants of the famous Iberians. It is

black cloaks, which were girt about the waist and

reached to their ankles: they walked about with

sticks in their hands, and their beards were as

remarkable that Diodorus Sieulus describes the Celiberrans, or Celts of Spain, as clothed in black and shaggy cloaks, made of a wool resembling the hair of goats, thus using almost the same terms which Strabo employs to describe the dress of the people of the Cassiterides. The chief island of the Scilly group is called Silura by Solinus; and perhaps the original occupants of these isles were the same Silures who are stated to have afterwards inhabited South Wales, and whose personal appearance, it may be remembered, Tactus has expressly noted as betokening a Spainsh origin.

It was undoubtedly through the extended commercial counexions of the Phœnicians, that the metallic products of Britain were first distributed over the civilized word. A regular market appears to have been found for them by these enterprising traffickers in some of the most remote parts of the earth. Both Plury and Arrian have recorded their export to India, where the former writer says they were wont to be exchanged for precions stones and pearls. It is probable that this commerce was at one time carried on, in part at least, through the mediann of the more ancient Palmyra, or Tadmor of the Desert, as it was then called, which is said to have been founded by Solomon a thousand years before our cia.\*

The Phæmeians, and their colonists settled in Africa and the south of Spani, appear to have retained for a long period, the exclusive possession of the trade with the British islands, even the situation of which they contrived to keep concealed from all other nations. It appears from Herodotus, that, in his time, about four centaries and a half before the birth of Christ, although the was known to come from certain islands which, on that account, went by the name of the Cassiferides, or Tim Isles, yet all that was known of their situation was, that they lay somewhere in the north or north-west of Europe. It is generally supposed that the first Greek navigator who penetrated into the seas in this part of the world was Pytheas of Marseilles, who is said to have flourished about a hundred years after the time of Herodotus. From this celebrated colony of Marseilles something of the Greek civilization seems early to have radiated to a considerable distance over the surrounding regions; but whether there ever was any direct intercourse between Marseilles and Britain we are not informed. The only accounts of the trade which have come down to us, represent it as carried on through the medium of certain ports on the coast of Ganl, nearest to our island; and we are probably to understand that the ships and traders belonged, not to Marseilles, but to these native Gallic towns. From the north-west coast of Gaul, the tin and lead seem to have been for a long

time transported across the country to Marseilles, by land-carriage.

Strabo relates, on the authority of Polybons, that when Scipio Africanus the younger made inquiry respecting the tin islands of the people of Marseilles, they professed to be totally ignorant of where they lay. From this we must inter, either that the Massilians had adopted the policy of the Carthaginians with regard to the navigation to these isles, and studiously concealed what they knew of them, or, what is more probable, that they really knew nothing of the countries from which their tin came, the trade being, in fact, carried on, as we have just supposed, through the medium of the merchants of the north-west coast of Gaul. The Romans, according to the account given by Strabo in another place, had made many endeavours to discover the route to these mysterious isles, even while the trade was still in the exclusive possession of the Carthaginans. He relates, that, on one occasion, the master of a Carthaginian vessel finding himself pursued, while on his way to the Cassiterides, by one whom the Romans had appointed to watch him, purposely ran his vessel aground; and thus, although he saved his life, sacrificed his cargo, the value of which, however, was repayed to hun, on his return home, out of the public freasury But the Romans, he adds, at length succeeded in discovering the islands, and getting the tin trade, or at least a part of it, into then own hands. As Strabo died a p. 25, this commercial intercourse of the Romans with the south-west of Britain innst have long preceded the invasion of the south-castern part of the country by Claudius, and may very possibly have preceded even the carlier myasion by Cresar. It is remarkable that Strabo does not speak of it as having been a consequence of, or m any degree connected with the last-mentioned event. He says, that some time after its commencement, a voyage was made to the island by a Roman navigator of the name of Pubhus Crassus, who, finding the inhabitants of a pacific disposition, and also fond of navigation, gave them some instructions, as the words seem to imply, for carrying it on upon a larger scale. This passage has attracted less attention than it would seem to descrive; for, if the Cassiterides be, as is generally supposed, the Scilly islands, we have here the first notice of any commercial intercourse carried on with Britain by the Romans, and a notice which must refer to a date considerably earlier than that at which it is usually assumed that the country first began to be resorted to by that people.

We are inclined to believe, however, that the trade of the Romans with the Cassiterides was entirely confined to their colonial settlements in the south of Gail. Of these the city of Narbonne, situated about as far to the west of the month of the Rhone as the Greek city of Myrselles stood to the cast of it, was the chief, as well as one of the oldest, having been founded about the year B.c. 120. The historian Prodorus Sterilus, who was contemporary with Julius Cæsar, has given us an

See in Maurice's Indian Antiquities, vol. vi. pp. 249, &c., a "Dissertation on the Commerce carried on in very tende ages by the Phaemenais, Carlhaginiaus, and Greeks, with the Butish Islands, for then ancient staple of tin, and on their extensive batter of that commedite, with those of the Indian Contigent; the whole confirmed by extracts from the Institutes of Menn, &c." The extracts from the Institutes of Menn, however, hardly deserve this formal amouncement; and the essay, altogether, is, like everything clos of this author's, a very wordy performance.

younger Scipio. Diodorns mentions the expedition of Casar, of which he promises a detailed account in a part of his history now unfortunately vost; but he tells us a good many things respecting the island, the knowledge of which could not have been obtained through that expedition. We must, therefore, suppose that he derived his information either through an intercourse with the country which had arisen subs**c**quent to and in consequence of Cæsar's attempt, or, as is much more probable, from the accounts of those by whom the south-western coast had been visited long before. Indeed, various facts concur to show that, however ignorant of Britain Cæsar himself may have been when he first meditated his invasion, a good deal was even then known about it by those of the Greeks and Romans, who were carious in such inquiries. Cresar notices the fact of tru, or white lead, as he calls it, being found in the country; but he erronconsly places the stores of this mineral in the interior (in mediterrancis regionibus), probably from finding that they lay a great distance from the coast at which he handed; and he does not seem to have any suspicion that this was really the famous Land of Tin, the secret of whose situation had been long guarded with such jealous care by its first discoverers, and which his own countrymen had made so many anxions endeavours to find out. But a century and a half before Polybus, as he tells us himself, had intended to write respecting Britain; and Strabo informs us that the great historian had actually composed a treatise on the subject of the British islands, and the mode of preparing tin. His attention had probably been drawn to the matter by the inquiries of his friend Scipio; for Polybius, as is well known, was the companion of that celebrated general, in several of his military expeditions and other journeys. No doubt, although the people of Marseilles were unwilling or unable to satisfy the curiosity of the travellers, they obtained the information they wanted from some other quarter. \* And in the title of this lost trea Cumden has here expressed himself in a manner singularly con-

\* Camden has here expressed himself in a manner singularly contrasting with his ensonancy, and, it may be justly added, characteristic accuracy. First, in order to prove "that it was late before the name of the Britons runs beard of by the Greeks and Romans," he quotes it passage tom Polybous, which in the original only limplies that it was doubtful whether the north of Surope was entirely encompassed by the sea, but which he renders as if it asserted that nothing was known of Europe to the north of Marseilles and Narbonne at all. Polybous has, in fact, limself described many parts of Gaul to the morth of these towns. Next he makes the Instornan to have been the friend, not of the younger, but of the elder Africanus, and to have travelled over Europe not about to 1.59, but 3.9 years before Christ. Even if he had been the contempliary of the elder Serijot, this would be a most trops matake. The whole of this passage. Scipio, this would be a more trous mustake. The whole of this passage in Camilen, however (it is in his chapter on the Manners of the Briin vanuer, nowere (it is in instruction are statistics), is opposed to his sown opinions is expressed in other parts of his work. The authority of Festis Atienns, which be here disclaims, he selsewhere makes use of very freely (see his chapter on the Seilly islands, at the end of the Britannia). And whereas he contends here that I hitain had never been heard of by the Greeks till a comparation, the contends have four many hears above account. paratively recent date, he has a few pages before a long argument to

of Ganl. The Icus of Diodorus has, by the majority of recent writers, been assumed to be the Isle of Wight, the Ucetis of Ptolemy, and the Vectis or Vecta of some of the Latin writers. But this seems to us altogether an untenable supposition. It is impossible to believe either that Diodorns would call the Isle of Wight an island in the neighbourhood of the promontory of Bolerium, seeing that it is distant from that promontory about 200 miles, or that the people of Bolerium, instead of carrying down their tin to their own coast, would make a practice of transporting it by land carriage to so remote a point. Least of all is it possible to conceive how a journey could be accomplished by wheeled carriages from the Land's End to the Isle of Wight over the sands which were left dry at low water, as Diodorus says was the case. There can be no doubt whatever that 1ctis was one of the Scilly isles, between which group and the extremity of Cornwall a long reef of rock still extends, part of which appears, from ancient documents, to have formed part of the main land at a comparatively recent date, and which there is no improbability in supposing may have afforded a dry passage the whole way in the times of which Diodorns writes. The encroachments of the sea have unquestionably effected extensive changes in that part of the British coast, and at a very remote period it is evident from present appearances, as well as from prove that it must have Esen known "to the most ancient of the Greeks." In the same chapter (on the Name of Britain) he quotes a passage from Pluny, in which that writer characterizes the island

us famous in the writings (or records, as it may be translated) of the Greeks and Romans—" clara Greeis nostrisque monumentis."

distance between the Scilly isles and the main land must have been very much less than it now is,

"It doth appear yet by good record," says a writer

of the latter part of the sixteenth century, "that

whereas now there is a great distance between the Syllan Isles and point of the Land's End, there

was of late years to speak of scarcely a brooke or dram of one fathom water between them, if so

much, as by those evidences appeareth that are

yet to be seen in the lands of the lord and chief

owner of those isles." \* Some of the islands

even may have been submerged in the long course

of years that has clapsed since the Ictis was the mart of the tin trade; and the numerous group of

islets which we now see may very possibly be only the relics left above water of the much smaller

number, of a considerable size, which are described

as forming the ancient Cassiterides. It may be added that if the south-west coast of Brittany,

where the maritime nation of the Vencti dwelt, was,

as seems most probable, the part of the continent from which the tin ships sailed, the Isle of Wight

was as much out of their way as of that of the people of Bolermin. The shortest and most direct

voyage for the merchants of Vannes was right

across to the very point of the British coast where

the turnmes were. It appears to us to admit of

little doubt that the 1ctis of Diodorus is the same island which, on the authority of the old Greck

Instorian, Timicus, is mentioned by Pliny under

the name of Mictis, and stated to be six days' sail inward (introvues) from Britain (which length of

mivigation, however, the Britons accomplished in

their wicker boats), and to be that in which the tin was produced. It must no doubt have taken fully

the space of time here mentioned to get to the

Scilly isles from the more distant parts even of the

south coast of Britain. Diodorus goes on to inform us that the foreign merchants, after having purchased the tin at the Isle of Ictis, and conveyed it across the sea to the opposite coast of Gaul, were then wont to send it overland to the mouth of the Rhone, an operation which consumed thirty days. At the mouth of the Rhone it was no doubt purchased by the merchants of Marseilles, and at a later period also by their rivals of Narbonne, if we are not rather to suppose that the Gallie traders who brought it from Britain were merely their agents. Caesar, however, expressly informs us that the Veneti, who occupied a part of the present Bretagne, had many ships of their own, in which they were accustomed to make voyages to Britain. From the two great emporia in the south of France the commodity was diffused over all other parts of the earth, as it had been at an earlier period from Cadiz and the other Phoemeian colonies on the south coast of Spain. It appears from Strabo, however, that the operose and tedious mode of conveyance by land carriage from the coast of Brittany to the gulf of Lyons was eventually abandoned for other routes, in which \* Harrisou's Description of England, b. iii, c. 7.

that river as far as it was navigable, and then, being carried on horses a short distance overland, were transmitted for the remainder of the way down the Rhone, and afterwards along the coast to Narhome and Marscolles. It is probable enough that the Isle of Wight, which is opposite to the mouth of the Seine, may have been used as the mart of the British trade in this navigation, for which purpose it was also well adapted, as lying about midway between Cornwall and Kent, and being therefore more conveniently situated than any other spot both for the supply of the whole line of coast with foreign commodities, and for the export of native produce. When the route we are now describing came to be adopted for the British trade generally, even a portion of the tin of Cornwall may have found its way to this central depôt. But even after land carriage came to be displaced by river navigation, a large portion of the British trade still continued to be carried on from the west coast of Gaul. through the medium both of the Loire and the The Loire seems to have been taken advantage of chiefly to convey the exports from Narbonne and Marscilles down to the sca-coast after they had been brought by land across the country from Lyons, to which point they had been sent up by the Rhone. The Garonne was used for the conveyance to the south of France of British produce, which was sent up that river as far as it was navigable, and thence carried to ats destination over land. This is nearly all that is known respecting the commercial intercourse of Britain with other parts of the world before the country became a province

of transportation afforded by the country. By one

of these, the British goods being brought to the

mouth of the Scine; in Normandy, were sent up

of the Roman empire. The traffic both with Carthage and the Phemician colonies in the south of Spain had of course ceased long before Cæsar's invasion; at that date the only direct trade of the island was with the western and north-western coasts of Ganl, from the Garonne as far probably as to the Rhine; for, in addition to the passage of commodities, as just explained, to and from Provence, the Belgie colomists, who now occupied so large a portion of the maritime districts in the south of Britain, appear also from their first settlement to have kept up an active intercourse with their original scats on the continent, which stretched to the last-mentioned river. The British line of communication, on the other hand, may be presumed to have extended from the Land's End to the mouth of the Thames; though it was probably only at two or three points in the course of that long distance that the continental vessels were in the habit of touching. There is no evidence that any of the vessels in which the trade with the continent was carried on belonged to Britain. island in those days seems only to have been resorted to by strangers as the native place of certain valuable commodities, and to have maintained little

line of coast must have been enabled to keep up, as we are assured they did, a very considerably higher degree of civilization than would be found among the back-woodsmen beyond them. It is to be re-

Even from this imperfect intercourse with the rest

of the world, bowever, the inhabitants of all this

membered that no small amount of the commercial spirit may exist in a country which maintains no intercourse with foreigners except in its own ports. The situation of Britan in this respect, two thousand years ago, may be likened indeed to that of Spitzbergen or New Zealand at present; but the same peculiarity, which at first sight seems to us so remarkable and so unnatural, characterizes the great commercial empire of China. There the national customs and the institutions of the government have done their utmost to discourage and restrain the spirit of commercial enterprise; but that spirit is an essential part of the social principle, and as such is unextinguishable wherever the immutable circumstances of physical situation are not adverse to its development. Hence, although their laws and traditionary morality have operated with so much effect as to prevent the people of China from pushing to any extent what may be called an aggressive counterce, that is to say, from seeking numbers for their commodities in foreign countries, these adverse influences have not been able so far to overcome the natural incentives arising out of their geographical position as to induce them to refram equally from what we may call admissive commerce, or indeed to be other than very eager followers of it. The case of the early Britons may have been somewhat similar. The genius of most of the Oriental religions seems to have been opposed to foreign intercourse of every kind, the prohibition or systematic discouragement of which the priests doubtless regarded as one of their most important securities for the preservation of their influence and authority; and very probably such may also have been the spirit of the Celtic or Druidical religion. It is remarkable, at least, that the well-ascertained

The most particular account of the exports and imports constituting the most ancient British trade is that quoted above from Strabo, and it is probably not very complete. It only adds the single article of skins to the fin and lead mentioned by Festus Avients and others. It is probable, however, that the island was known for a few other products besides these even before the first Roman invasion. Casar expressly mentions iron as found, although in small quantities, in the maritime districts. it appears from some passages in the Letters of, Cicero, that the fame of the British war-chariots

had already reached Rome. Writing to Trebatius,

while the latter was here with Cæsar, B.C. 55, after

observing that he hears Britain yielded neither

gold nor silver, the orator playfully exhorts his

Celtic tribes of Europe, though distributed for the

most part along the sea-coast, have never exhibited

any striking aptitude either for navigation or for

any employment in connexion with the sea.

carried off before he knows where he is, by some driver of one of these rapid vehicles. Strabo's account of the foreign counnedities imported into Britain in those days is, that they consisted of earthenware, salt, and articles of bronze, which last expression is undoubtedly to be understood as meaning not mere toys, but articles of use, in the fabrication of which brouze, as we have explained above, was the great material made use of an early times. Casar also testifies that all the bronze made use of by the Britons was obtained from abroad. The metal, however, as we shall presently have occasion to show, was probably imported to

some extent in ingots or masses, as well as in ima-

nufactured articles. Much of the bronze which

was thus brought to them, whether in humps of

metal, or in the shape of weapons of war and other

necessary or useful articles, had no doubt been

formed by the aid of their own tiu. Neither the

Britons themselves, nor any of the foreigners who

traded with them at this early period, appear to

have been aware of the abundant stores of copper

which the island is now known to contain. Indeed

the British copper-mines have only been wronght

to any considerable extent in very recent fines.

and make his way back to them at Rome with his

best speed. In another epistle he cautious Tre-

bathis to take care that he be not snatched up and

Having thus collected and arranged the lew but interesting facts that have been preserved relating to the earliest interchange of their own commodities for those of Toreign parts, carried on by the abelent Britons, we now proceed to take a survey, as far as our scanty sources of information enable us to do, of the different arts of life which appear to have been known and practised among themselves. We begin with their modes of obtaining subsistence. The country, as has already appeared, is presented to us, when the first light of history dawns upon it, as inhabited by a mixed race of people, divided into many tribes, varying more or less from each other in dress, customs, and acquorements; those situated farthest from the south coast being the rudest in their manuer of life, and the most deficient in general information. These, as we are informed by Cæsar, never sowed their land, but followed the primitive callings of the lumter and the herdsman, clad in the skins, and living upon the flesh and the milk of their flocks and herds, and the spoils of the chase, which was at once their sport and their occupation. Although they had abundance of milk, however, some of the Britons, according to Strabo, were ignorant of the art of making cheese; and it is asserted by Xiphilinus, that none of them ever tasted fish, although

they had multitudes in their lakes and rivers; but

whether from an ignorance of the art of fishing, or

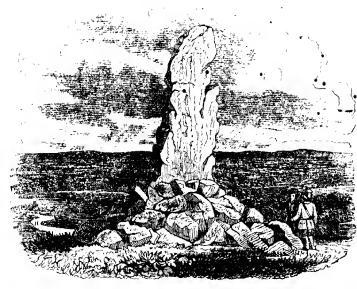

from some religious or other prejudice, does not

appear. Cæsar, who says nothing of this, states

that they thought it wrong to cat either the hare,

the common fowl, or the goose, although they

reared these animals for pleasure. The limits of

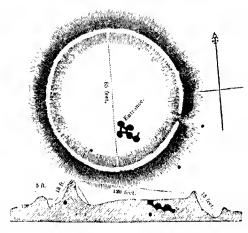

HARL STONE, CORNWALL,-From King's Munimenta Antiqua.

pastmage were marked as in the patriarchal times, recorded in the Scriptures, by large, upright, single stones, numbers of which are still to be found all over the kingdom, and are known by the names of hoar or hare stones (i. e. literally border or boundary stones) in England, and maen hir or menin gwyr in Wales.\*

The southern tribes inhabiting the coasts of the British channel, and more particularly the Cantii or people of Kent, are distinguished by Cæsar as resembling in habits and manners the Belgic Gauls, their opposite neighbours and kinsmen. They possessed the same knowledge of agriculture, and, according to Plmy, were not only acquainted with the modes of manuring the soil in use mother countries, but practised one peculiar to themselves and the Gauls. This was the application of marl to that purpose; and one white chalky sort is mentioned, the effects of which had been found to contime cighty years; "no mm," it is added, " having yet been known to have manured the same field twice in his lifetime." Of the British instruments, and methods of ploughing, sowing, and reaping, we have no information; but they were probably the same as in Belgium and Gaul, and little different from those used in Italy at that period.

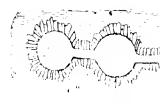

To the flail the Britons appear to have been strangers; for Diodorus Siculus tells us they had granaries or subterranean chambers, in which they housed their corn in the ear, beating out no more than they required for the day; then, drying and bruising the grain, they made a kind of food of it for innacduate use. Some vergices of this ancient

 Men hars in Armoric is a bound stone. See on this subject a learned and highly curious letter by the late William Hamper, Esq., F.S.A., in the 25th vol. of the Archeologia. practice were remaining not long ago in the western isles of Scotland. "It is called graddan," says Martin, "from the Irish word grad, which signifies quick. A woman, sitting down, takes a handful of corn, holding it by the stalks in her left hand, and then sets fire to the ears, which are presently in a flame; she has a stick in her right hand, which she manages very dexterously, beating off the grain at the very instant when the husk is quite burnt; for, if she miss of that, she must use the kiln; but experience has taught them this art to perfection. The corn may be so dressed, winnowed, ground, and baked within an hour."\*

vegetables cultivated in the country before its subingation by the Romans.

[Book I.

With regard to the houses of the Britons, at the period of the Roman invasion, we have the testimony of Cæsar, that on the southern coast, where they were numerous, they were nearly of the same description with those of the Gauls Siculus calls them wretched cottages, constructed of wood, and covered with straw; and those of Gaul are described by Strabo as being constructed of poles and wattled work, in the form of a circle, with lofty, tapering, or pointed roofs. Representations of the Gaulish houses occur on the Antonine column, agreeing sufficiently with the description of Strabo, but the roofs are in general doined.

GAULISH HUTS .- FROM THE ARIONING COLUMN,

They all have one or more lofty arched entrances; but from want of skill in the artist, they certainly appear, as a modern writer has remarked, more like the large tin camsters set up as signs by grocers, than habitable buildings.\* At Grimspound, Devoushire, t in the island of Anglesey, ; and in many other parts of the United Kingdom, vestiges are to be seen of stone foundations and walls, apparently of circular houses. Chun Castle, in Cornwall, are several dilapidated walls of circular buildings, the foundations detached from each other, and consisting of large stones piled together without mortar: each but measures from ten to twenty feet in diameter, and

has a doorway with an upright stone or jamb on each side. There is no appearance of chimneys or windows \*

They had nothing amongst them answering to the Roman ideas of a city or town. "What the Britons call a town," says Caesar, "is a tract of woody country, surrounded by a vallum (or high bank) and a ditch for the security of themselves and cattle against the incursions of their enemies;" and Strabo observes, "The forests of the Britons are their cities; for, when they have inclosed a very large circuit with felled trees, they build within it houses for themselves and hovels for their cattle. These buildings are very slight, and not designed for long duration." What Cresar calls a vallum and ditch is expressed in Welsh by the words caer and din or dinas; the same with the Gaelic dun. The caer is generally found to consist of a single vallum and ditch. Such is the circular intrenchment called Caer Morus, in the parish of Cellan, county of Cardigan. The dun, din, or dinas was a more important work, and generally crested like a fortress some very commanding situation. The Catterthuns in Angusshire, Scotland, are posts of great strength. The mountain on which hey stand is bifurcated with a fortress on each peak, the highest called the White, the other the Black Catterthun. The white is of an oval form, and made of a stupendous dike of loose white stones, whose convexity from the base within to that without is 122 feet. On the outside of a hollow made by the disposition of the stones, is a rampart surrounding the whole, at the base of

Borlase. Britton's Architectural Antiquities, ii, p. 57. Archaeologia, vol. xxii. p. 300, and Appendix.

which is a deep ditch, and below that, about 100 yards, are vestiges of another that went round the hill. The area within the stony mound is flat; the greatest extent of the oval is 436 feet; the transverse line is 200. Near the east side is the

PLAN AND SECTION OF CHUN CASILE.

foundation of a rectangular building, and on most parts are the foundations of others, small and circular. There is also a hollow, now aimost filled with stones, which was once the well of the place.\*

The towns of the warlike Britons were all, in fact, military posts; and we have the testimony of Cæsar, that they evidenced distinguished skill in fortification and castrametation. The capital of Cassivelliumus he describes as admirably defended (egregic unities) both by nature and art. Castle, which we have before mentioned, is another highly interesting specimen of an ancient British dun, or fortress. It consists of two circular walls, having a terrace thirty feet wide between. walls are built of rough masses of grante of various sizes, some five or six feet long, fitted together, and piled up without cement, but presenting a regular and tolerably smooth surface on the out-The outer wall was surrounded by a ditch nmeteen feet in width: part of this wall in one place is ten feet high, and about five feet thick. Borlase is of opinion that the inner wall must have been at least fifteen feet high; it is about twelve The only entrance was towards the south-west, and exhibits in its arrangement a surprising degree of skill and military knowledge for the time at which it is supposed to have been con-

Mugumenta Antiqua, vol. i p. 27. Meyrick's Orig. Inhab. p. 7.
 Pennant's Tour in Scotland, part ii, p. 157.

It is six feet wide in the narrowest part, and sixteen in the widest, where the walls diverge, and are rounded off on either side. There also appear indications of steps up to the level of the area within the castle, and the remains of a wall, which, crossing the terrace from the outer wall, divided the entrance into two parts at its widest end. The inner wall of the castle incloses an area measuring 175 feet north and south, by 180 feet east and west. The centre is without any indication of buildings; but all around, and next to the wall, are the remains of circular inclosures, supposed to have formed the habitable parts of the castle. They are generally about eighteen or twenty feet in diameter, but at the northern side there is a larger apartment thirty by twenty-six.\* Castle an Dinas and Caer Bran, both in the same county of Cornwall, exhibit similar vestiges of circular stone walls, containing smaller inclosures. The first is situated on one of the highest hills in the hundred of Penwith; the second on a hill in the parish of Sancred.  $\uparrow$  A fine specimen of a triple ramparted British camp exists on one of the Malvern flills, called the Herefordshire Beacon — Of ancient British earth-works also there is a most interesting relic at Tynwald, in the Isle of Man ! It is a round hill of earth, cut into terraces, and ascended

#### NATIONAL INDUSTRY.

by steps of earth like a regular staircase. The entrance into the area had stone jambs, covered with transverse imposts, fixed by the contrivunce called a tenon and mortice, like those at Stone-Henge.

The last-named stipendous monument and similar circles and inclosures in various parts of the kingdom, are evidences of a much higher degree of architectural skill than is displayed either in the domestic or the military erections we have noticed. The application of the principle of the

lever must have been known to those by whom such enormous blocks of stone were lifted from the quarry, conveyed to the place where they were to be used, and hoisted and disposed in their present form. It thus appears, that although the towns of the Britons may be likened to the knaals of the Hottentots, their fortresses, castles, and the pillared circles dedicated to the worship of their divinities, or the solemn deliberations of their kings or legislators, are not to be paralleled amongst savages.

With regard to the furniture and interior decora-

Constantine Tolman, Cornwall; consisting of a vast slone 33 feet long, 144 deep, and 184 across, placed on the points of two natural rocks.

The stone, which is calculated to weigh 750 tons, points due south and north

of which would throw considerable light upon the degree of civilization to which they had attained, we are completely in the dark. But however poorly furnished the houses of private individuals may have been, it is probable enough that the residences of their kings, their sages, and their chiefs, were not destitute of such comforts and even ornaments or elegancies as their intercourse, first with the Phænicians, and afterwards with the Gauls, would have procured them, supposing them to have been aboriginal savages, instead of colonists, bearing with them the arts, customs, and manners of the countries from whence they came. Of the handicrafts in which they themselves excelled, that of basket-making or wicker-work has been particularly mentioned by the Roman poets, Juvenal and Martial. The Latin bascauda, from whence is the modern basket, appears to have been a British Wicker-work was used in the construction

tions of the habitations of the Britons, a knowledge

of their smaller boats by the Britons; and of this manufacture were made the gigantic idols in which they hurned their victims at their religious festi-Long before the arrival of the Romans, it is obvious that the Britons must have possessed certain implements required for the cutting, smoothing, shaping, and joining of wood.\* Besides their houses, they had, as we have already seen, at the time of Cæsar's invasion, not only instruments of husbandry, but carriages both for war and for other purposes. These war-carriages have already been described in our narrative of their protracted contest with their invaders. The Greek and Roman writers mention the British wheel-carriages under the six different names of Benna, Petoritum, Currus or Carrus, Covmus, Essedum or Esseda, and Rheda; and it is thought by some, though per-\* See a great variety of those instruments called celts in the fifth

haps without sufficient reason, that each of these terms designated a particular description of carriage. The covinus is supposed to have been the chariot which was armed with a scythe.\*

There is no reasonable ground for supposing, as

some writers have done, that the ancient Britons possessed any description of navigating vessels, which could properly be termed ships of war. The notion has been taken up on an inference from , a passage in Cæsar, or rather from a compenson of several passage-7 which the language of that writer rightly understood, certainly does not at all autho-Caesar gives us in one place an account of a naval engagement which he had with the Veneti of western Gaul, whose ships appear, from his destription, to have been very formidable military engmes. In a preceding chapter be had informed us, that in making preparations for their resistance to the Roman aims, the Veneti, after fortifying their fowns, and collecting their whole naval strength at one point, associated with them for the purpose of carrying on the war, the Osismu, the Lexobit, and other neighbouring tribes, and also sent for aid out of Britain, which lay directly over against their coast. But it is not said that the assistance which they thus obtained, either from Britain or any other quarter, consisted of ships. It does not even appear that it consisted of semuen; for, although it so happened that the war was terminated by the destruction of the naval power of the Veneti, in the engagement we have just mentioned, preparations had evidently been made in the first instance for carrying it on by land as well as by sea. The supposition that the Britons possessed any ships at all resembling the high-riding, strong-tumbered, iron-bound vessels of this principal maritime power of Gaul-provided, amongst

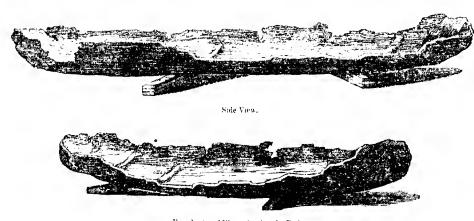

other things, Gesai assures its, with chain cables

(auchoræ, pro funibus, ferreis catenis revinctæ) is in violent contradiction to the general bearing of all the other recodred and probable facts respecting the condition of our island and its inhabitards at that period. There is no evidence or reason for believing that they were masters of any other navigating vessels than open boats, of which it may be doubted if any were even furnished with sails. Their common boat appears to have been what is still ralled the currach by the Irish, and the coracle (ewrwgyl) by the Welsh, formed of osier twigs, covered with hide. The small boats yet in use upon the rivers of Wales and Ireland are in shape like a wahut-shell, and rowed with one paddle. Plmy, as already noticed, quotes the old Greek historian Timieus, as affirming that the Britons used to make their way to an island at the distance of six days' sail in boats made of wattles, and covered with skins; and Solmus states that, in his time, the communication between Britain and Ireland was kept up on both sides by means of the c vessels. Caesar, in his listory of the Civil Waa, tells us that, having learned their use while in Birtam, he availed himself of them in crossing rivers in Spain; and we learn from Lucan, that they were used on the Nile and the Po, as well as by the Another kind of British Loat seems to have been made out of a single tree, like the Indian canoes. Several of these have been discovered. In 1736 one was dug up from a morass called Lockermoss, in Dumfries, Scotland. was seven fect long, dilated to a considerable breadth at one end: the paddle was found near it. Another, hollowed out of a solul tree, was seen by Mr. Pennant, near Rilbhan. It measured eight feet three inches long, and eleven inches deep. In the year 1720 several canoes similar to these were

dag up in the marshes of the river Medway, above Maidstone; one of them so well preserved as to be

used as a boat for some time afterwards. On draming Martine Muin, or Marton Lake, in Lan-

Foreshortened View, showing the End.

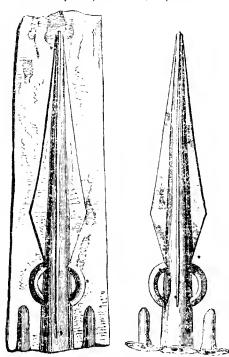

cashire, there were found sunk at the bottom, eight canoes, each made of a single tree, much like the American canoes.\* In 1834 a hoat of the same description was found in a creek near the village of North Stoke, on the river Arun, Sussex. now in the British Museum, and measures in length thirty-five feet four inches; in depth one foot ten inches; and in width, in the middle, four feet six inches. There are three bars left at the bottom, at different distances from each other, and from the ends, which seem to have served the double purpose of strengthening it and giving firm footing to those who rowed or paddled the canoc It seems to have been made, or at least finished, by sharpened instruments, and not by fire, according to the practices of the Indians.

Although Strabo mentions articles of carthenware among the supplies brought to the inhalitants of the tm islands by the foreign merchants, it is probable that the art of manufacturing certain descriptions of such articles was not unknown to the Britons. The Gauls had numerous and extensive potteries. The British earthenware, however, appears to have been of an inferior description, composed of very coarse materials, radely formed, before the use of the lathe was known, imperfectly baked, and subject, therefore, to crack by mere exposure to the weather. The armaments chiefly consisted of the zigzag pattern, and of lines evidently worked by some pointed instrument with the hand, and not formed in a mould. The vases most frequently found are divided by  ${
m Sn}/{
m R}/{
m Colt}$ Hoave into three kinds. I. The large sepulchral or funeral ma, which contains the burnt bones of the deceased, sometimes in an upright but more frequently in a reversed position. It is usually a truncated cone, plam, standing mouth downwards ura dish to fit, like a pie dish, worked with zigzags. 2 The drinking cup, most frequently found with skeletons, and placed at the head and feet, of a barrel form, but widening at the mouth, always neatly ornamented with zigzag or other patterns, and holding about a quart in measure: they are supposed to have contained articles of food for the dead. 3. Incense-cups, or thuribula, diminutive, more funtastic in shape and ornaments than the former, frequently perforated in the sides, and sometimes in the bottom, like a cullender. These are supposed to have been filled with balsams and precious ointments, or frankincense, and to have been suspended over the funeral pile.

Among the useful arts practised by the ancient Britons, they must be allowed to have had some acquaintance with those relating to the metals, but how much it is not easy to determine. Both Strabo and Diodorus Siculus have briefly noticed their mode of obtaining the tin from the earth. former observes that Publius Crassus, upon his visit to the Cassiterides, found the mines worked to a very small depth. It may be inferred from this

expression, that the only mining known to the natives was that which consisted in digging a few feet into the earth, and collecting what is now called the stream tin, from the modern process of washing and separating the particles of the ore thus lodged by directing over their bed a stream of water. No touls, of which they were possessed could have enabled them to cut their way to the vems of metal concealed in the rocks—The language of Diodorus supports the same conclusion. He speaks of the tin as being mixed with earth when it is first dug out of the mine; but, from what be adds, it would appear that the islanders knew how to separate the metal from the dross by smelting. After it was thus parified, they prepared it for market by castone it into ingots in the shape of dice. What lead they had was no doubt procured in like maimer from the surface of the soil or a very small depth under it. Plmy indeed expressly states that, even in his time, this latter metal was found in Britain in great plenty lying thus exposed or scarcely covered.

There is every reason to believe that some knowledge of the art of working in metals was possessed by the Britons before the Roman myasion. Moulds for spear, arrow, and axe-heads have been ficquently found both in Britani and Ireland;\* and the discovery in 1735, on Easterly Moor, near York, of 100 ave-heads, with several humps of metal and a quantity of cinders, may be considered

ported into Britain was cast hato shapes by the inhabitants themselves \* The metal of which the Pritish weapons and tools were made has been chemically analyzed in modern times, and the proportions appear to be, in a spear-head, one part of tin to six of copper; in an axe-head, one of the and ten of copper; and in a knife, one of tin to seven and a half of copper t

Axe-Heads, commonly called Cells. Whatever knowledge the Gauls possessed of the

art of inbricating and dyeing cloth, the more civilized inhabitants of the South of Britain, having come originally from Gaul, and always keeping up a close intercourse with the people of that country, may be fairly presumed to have shared with them. long dark-coloured mantles in which Strabo describes the inhabitants of the Cassiterides as attired, may indeed have been of skins, but were more probably of some woollen texture. The Gauls are stated by various ancient authors to have both woven and dyed wool; and Plmy mentions a kind of felt which they made merely by pressure, which was so hard and strong, especially when vinegar was used in its manufacture, that it would resist the blow of a sword. Caesar tells us that the ships of the Veneti of Gaul, notwithstanding their superior strength and size, had only skins for sails; and he expresses a doubt as to whether that material was not employed either from the want of linen or ignorance of its use. At a somewhat later period, however, it appears from Pliny that linen cloth was fabricated in all parts of Ganl. The dyes which the Britons used for their cloth were probably extracted from the same plant from which they obtained those with which they marked their skin, namely, the isatis, or woad. "Its colour," says a late writer, "was somewhat like indigo, which has in a great degree superseded the use of it. The best woad usually yields a blue sint, but that. herb, as well as indigo, when partially deoxidated, has been found to yield a fine green. . .

WOAD- (Isatis l'inctoria)

Some of the facts stated above would seem to afford as reason for suspecting that Britain was better known even to the Roman world before the two expeditions of Cresar than is commonly supposed, or than we should be led to infer from Cæsar's own account of those attempts. We may even doubt whether he was himself as ignorant of the country as he affects to have been. He may very possibly have wished to give to his achievement the air of a discovery as well as of a conquest. Tacitus, as we have seen, is disposed to claim for Agricola, a century and a half later, the honour of having first ascertained Britain to be an island, although even Cæsar professes no doubt about that point; and from the lunguage of every preceding writer who mentions the name of the country, its insular character must evidently have been well known from time immeniorial. The Romans did nothing directly, and, notwithstanding all their conquests, little even indirectly in geographical discovery; almost wherever they penetrated the Greeks or the orientals had been before them; and any reputation gained in that field would naturally be valued in proportion to its rarity. But however this may be, Cæsar's invasion certainly had the

robes of the fanatic British women, witches, or Borlese's Cornwall, p. 287
 Meynek's Original Inhabitants, and Philosophical Transactions for 1796, p. 395, &c.

<sup>\*</sup> Britannia after the Romans, p. 56.

immediate effect of giving a celebrity to Britain which it had never before enjoyed. Lucretins, the oldest Roman writer who has mentioned Britain, is also, we believe, the only one in whose works the name is found before the date of Cæsar's visit. the interest which that event excited, the Letters of Cicero, to some passages of which we have already referred, written at the time both to lns brother Quintus, who was in Cæsar's army, and to Atticus and his other friends, afford sufficient evidence. In the first instance, expectations seem to have been excited that the conquest would probably yield more than barren laurels; but these were soon dis-"It is ascertained," Caesar writes to Atticus, before the issue of the expedition was yet known at Rome, "that the approaches to the island are defeuded by natural impediments of ewonderful vastness (mirifices molibus); and it is known too by this time that there is not a scriple of silver in that island, nor the least chance of

respondent, he mentious having had letters both from his brother and from Cæsar, informing him that the business in Britain was finished, and that hostages had been received from the mhabitants; but that no booty had been obtained, although a pecuniary tribute had been imposed (imperata tamen pecuniat). Although the island was not conquered by Casar, the way was in a manner opened to it, and its name rendered ever after familiar, by his sword and Besides the reduction of Gaul, which he effected, removed the most considerable barrier between the Romans and Britain. After that, whether compelled to receive an imperial governor

booty, unless it may be from slaves, of whom you

will scarcely expect to find any very highly accom-

plished in letters or in missie, \* So, also, in the

epistle unmediately following to the same cor-

or left unattacked, it could not remain as much dissociated from the rest of the world and invisited as before. A land\_of Roman arts, letters, and government,—of Roman order and magnificence, public and private,—now by literally under the eyes of the natives of Britam; and it was impossible that such a spectacle should have been long contemplated, and that the interconrse which must have existed between the two closely approaching coasts could have long gone on, without the ideas and habits of the formerly secluded islanders, semibarrans themselves and encompassed by semibarbarians, undergoing some change. Accordingly Strabo has intimated that, even in his time, that is to say, in the reign of Augustus, the Roman arts, manners, and religion had gained some footing in Britain. It appears also, from his account, that although no annual payment under the obnoxious name of a tribute was exacted from the Britons by Augustus, yet that prince derived a considerable revenue, not only from the presents which were made to him by the British princes, but also by means of what would certainlonow be accounted a very decided exercise of sovereignty over the is-

\*Epist. ad Att. iv. 16.

island, for it is well known to drave been a leading regulation of the Roman financial system•that all such duties should be paid on goods exported before embarkation, and on goods imported before they were landed. If the duties were not paid according to this rule, the goods were forfeited. The right of inspection, and the other rights with which the collectors were invested to enable them to apportion and levy these taxes, were necessarily of the most arbitrary description; and they must have been even more than ordinarily so in a country where the imperial government was not established, and there was no regular superintending power set over them. Strabo says that a great part of Britain had come to be familiarly known to the Romans through the intercourse with it which was thus maintained. All this implies, that the foreign commerce of the island had already been considerably extended; and such accordingly is proved to have been the case even by the entalogue—probably an incomplete one—of its exports and imports which Strabo gives Among the former he mentions gold, silver, and from, but, strangely enough, neither lead nor

exports and imports. . To these imposts, it seems,

the Britons submitted without resistance; yet they

must of course have been collected by functionaries

of the imperial government stationed within the

tm; corn, cattle, skins,-including both hides of horned cattle and the skins and fleeces of sheep, and dogs, which he describes as possessing various excellent qualities. In those days slaves were also obtained from Britain as they now are from the coast of Africa; and it may be suspected from Cicero's allusion already quoted, that this branch of trade was older even than Caesar's invasion. Cicero seems to speak of the slaves as a wellknown description of British produce. several kinds of raw produce the Britons appear to have exchanged for articles the manufacture of which was probably of more value than the material, and which were, for the greater part, rather showy than useful. The imports enumerated by Strabo are ivory bridles, gold chains, cups of amber, drunking glasses, and a variety of other articles of the like kind. Still, all these are articles of a very different sort from the brass buttons and glass beads, by means of which trade is carried on with savages.

After the establishment of the Roman dominion in the country, its natural resources were no doubt much more fully developed, and its foreign trade both in the way of exportation and importation, but in the latter more especially, must have assumed altogether a new aspect. The Roman colonists settled in Britain of course were consumers of the same necessaries and luxuries as in other parts of the empire; and such of these as could **not be** obtained in the country were imported for their use from abroad. They must have been paid for, on the other hand, by the produce of the island, of its soil, of its mines, perhaps of its seas, and by the native manufactures, if there were any of these suited to the foreign market, 4

The chief export of Roman Britain, in the most floroshing times of the province, appears to have This island, indeed, seems eventually to have come to be considered in some sort as the Sicily of the northern part of the empire; and m the fourth century we find the armies of Gaul and Germany depending in great part for their subsistence upon the regular annual arrivals of re-n from Britain. It was stored in those countries for their ense in public gramatics. But on extraordinary

emergencies a nuch greater ipanitity was brought over than sufficed for this object. The historian Zosmus relates that in the year 359, on the Roman colonies situated in the Upper Rhine having been plundered by the enemy, the Emperor Julian built a fleet of 800 banks, of a larger size than usual, which he dispatched to Britain for corn; and that they brought over so much that the inhabitants of the plundered towns and districts received enough not only to support them during the winter, but also to sow their lands in the spring, and to serve them till the next harvest. It is probable also that Britain now supplied the confinental parts of the empire with other agricultural produce as well as grain. No doubt its cattle, which were abundant even in the time of Cresar, frequently supplied the forgign market with carcases as well as hides, and were also exported abive for breeding and the

grapher Strabo, have celebrated the pre-enunence of the British dogs above all others both for courage, size, strength, fleetness, and scent.\* Cheese, also, which many of the British tribes when they first became known to the Romans appear not to have understood how to make, is said to have been afterwards exported from the island in large quantities. The chalk of Britain, and probably also the lume and the marl, secon to have been held in high estimation abroad; and an ultar or votive stone is stated to have been found in the seventeenth century at Domburgh, in Zealand, with an inscription testifying it to have been dedirated to a goddess mined Nebalcuma, for her preservation of his freight, by Secundus Silvanus, a British chalk - merchant (Negociator Cretarius Britannicumus)

We may fairly presume that the trade in the

ancient metallic products of the island, tin and lead, was greatly extended during the Roman occu-

plough—The British horses were highly esteemed

by the Romans both for their beauty and their

Various Latin poets, as well as the geo-

pation. It seems to have been then that the tinmines first began to be worked to any considerable depth, or rather that the metal began to be procured by any process which could properly be called mining. It has been supposed that convicted crummals among the Romans used to be condemned to work in the British mines. † Roman coms, and also blocks of tin, with Latin inscrip-\* See a curious collection of these testimomes in Camden's Britanma, by Gibson, 1, 139-40. See also Harrison's Description of England, B in. c 7.

tions, have been found in the old tin-mines and stream-works of Corowall. The British Museum contains several pigs of lead stamped by the Romans, which have been discovered in different parts of the country. Britain then, as now,

Pigs of Load, in the Bourish Musel M.

securs to have produced much more lead than all the rest of Europe. But we shall return to this subject presently, when we come to speak of the improvements in the useful wits introduced by the Romans. We have no direct information as to any actual exports of the metals from Britain in the Roman tunes, and can merely inter the fact from the mention which we find made of them as important products of the country, and from the other evidences we have that they were then obtained in considerable quantities. On these grounds it has been supposed that supplies were in those days obtained from Britain not only of lead and tin, but also of iron, and even of the precious metals. Tacitus expressly mentions gold and silver as among the mineral products of the island \* The same writer adds that Britain likewise pro-

duces pearls, the colour of which however is dusky and livid, but this he thinks may probably be attributed to the unskilfulness of the gatherers, who do not pluck the fish abive from the rocks, as is done in the Red Sea, but merely collect them as the sea throws them up dead. The pearls of Britain seem to have very early acquired celebrity. We have already quoted the tradition preserved by Suctomius about Julius Caesar having been tempted to invade the island by the hope of enriching himself with its pearls; and what Pliny tells us of the shield studded with British pearls, which he dedicated to Venns, and suspended in her temple at Rome. Solims affirms that the fact of the pearls being British was attested by an inscription on the shield. which agrees very vell with Pliny's expression, that Cæsar wished it to be so understood. The oldest Latin writer, we believe, who mentions the

that some of the seas of Britain generate pearls and gems. They are also mentioned in the second century by Achan in his History of Animals, and by Origen in his Commentary on St. Matthew, who, although he describes them as somewhat cloudy, affirms that they were esteemed next in value to those of Indm. They were, he says, of a gold colour. Some account of the British pearls is also given in the fourth century by Marcellinus, who describes them, however, as greatly inferior to those of Persia. In the same age the poet Ansomus mentions those of Caledonia under the poetical figure of the white shell-berries.\* But the British nearls have also been well known in modern times. Bede notices them as a product of the British seas and rivers in the eighth century. There is a chapter upon those found in Scotland in the description of that country prefixed to Hector Bocce's History, in which the woter gives an account of the manner of catching the fish in his time (the beginning of the sixteenth century). It is very different from that which Tacitus has noticed, as will appear from the passage, which is thus given in Harrison's English translation: —" They are so sensible and quick of hearing, that although you, standing on the brae or bank above them, do speak never so softly, or throw never so small a stone into the water, yet they will descry you, and settle again to the bottom, without return for that time. Doubtless they have, as it were, a patinral carefulness of their own commodity, as not ignorant how great estimation we mortal men make of the same amongst us; and therefore so soon as the fishermen do eatch them, they bind then shells together, for otherwise they would open and shed their pearls, of purpose for which they know themselves to be pulsurd. Then manner of apprehension is this; first, four or five persons go into the river together, up unto the shoulders, and there stand ma compass one by another, with poles in their hands, whereby they rest more surely, sith they fix them in the ground, and stay with one hand upon them; then, casting then eyes down to the bottom of the water, they expy where they he by their shuning and clearness, and with their toes take them up (for the depth of the water will not suffer them to stoop for them), and give them to such as stand next them." The Scotch pearls, according to Bocce, were engendered in a long and large sort of mussel, called the horse-mussel. On the subject of the origin of the pearl he follows Pliny's notion. These mussels, he says, "early in the morning, in the gentle, clear, and calm air, lift up their upper shells and mouths a little above the water, and there receive of the fine and pleasant breath or dew of heaven, and afterwards, according to the measure and

British pearls is Pomponius Mela, who asserts

quantity of this vital force received, they first conceive, then swell, and family product the pearl? " The pearls that me so got in Scotland," he adds, " are not of small value; they are very count and bright, light and round, and sometimes of the quantity of the nail of one's little finger, as I have had and seen by name own experience. In his own Description of England, also, written about • the middle of the sixteenth century, Harnson notices chose still to be found in that part of the island. He accounts for their leaving fallen into disrepute in a curious way. "Certes," be writes, "they are to be found in these one days, and thereto of davers colours, in no less immibers than ever they were of old time. Yet are they not now so much desired, because of their smallness, and also for other causes, but especially soth churchwork, as copes, vestments, albes, tunicles, altarcloths, canopies, and such trash are worthily alsolished, upon which our countrymen superstitionsly bestowed no small quantities of them. For I think there were few churches or religious houses, besides bishops' mittes, books, and other pontifical, vestures, but were either thoroughly fretted or notably garmsbed with large munbers of them." He adds, "I have at similar times gathered more than an omice of them, of which divers have holes already entered by nature, some of them not much inferior to great peason (peas) in quantity, and thereto of sundry colours, as it happeneth among such as are brought from the easterly coast to Saffron Waldon in Lent, when to want of flesh stale stinking fish and welked massels are thought to be good meat, for other fish is too dear immongst us when law doth bind us to use it. They (pearls) are also sought for in the latter end of August, a little before which time the sweetness of the dew is most convenient for that kind of fish which doth engender and conceive them, whose form is the, and much like unto a lempst. The further month, also, that they be found, the bughter is then colour, and their substances of better value, as lapidaries do give ont?' In another place, Harrison mentions, as found in England, what he calls mineral pearls, "which," he says, " as they are for greatness and colour most excellent of all other, so they are digged out of the main land, and in sundry places for distant from the shore " Camden, and his translator, Gibson, have given us an account of pearls found in the river Conway in their time — "The pearls of this river," says the latter, " are as large and well coloured at any we find cather in Britain or Treland, and have probably been fished for here ever since the Roman conquest, if not sooner." The writer goes on to mform us, that the British and Irish pearls are found in a large black mussel; that they are pecu-Day to rapid and strong rivers; and that they are common in Wales, or the routh of Ungland, to Scotland, and some parts of Ireland. They are called by the people of Caernaryonsburg, kretym driw, or delage shells. The massels that contain pearls are generally known by being a little con-

<sup>&</sup>quot;Albertes concharam germina haccas;" literally, the white heries, the linds of shells. Ausmins in Mosella. This appears he is the unique of the verse. "Gignit et insignes, antiqua Britanina barcas," quoted by Camden and by their writers after him, from Marbodoens, a Frenchman of the eleverath century, who wanter a Latin point entitled." De Genmanina Lapidomque piecusoum forms, natura, et arbibis." Of coarse a writer of that ago can be no authority in this cano. anthorny in this case.

tracted, or contorted from their usual shape. A Mr. Wynn had a valuable collection of pearls, procured from the Conway, amongst which, Gibson says that he noted a stool-pearl, of the form and bigness of a lesser button mould, weighing seventeen grams. A Copway pearl presented to the queen of Charles 11., by her chamberlam, Sir Richard Wynn (perhaps of the family of this Mr. Wynn), is said still to be one of the ornaments of the British crown. Camden also speaks of pearls found in the river Irt, in Cumberland. "These," he says, " the inhabitants gather up at low water; and the jewellers buy them of the poor people for a trifle, but sell them at a good price." adds (writing in the beginning of the last century), that not long since a patent had been granted to some persons for pearl fishing in this river; but the pearls, he says, were not very plentiful here, and were most of the dull-coloured kind, called sand-pearl. Mention is made in a paper in the Philosophical Transactions, of several pearls of

108

large size that were found in the sixteenth century in Ireland; among the rest, one that weighed thirty-six carats \* Pennant (Tonr in Scotland, 1769) gives an account of a pearl-fishery then carried on in the neighbourhood of Perth, in Scotland, which, though by that time nearly exhausted, had, a few years before, produced between three and four thousand pounds worth of pearls annually. An eminent naturalist, we observe, has recently expressed some surprise that the regular fisheries which once existed for this native gemshould have been abandoned. † The pearl, however, though still a gem of prize, is not now held in the same extraordinary estimation as in ancient times, when it appears, indeed, to have been considered more valuable than any other gem whatever. "The chief and topmost place," says Plmy, " among all precious things, belongs to the pearl."

BRITISH PEARL SHELLS. Natural Size. a. Duck Fresh-Water Pearl Mussel (Anodon Anatinus.) b. Swan ditto (Anodon Cygnens)

Another product of the British waters, which was highly prized by the luxurious Romans, was the oyster From the manner in which the oysters of Britam are rnentioned by Pliny, their sweetness seems to have been the quality for which they were especially esteemed.\* Juvenal speaks of them as gathered at Rutupiæ, now Richborough,

which he calls chenerotes, and describes as smaller than the anser, or common goose.\*

Solimus † celebrates the great store found in Britain of the stone called the gagates, in English the black amber, or jetstone. This mineral, as may be seen from Pliny, t was held by the ancients to be endowed with a great variety of medical and magical virtues. Camden mentions it as found on the coast of Yorkshire. "It grows," he says,

near Sandwich. + Pliny, who mentions as among

the greatest deheacies of Britain a sort of geese,

and before it is polished looks reddish and rusty, but after, is really (as Solmus describes it) diamond-like, black, and shiming." "Certain it is," says Harrison, "that even to this day there is

byshine and about Berwick, whereof rings, salts, small cups, and sundry trifling toys are made; although that in many men's opinions nothing so

" upon the rocks, within a chink or cliff of them;

some plenty to be had of this commodity in Der-

fine as that which is brought over by merchants daily from the main." Marbodnens, however, gives the preference to the jets of Britain over those of all other countries. The inhabitants of Britain under the Roman government, no doubt carried on traffic with the other parts of the empire in ships of their own; and the province must be supposed to have possessed a considerable mercantile as well as military navy. It is of the latter only, however, that the scanty history of the island we have during the Roman domination has preserved any mention. powerful maritime force, as we have already had occasion to observe, was maintained by the Romans for the defence of the cast, or, as it was called, the Saxon coast; and about the end of the thad century we have the first example of an exclusively British navy under the sovereignty of the funous Carausius.\* The navy of Carausius must have been manned in great part by his own Britons; and the superiority which it maintained for years in the smrounding seas, preserving for its

CHAP. IV.]

Wholly uncultivated as the greater part of the country was when it was first visited by the Romans, it was most probably not unprovided with a few great highways, by which communication

was maintained between one district and another. Caesar could searedly have marched his forces even so far into the interior as he did, if the districts through which he passed had been altogether without rodas. Rude and imperfect enough these British roads may have been, but still they must have been to a certain extent artificial; they must have been cleared of such incumbrances as admitted of being removed, and carried in a continuous line out of the way of marshes and such other natural impediments as could not be otherwise overcome. Tacitus would seem to be speaking of the native roads, when he tells us that Agricola, on preparing in his sixth summer to push into the regions beyond the Forth, determined first to have a survey of the country made by his fleet; because it was apprehended that the roads were infested by the enemy's forces.

tradition is, that the southern part of the island was, in the British times, crossed in various directions by four great highways, still in great part to be traced, and known by the names of the Fosse,

109

Circucester, Chipping Norton, Coventry, Leicester, and Newark, to Lincoln. Watling-street is said to have commenced at Dover, to have proceeded thence through Kent, by Canterbury, to London; then to have passed towards the north, over Hmupstead Heath, to Edgeware, St. Alban's, Dunstable, Stoney Stratford, in Northamptonshire, along the

Watling-street, Ermine-street, and the Ichemid. The Fosse appears to have begun at Totness, in

Devoushire, and to have proceeded by Bristol,

west side of Leicestershire, crossing the Fosse near Bosworth, and hence to York and Chester-le-Street, in the county of Durham. Some carry it, in later times, from this point as far as to Lanark and Falkirk, in Scotland; and others even to Carthness, at the extremity of the island. The Ermune-street is understood to have run from St. David's, in Wales, to Southampton, crossing the Fosse between Circucester and Gloncester. The Ikenild is supposed to have been so called from having begun in the

country of the Iceni, on the east coast. It is com-

monly thought to have crossed Watling-street, at

Dunstable, and thence to have taken a north-

easterly direction, through Staffordshire, to the

west side of the island. The utmost, however,

that can be conceded in regard to these roads being of British origin, is, that bues of communication in master his island empire against "the superb fleets such directions may have existed in the time of the that were built and equipped," says a contempo-Britons. It was the Romans, undoubtedly, by may writer," + " simultaneously in all the rivers whom they were transformed into those elaborate of the Gauls to overwhelm lum," may be taken as and almost mominicatal works which their rean evidence that the people of Britain had by this mains declare them to have been. Roads contime been long famithar with ships of all descripstructed to last for ever were laid down by that extraordinary people, as the first foundations of their empire wherever they planted themselves, and seem to have been considered by them as the indispensable veins and arteries of all civilization. In Britain it is probable that they began their operations with the great native high-roads, the course of which would be at least accommodated to the situation of the principal towns and other more important localities throughout the country. These they no doubt levelled, straightened, and paved, so as to fit them not only for the ordinary purposes of pedestrian and carriage communication, but also for the movements of large bodies of infantry and cavalry, in all weathers and in all seasons. But

they formed also many new lines of road, leading

from one to another of the many new stations

which they established in all parts of the country.

Camden describes the Roman ways in Britain as running in some places through drained fens, in

others through low valleys, raised and paved, and

In this country, as elsewhere, the

so broad that they admit of two earts easily passing

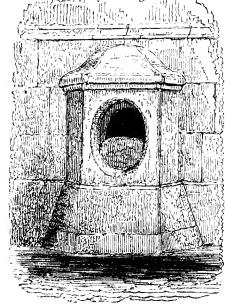

Roman roads were in great part the work of the soldiery, of whose accomplishments skill in this

kind of labour was one of the chief. But the na-

tives were also forced to lend their assistance; and

<sup>\*</sup> Sec ante, p. 53. † The Orator Mamertinus, c. xii, sequoted in Britannia after the

we find the Caledonian Galgaens, in Tacitus, com-plaining, with indignation, that the bodies of his countrymen were worn down by their oppressors in clearing woods and drauming marshes—stripes and indignities being added to their toils. To the sort of work also extanuals were sentenced, as well as to the mine. The laws of the empire made special provision for the repair of the public ways, and they were given in charge to overseers, who d duty it was to see them kept in order. "The ancient document called the Itmerary of Automnus, commerates fifteen routes or journeys in Britain, all of which we may presume were along regularly formed high-roads; and probably the list does not comprehead the whole number of such roads the island contained. In every instance the distances from station to station are marked in Roman imiles; and no doubt they were indicated on the actual road by unlestones regularly placed along the line.

LONDON STONE

learning, against the south wall of St. Swithm's church, in Cameon-street, London, is supposed to have been the first, or that from which the others were numbered, along the principal roads, which appear to have proceeded from this point as from a centre The Roman roads in Britain have undergone so many changes since their first formation, from neglect and dilapidation on the one hand, and from many repairs which they are known to have received long after the Roman times, and in styles of workmanship very different from the Roman, that the mode in which they were originally contsructed is in most cases not very easy of disco-

One of those which had probably remained most nearly in its primitive condition, was that discovered by Sir Christopher Wren, under the present Cheapside, London, while he was preparing to erect the church of St Mary-le-Bow. " Here," says the account in the Parentaha, " to his surprise, he sunk about eighteen feet deep through made ground, and then imagined he was come to the natural soil and hard gravel; but upon full examination, it appeared to be a Roman causeway of rough stone, close and well rammed, with Roman brick and rubbish at the bottom for a foundation, and all lumly cemented. This cause way was four feet thick. I aderneath this causeway by the natural clay, over which that part of the city stands, and which descends at least forty feet lower " Wren eventually determined to erect the tower of the church upon the Roman causeway, as the firmest foundation be could obtain, and the most proper for the lofty and weighty structure he designed. Some of the other Roman roads in Britam, however, and especially those connecting some of the lines of imbiary posts, were constructed in a more ambitious style of workmanship than appears to have been here employed being paved, like the famons Appian way and others in Italy, with flat stones, although of different sizes, yet carefully cut to a uniform rectangular shape, and closely joined together. Some of our great roads still make were originally formed by the Romans, or were used at least in the Roman times. One example is the great western road leading to Bath and Bristol, at least for a considerable part of its course.\*

BOOK I.

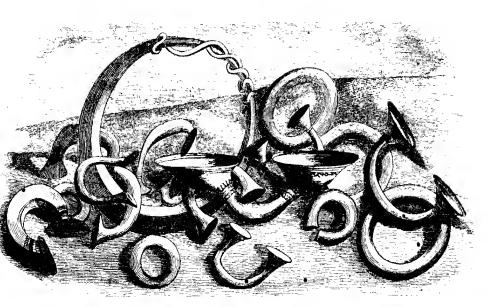

We may here most conveniently notice the subject of the description of money which appears to have been in use among the ancient Britons, Cresur's statement is, distinctly, that they had no comed money. Instead of money, he says they used pieces either of bronze or of non, adjusted to a certain weight. There is some doubt, owing to the disagreement of the manuscrapts, as to whether he calls these pieces of metal rings, or thin plates, or merely tallies or cuttings (taleae); but the most approved reading is rings. A curious paper on this ring-money of the Celtic nations has been lately printed by Sir William Betham, † Specimens of this primitive currency, according to the writer, have been found in great numbers in Ireland, not only of bronze, but also of gold and silver. Of these, the famous London stone, still to be seen the form is that of a complete ring, sometimes that of a wire or bar, merely bent till the two extremties are brought near to each other. In some cases the extremities are armed with flattened knobs, in others they are rounded out into cup-like hollows. Sometimes several rings are joined together at the circumferences; other specimens consist of rings linked into one another. The most important pe-

<sup>•</sup> In the 'United Service Journal' for January, 1836, is an account of a Survey of the Roman Cond from Stehester to the Stakon on the Thames, called Pontes, lat by made by the officers studying at the Serior Bepartment of the Royal Mitary College, + Papers read before the Royal Mitary College.

culiarity, however, distinguishing these curious relies, and that which the writer conceives chiefly proves them to have really served the purposes of money, is, that upon being weighed, by far the greater number of them appear to be exact multiples of a certain standard unit. The smallest of gold which he had seen, he says, weighed twelve grains, or half a pennyweight; and of others, one contained this quantity three times, another five, another ten, another sixteen, another twenty-two, another four hundred and eighty (a pound troy), and another five hundred and thirty-four. The case he affirms to be similar both with those of silver and those of brouze. All, he says, with a very few exceptions, which may easily be accounted for on the supposition of partial waste or other mjury, weigh each a certain number of balf pennyweights. The smallest specimens even of the bronze ring money are quite as accurately balanced as those of the more valuable metals; and among these brouze specimens, unleed, the anthor states, that, after having weighed a great many, he has never found a single exception to their divisibility into so many half pennyweights. It would thus appear that the ancient Critic scale was the same with that which we now call troy weight. The writer conjectures that the Latin uncin, an ounce, is the Celtic word unsha, which he says signifies one-sixth; in which case we must suppose the original integral weight of which the ounce was a fraction, to have been half our present pound troy "To what remote period of antiquity," he observes, "do these singular facts

carry as back! To many ages before the time of Cæsar, or even Herodotus. The latter speaks of the Lydnas as the first who comed metallic money, at least six centuries before our era. These are no visionary speculations; we have here the remains and unperishable relics of those raily times to verify the whole; and recent investigations and discoveries, in a most singularly conymeing mainer, come to our aid, by showing that the fresco paintings in the tombs of Egypt exhibit people bringing, as fribute to the foot of the throne of Pharaoh, bags of gold and silver rings, at a period before the exodus of the Israelites." These things, however, are not the only specimens that have been found of the substitutes used by the Britons before the introduction of comed money. barrows and elsewhere there have been occasionally turned up hoards of what has all the appearance of being another species of primitive currency, consisting of small plates of non, mostly thin and ragged, and without any impression.

Of British coincel money, the description which is apparently of greatest antiquity, is that of which the specimens present only certain pictorial figures, without any legends or literal characters. Of this sort of coins a considerable collection was discovered about the middle of the last century, on the tup of Caribre Hill, in Cornwall. Of these, some were stamped with figures of horses, oxen, hogs, and sheep; a few hall such figures of annuals on one side, and a healt apparently of a royal personage on the other. All of them were of gold; and perhaps it was only money made of the more

precious metals which it was thought necessary at

first to take the trouble of thus impressing. When

the convenience of the practice had been expe-

rienced, and perhaps its application facilitated, it

would be extended to the bronze as well as to the

gold and silver currency. Although even that

point has been disputed, it may be admitted as

most probable that the Carnbre coms were really

British money, that is to say, that they were not

only current in Britain, but had been coined under

112

the public authority of some one or more of the states of this island. This we seem to be entitled to infer, from the emblematic figures impressed on them, which distinguish them from any known Gallic or other foreign coins, and are at the same time similar to those commonly found on what appears to be the British money of a somewhat later The questions, however, of when, where, and by whom were they comed, still remain. though the figures upon them are peculiar, they still bear a general resemblance to the money, or

what has been supposed to be the money, of the ancient Gauls; and as well from this circumstance, as from the whole character of the early British civilization, which appears to have been mainly borrowed from Gaul, we may presume that they were either fabricated in that country, or were at least the work of Gallic artists. It is remarkable that these coins are all formed of pure gold; and Diodorus Siculus informs us, that in no articles which they made of gold did the Gauls mrx any alloy with the precious metal. As to their date, it would seem to be subsequent to the time of Cæsar, since, according to his account, the Britons were then imaggnainted with the use of coincd money of any description; and it may be placed with most probability in the interval between his invasion and that of the Emperor Claudius—a period, as we have already endeavoured to show, during which British civilization must have made a very considerable, though unrecorded, progress. Besides this merely pictured metallic money,

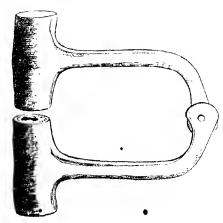

ANCIENT BRIFISH COINS.

what bear the appearance of being such, which are marked not only with figures of various kinds, but also with legends in Roman characters. One of these, from having the letters Sequ inscribed upon it, has been attributed to Segonax, who is mentioned by Clesar as one of the four kings of Kent; but it is obvious that upon such an inference as this, no reliance can be placed. The greater mmber of the coins in question bear, either in full or abbreviated, the name of Cunobelinus, who is said to have lived in the reign of Augustus. Some of these have the name Cunobilin at full length; one

however, there exist numerous British coins, or

has Cunobelinus Re, the latter word being probably the Latin Rex; others have the abbreviations Cun, Cuno, Cunob, or Cunobe. Several have, in addition, what has been supposed to be the abbreviated name of their place of comage; being most frequently Cam, or Camu, for Camulodunum, as it is conjectured; in one instance Ver, perhaps for Verulanium; in other cases No, or Novane, or Novanit, of which no probable interpretation has been given. And in addition to these inscriptions, the greater number present the singular word Tascia, or Tascio, either written at length, or indicated by two or more of its commencing let-

This word has given occasion to much disputation; but perhaps nothing has been proposed on the subject so probable as Camden's suggestion, who conceives that the word, derived apparently from the Latin taxatio, sigmfied, in the British language, a tribute, or tribute-money. The figures upon these coms of Camobeline are very various. Some have a head, probably that of the king, occasionally surrounded with what seems to be a fillet of pearls, in allusion, we may suppose, to the ancient fame of the island for that highlyprized gem; others have a naked full length luman figure, with a club over his shoulder; many have the figure of a borse, sometimes accompanied by a wheel, which has been supposed to convey an allusion to the formation of highways, but perhaps is rather intended to indicate the national war-chariot; a crescent, an ear of coin, a star, a comet, a tree, a hog, a dog, a sheep, an ox, a hon, a spinnx, a centaur, a Janus, a female head a woman riding on an animal like a dog, a man playing on a harp, are some of the representations that have been detected on others. One shows what evidently appears to be a workman in the act of making money; he is sented in a chair, and holds a hammer in his hand, while a number of pieces he before him. About forty of these coins of Cumobeline have been discovered. Many others also exist, which, from the names, or fragments of names inscribed an them, have been assigned to Boadicea, Cartismandna, Caractaens, Venutus, and other British sovereigns. The legends on most of these, however, are extremely obscure and dubious. What is somewhat remarkable is, that no two, we believe, have been found of the same comage. They are almost all more or less dish-shaped, or hollowed on one side - a circumstance which is common also to many Roman coms, and may be supposed to have been occasioned by the want of the proper guards to prevent the metal from being bent over the edges of the die by the blow of the hammer. The Bri tish coms thus inscribed with Roman characters

ROMAN COIN MOULI

are some of them of gold, some of silver, some of bronze, some of copper. Unlike also to the coms mentioned above, without legends, all of them that are formed of the more precious metals are much

It must be confessed that the whole subject of these\_supposed British coms, notwithstanding all the disputation to which they have given rise, is still involved in very considerable obscurity. It has even been denied that they ever served the purposes of a currency at all. • "They are works," observes a late writer, "of no carber date than the apostasy and anarchy after the Romans. Moreover, they were not money. They were Bardic works belonging to that numerous family of Gnostic, Mithriac, in Masonic medals, of which the illustration has been learnedly handled in Chifflet's 'Abrayas Protens,' Von Hammer's 'Baphometus,' the Rev. R Walsh's 'Essay on Ancient Coms,' and (as applicable to these very productions) the Rev. E. Davies's 'Essay on British Coms.' The coms engraved by Dom B. de Montfaucon as remmants of ancient Gambsh money, are productions of similar appearance and of the same class. Paracelsus alludes to them as money coined by the guomes and distributed by them among men. Their uses have never been known; but I explain them Money is a ticket entitling the bearer to goods of a given value. . . Masoure medals were tickets entitling one initiate to receive assistance from another. It may be objected, that there was no great difficulty of stealing or forging them. True; but to be a beneficial holder of these baubles it was necessary that you should be able to eyplant the meaning of all the devices upon them. According to the sort of explanation given by the party, it would appear whether he was an authorized holder, and, if such, what rank of mitiatron he had attained, and consequently to what degree of favour and confidence he was entitled. The names selected to adorn these British medals are unequivocally marked with hatred for the Romans, and love for the memory of those Britons who warred against them; and they imply an exhortation and a compact to expel and exclude the Roman nation from the island."\* This view is supported by some plansible arguments; but it is far from being altogether satisfactory. The denial, however, of the title of these coms or medals to be accounted a species of ancient money, is no mere piece of modern scepticism. Camden, though he inclines to a different opinion, expresses himself upon the point with the greatest besitation. "For my part," he says, "I freely declare myself at a loss what to say to things so much obscured by age; and you, when you read these conjectures, will plainly perceive that I have groped in the dark." "Whether this sort of money passed carrent in the way of trade and exchange," he observes in conclusion, "or was at first comed for some special use, is a question among the learned. My opinion (if I may be allowed to interpose it) is \* Butanna after the Romans, pp. 218 &c.

After Cæsar had appointed how much money

should be paid yearly by the Britains, and they were oppressed under Augustus with the payment of customs, both for exporting and importing commodities, and had, by degrees, other taxes laid upon them, namely, for corn-grounds, plantations,

114

groves, pasturage of greater and lesser cattle, as being now in the condition of subjects, not of slaves; I have thought that such coms were first stamped for these uses; for greater cattle with a horse, for lesser with a hog, for woods with a tree, and for corn-ground with an ear of corn; but those with a man's head seem to have been comed for poll money. Not but I grant that afterwards these came into common use. Nor can I reconcile myself to the judgment of those who would have the hog, the horse, the car, the Janus, &c. to be the arms of particular people or princes; since we find that one and the same prince and people used several of these, as Cunobeline stamped upon his coms a hog, a borse, an ear, and other things. But wbether this tribute-money was comed by the

Romans, or the provincials, or their kings, when the whole world was taxed by Augustus, I cannot One may guess them to have been stamped by the British kings, since Britain, from the time of Julius Caesar to that of Claudius, lived under its own laws, and was left to be governed by its own kings, and since also they have stamped on them the effigies and titles of British princes." After the establishment of the Roman dominion in the island, the coms of the empire would na-

furally become the currency of the new province;

and indeed Gildas expressly states that from the

time of Chardias it was ordained by an imperial

edict that all money current among the Britons should bear the unperial stamp. These expressions, by the by, would rather seem to countenance the opinion, that coincd money not bearing the imperial stamp had been in circulation in the country before the publication of the edict. Great numbers of Roman come of various ages and denominations have been found in Britain. "There are prodigions quantities found here," observes Cainden, " in the runs of demolished cities, in the treasurecoffers or vaults which were hidden in that age, and in funeral urns; and I was very much surprised how such great abundance should remain to this day, till I read that the melting down of ancient money was prohibited by the imperial constitutions." It is highly probable, also, that some of this imperial money was coined in Britain, where the Romans may be presumed to have established mints, as they are known to have done in their other provinces. There are several coins extant both of Caransius and of Allectus, and these it can hardly be doubted were the productions of a British mint. It is remarkable that in the sepulchial barrows there has been found imperial money of the times of Avitus (a. b. 455), of Anthemius (a.b. 467—472), and even of Justiman" (a.n. 527—565). Many of the Roman coins, also, or imperial medals struck upon particular occasions, from the time of Claudius,

form interesting illustrations of the lustory of the We now proceed to notice shortly the chief improvements in the necessary or useful arts for

which the Britons appear to have been indebted to their Roman conquerors. The Romans, themselves devoted to agriculture,

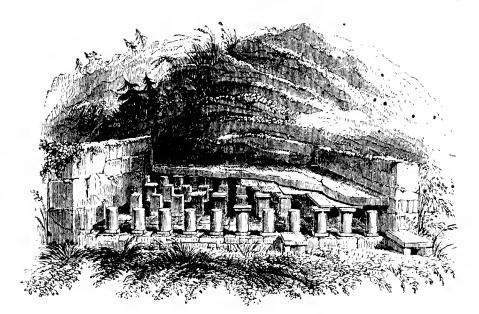

eagerly encouraged and assisted the British husbandmen; and we, therefore, as has been already noticed, find the island eventually not only producing a sufficient quantity of corn for the support of its own inhabitants and the Roman troops in occupation, but affording a large surplus annually for exportation. In addition also to an improved and extended tillage, the Romans appear, mimediately on their obtaining a firm establishment in Britain, to have introduced the practice, previously scarcely known to the natives, of useful and ornamental gardening Tacitus tells us they began to plant orchards, and found, by experience, that the soil and climate were favourable to the growth of all kinds of fruit trees except the vine and the olive, and of all plants and vegetables save a few which

were peculiar to warmer countries Notwithstanding also his particular exception of the vinc, it is said that permission was granted long afterwards by the Emperor Probus to plant vines and to make wine in Britain, and that, if so, it was not granted in vain, appears probable from the fact that the vine was certainly flourishing here in the time of the Saxons; the continual mention of vineyards in their wills and deeds affording us indisputable evidence of its general cultivation.

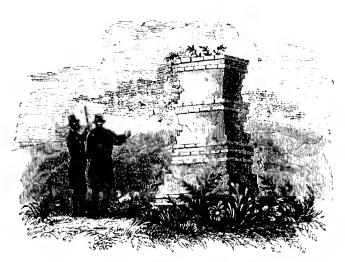

On the settlement of the Romans a change of course took place in the architecture of the British houses and towns, for the commencement of which the country appears to have been indebted to the policy of Agricola, the most excellent of the Roman governors. "That the Britons," says Tacitus, "who led a roaming and unsettled life, and were easily instigated to war, might contract a love of peace and tranquillity by being accustomed to a more pleasant way of living, he exhorted and assisted them to build houses, temples, courts, and market-places. By praising the diligent and reproaching the indolent, he excited so great an emulation amongst the Britons, that after they had crected all those necessary edifices in their towns, they proceeded to build others merely for ornament and pleasure, such as porticoes, galleries, baths, Lanqueting-houses, &c."

Giraldus Cambrensis has left us an account of the remains of the city of Caerleon, in Wales, as he beheld it himself in the twelfth century. "It was," he says, "elegantly built by the Romans, with brick walls. Many vestiges of its ancient splendour still remain, and stately palaces which formerly, with the gilt tiles, displayed the Roman grandeur. It was first built by the Roman nobility, and adorned with symptuous edifices, with a lofty

See upon this subject, "The Coins of the Romans relating to Britain," by J. G. Akerman, 12mo. Lond. 1836.

tower, curious hot baths, temples now in ruins, and theatres encompassed with stately walls, in part yet standing. The walls are three miles in circumference, and within these, as well as without, subterraneous buildings are frequently met with, as aqueducts, vaults, hypocausts, stoves, &c."

Matthew Paris also, in his 'Lives of the Abbots,' mentions the numerous interesting remains of

Roman architecture discovered near St. Alban's, at the ancient Verulam, by two abbots, previous to the Norman Conquest, and consisting of dilapidated temples, subverted columns, altars, idols, and the foundations of a large palace.

The more recent discoveries of these Roman British rums it would be endless here to enumerate and useless to describe, as there appears to have

. 2

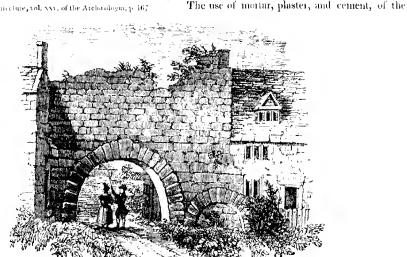

[Book I. Britain would (while harassed with intestine warfare)

improve on the models left by the Romans." It is not now to be ascertained," he continues, "whether any examples of the actual use of columns, with an architrave incumbent, were left by the Romans, but we have various examples of the plain arch with a pier. As a specimen, the north gate of Lincoln, now used, as it was many centuries ago, for a gate, is perhaps the most per-This plain square pier and a semicircular

been nothing to distinguish them from those of the Romans themselves; we have however the authority one of the best informed writers on the subject, that "nothing very good of Roman work ever existed in Britain " . . . . "All the fragments of architecture which have been discovered, whether large or small, whether the tympanum of a temple as found at Bath, or small alters as found in many places, I believe," says Mr. Rickman, " were alle deficient with a micomposition of in execution, or in arch I believe to have been imitated in the Saxon buildings; and thus I find actually now a part of the work "

both, and none that I-know of have been better, if so good, as the debased work of the Emperor Dioeletam in his palace at Spalatro. With these debased examples we cannot expect that the inhabitants of Letters on Architecture, vol. xxv. of the Architalogus, p. 167

RUMAN ARCHES FORMING NEWPORT GAIE, LINCOLN, as it appeared in 1792

RESTORATION OF THE ROMAN ABOUTORMING NEWFORT GATE, LINCOLN

various tools and implements for building, the art of making the flat tiles abovementioned, and all things connected with masonry and bricklaying, as known and practised by the Romans, must of course, in the progress of these works, have been communicated to their new subjects; and it appears that, by the close of the third century, British builders had acquired considerable reputation. The panegyrist Emmenus tells us that when the Emperor Constantias rebuilt the city of Antun, in Gaul, about the end of the third century, he brought the workmen chiefly from Britain, which very much abounded with the best artificers.

We have already mentioned the labours of the

Romans in the improvement of the old roads of the country, and the formation of many new ones. Then attention was at the same time given to the working of the valuable nanes throughout the island. The primitive mode of procuring the various metals, by searching the beds of rivers and the depths of valleys, or extracting protrading lumps of ore from fractured lodes in the fissures of the mountains, was replaced by the art of numing. A beautiful specimen of the Roman mode of driving levels exists at a place called Pynsaint, in the parish of Caeo, Caeomarthenshipe.

In the British Museum, as previously stated, are preserved several pigs or masses of British lead, one of which has the name of the Emperor Domitian inserabed on it, another that of the Emperor Hadrian, and a third bears that of a private individual. "These pigs or oblong masses," observes a late writer, "afford unfoulfied evidence that the lead-mines of Derbyslure and its neighbourhood were worked in the Roman blue. The inscriptions also, which they bear, usually indicating the corperor in whose time the metal was obtained, confirm the testimony of Plmy, who says, 'that m Britain lead is found near the surface of the earth in such abundance that a law is made to limit the quantity which shall be taken.' It was therefore necessary as the foyal mmes to mark the lead with the emperor's name In a few instances such pigs apparently bear the name of a private proprietor, but all show that the article was under fiscal regulation, which accounts for the form in which the lead was east; the inscription, and sometimes a border which surrounds if, always covering the upper area of the space to

its full extent."\*

## CHAPTER V.

# THE HISTORY OF LITERATURE, SCIENCE, AND THE FINE ARTS.

H18 division of our history will contain an account of the state and progress under each period of those higher kinds of those higher kinds of knowledge and skill, which are distinguished from the arts treated of in the preceding chapter, by not being directly contributory to the siste-

nance or physical accommodation of life, but having in view, at least immediately and in the first instance, the exercise, gratification, and improvement of the intellectual faculties, and of those other powers and tastes which peculiarly constitute our humanity, and the general exaltation and embellishment of the social condition. The intellectual character of the time; the branches of learning and science that were chiefly cultivated in our own country and elsewhere, and the manner in which they were cultivated; the schools, colleges, and other instantions for the maintenance or diffusion of crudition and philosophy that existed in these islands; the state and progress of the national laugriage; the more eniment literary and scientific names by which the age was adorned; the great literary works that were produced, and the scientific discoveries that were made; and finally, the state of the fine arts of music, painting, engraving, &c., and of the popular taste, -will all fall mider this part of our survey. We need scarcely remark, that these things are much more than the mere ornamental flower and crown of our civilization; they are the very strength of its fibres, and the main element of its growth and expansion; for, while it is true that the exclusively useful arts both naturally originate learning and the fine arts, and form the indispensable basis and support without which they could neither flourish nor exist, it is equally true that the latter, in the end, amply repay the debt, and that the sure effect of the advance of every form of intellectual culture is to extend or consolidate the fabric of that other prosperity which rests upon the operations of manual, mechanical, and mercantile industry. And, indeed, what is the worth to a nation of the highest state of mannfacturing and commercial greatness, if it do not at the same time assert to itself a high place in regard to those tastes and pursuits which can alone prevent the pursuit of wealth from being at once

the most stupid and the most debasing of all idolatries?

The title of the chapter, in the strictest acceptation of its terms, is scarcely applicable to what we shall have to state in regard to the present period, when literature, science, and the fine arts can searcely be said to have yet had their buth in our island. At all events, whatever existed in those remote times deserving the name of learning or scientific knowledge, never having been committed to writing, and having consequently perished with the general subversion of the order of things then established, cannot be regarded as having been even the beginning or rudimental germ of that which we now possess. The present literary civilization of England dates its commencement only from the next, or Saxon period, and not from a very carly point in that,

A learned writer of the last century commences a "Literary History of the Britons before the Arrival of Cæsar," by gravely informing us that "King Samothes was the first who established a school in this island for instructing the Gaints arts and sciences."\* We shall not earry our review quite so far back, but leaving Samothes and his giants at their studies undisturbed, shall content ourselves with taking up the history of learning in Britain from the days of the race of people of ordinary dimensions who were found inhabiting the

island on its invasion by the Romans At this time, as has been already shown, the south of Britain was occupied by a population which, although divided into many distinct tribes, bore throughout the appearance of being of Gallic In particular, we are expressly informed that the language of Britain differed very little from that of the Gaul. Some of the British tribes seem to have come from Celtic, and others from Belgic Gaul; but it is probable, as indeed Strabo distinctly assures us, that the Celts and the Belgians spoke merely two slightly differing dialects of the same tongue. The evidence of the most ancient names of localities throughout the whole of South Britain confirms this account; everywhere these names appear to belong to one language, and that the same which is still spoken by the native Irish and the Scotch Highlanders; the latter of whom call themselves, to this day, Gael or Gauls.

• Primus qui scholam ad instruendos Gigaules in arthus et veit, erat Rex Samolhes, qui, ex Armena per Galham profectus, ad litora lititannus appulit, auno post dilavium CCC.II, &c. Rev. et Doct. V. CHAP. V.]

They naturally enough, therefore, no more

thought of communicating their knowledge to the

multitude, than people would now think of so com-

portant ment of being no mere bereditary oli-,

garchy, or other close corporation, but of being

open to all who choic to undergo the requisite

preparatory training, and of Leng accustomed in

this way to sustain itself by constant drafts

from the mass of the nation. Although the point

has been disputed, there is no evidence for the

supposition that the Drindical rank was a heredi-

tary dignity. We know that the chief Drind

obtained his place by election; and it does not

seem likely that this would have been the case if

the institution generally had been founded upon the hereditary principle. The Drudical clergy

appear rather to have been a body of the same sort with the clergy of any modern Christian

church; that is to say, consisting not of the mem-

bers of particular families, but of persons educated to the profession from any of all the families in

the land.—It may be assumed, however, that they

were principally derived from the more opulent or

honomable classes. Casar describes the young

men who some of their own accord, others sent

by their parents and relations—resorted to the

Druids of Gaul to obtain instruction in their sys-

tem, and to be trained to become members of their

body, as very numerons. Pomponius Mela speaks

of then pupils as consisting of the most noble indi-

Yet their institution seems to have had, the im-

municating then money or their estates.

the country now called Wales, as well as throughout the rest of south Britain; for the oldest names of places in Walcs are not Welsh but Gaelie. Nor does the peenhar dialect of Cornwall appear to have been at this time known any more than its sister Welsh, in the southern parts of the island. The Celtic or Gache was also undoubtedly the language of the great body of the people of Ire-The tubes by whom North Britain was

LITERATURE, SCIENCE, AND THE FINE ARTS.

occupied, on the other hand, seem to have been for the greater part of German or Scandmavian extraction; and, if so, they must be supposed to have spoken a Teutome dialect. But in the absence of all direct evidence, historical, traditional, or monumental, the point is one upon which it is impossible to affirm anything with confidence. As far as the topographical nomenclature of the country affords us any light, it would seem to indicate that the greater part of modern Scotland was anciently occupied by a people speaking a language very It is with the Britons of the south exclusively, however, that we are now concerned; for among these only have we reason to behave that any kind of learning or scientific knowledge whatever existed at the time to which our inquity relates. Among the South Britons there was undoubtedly established a class of persons, forming a clergy, not

only in the modern, but in the original and more extensive signification of the term; that is to say, a body of national functionaries intrusted with the superatendence over all the departments of learning \* The Drinds were not merely their theologians and priests, but then lawyers, their physicians, their teachers of youth, then moral and natural philosophers, their astronomers, their mathematicians, their architects, their musicians, their poets, and in that character, no doubt, also their only historians. To them, in short, were left the care and control of the whole intellectual culture of the nation. It is most probable that, in discharging this duty, the Druids proceeded upon the principle of imparting none of their knowledge except to such as they trained up to be members of their own body. The state of society would scarcely admit of any diffusion of their instructions among the people at large and the genius of their system, as far as it can be detected, appears to have been wholly opposed to any such lavish communication of that to which they owed all their ascendancy over their fellow-countrymen. To them knowledge was power, not only in the sense in which it is so to every individual in the possession of it, as enabling him to do those things the way of doing which it teaches, but besides, and to a much larger extent, as putting into their hands an instrument. of authority and command over all around them. This latter advantage, unlike the former, they \* Coloridge on the Constitut on of the Church and State, pp. 46,

nearly albed to the present Welsh.

viduals of the nation. In regard to the particular studies in which these crowds of pupils were exercised, our information, as might be expected, is very impatisfactory. Both Caesar and Mela state the fact of their sometimes remaining twenty years under tuition; and the former reports that they were said in the course of that time to learn a great number of verses. Caesar adds, as has been detailed in a former chapter nearly in his own words, that besides the theological instruction which they imparted, the Drinds instructed their scholars in many things respecting the heavenly bodies and their motion, the magnitude of the universe and the earth, and the nature of things,—the last phrase designating, we may suppose, a sort of mixed comise of physics and metaphysics. All these instructions, it seems, they communicated orally, the employment of the art of writing being dispensed with for two reasons, -- first, that the things taught might be more seeme from the chance of coming into the possession of the multitude or the unmittated; secondly, for the sake of better exercising the memory of the learners. Caesar expressly informs us, however, that the Draids were acquainted with letters, and used them on all common occasions. The characters which they used, however, would hardly seem to have been those of the Greek alphabet, as the common

reading of the passage asserts, seeing that, inde-

"HISTORY OF ENGLAND.

they might not by able to read it. It has been

suggested, indeed, that the Druds anglit use the Greek letters, or letters resembling those of the Greek alphabet, without understanding the Greek tongue "It is a carious circumstance that in the number and powers of the letters, the Celtic alphahet, which has been used from time immeniorial nelicland, exactly corresponds with the original Greek adplished said to have been brought by Cadians from Pharmera, although the ancient forms of the former have been exchanged in modern times for those of the Saxon characters expressing the same sounds. The Druids, therefore, may have obtained possession of letters resembling those of the Greeks without having been indebted for them to that people. The Gallie God of Eloquence, as we leson from Lucian, was called Quones; and it is remarkable that certain ancient inscriptions in an unknown character found engraveremon the rocks and elsewhere in Ireland, have always been known among the people by the name of Ogam or Ogma This coincidence would seem to warrant us in inferring a connection be-

tween the ancient Celtic cloquence, and the use of

cultivated and licht in the highest honour both by the Drinds and by the other leading personness

among the Celtic nations. In the state of society

which then subsisted this was the most powerful instrument for ruling the popular mind, as it still

The art of cloquence was no doubt assiduously

pendently of other objections to that reading, we

is among the islanders of the South Sea and the Indians of America, in a much less advanced social combine. Among both the Gauls and the Britons we read of ilisplays of oratory in all their unblic proceedings. The debates of their councils and the direction of their armies alike dimanded the exercise of this popular accomplishment. The harangues delivered on certain memorable occasions by Galgaens, Boadicea, and other British chiefs, have been preserved to us by the Roman writers. Tacitus has depicted the Drinds of Mona, when that sanctuary was attacked by the Roman general Suctomms, rushing, with burning torches outstretched before them, through the ranks of their armed countrymen arrayed to repel the invaders, and inflaming their courage by pouring forth frenzied prayers with their hands uplified to heaven. On other occasions, according to Diodorns Sienlis, they would evince their powers of persuasion by throwing themselves between two bodies of combatants ready to engage; and by the charm of their words, as if by enchartment, appeasing their mintual rage, and prevailing upon them to throw down their arms. In the adminis-

tration of the laws also, and in the celebration of

their religious solemnities, they would no doubt

often have occasion to address the people. The

was that of ago; and it noight also be because they in this way the more distinctly showed that it was not by bodily strength he effected the subjugation of his fellow-mere. This allegory, it may be added, both in its conception and in the manner he which it was represented to the senses, evinces a very considerable advance in civilization and intellectual culture, and would be enough of itself to place these Celuc nations of antiquity in a different category altogether in these respects from the modern savage communities with which they bave some-

Poetry, and its then inseparable accompaniment,

Music, were doubtless also cultivated by the Bri-

artificial mounts called Carnedds, still remaining

in Anglesey and in other parts of Walcs, are sup-

posed, as has been already noticed, to have formed

the stations from which they were wont to deliver

their regular instructions and admonitions to the

listening crowd. The account which Lucian gives

of the manner in which their god Ogmius was represented by the Gauls shows forcibly the high

estimation in which the art was held over which he was supposed to preside . The epithet of

Ogmins, or the God of Eloquence, was given by

them to Herenles, whose matchless strength, they

finely conceived, did not be in his thews and

smews, but in the power of his persuasive words,

by which he took captive the reason and subdued the hearts of all men; -a thought which we might

almost call an anticipation of the striking and

beautiful expression of Burke when he described the common mother tongge of Englishmen and

Americans as uniting the two nations by "a tie lighter than air, but stronger than non." The

Gauls accordingly painted their Hercules Ogmius

as an old man surrounded by a great multitude of people, who seemed attached to him in willing

subjection by slender chains reaching from his

tongue to their cars. They made him old, they said, because the richest and strongest cloquence

[Book L

tish and Gallic Drinds, or by that particular division of their body called the Bards. It was, as we have already related, the especial office of these bards, whom Strabo designates by the epithet of Hymners, to celebrate in verse the praises both of the gods and heroes of their nation. Their compositions would thus confirm all that was by any artificial process preserved from oblivion of the national history. Their recutations were most probably chanted to the accompaniment of some musical instrument resembling the ancient lyre or the modern harp.

tinges been compared.

Of the Theology of the Dands a sufficiently full account has already been given. This formed not only the chief department of the Druidical icarning, but that with the spirit of which all the test of their learning was impregnated law, their medicine, their cthics, their astronomy, their system of the physical constitution of the minverse, were all auronimodated to their theological doctrines, or, to speak more correctly, were all only so many parts of their theology. Of their are known in explaining their religious system.

occasion to detail most of the few particulars that

few words may be added however on one or two of the branches of their physical knowledge. Their medicine seems to have been in its general character, and in most of its professions and practices, a medley of their all alike vain and definsive theology, astrology, divination, and magic, and must have owed the greater part of any efficacy that may have belonged to it to its mere power over the imagination But they seem also to have been possessed of a limited materia medica, and may even have known some useful secrets respecting the preparation or administration of simples of which we are at present ignorant. Plmy has told us of several herbs which were venerated by the Druids of Ganl for their supposed mediculal vulues, and were applied by them to cure various diseases. We have already quoted his account of the sacred character and moral influences attributed by them to the mistletoe. This plant, which they called by a name signifying allhealing, would seem to have been also their sovemustletoe is said to have been found useful m modern times in cases of chilepsy. \* Another medical berh of the Druds was what Pliny calls the selago, and describes as resembling saym, and which has been supposed to be a species of hedgehyssop. This, too, they regarded as an excellent protection against diseases in general, and its smoke as particularly salutary for ailments of the eyes. Another which he mentions was the samohis, or marsh-wort; this they administered to

reign remedy for most bodily disorders. cattle as well as to lumnan patients. But of all vegetable productions, with the exception only of the nurtletoe itself, that which they held in the highest estimation seems to have been the vervain. It is described, with the usual mixture of medical and tahsmanic attributes, as of efficacy to enable those who anomted themselves with it to obtain the objects of their wishes, as having the power to repel fevers, to conciliate friendships, and to cure every disease. Mixed with wine, it was good against scrpents. Very little reliance however was placed by the Drindical physicians upon the merely natural properties of these precions plants. Everything depended upon the ceremonial with which they had been gathered. Some were to be cut from their stalks with an instrument of iron, others were to be placked by the hand; some were to be gathered by the left hand, others by the right; some while the sun was shining, others in the moonlight, others in the absence of both these luminaries and under the ascendancy of some appropriate star. In some cases the person who went culling was to be attired in white; in others

of real value however may, as we have said, have been hidden under all this delusion and imposting, If the Drinds possessed any recondite knowledge whatever (and there can be no doubt that they possessed a great deal), an infimate acquaintance with those productions of the earth by which they were surrounded in the woodland retreats where they spent so much of their studions lives can hardly be denied to them. The few scattered notices in Pliny of their medicine and botany have evidently no pretensions to be considered a full account of their knowledge in these sciences; and it is probable enough that his details may be in many respects as erroneous as they are obviously fragmentary and imperfect. We have seen that Cicero testifies to the extensive information possessed by one of the fratermty m all that the Greeks called physiology, that is, natural science in general. It may also be presumed that, practised as they were in the saerifice both of brute and of human victims, the Drinds could hardly fail to have attained a good deal of anatomical knowledge; but as to whether they made this available either in their medical practice or in any operations of surgery, we have no information. The branch of science respecting the cultivation of which in these islands in early times we have the most direct historical testimony, and also perhaps the best corroborative evidence of another kind, is that of astronomy. Here, in an especial manner, we find science springing out of, and taking the form almost of a part of, the national religion, if indeed we ought not rather to regard the religion as the daughter of the science, and to suppose the worship of the sun, moon, and stars as divinities, to have been originally merely the popular exhibition made of their discoveries by the sages who studied the movements of these celestial bodies. Wherever, at all events, this particular species of idolatry prevailed, the observation of the celestial motions, in other words, the study of astronomy, appears to have been blended with it; and no doubt can be entertained that, whether it was so in the first instance or not, many scientific truths came eventually to be hieroglyphically sig-

he was to go barefooted; in others, fasting.\*

these minute formalules, in addition to their main

purpose of impressing the scal of religion upon

everything, would have the secondary advantage of

affording a convenient shelter for the credit of the

drug and the doctor in all cases in which the pre-

scription failed of its promised effect; the ready

explanation would be some neglect or irregularity

on these ceremonal observances. Some knowledge

mified both in the mythology and in the ceremonial

forms of the superstition. Ingenious speculators

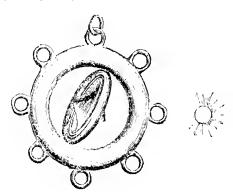

have endeavoured to detect an astronomical mean-

ing in the disposition of the stones of Stonehenge and Avebury, and of other similar Druidical or

<sup>\*</sup> See Dissertation on the Mistletoe, by Sic John Colbatch, 1729; and Treatise on Epilepsy, and the Use of the Viscus Querenius, or Mistletoe of the Oak in the Cure of that Disease, by Henry Fraser, M.D., 1806. VOL. I.

The Irish Round supposed Druidical temples Towers are also conjectured, in combination with their design as sacred or emblematical monuments, to have served the purpose of observatories or watch-towers of the heavens. They have generally, near the top, four openings or windows facing the four cardinal points \* Both Cæsar and Mela, (apparently copying him) bear testimony, in passages which we have already had occasion to quote, to the reputation of the Gallie Druids for an acquaintance both with the movements and the magnitudes of the heavenly bodies. We are not aware, however, of any evidence for the supposition, although not unlikely in itself, that, in addition to its general religious application, the science of astronomy was cultivated by these priests as being imagined to afford them the means of looking into futurity, or, in other words, for astrological purposes, unless we are to consider so much to be intimated by the expression of Mela, who mentions their profession of being able to tell the intentions of the gods immediately after having informed us of their knowledge of the motions of the stars, as if their divination had been a part of their astronomy circumstance that in all the ancient ceremonial religions tended to maintain an intimate alliance between religion and astronomical science, was the necessity of some skill in the latter for the regulation of the various annual festivals. Such festivals, as we have seen, constituted a remarkable feature of the Druidical system of worship. The slight notices which the classical writers have preserved would lead us to infer that among the Gauls and Britons, and also among the Germans, all their periods were made to depend upon the movements of the moon. Even what Tacitus has recorded of the Germans and Cassar of the Gauls, that they reckoned time not by days but by nights, would favour this supposition. We find both nations, also, holding their great solemnities always under some particular aspect of the moon; the Germans, according to Tacitus, at the time of the new or full moon; the Gauls, as Pliny informs us, when that huminary was six days old. From the sixth day of the moon, also, according to Phuy, the Druds began the reckoning not only of their months and years, but likewise of their great cycle, which he says was a period of thirty years. It is remarkable that in the description given by Diodorus Siculus from Hecataeus of the wonders of the Hyperborean Isle, which has been supposed to be Britain or Ireland, the cycle of uneteen years, called the cycle of the moon, because after that number of solar revolutions, the relation of the moon's placer in the heavens to that of the sun becomes the same as it was at the commencement of the period, is mentioned in such a manner as to seem to indicate that it was applied as the great !

regulator of the national religious calendar. Hyperboreans believe, the historian tells us, that Apollo descends to their isle at the end of every nmeteen years, and plays upon the harp, and sings and dances all the night from the vernal equinox to the rising of the Pleiades (about the autumnal equinox), as if rejoicing in the honours rendered to him by his votaries. The knowledge of the hum cycle, however, would imply a nearly correct knowledge of the solar year; and that also, accordingly, both upon this and upon other grounds, has been claimed for the ancient British and Irish The passage in Diodorus has even astronomers been adduced as sanctioning the supposition that their observation of the heavenly bodies may not have been unassisted by optical instruments. The ancient anthorities from whom Diodorns copied his account affirmed, it seems, that in this Hyperborean isle the moon appeared as if it were near to the earth, and exhibited distinctly protuberances upon its surface like the mountains on our globe. This is certainly very much the shape which would be assumed in times of wondering ignorance by the rumours transmitted from a distant land, and perhaps through a long succession of generations, of such an unnitelligible marvel as the drawing down of the heavens towards the earth by the optician's glass. The doctrine, however, that the moon was a globular body like the earth, and that its sinface was similarly varied by elevations in one place and depressions in another, may naturally enough have been adopted by these ancient astronomical sages, merely on general considerations of theory or probability, and without having been suggested by any spots or excrescences actually detected on the planet by the eye.

ASTRONO HEAL INSTRUMENT

An account of a curious relic found in Ireland, which is supposed to be an aucient Celtic astronomical instrument, has lately been communicated by Sir William Betham to the Royal Irish Academy. Parts of similar instruments have before been found in that country, but the present is the only perfect specimen that is known to exist. It is of what is called Celtic brass, that is, bronze,

<sup>•</sup> See upon this subject Moore's History of Ireland, pp. 33, and 68—71; and 0 Binen's Round Towers, pp. 48—62. This hoff writer, basequeer, while he admits the astronomical purposes of the towers, sugast their election to another order of pricests, of the Budhist foith, who, he contends, preceded the Dinids, and far surpassed them in the knowledge of astronomy and in all other learning.

William Betham, " of a circle, the outside edge of which represents the moon's orbit, having on it

eight rings representing the different phases of the

planet. In the inside of this circle is another fixed on an axis, in the line of the inclination of the poles, on which this, which represents the earth, traverses." The size of the instrument is not given, but it is conceived to have been in common use, probably in teaching the science of astronomy, and, in its exhibition, to bave been suspended from the ring representing the moon in its first quarter by another ring, which was found loose in that Several cucles of ancient stones, it may be added, exist both in Wales and in Ireland, which still bear, in the language of the people, the name of the Astronomers' Careles, and are supposed to mark the sites of Drindical observatories, or seminames for instruction in astronomical science. But this study could not have been prosecuted to any extent without a considerable proficiency in the abstract sciences both of mathematics and mimlers, and these branches also, therefore, we must suppose to have formed a part of the Drindical learning, and of that extensive course of instruction which we are told the pupils of the Druids some-

tunes spent twenty years in passing through. On the whole, shronded from our distinct view as the facts of the subject are by the remoteness of the time, and the scantiness of the light shed upon them by history, there is reason to believe that these studious Celtic priests had accumulated no contemptible stock of knowledge in various departments of science and philosophy. According to Ammsoms Marcellums, it was to the Drinds that the Ganls were indebted for nearly all that they possessed of civilization and learning; and the same thing in all probability might have been said of the Britons. That with the real and valuable knowledge possessed by the Pruids, there was much error and superstation mixed up, there can be no doubt; everything they believed, and everything they taught may have been, at the best, but a mixture of truth and falsehood; but still it would be very far from being worthless on that account. In the most advanced state to which human knowledge has yet attained, it has perhaps in no department been purified from all alloy of error; and in the greater number of the fields of philosophical speculation, the conjectural and doubtful still forms a large portion of the most successful nivestigations that the wit of man has been able to achieve. Civilization could never make any progress, if nothing except knowledge free from all error could carry it forward. Nor shall we perhaps be disposed, upon reflection, to pass a very severe judgment upon the Drinds, even if they should appear to us, in their endeavours to secure an in-

sometimes to employ such arts of deception as their superior knowledge enabled them to play off.

It is not necessary to assume that in practising

there pious frauds, they set no other object before

course for the people over whom they excresed so powerful a sway. Whotever we may think of the soundness of their reasoning, this may have been their motive; such a consideration may • be supposed to have actuated them, even if we admit, as is very likely, that their indement in the case was somewhat biassed by their self-interest Undoubtedly neither fraud nor force seems to be a suitable instrument of civilization; but it is also not to be doubted that both have often been so employed, not only with the most honest intentions, but what is more, not without some degree of suc-They may not be the best cavilizers in ordinary circumstances, or then use may not be justifiable on principle in any circumstances; but it does not follow that they have never been used either with any good effect or with any good design. Perhaps what was good in the effect has always been counterbalanced by what was bad in its accompaniments;— it has doubtless always been impaired in that way;—but still in many instances the attempt cannot reasonably be charged as being, at the very worst, anything worse than a mistake of The Drudical religion was a the pidgment. system of delusion and imposture, unquestionably; we mean, it was not only a false religion, but it was one which its priests systematically sought to support Ly delinding the understandings of the people, and by a thousand devices and contrivances which they must have known to be fraudulent and dishonest. All this it was, in common with nearly every other form of ancient supersti-Nevertheless, we shall certainly not judge either charitably or wisely if we at once assume that in all these old idolatries, some of which have held in awe half the nations of the earth for thousands of years, the priests were nothing else but an uninterrupted succession of knaves and hypocrites, cherishing no thought and pursning no end but that of the aggrandizement of their own order and the compution and degradation of their fellow-men. They were, it cannot be doubted, most generally decrived as well as the rest; even while decriving, and consciously deceiving, others, they remained, to a great extent, deceived themselves; they beheyed that it was the truth which they supported even by their stratagems and tricks. And the more philosophical minds among them, with whom the religion in no part of it had any credit as a supernatural revelation, may still have deemed its influences on the multitude salutary on the whole, and so have justified to themselves their profession and support of it. The national religion was in almost all these cases the principal cement of the national civilization, and the latter would have crimbled to fluence over the popular mind, not to have scrupled pieces if the former had been suddenly destroyed When the South of Britain became a part of the Roman empire, the inhabitants, at least of the

and applied themselves to the study of the Latin

Interature and art. The diffusion among them of this new faste was one of the first means employed by their politic conquerors, as soon as they had fairly established themselves in the island, to rivet their doraumon; and a more efficacious they could

HISTORY OF ENGLAND.

BOOK I.

the fourth century, makes frequent mention of a

contemporary British writer whom he calls Sylvins

Bonus, and whose native name is supposed to have

been Coil the Good, but of his works, or even of

then titles or subjects, we know nothing. Auso-

mus, who seems to have entertained strong prepa-

dices against the Britons, speaks of Sylvius with

the same animosity as of the rest of his country-

celebrated heresiarch Pelaguis, his disciple Celes-

tius, St. Ninian the converter of the southern

Picts, and St. Patrick the great apostle of Treland,

might all be included in this period; but the mis-

sionary exertions of the two last-mentioned will

fall to be noticed more conveniently in our next

chapter on the History of Religion Pelagins,

although he has been claimed as a native of South

Britam, was more probably, like his disciple Celes-

tms, a Scot; that is to say, a native of Ireland. He

is said to have been a monk of Bangor; but whether

this was the monastery of Bangor in Wales, or

that of Bangor, or Banchor, near Carricklerins in

Ireland, has been disputed. Pelaguis supported

his peculiar opinions with his pen as well as

orally; and some controversial writings attributed to

him still exist. Until he began to propagate the

beretical opinious which have made him so famous,

he appears to have emoved the highest esteem of

his contemporaries for his moral qualities as well

as for talent and cloquence; the extraordinary suc-

eess with which he diffused his views may suffice

to attest his intellectual ability and accomplish-

ments. The reputation of his disciple Celestius

was nearly as great as his own. Many of the fol-

lowers of the Pelagian heresy indeed styled them-

been an Irishman. St. Jerome, the great oppo-

nent of him and his master, almost says as much

when, in one of his passionate invectives, he calls

him a blockhead swollen with Scotch pottage, that

is, what we should now call Trish flummery ' We

may quote as a specimen of the cloquence of the

selves Celestians -

Celestins also appears to have

Among the early British churchinen the

first necessity of the social condition, and the indispensable basis of all civilization, did not allow another winter to pass without beginning the work of thus traking up the national rand to a Roman character. Tacitus informs us that he took measures for having the sons of the chiefs educated in the liberal arts, exciting them at the same time by professing to prefer the natural genius of the Britons to the studied acquirements of the Gauls; the effect of which was, that those who lately had disdained to use the Roman tongue now became ambitious of excelling in cloquence. In later times, schools were no doubt established and maintained in all the principal towns of Roman Britain, as they were throughout the empire in general. There are still extant many imperial educts relating to these public seminanes, in which privileges are conferred upon the teachers, and regulations laid down as to the manner in which they were to be appointed, the salaries they were to receive, and the branches of learning they were to teach. But no account of the British schools in particular has been preserved. It would appear, however, that, for some time at least, the older schools of Gaul were resorted to by the Britons who pursued the study of the law . Invenal, who lived in the end of the first and the beginning of the second century, speaks, in one of his Satires, of cloquent Gaul instructing the pleaders of Britain. But even already forensic acquirements must have become very general in the latter country and the surrounding regions, if we may place any reliance on the assertion which he makes in the next line, that in Thule itself people naw talked of liring rhetoricians to manage their causes. Thule, whatever may have been the particular island or country to which that name was given, was the most northern land known to the ancients.

It is somewhat remarkable that while a good many names of natives of Gaul are recorded in connexion with the last age of Roman literature, scarcely a British name of that period of any literary reputation has been preserved, if we except a few which figure in the listory of the Christian Church The poet Ausonius, who flourished in

age, and also of its most orthodox Christianity, a little more of the "splendid lule" of the learned saint. He goes on to describe Celestins as "a great, corpulent, barking dog, fitter to kick with his heels than to bite with his teeth; a Cerberus, wha, with his master Pluto (so Pelagius is designated), deserved to be knocked on the head, and so put to eternal silence." There still exist some epistles and other works attributed to Celestius, which are believed to be genume. The original Latin is "Scotorum pultibus prægravatus"— Vossuis, however, in his Dissertation upon Pelagranism, considers the Itish flummery with which Celestius is here said to have been swollen, as meaning the notions of his master Pelagius, and addices

the wodrs as a testimony in layour of the Irish origin of the latter.

#### CHAPTER VI.

### THE HISTORY OF MANNERS AND CUSTOMS

N the present period, under thus head, although it would not be difficult to collect a great deal of matter, by availing ourselves of all that has been related of communities conceived to be in the same state of social advancement with the ancient Britons, and thence assuming, by analogy or conjecture,

the particulars of the domestic life and habits of the latter, the real information we possess amounts to very little. All that we know upon the subject is to be found in the meidentid notices that have fallen from the Roman writers in the course of then historical narratives, or to be deduced from the few relies of the British people that have survived the destruction of time; and even when these sources are most carefully studied, what we learn from both of them together is extremely scanty and unsatisfactory.

We have already described the houses of the Of the manner in which these rude hovels were firmished we know scarcely anything. In some of the cams of Camobeline we find the interior of a habitation furnished with scats resembling our modern chairs, stools like the crickets of our peasantry, and others composed of a round block of wood, while the arms of the family are ranged along the wall.\* The floor probably served for a bed, and the mantle of the sleeper for a blanket; in wint r they might have recourse to the additional warmth of shaggy skins. Wooden bowls and platters, and their celebrated baskets of osier work, would contam their provisions and other necessaries; and in addition to these they had, as already mentioned, articles of coarse pottery, consisting of howls, cups, and jars. According to Strabo, they also had cups and other vessels of glass; but, as these were articles of importation, it is probable that they were confined to the houses of the chiefs. Though the Britons were a hardy race, yet their climate would make the comforts of a fire desirable during the winter, and accordingly. we may suppose that they adopted the obvious resource of a fire upon the floor, until the Romans introduced among them the luxury of a brazier. Their forests supplied them abundantly with fuel;

\* Pegge on the Coms of Canobelinus

but, in addition to this, they appear to have been acquainted with coal before the arrival of their conquerors, collections of this mineral having been found in various places, attesting their British deposition.' The only coal they had, of course, was gathered upon or near the surface, and used in cases where wood could not easily be obtained. Their diet, no doubt, corresponded with the poverty of their dwellings and the general simplicity of then lives. The country, where it was cultivated by that superior race who occupied the sca-coast opposite Ganl, was productive in grain, and the pastures were covered with flocks and beids, so that the fortimate natives of these quarters were well supplied with the materials at least of even comfortable living Of the milk they made curds; and while the Romans, contented with their own olives, were ignorant of butter, it was probably known to the Britons, as Plmy informs us it was generally to the barbarous nations ( Salt was an imported article at the period of the Roman invasion, and probably was a Invery attainable only by a few

While such were the articles of subsistence among the more favoured and better civilized of the ancient Bistons, then more barbarons countrymen must have been in a state of considerable destitution. This is evident from the testimeny of several Roman authors. Caesar, who attests the fertility of Kent and the superiority of its people, informs us also that, in the interior of the island, the inhabitants sowed no grain, but lived on the milk and flesh of their flocks and herds. inhabitants of the northern parts of the island were in a still more wietched condition in the article of food. We are toble of the Macatac and Caledonians, that they byed upon the milk of their flocks, upon wild frmits, and whatever they could procure in hunting ! This was their food even under favourable encumstances, for it is added that, when they were in the woods, they fed upon roots and leaves. A melanchely proof of then wretchedness many be deduced from what we are told of the substitute they employed in the want of natural sustenance. It was a tertam compasition, by which, it is said, when they had caten about the quantity of a bean, then spirits were so admirably supported that they no longer felt hunger or thirst. \ This invention, to which such miraculous effects are attarbuted, was probably nothing more than a drug made use of by them

Mead, or

to deaden the anawings of hunger, just as Indian hunters, in similar cases, gird a bandage tightly upon their stomachs. The game upon which the more needy or more adventurous natives,

both of the north and south, chiefly subsisted, was probably of a kind only to be procured with difficulty, -- the bison, the boar, and the moose-deer, against which their imperfect weapons must have

been frequently unavailing. Antiquarians have been more currous about how this game was cooked than were probably the hunters themselves; and while some have alleged that the ancient Britons ate it raw in the forests, after expressing the blood between flat stones or pieces of timber, according to the fashion of the Scotch highlanders in former times, others have supposed that the carease was baked in a pit lined with heated flints, as is done in the present day by the New Zealanders. We have already mentioned the abstinence of

the Southern Britons from hares and poultry, and that of those in the north from fish. It is remarkable that in this last particular the ancient occupants of the northern part of our island were till lately mutated by their representatives, the Scottish Highlanders. But whatever may have been the cause of this avoidance of what we should deem some of the most natural and salutary kinds of food, the carly Britons have been accused of not abstanning from the most revolting of all the gratifications of a deprayed appetite. Antiquity has subjected them to the odious charge of caimibalism. Diodorus Siculus and Strabo both mention the existence of a report to that effect respecting the Irish; St. Chrysostom, in one of his sermons, speaks of it as a practice that had prevailed, in the exclamation-"How often was human flesh eaten in Britam?" and St. Jerome seems expressly to affirm that when he was a young man, in Gaul, he saw some of the Attacotti, a British nation, eating human flesh. Gibbon has adduced this as the testimony of an eyewitness to the fact of the cannibalism of some of the Britons, and has declared that he finds no reason to question the veracity of the saint; but the account is certainly in some respects a strange one. It is difficult to believe, in the first place, that an exhibition of canmbalism could be publicly tolcrated in the fourth century in the Roman province of Gaul. But Jerome not only would seem to say that he saw the Attacotti eating human flesh; he adds, as equally what he had ascertained by his own observation in Gaul, that these British savages, when they found herds of hogs and cattle in the woods, were wont to cut off and devour certain parts of the bodies of the shepherds, which they accounted particularly delicate. Now this certainly he could not have seen with his own eyes, although he may have heard it reported. Although, therefore, his words are not so cautious as they ought to have been, and are dictated with a view to rhetorical effect, we seem

to be justified in regarding him as testifying not

to what he had seen, but only to what he had

heard, in the whole story. Still his statement will

they appear to have acquired. The frequent existence of the practice of cannibalism among tribes not always in the lowest stage of barbarism, has now been completely established. The Battas of Sumatra, who have a written language, and have in other respects made considerable advances in civilization, have perhaps carried the practice further than it has been carried in any other country. We know nothing about the habits of the Britons in regard to temperance in drinking. metheglin, was probably the common beverage at their social feasts, as it is said to have been among the Celtic nations generally. They are also said to have used a preparation from barley,\* forming a coarse sort of wine, or "spurious Baechus," as the Itahans called it, which was of a much more intoxicating quality. This was nothing more than a species of ale common to the Gauls, the Spaniards,

man-eating; and all we can say is, that it is not

impossible they may have deserved the character

of savages in making even water intoxicate. With wine they probably had little if any acquaintance. In their personal appearance, the Britons seem to have been a people of large limbs and much muscular strength and activity. This much may be gathered even from the narrative of their various encounters in fight with the Roman legions. Strabo mentions that he had seen some British voing men at Rome half a foot taller than even the Gauls, who were a bulky race compared with the Italians. He alleges, however, that they were not strongly and gracefully formed in proportion to their great stature, and did not stand very firmly upon their legs; but this was perhaps owing to the immaturity of those juvenile specimens that came under his

and the nations of the west and north, and alluded

to by several writers,† who admired the ingenuity

Their clothing, both for warmth and ornament, is one of the chief signs by which the degree of civilization among an early people is indicated. The half-naked savage shivering amidst the storm of the elements, with no better defence than a loose cloak of skin, betokens a human being in the lowest stage of helplessness, and whose intellectual capacities are as yet in great part dormant. The addition of a single pin or button, by which his garment is rendered more comfortable, indicates an advance in intellect that will operate equality upon all his other arrangements; and as one piece after another, for convenience or decoration, is added to his attire, we may commonly trace the progress of his general civilization. Mere expediency was at first his standard; but as his wants increase and his tastes improve, the narrow limits of necessity are soon overstepped for those of decency, gracefulness, and splendour.

The Mæatæ and Caledonians are described by the Romans as livingen a state of nudity; but as they seldom saw these warlike tribes except in \* Dioscorid. lib, li, c, 110, † Pliny, Orosius, Isidorus.

battle or flight, their want of clothing may have been only temporary, and for convenience, during their desultory warfare. The flinging off of their garments in battle was a custom general among the Celtic nations. Livy informs us that, at the battle of Camize, there were Gauls who fought naked from the waist upwards; and Polybins says that some Belgie Gauls fought entirely naked, but it was only on the day of battle that they stripped themselves. It was thus that, in the battles of modern times, the Scottish Highlanders were accustomed to throw off their plaids, by which they sometimes astonished their antagonists by the view of their naked limbs, as much as their prototypes did the Roman legious, and incurred an equal charge of barbarism. Cresar himself infmors us that the inhabitants of the interior of Britain wore clothing When this was the case with the least refined part of the population, it is obvious that the more advanced portion of them, who inhabited the sea-coast, must have possessed a more plentiful and less primitive wardrobe. Of the several kinds of cloth manufactured in Gaul, one, according to Plmy and Diodorus Siculus, was composed of fine wool dyed of several colours, which being spin into varn, was woven either in stripes or chequers; and of this the Gauls and Britons made their summer garments. Diodorus, describing the Belgie Gauls, says, they were dyed tunics, beflowered with all

FIGURES OF ANCIENT GAULS IN THE BRACCY, TUNIC, AND SAGUM-Drawn from Roman Statues in the Louvie.

manner of colours. With these they were close trowsers, which they called braceae. These trowsers, an article of dress by which all the Barbaric nations seem to have been distinguished from the Romans, were made by the Gauls and Britons of their striped or chequered cloth, called breach, brycan, or brewan, brew in Celtic signifying anything speckled, spotted, striped, or in any way partycoloured. Over the time both the Gauls and the Britons wore a short cloak, called a sagum by the Romans, from the Celtic word sare, which, according to Varro, signified a skin or Inde, such having been the material which the invention of cloth had superseded. The British sagum was of one umform colour, generally either blue or black.\* The predominating that in the chequered flowsers and time was red. Their hair was turned back upon the crown of the head, and fell down in long and bushy curls behind. Men of rank amongst the Ganls and Britons, according to Casar and Diodorus, shaved the chin, but wore immense tangled mustaches. The ornaments of the Britons consisted, like those of the Ganle, of rings, bracelets, and armlets of non, copper or lans, silver or gold, according to the rank or means of the wearer, and that peculiar decoration the torch or dorch, Latinized torques, which was probably a symbol of nobility or com-When the captive Caractaens was led

through the streets of Rome, several of these chains,—the spods which he had taken from his conquered enemies in Britain,-were carried in the procession t. It was a sort of necklace or collar composed of flexible bars of gold or silver, twisted or monided like a rope or wreath, and hooked together belinid. Sometimes the torques were formed of bronze; and Herodian says that those of the northern part of the island wore torques of iron, "of which they were as vain as other barbarians were of gold."# Specimens of those of gold, silver, and bronze have been frequently found both in Britain and Ireland. Two splendid specimens of

gold torques found in the county of Meath have t Tac. Annal vn 36 Duedor v, 33, I Latie c xlvn.

guidles instead of collars, as Herodian mentions they were also worn round the waist. From the hook of one proceeded a gold wire, a quarter of an meh thick and eight inches long, terminating in a solid knob, an appendage never before seen in any specimen. The weight of the whole torque was twenty-five onnees \* The ring, Plany tells us, was worn by the Britons and Gauls upon the middle finger. Of the weapons, offensive and defensive, of the ancient Britons several specimens have been preserved. The most complete collection is undoubtedly

heen supposed, from their size, to be meant for

[Воок Т.

that at Goodrich Court. Hatchets or battle-axes of stone, arrow-heads of flint and lances of bone, supposed to have been the primitive weapons, and others of the same form but of maxed copper and tm;the leaf-shaped sword of the same metal, worn also by the Gauls, and the metal coatings of the flat circular shields or targets, called tarians or clashers, the concentue circles on which, separated by rows of httle knobs, forcibly remind us of the Highland target, are all to be seen there in perfect preservation. The shields have a hollow boss in the centre, to admit the hand, as they were held at arm's length in action.† A most interesting relic of this period was lately discovered in a carn at Mold, in Flintshire.

a golden breastplate or gorget, embossed with a

figured pattern in various degrees of rehef. It was found containing the bones of the deceased warrior, and in the position in which it would have been worn, with remnants of coarse cloth or serge, beads of amber, and pieces of copper, upon which the gold had been probably fastened. Its extreme length is three feet seven mehes, being made, apparently, to pass under the arms and neet in the centre of the back; and its width in front, where it is hollowed out to receive the neck, eight mehes. Some separate pieces found with it appear to have passed over the shoulders like straps, but the inutilation of the corslet at the very point on each . Meyrick's Ong. Inhab p. 14 note. Sn W. Betham, however, we

suppose would consider this and other such specimens to have been puces of money. See ante, pp. 110, 111

† See also Archæologia, vol. xxiii, p. 95

tunately prevents us from ascertaining precisely
the mode of their application. The breastplate is
here engraved from the original, which is now in
the British Museum.\*

We have already more than once had occasion to

the British Museum.\* advert to the painted skins of the Britons. Cæsar, the first of the Roman writers who mentions this national peculiarity, describes it to have consisted merely in staining themselves of a cerulean colour with the herb vitrum or woad. Solmus, however, represents the process as a laborious and painful one, but permanent in its effect, and speaks of the painting as consisting chiefly of the figures of animals that grew with the growth of the body. Herodian says they punctured their bodies with the figures of all sorts of animals. Isidore is still more explicit, for, in speaking of the Picts whose name he derives from their coloured skins, he tells us that the painting was done by squeezing out the mice of certain herbs upon the body, and puncturing the figures with a needle. Here, then, we have the same process of tattooing which is performed in the present day by the natives of the South Sca islands. Casar supposes the Britons to have coloured their skins for the purpose of terrifymg then enemies; but such could scarcely have been the object with a people among whom the practice was universal, and whose wars were international. Probably this skm-painting was the national dress, and existed in its highest state of perfection at a period considerably prior to the Roman invasion, when the clothing of the people was more scanty than in the days of Cæsar might aftempt by the operation, also, to indurate the skin more effectually against the inclemency of the elements. But a still stronger motive for the endurance of such pum and labour as the practice occasioned, is to be sought in that love of ornament so natural to mankind at large, and so especially powerful in the savage. The ancient Briton, in the absence of other distinctions in the way of clothing and decoration, would find, in these fantastic ornaments, his hadge of rank in society, and his chief attraction in the eyes of the other sex. As the process also was performed in early youth, it was a probation, among a rude people, for a life of hardihood; and by the profusion of its lines and figures, the wearer evinced his contempt of pain and power of endurance. But when the body began to be covered, such a profusion was found superfluous; and as the articles of raiment were increased, the blue figures were proportionably discontinued, so that the practice gradually declined, and was at last wholly abandoned. therefore that we hear no more of this tattooing in the South after it was subdued and civilized into a Roman province; though it still continued among

civilization <sup>1</sup> We may here observe that, by the same gradual process this practice is on the wane in New Zealand, and probably, in the course of a century, will be recorded among the things that have been.

A still more singular distinction than that of a

A still more singular distinction than that of a painted or punctured skin separated the ancient Britons morally from the rest of the world, as ninch as their insular position did gaographically. This was the nature of their institutions or customs of marriage. Those rights of exclusive property in a wife, which even among the rudest tribes are prized so highly, and gnaided with such jealous care, are asserted to have been strangely disregarded by the early inhabitants of this island. According to Casar, ten or twelve families used to live under the same roof, the husbands having The ties of previous their wives in common. consanguinity, also, so far from being a check, seem rather to have been considered as a recommendation in these strange associations, in which, we are told, for the most part brothers joined with brothers, and parents with their sons. The paternity of the children was settled by their affiliation upon the person by whom their mothers had been first married. Of the manner m which the children were reared, all the information we have is a story told by Solmus, who relates that the first morsel of food was put into the infant's mouth on the point of his father's sword, with the prayer that ke might prove a brave warnor and die on the field of battle. These matrimonial clubs have appeared so pre-

posterous and incredible to inquirers of the present day, that many have been disposed to class them among the fetions of antiquity. It has been supposed that the Romans diew a wrong conclusion from the British mode of living, which was so unlike their own, and, finding so many families huddled together under one roof, too hastily assumed that they lived in all respects in common. But the Romans were never so mistaken when they found other rude tribes thus crowded together: while they brought this revolting charge against the Britons, they have imputed nothing of the kind to the Germans, for instance, who were placed in similar circumstances. The fact, too, does not depend upon the solitary testimony of Casar. It is also stated by Dio Cassius, or his abridger Xiphilinus; and that writer reports a conversation respecting it between the Empress Juha and the wife of a British chief, in which the latter, on being raffied about the marriages of her countrywomen, at ence admits the charge, only retorting that the Roman matrons acted in a manner much more indefensible by indulging themselves in an equal licence covertly, and in violation of the laws of their country. St. Jerome also speaks of the practice as still prevailing in his day, in the northern parts of Britain. lingered in these regions, of course, long after civilization and Christianity had extirpated it in the

the rude tribes of the North, where it lingered until

it was banished thence also by the full attire of

· We shall find in the sequel, however, that it ie appeared among

See also engraving and account by Mr. Gage in vol. axvi. of the Archaeologia, p. 22,
 VOL. 1,

But even during the general prevalence of south. this promiscuous polygamy, the virtue of conjugal fidelity, as already noticed, seems still to have been perfectly well understood, and also held in much respect. Their marriages, however extraordinary their nature appears to us, may still have been protected by a law, the provisions of which it was both dangerous and disreputable, to transgress Cartismandea, the Queen of the Brigantes, when she transferred her affections from her husband to her armour-bearer, may very probably have violated the established regulations, however liberal; and hence the universal storm of indignation which her conduct raised O1, the community of husbands and lovers may have been customary only among the lower classes, and not tolerated by the general opinion in the case of the princes and chiefs. male honour also appears, from the instance of Boadicea, and from various scattered notices in the Roman writers, to have been highly appreciated by the Britons. The general respect in which women were held, indeed, is attested by various circumstances. They, as well as men, appear to have

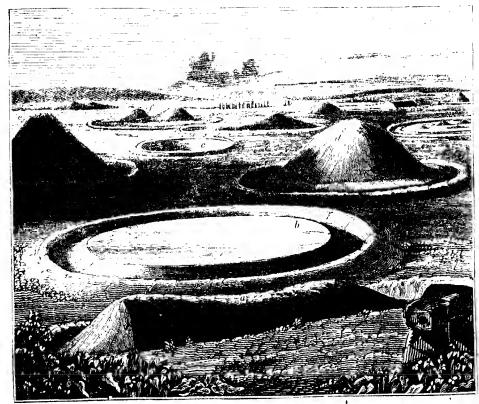

assumed the prophetic office, and dictated for the

emergencies of the future. Women occasionally

both held the sovereignty of states, and com-

manded armies in the field of battle. This is the reason that some of the female sepulchres, when opened, display an assortment like the commodities of Ulysses, when he went to discover Achilles, viz., implements of housewifery, trinkets, and wailike weapons.

Those affections that have cherished a friend or relative when living, are generally expressed for his lifeless remains in a great variety of forms; and as love and friendship are most intense among the uncivilized, the rudest tribes are found to prescat the most striking indications of these passions in their functal ceremonics and modes of burnel The intensity of their feelings on such occasions the ancient Britons have sufficiently announced to posterity, in the numerous barrows that exist in the southern division of the island, and the cause that are found in the northern. What particular ceremonies they used in their interment of the dead we know not; but, from the contents of the graves, we find that, like other rude nations, they buried with the body-whatever they accounted most valuable Weapons of war and of the chace, ornaments of every kind, and even articles of jewellery were thus deposited; and frequently also the relies of dogs and deer are found mixed with human bones. All

this had, doubtless, a prospective view to the ! existence of the departed individual in a future state; he was thus not only arrayed for that other seene in a manner befitting his rank and former estimation, but furnished with the means of detence, subsistence, and amusement. The prodigious labour with which the old British barrows were evidently constructed, by soil in many cases brought from a great distance, and the care and ingenuity displayed in their forms, excite the wonder of modern ages. These strange sepulchres exhibit great varicty both in size and shape, and by this, in some cases, we can conjecture not only the period of their construction, but also the condition of those whom they were designed to commemorate. Thus the miniense mounds of earth of an oblong form and rude construction, some of which are about 400 feet in length, but containing few bones, and fewer valuable relies, were probably the earliest graves of the island, and designed for chieftains, who could more easily obtain the labour of a thousand vassals, than the possession of a single trinket.

these may perhaps she classed the bowl-shaped barrows, as they are called, which are plain hemispheric mounds of earth. The bell-shaped barrow is evidently of still later date, being an improvement upon the former, having its sides gracefully curved inward, immediately above the surface, and exhibiting greater skill and labour in its construc-To these may be added what have been improperly termed the Druid-barrows: these are the most elegant of the whole series of graves, and appear to have been in general occupied by females, from containing trinkets of a finer and more feminine character, and bones of a smaller size than those of the others. It would appear also that these vast piles were reserved only for chiefs and personages of elevated rank; while the common people, as in other countries, were burned in those more humble receptacles whose traces are soon

was, to place it in a cist, with the legs bent up towards the head. This practice is generally found to have been adopted in the long barrows mentioned above; and in these, along with the remains of the body, there are sometimes found daggers of bronze, and drinking cups of the rudest workmanship. Sometimes they laid the body in the grave at full length. In these cases, the articles of bronze and iron, such as spear-heads, lances, swords, bosses of shields, and ornaments of chainwork, together with beads of glass and amber, and other trinkets, proclaim a more refined period, and greater skill in the arts. In some instances, their practice seems to have assimilated inoic nearly to that now followed, the bodies being inclosed in a strong wooden coffin, riveted with bronze, or an unbarked piece of a tree, hollowed out in the centre. It appears, however, that they were also in the frequent practice of consuming the body by In many of the barrows, the chaired, or half-burnt bones are found carefully collected on the floor, or deposited within a cist cut in the chalk. A still-more classical mode of burial was also frequently followed among the Britons. When the body had been consumed on the pile, the ashes were carefully collected, inclosed in a linen sheet, which was secured by a brass pin, and deposited in an urn. Many of the barrows, on being opened, are found to contain these urns, which are placed, in most instances, with the bottom uppermost. This practice of sepulture by burning, appears to have been wholly confined to the inhabitants of the southern part of Britain, making it probable that they had learnt it from the Romans. As for the

Caledonians, it would seem that they were contented with laying the body in the earth entire, and raising over the spot a loose heap of stones, to perpetuate the memory of the departed.\*

Such are nearly all the facts that are now to be collected under the head of the private life and social habits of the Britous, while they remained an unconquered people. The transformation of the island, or the greater part of it, into a Roman province, also in course of time transformed the inhabitants into Romans, in their tastes, manuers, and modes of life. The country now, in every respect, assumed a new aspect. The forests were opened, and roads constructed in every direction; and the wild beasts being dislodged, the occupation of the bimter ceased, or became an occasional aniusement. The building of towns, and the extension of traffic, banished those rude practices or inconvenient customs, that were only tolerable amidst the dieariness of the woods and the idleness of their inhabitants. Superior modes of agriculture were introduced; and the natives, thus taught the fertility of their soil, forsook a precarious mode of subsistence for the settled life of the husbandman. Houses of brick or stone gradually superseded those of mud or timber; and while, in the progress of improvement, the tesselated pavement and domestic ornaments of the "eternal city" adorned the habitations of the British kings and chieftains, their retainers would also, in their humbler sphere, vie with each other in the comforts of their dwell-In this manner, too, the sports and recrea-

tions of the people would be either changed or modified. The chariot being laid aside, as unserviceable in the Roman mode of fighting, that enthusiasm for horsemanship which it cultivated must necessarily have decayed. Now that the several native tribes were no longer permitted to war against each other, the warlike exercises in which their youth and manhood were formerly trained became unnecessary, and perhaps were Their religious practices, prohibited by the law. and superstitions of common life, must, in like manner, have rapidly faded away with the disappearance of the Drnids, by whose authority they were enforced, and the advances of Christianity and a higher civilization. .

Among other things, the external appearance of the Romanized Britons was altogether different from that of their conquered ancestors. We are informed by Tacitus, that so early as during the command of Agricola in Britain, the sons of the British chieftains began to affect the Roman dress. The Braces were abandoned by them, and the Roman timic, reaching to the knee, with the cloak or mantle, still called the saguin, became the general habit, at least of the superior classes. The change in the fenule garb was less remarkable, perhaps, as it had originally been similar to that of the Romans. The hair of both sexes was cut and dressed after the Roman fashion.

In their arms and weapons similar alterations appear to have taken place, even before the complete subjugation of the country. The metal coating of a shield, supposed to have been fabricated by the Britons after they had been induced to unitate the Roman fishions, was found some years since in the bed of the liver Witham, in Lincoln-

shire, with several broken swords and spear-heads of bronze, and is now in the Meyrick collection. It bears a strong resemblance to the Roman sentum. It appears originally to have been gift, and is adorned on the umbo, or hoss, with the common red carnehan of the country. While its shape is Roman, the ornamental detail partakes strongly of the character of the British patterns; and the learned proprietor remarks, that "it is impossible to contemplate the artistic portions without feeling convinced that there is a mixture of British ornaments with such resemblances to the elegant designs on Roman works as would

be produced by a people in a state of less civilization."\*

While these changes were gradually taking place, however, in the southern parts of the island, the north, beyond the wall of Hadrian, remained in its original wild and uncultivated state. When the Emperor Sevenis invaded Caledonia in the beginning of the third century, a contemporary author† describes the Macatic and Caledonians in almost the same words as Caesar had the Butons of the interior more than two centuries before.

#### CHAPTER VII.

# HISTORY OF THE CONDITION OF THE PEOPLE.

HE account of each period will be concelled by a chapter under this title, the object of which will be, to take a general view of the whole social condition of the people, and to endeasyour to estimate the amount and character of the national civilization, by collecting

into a focus the light that may be thrown upon these subjects, both by the various particulars already noticed, and by certain additional classes of facts not admitting of being conveniently introduced under any of the preceding heads, additional facts will consist principally of such authentic information as can be obtained relating to the distribution of property, the proportions in which the population appears to have been divided into the different classes composing it, the incomes and rates of living of these several classes, the health and sickness of the community, the prevalent diseases, the ordinary length of life, with the other matters belonging to the department of what has been called Vital Statistics, and the statistics of vice and erime, including both the kinds and extent of crune commutted, and the institutions for preserving order, and repressing and pumsling violations of the law.

The sources of information of this description, however, are lamentably deficient even in regard to the most recent times; and in the earlier periods of our history no regular record of such facts is to be found, even in the most meagre form. In the remote and obscure period with which we are at present engaged, where we are nearly without anything that can properly be called history of any kind, we have only a few incidental notices to guide us to some vague general conclusions on one or two points of the inquiry.

On the question of the degree of civilization possessed by the Britons at the time of the Roman invasion, although it would be easy enough to draw up a plausible argument in support of any hypothesis that might be proposed, it is extremely difficult to come to any certain or perfectly satisfactory determination. The facts upon which we have to form our judgment are too few and too unconnected to afford us more than the merest glimpses of the subject. And from the insulated

and fragmentary way in which they are stated, it is a business of the most conjectural speculation to attempt to reconcile them with one another, and to weave them into a consistent whole. On the one hand, we have a country covered in great part with woods and marshes, without towns, except such forest fastnesses as have been found even among the rudest savages (although those of the Britions may have been more artificially defended from hostile assaults), and in all probability without any roads, except some two or three great tracks, sufficing rather to point the way from one locality to another, than to serve as the means of convenient communication. We have a people, in fight at least, showing themselves naked or hulf maked-without books or letters,-without any arts, as far as our evidence goes, save the simplest and rudest,—without even other bitations, apparently, than mud-hovels, reared for permanent occupation, but hastily put together to be crept into for a few months or weeks, and then possibly to be abandoned or set fire to on the approach of me enemy or on any other occasion that might make it convenient for their occupants to shift their quarters. Thus, in the impressive sketch of Tacitus, the day following the fatal battle of the Grampians is described as heving displayed to the view of the victors a vast silence all around, the hills a wide expanse of lonelmess, honses smoking in the distance, not a hianan being to be met with anywhere by the parties sent out to scour in all directions. This, indeed, was in the wilder regions of the north; but we can hardly doubt that in the wars between the different tribes which we are told raged incessantly even in the southern parts of the island, the people must have been accustomed in like manner to fly for safety to the woods, when a hostile band, too strong to be resisted, swept the country, and without hesitation to leave their slight and miserable dwellings to be ransacked and trodden under We learn even from the brief narrative of Cæsar's campaign, that the natives made for the woods and hid themselves there after every defeat, and that it was from the woods they came forth whenever they ventured again to attack the invaders. In short, they evidently were in the greater part a people hving in the woods, which probably covered most of the country, and m which, as has been just noticed, we are expressly told that the only groups of cottages they had that could be called towns or villages, were all hidden. These are the habits of mere savages, m as far as

the adjacent coast of Gaul, but with other and

HISTORY OF ENGLAND.

much more distant parts of the world, from which traders regularly resorted to more than one point of the island. The inhabitants of the south coast, we are expressly told, were not clothed in skins; from which we may infer that they had garments made of woollen cloth, or some other woven or manufactured material. Indeed, the common statement of Cresar and other writers, that they did not differ much in their way of life from the Gatds, enever could have been made of a people who went naked. The Britons of the south were not even dependent for their subsistence solely either upon the chace or upon pasturage; they sowed corn, as well as possessed great plenty of cattle. They were a large population, and their houses also were very numerous. They had a sort of money, perhaps not ruder than that which appears to have been in use in Egypt in the time of They showed not only much the Pharaobs. bravery, but also very considerable skill in warventuring to encounter even the Roman legions both in sudden surprises and in pitched battles, and evincing military organization and array in the latter, as well as stratagem in the former. Although their offensive arms were not of the best material, they were still of metal, and not merely of wood, or bone, or stone. Their war-chariots, both in their management and their construction, were machines which never could have been found among a people altogether without civilization. Yet we find them in the possession of Galgacus and his Caledonians, as well as of the Britons of the south. taking into account the scythes with which they are said to have been armed, the fact that they were carriages running rapidly upon wheels, and capable of being driven impetuously to and fre according to the sudden exigencies of battle, is enough to prove the existence of considerable mechanical knowledge and ingeniity among a people provided with such engines of war. Then there seems to have been established in each tribe a regular government, presided over by a single chief or king, whose power, however, was not absolute, but was controlled by an aristocracy, and perhaps also, in some degree, by the community at large. Dio Cassius, in an account of the northern tribes, tells us that the people had a great share in the government—a circumstance, by the by, which somewhat tends to corroborate the supposition of the Germanic origin of these tribes. British states, though often at cumity among themselves, had made a sufficient advance in policy, to be accustomed to provide against a common danger, by both leaguing themselves together, and placing the general direction of affairs for the time in the hands of a single chief, selected for his sup-

flicting interests or views of the different tribes seem also in both instances to have interfered to hinder the league from being either so extensive or so compact as it otherwise might have been, yet such general movements, however unsuccessfully conducted, could only have spring from a spirit of patriotism or nationality much too comprehensive as well as too considerate for mere barbarians. Above all, there existed among these Britons a numerous order of persons, constituting what we should now call one of the estates of the realm, who were possessed of a knowledge of letters, and also, we have every reason to believe, of a very considerable amount of scientific knowledge. They had a system of laws regularly taught and administered by these learned sages, and a religion of mysterious doctrines and an imposing ritual of which they were the ministers. These Druids of Britain and Ganl, as we may gather from the instance of Divitiaens, mentioned by Cicero, were qualified by their intellectual acquirements to associate with the most eminent among the literary men of Rome; and in some departments of natural knowledge they were probably more accomplished than any Roman or Grecian philosopher. Even if we suppose the Druidical learning to have been originally an importation from abroad, and never to have spread beyond the members of the Druidical body, it is difficult to conceive that the mass of the population, in the midst of which such a permanent light was fed and sustained, could have been wholly without a civilization of their own, although it may have differed in many of its features from the civilization of the Greeks and Romans, and from that which the modern nations of Europe have in great part inherited from them. The civilization of the Southern Britons was the same in kind, though perhaps inferior in degree, with that of their neighbours and kindred, the It was a social state, implying the possession of many of the more homely accommodations of life, but of very few of its luxuries, or at least of what we should designate by that name. Of luxuries, indeed, in the strictest sense, that is to say, of something more than the indispensable necessaries of existence, no human condition is wholly destitute; the savage as well as the civilized man has his enjoyments beyond what nature absolutely requires; but the hixuries of the latter only are artificial refinements. Of that description of luxuries there was no general diffusion under the civilization of the ancient Britons; their chief extra gratifications were still no doubt those of the savage state-war, and the chace, and the pleasures of roving adventure, and festive merriment, and such other indulgences of little more than mere animal posed fitness to hold the supreme command. It passion, which enlist no arts in their service, and

was thus that they combined under Cassivellaunus,

to repel the first invasion of the Romans, and long

afterwards under Boadicea to destroy their con-

querors after the latter had gained possession of

the country; and although they were defeated in

both these attempts, and the animosities and con-

[Book L

demand no other materials but such as are spontaneonsly furnished by nature. But even the highest civilization, it is to be remembered, does not throw these things entirely aside; and their existence, therefore, as an accompaniment of the social condition of the Britons, affords in itself no criterion of the general character of that social condition. It evidently, however, as has been observed, stood elevated in many other respects far above the possession of the mere necessaries of existence; and, therefore, it was not a savage state. It was a state, although of low civilization, yet in which the principle of progression was at work, and out of which a higher civilization would probably, in course of time, have evolved itself. That peculiarity is the great characteristic distinction between civilization and barbarism.

In the mean time, however, came suddenly and by force the substitution of the different and no doubt much more advanced civilization of Rome Order and magnificence, arts and literature, now took the place of the imperfect government, the constant internal wars, the mainstructed intellects, the mid hovels, the towns in the woods, and the generally rude accommodations of the Britons. The country assumed a new face, and looked as if the light of a new and brighter day had been let in upon it. Cultivation was improved and extended; forests were swept away, with the beasts of prey by which they were tenanted; roads were formed; towns arose, exlibiting, for the first time, piles of regular, stately, and decorated architecture, and multitudes of people moving along in "the sweet security of streets" There cannot be a question that, after the period of transition and conflict was over, this change was on the whole a happy one for Britain. The very silence of history, in regard to the province during a long period of the Roman dominition, attests the tranquility which it enjoyed. That domination lasted altogether for nearly four limidred years; and with the exception of the incursions of the northern barbarians in the reigns of Hadrian and Severus, which the energetic proceedings of these emperors speedily put an end to, little or nothing seems to have occurred to distrab the southern part of the island throughout almost the whole of the second and third centuries. At this time it was probably as flourishing and as happy a province as any other in the empire. It was now occupied by a population no longer cut off from the rest of the world, and lagging in the rear of civilization, but in possession of all the literature and science, and of all the useful and elegant arts, that were cultivated in the most refined parts of the earth, and qualified, therefore, to turn the natural advantages of the country to the best account. The panegyric of the orator Eumenius on Constantine the Great may be received as testifying to the general behef of the prosperous and happy condition of Britain, even at a later date. "" Oh fortunate Britannia!" he exclaims, "thee lath nature deservedly enriched with the choicest Llessings of heaven and earth. Then neither feelest the excessive rolds of winter nor the scorching Thy harvests reward thy heats of summer. labours with so vast an increase, as to supply thy tables with bread and thy cellars with liquor. Thy woods have no savage beasts; no scrpents harbour there to hunt the traveller. Innumerable me thy herds of cattle, and the flocks of sheep, which feed thee plentifully and rlothe thee righty. And as to the comforts of life, the days are long, and no might passes without some glimpse of light." Another panegyrist of the same age, in like manner expatiates upon the excellencies of Britain as "a land so stored with corn, so flourishing m pasture, so rich in variety of mmes, so profitable in its tributes; on all its coasts so furnished with convenient harbours, and so miniense in its extent and circuit," "It is the masterpiece of Nature," affectionately adds our own Camden, after quoting these ancient testimonies, "performed when she was in her best and gayest humour, which she placed as a little world by itself, by the side of the greater, for the admination of mankind; the most accurate model, which she proposed to herself, by which to beautify the other parts of the umvene."

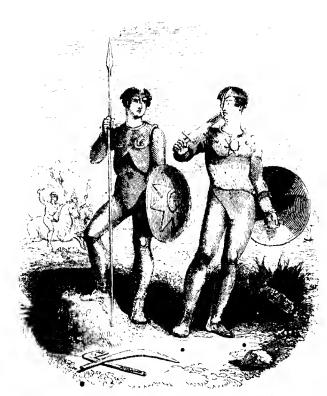

though differing subsequently, owing to the time and circumstances of their disseverance from the great northern stock, the direction in which their migrations and conquests had lain, and the character, physical and moral, the habits, and the language of the people they had conquered, or among whom they had settled and been mixed. It would neither be a profitable nor a very easy task to trace all these kinded streams to their primitive fountain-head, by the shores of the Cuspian, in Asia, and thence follow them back again to the coasts, promontories and islands of the Baltic and the Rhine; but it is necessary to give a local habitation to the particular tribes that now began to work a total change in Britain. Although classed under one general head, as Saxons, these tribes were three in number: 1. The Jutes. 2. The Angles 3. The Saxons. Jutes and the Angles dwelt in the Cumbric Chersonesus, or pennisula of Jutland (now a province of Denmark), and in parts of Schlesswig and Holstem, the territory of the Angles extending as far as the modern town of Flensburgh. In Holstein

commenced their career from the same regions,

England); and the narlowness of its limits need not interfere with our belief that this was the seat of the tribe (the Angles) that gave its name to our island. The Saxons Proper, to the south of the Jutes and Angles, were far more widely spread, extending from the Weser to the Delta of the Rhme, and ocenpying the countries now called Westphalia, Friesland, Holland, and probably a part of Belgium. Their precise limits are not fixed, but, it seems, their gradual encroachments on the contment had brought them from the Baltie to the neighbourhood of the British Channel, when they embraced, as it were, our south-eastern coast, From the very close resemblance the old Fusick dialect bears to the Anglo-Saxon, a recent writer conjectures that the conquerors of Britam must have come principally from Friesland.\* But many known fluxes and refluxes of population took place between the fifth and the twelfth centuries: the Jutes and the Angles, whose language may have been as like that of our Anglo-Saxon ancestors as the old Frisick dialect, were partially dispossessed

· Palgrave, Hist. Eng

there is a district still called Anglen (the real old

Arms and Costome of the Tribes on the Western Shorts of the Patric

T. 2.

of their territory in the peninsula of Jutland, and mixed up with newer tribes from Scandinavia, who eventually formed the Damsh kingdom, and must have influenced the dialect there, as afterwards in Schlesswig and Holstein. On the other hand, the occupants of the remarkable district of Friesland, where language, manners, usages—where all things seem, even in our days, to retain an ancient and primitive stamp, may, from local situation or other causes, have escaped the intermixture that befel the other Saxous. It is generally admitted that Horsa, Hengist, and their followers, were Jutes, and that the tribe or nation they first called in to partake in the pay and spoils of the Britons, were then neighbours the Angles, from Holstein, and not the Saxons, from Friesland, though the latter seon joined the enterprise, and probably derived some advantage from being nearer than the others to the scene of action.

When the conquests of the Romans, in the first century of our era, brought them into contact with the Saxons, they found them as brave as the Britons, but, like the latter people, unprovided with st el blades and the proper implements of war. During the three centuries, however, that had clapsed since then, in their wars with the Roman armics, and their friendly intercourse with the Roman colonies in Gaul and on the Rhine, they had been made fully sensible of their wants, and learned, in part, how to supply them. In their long-continued paratical excursions they had looked out for bright arms and well-wrought steel, as the most valuable article of plunder, and a constant accumulation must bave left them well provided with that ruder metal which commands gold When they appeared in Britain, they certainly felt no want of good arms. Every warrior had his dagger, his spear, his battle-axe, and his sword, all of steel. In addition to these weapons, they had bows and arrows, and their champions frequently wielded a ponderons club, bound and spiked with from, a sort of sledge-hammer, a copy, possibly, from the Scandinavian type of Thor's "mighty hammer" These two weapons, the battle-axe and the hammer, wielded by nervous arms, were the dread of their enemies, and constandy recurring images in the songs of their bards, who represent them as cleaving helmets and brains with blows that nothing could withstand. When their depredations first attracted the notice of the Romans, they ventured from the month of the Baltic and the Elbe, in crazy little boats; and shoals of these canoes laid the coasts of Gaul, Britain, and other parts of the empire under contribu-Though larger, the best of these vessels could searcely have been better than the coracles of the British: they were flat-bottomed, their keels and ribs were of light timber, but the sides and upper works consisted only of wicker, with a covering of strong hides. In the fifth century, however, their chindes,\* or war ships, were rong, strong, lofty, and capable of containing each a

considerable number of men with provisions and other stores. If they had boldly trusted themselves to the stormy waves of the Baltic, the German ocean, the British channel, and the Bay of Biscay, in their frail embarkations, they would laugh at the tempest in such ships as these their contemporaries speak of their love of the sea, and of their great familiarity with it and its dangers. "Tempests," says Sidonins, "which inspire fear in other men, fill them with joy: the storm is their protection when they are pressed by an enemy -their veil and cover when they meditate an attack." This love of a maritime life afterwards gained for some of the northmen the title of Sea-The passion was common to all the Saxons and to the whole Tentome race; and a recent historian has suggested that the settlement of so many pirates in England, the natives of every country from the Rhine to the North Cape, may have contributed to cultivate those nantical propensities which form a part of the English character. \* Thus supposing that the Britons actained the

arms of the Roman legions—and there is no reason to doubt that they did, though the Roman discipling was lost - then new enemy was as well armed as themselves; while the Saxons had over them all the advantages of a much greater command of the sea, and could constantly recruit their aimies on the continent, in the midst of their warlike brethren, bring them over in their ships, and land them at whatever point they chose, At the period of their invasion of Britain, the

Saxons, were as rough and ancouth as any of the barbarian nations that overturaed the Roman curpure. Of civilization and the arts, they had only borrowed these parts which strengthen the arm in battle by means of steel and proper weapons, and facilitate the work of destruction. They were still Pagans, professing a bloody faith, that made them hate or despise the Christian Britons. Revenge was a religious duty, and havoc and slaughter a delight to their savage tempers. Their enemics and victims who drew their portraits darkened the shades; and the Saxons had, no doubt, some of those rude virtues which are generally attached to

such a condition of society. The obscurity that comes over the bistory of Britain with the departure of the Romans, continues to rest upon it for the two following centuries. In the first instance, Hengist and Horsa appear to have fulfilled their part of the engagement upon which they had come over by marching with the Jutes, their followers, against the Picts and Scots, and driving these invaders from the kingdom. Soon after this, if it occurred at all, must be placed the story of the feast given by Hengist, at his stronghold of Thong-caster, in Lincolnshire, to the British King Vortigern, and of the bewitchment of the royal guest by the charms of Rowena, the young and be utiful daughter of his entertainer. Rowena's address, as she gracefully knelt and pic-

VORTIGIAN AND ROWENS -Angelica Kauffman,

sented the wine-cup to the king, Liever Kyning ways heat (Dear king, your health), is often quoted as the origin of our still existing expressions, wassail and wassail-cup, in which, however, the word wassail might mean health-druking, or pledging, although it had never been uttered by Rowena. But as the story goes on, the action and the words of the Saxon maid finished the conquest over the heart of the king which her beauty had begun; and, from that time, he rested not till be had obtained the consent of her father to make her his wife. The latest writer who has investigated the history of this period, sees no reason to doubt the story of Rowena, and has advanced many ingenious and plausible arguments in proof of its truth.\* But, at any rate, it appears that, either from Vortigern's attachment thus secured, or from lns gratitude for martial services rendered to him, or from an inability on his part to prevent it, the Jufes were allowed to fortify the Isle of Thanct, and to myite over fresh forces. The natural fertility and beauty of Britam, as well as its disorganization and weakness, must long have been familiar to the pirates on the continent, and as soon as they got a firm footing in the land, they conceived the notion of possessing at least a part of it, not as dependent allies or vassals, but as masters. The conquest of the whole was probably an after-thought, which did not suggest itself till many generations had passed away. The sword was coon drawn between the Britons and their Saxon guests, who, there-

\* Britannia after the Romans, pp. 42, 62, &c.

upon, allied themselves with their old friends the Scots and Picts, to oppose whom they had been invited by Vortigern. That unfortunate king is said to have been deposed, and his son Vortimer elected in his stead. A partial and incertain league was now formed between the Roman faction and the Britous; and several buttles were fought by their united forces against the Saxons. In one of these engagements, Vortigern is said to have commanded the Britons. Then, after a time, the two nations, according to the story commonly told, agreed to terminate their contention; and a meeting was held, at which the chief personages of both were mixed together in festive enjoyment, when, suddenly, Hengist, exclaiming to his Saxons, Nimed cure scaras (Unsheath your swords), they pulled forth each a short sword or knife, which he had brought with him concealed in his hose, and slew all the Britons present, Vortigern only excepted. This story, too, has been treated as a fiction by most recent writers; but the same ingemous and accomplished inquirer who bas vindicated the historic existence of Rowena, has also argued ably and powerfully in favour of the truth of this other ancient tradition. "The transaction," he observes, " certainly occurred. It has been unjustly brought into doubt. The memory of it is generally diffused among the British; it is detailed in their Bruts; it is referred to in their Triads as a notorious event, and it is alluded to by their bards, in language of dark and mysterious allusion, which proves its reality better than the

ties plotted against, and, in what they did, to have acted only on the defensive. The bloody congress

appears to have taken place at Stonehenge, on a

May-day. In the end, Eric, the son of Hengist,

remained in possession of all Kent, and becapie the founder of the Kentish, or first Saxon king-

The conquerors of "Cantwara Land," or Kent,

seem to have been Jutes mixed with some Angles;

but now the Saxons appeared as their immediate

neighbours. In the year 477, Ella, the Saxon, with

his three sons, and a formidable force, landed in the

ancient territory of the Regm, now Sussex, at or near to Withering, in the isle of Selsey. The Britons,

who had certainly recovered much of their martial

spirit, made a vigorous resistance; but they were

defeated with great slaughter, and driven into the

forest of Andreade, or Andredswold † According

to the old writers, this forest was 120 miles long,

and 30 broad; prodigions dimensions, which asto-

Avon to the Northumbrian Tyne This line was extended as far north as the Firth of Forth by the

Angles of Bermeic and Dena, who were united

under one sceptre, about the year 617, and thence-

forward were called Northumbrians. All the

western coast from the Frith of Clyde to the Land's

End, in Cornwall, and the southern coast from the

Land's End to the confines of Hampshire, remained unconquered by the Saxons. Such had been the

security of Cornwall, and its indifference to the fate

of the rest of the island, that, while the states of

the south were falling one by one under the sword

of the Saxon invaders, twelve thousand armed Bri-

tons left its shore to take part in a foreign war.

This enrious event took place about the 'vear 470,

[Воок И,

portion of the island was covered with primeval woods, forests, and marshes. Continuing to receive accessions of force, Ella defeated a confederacy of the British princes, became master of nearly all Sussex, and established there the second kingdom, called that of the South Sarons. Taking the coast line, the invaders now occupied from the estuary of the Thames to the liver Aim; and to obtain this short and narrow slip had cost them half a century. Cerdic, with another band of Saxons, extended the line westward a few years after, as far as the river Avon, by conquering Hampshire and the Isle of Wight; when he founded Wesser, or the kingdom of the West Saxons. The country to the west of the Hampshire Avon, remained for many years longer in possession of the Britons, who now yielded no ground without had fighting. The next important descent was to the north of

the estuary of the Thames, where Eigenwine, about 527-9, took possession of the flats of Essex, with some of the contiguous country, and formed the state of the East Saxons. Other tribes carried their arms in this direction as far as the Stonr, when there was a short pause, which was not one of peace, for the Britins, driven from the coasts, pressed them meessantly on the land side. About the year 547, Ida, at the head of a formidable host of Angles, landed at Flamborough Head, and leaving a long lapse on the coast between him and the East Saxons, proceeded to settle between the Tees and the Tyne, a wild country, which now includes the county of Durham, but which was then abandoned to the beasts of the forest. This conquest obtained the name of the Kingdom of Bernicia. Other mvaders, again, stepped in between the Tees and

when Ganl was overrun by the Visigoths, and Anthemius, who reigned in Italy, was muable to protect his subjects north of the Alps. He purchused or otherwise procured the services of Riothamus, an independent British king, whose dominion included, besides Cornwall, parts of Devonshire. The Britons sailed up the river Loire, and established themselves in Berre, where, acting as oppressive and insolent conquerors, rather than as friends and albes, they so conducted themselves, that the people were rejoiced when they saw them cut to pieces or dispersed by the Visigoths.\* The breadth of the Saxon territories or their frontiers inland, were long uncertain and wavering, now advancing, and now receding, according to the fortune of war. Under the name of Myrena-ric,

pressed on the borders of Wales. In this district, however, the population was not destroyed or expelled; the Britons hved mixed up, in about equal numbers, with the Saxons. The Mercian Angles,

who, at one period, had spread to the south and east, until they reached the Thames, and included London in their dominion, contributed most extensively to the conquest of the island, and formed a kingdom, which was one of the last of the Heptarchy to be overthrown or absorbed. During their power, the Mercans more than once followed the bold mountaineers of Wales, who maintained a constant hostality, right through their country to the shores of St George's channel and the Irish sea; but they were never able to subduc, that ingged land. The other Auglo-Saxous who seized their domimons in the ninth and tenth century, were not more succe-sful than the Mercians; and although,

at a later day, some of its princes paid a triffing tribute, and the country was reduced to its present

limits of Wales and Monimonthshire, Cambria was never conquered by the Saxons during the six hundied years of their domination. The people of Strathelyde and Cumbra, which territories extended along the western coast from the Fifth of Clyde to the Mersey and the Dec, appear to have been almost as successful as the Welsh, and by the same means. Then disposition was ficice and washke, their hatred to the Saxons inveterate, and, above all, their country was mountamons and abounded with lakes, marshes, moors, and forests. Part of the territory of Stratliclyde, moreover, was defended by a ditch and a rampart at earth. This work, which is popularly called the Catrail or the March Dykes, can still be traced from the Peel-fell, on the Borders, between Northumberland and Roxburghshire, to Galashiels, a little to the north of Melrose and the river Tweed, and sear to Abbotsford.‡ In our Introduction we have stated the grounds there are for a belief that the Welsh and the occupants of Strathelyde and Cumbra were both the same people, and descended, not from the ancient Britons, but the Picts. lower down on the western coast, the Saxon arms

sistance they met with. Nearly two centuries had clapsed since their landing at Thanet before they found their way into Dumnonia or Devoushire, which, together with Cornwall, appears to have remained in the occupation of a great undisturbed \* "We are generally told that Mercia signifies the march or fron-tor—a signification peenhally improper for a central country. Myrciaeric, in the Anglo Saxon, signifies the woodland kingdom, which agrees very closely with Cottain, the latinized name of the old British inhabitants, signifying woodland men or foresters."—Mac-niberson, "March of Company 1, 1973.

were consumed even before the eastern and central parts of the island were subdued, and the last of the several new Saxon kingdoms established, a sufficient proof of the obstinate resistance of the Britans,—we have omitted all details of the achievements of the British champions, not excepting even-"what resounds her's sou," as Milton has chosen to designate the history of the famous King Aithur. It seems impossible to arrive at any certainty with regard to the chronology

or particular events of a period the only accounts of which are so dark and confused, and so mixed up and overrun with the most palpable fictions. as to Arthur, there appear to be the strongest reasons for suspecting that he was not a real but only a mythological personage, the chief divinity of that system of revived Drudism which appears to have arisen in the inconquered parts of the west of Britain after the departure of the Romans, the mane being often used in the poetry of the bards as the hieroglyphical representative of the system. This is the most important of the subjects upon which new light has been thrown by the researches of the author of 'Britannia after the Romans,' and his elaborate and masterly examination of the question of Arthur certainly seems to go very near to settle the controversy. "The 'Saxon Chronicle," he observes upon the several probabilities of the case (the only part of his argument to which we can here advert), "does not suppress the names of islanders with whom the Saxons had to deal, but mentions these of Vortigern, Natanleod, Ardan, Brochvael, Geraint, Constantine of Scots, and

Cadwallon. Its author betrays no knowledge of

Arthur's existence. The venerable Beda either never heard of it or despised at as a fable."

is it mentioned, he goes on to remark, either by

\* Botlase. Mrs. Bray's Letters to Southey.

Florence of Worcester or by Gildas. Yet, as he ! observes elsewhere, "the name of Arthur is so great, that if such a man ever reigned in Britain, he must have been a man as great as the circumscribed theatre of his actions could permit." And again; "The Arthurian era was one in the course of which the British frontier recoded, and Hants, Somerset, and other districts passed for ever into the hands of the invader. It is not by suffering a series of severe defeats that any Saxon or other man conquers provinces; it is done by gaining successive victories. If Arthur lived and fought, he did so with a preponderance of ill success, and with the loss of battles and of provinces. But exaggeration most be built upon homogeneous truth. For a Cornish prince to be renowned through all countries, and feigned a universal conqueror, he must really have been a hero in bis own land and a signal benefactor to it. No man was ever derfied in song for being vanquished and losing half a kingdom. But the God of War would retain his rank in any case. . . The God of War would keep his station and preside over valiant acts, whether the results of war were fortunate or not. But the disasters of the British, historically and geographi-

cally certain as they are, make it also clear that they were commanded by no king fit for their bards to canonize."

To bring the course of the invaders and the permanent settlement of the Anglo-Saxons under one point of view, we have glanced from the middle of the fifth to the middle of the seventh century. may now retrace our steps over part of that dark and utterly confused interval, but in doing so we shall not venture into the perplexing labyrinth présented by the more than half fabulous history of the Heptarchy, or seven separate and independent states or kingdoms of the Anglo-Saxons. Modern writers have assumed, that over these separate states there was always a lord paramount, a sort of emperor of England, who might be by in icritance or conquest, sometimes the king of one state and sometimes the king of another. This a-cendant monarch is called the Britwalda, or Bretwalda, a Saxon term which signifies the wielder, or donunator, or ruler, of But (Britain). According to Bede and the Saxon Chronicle, seven or eight of the Saxon princes in irregular succession bore

this proud title; and perhaps it may be inferred from Bede's expressions that the other six kings of the island acknowledged theur-elves the vassals of the Bretwaldas. We are not thoroughly convinced of any such supremacy (even nominal), and in the real operations of war and government we continually find each state acting in an independent manner, as if separate from all the rest, a proof at least that the authority of the lord paramount was very limited or very uncertain. As, however, their whole history is uninteresting, and as it is easier to trace the reigns of the more marking monarchs than to enter into seven separate dynastics, we shall follow the modern example. Erla, the conqueror of Sussex, and the founder there of the kingdom of the South Saxons,—the smallest of all the new states,—was the first Bret-

wolda, and died, little noticed by the English chronuclers, about the year 510. After a long vacancy,

Crywnix, king of Wessex, who began to reign

about 568, stepped into the dignity, which, how-

ever, was contested with him, by ETHLEBURT, the fourth king of Kent, who claimed it in right of his

Saxons had subdued all the Britons, they made

descent from Hengist, the brother of Horsa dispute led to hostilities, for long before the Anglo-

fierce wars upon one another. The first example of this practice, which must have retarded their general progress in the subjugation of the island, was set by Ethelbert, who, after sustaining two signal deteats from his rival, and many other reverses, during the twenty-two years that Ceawlin reigned, acquired the dignity of Bretwalda (4 b. 593) soon after that prince's death. Ceawlin, by the law of the sword, had taken possession of the kingdom of Sussex, and seems to have fought as often against his Saxon brethren as against the The grand incident under the reign of this, the third Bretwalda, was the conversion of himself and court by Augustine and forty monks, chiefly Italians, who were sent for that purpose into Britam, by Pope Gregory the Great. Ethelbert's change of religion was facilitated by the circumstance of his having esponsed a Christian wife st atty before. This was the young and beautiful Bertha, sister or daughter of Charibert, king of Paris, to whom, by stipulation, he granted the free exercise of her religion when she came into the Ethelbert's close connexion with the more enlightened nations of the continent, and his frequent intercourse with French, Roman, and Italian

churchmen, who, ignorant as they were, were infinitely more civilized than the Saxons, proved highly beneficial to England; and in the code of laws this prince published before his death, he is supposed to have been indebted to the suggestions and science of those foreigners, although the code has more of the spirit of the old German lawgivers than of Justinian and the Roman jurisconsults. This code was not octroyed, as from an absolute sovereign (a quality to which none of the Saxon princes ever attained), but was enacted by Ethel-

VOL. 1.

second being the code of the Burgindians, published a little later; and the third, that of the Longobardi or Lombards, which was promulgated in their dominions in the north of Italy, about half a century after Ethebert's code As king of Kent, Ethelbert's reign was a very long and happy one; as Bretwalda, he exercised considerable authority or influence over all the Saxon princes south of the Humber. He died in 616, and was succeeded, as king of Kent, but not as Bretwalda, by his son The Anglo-Saxons at this period were very volatile and fickle in their faith, or very imperfectly converted to the Christian religion Passionately enamoured of the youth and beauty of his step-mother, Ethelbert's widow, Eadbald took her to his bed; and as the Christians reprobated such incestuous marriages, he broke with them altogether, and returned to his priests of the old Tentorac idolatry. The whole Kentish people turned with him, for sook the missionaries and the churches, expelled the Christian bishop, and again set up the rude altars of the Scandmayian idols, Such a relapse as this was not uncommon among the recently converted heathen of other countries, but the sequel is curious, and makes our Saxon ancestors appear like a flock of sheep following the bell-wether. Laurentius, the successor of Augustime in the archbishopric of Canterbury, prevailed on Eadbald to put away his step-mother and return to his fold; and no somet had the king done so than all his subjects returned with him, without murmur or disputation We have said that Eadbald did not succeed to the dignity of Bretwilda. It appears, however, he made a claim to it, and that the other praices refused their concurrence and obedience. The digpity of Bretwalda would seem from this and other

bert with the consent of the states of his kingdom

of Kent, and formed the first written laws promul-

gated by any of the northern conquerors; the

instances not to have been obtained by regular and free election, but to have been conceded to him who showed himself ablest to maintain his claim to it hy the sword. The three first Bictwaldas, Ella, Ceawlin, and Ethelbert, were Saxons or Jutes, but now the dignity passed to the more powerful Angles in the person of Redwald, about the year 617. Redwald was king of East Anglia, and a kind of a Christian, having been converted some years before by the Bretwalda Ethelbert. But his wife and people were attached to the old idolatry, and, yielding to their importunities, he re-opened the temples, taking care, however, to place a Christian altar by the side of the statue of Woden, " in doing which he no doubt hoped to conciliate both parties. During his reign the Scots, who had renewed hostilities in the North, were beaten by the now united and extended Saxon kingdom of Northum-At a later period Redwald lumself was hostilely engaged with the Northumbrian king Edilfrid, who is said to have destroyed more Britons than all the other Saxon kings. The armies \* B. de

of the Saxon kings met on the banks of the river | Idel, in Nottinghamshire, where victory, after a sanguinary engagement, rested on the crest of the Bretwalda. Edilfiid was slain.

EDWIN, the fifth Bretwalda, succeeded (about

EDWIN, the fifth Bretwalda, succeeded (about 621), in a somewhat irregular manner, both to the dignity of Redwald and the kingdom of Edilfrid; and so successful was he in his wars and his polities that he raised Northumbria to a superiority over all the Saxon kingdoms, thus transferring the ascendancy from the south to the north of the After wavering some time between the old national faith of the Saxons and Christianity, Edwin, as we shall afterwards have to relate more particularly, was converted by the preaching of Paulines, a Roman missionary, and the influence of his fair wife Edilberga, who was daughter of Ethelbert, the Bretwalda and king of Kent, and a Christian, before she married Edwin. The happiest effects are asserted to have followed the conversion of the hitherto ferocious Northumbrians, "In this

time," says one of the old chroniclers, "was so great peace in the kingdom of Edwin that a woman might have gone from one town to another without grief or novaunce (molestation); and for the refreshing of wav-goers, this Edwin ordained, at clear wells, cups or dishes of brass or non to be fastened to posts standing by the said wells' sides; and no man was so hardy as to take away those cups, he kept so good justice."\* Edwin added the Isles of Man and Anglescy to his Northumbrian dominions, and was so powerful that all the Saxon kings acknowledged his authority, and paid him a kind of tribute. According to some accounts, he also maintained a supremacy over the Scots and Picts. In writing to bim, in the year 625, the Pope styles Edwin "Rex Anglorum,"—king of the Angles, or English. In his person the dignity of Bretwalda had a significant and clear meaning. but he did not hold it very long – About the year 633 Penda, the Saxon prince of Mercia, rebelled

\* Fabenn,

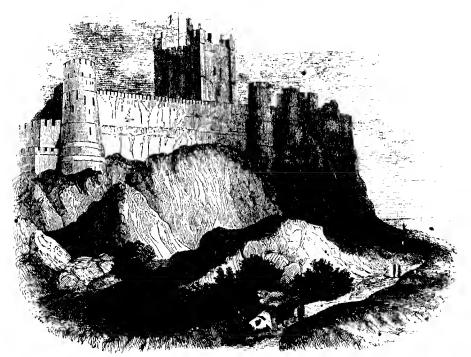

REMAINS OF THE ABBEY OF LINDISFARNE, HOLY ISLAND

against his authority, and, forming an alliance with Ceadwalla, or Cadwallader, the king of North Wales, he fought a great battle at Hatfield, or Heathfield, near the river Trent, in which Edwin was defeated and slain (A.D. 634). The alliance of one party of the Saxons with the Welsh to fight against another party of Saxons is remarkable, but the case was often repeated. The confederate armics between them committed a hortible slaughter, sparing neither old men nor children, women, nor monks. Cadwallader and the Welsh remained in the territory of the Northumbrians at York, but Penda marched into Norfolk against the East Angles. This people had embraced the Christian faith some seven years before at the carnest representations of the Bretwalda Edwin, and Sigebert, their old king, had lately renonneed his crown to his cousm Egeric, and retired into a monastery. But at the approach of Penda and his pagan host the old soldier left his holy retirement and directed the manœuvres of his army, with a white rod or wand, his religious scruples not permitting him to resume the sword and battle-ave. Penda was as successful here as he had been against the Christians of Northumbria, and both Sigebert and Egene fell in battle. At this time a struggle for supremacy seems to have existed between the converted and the unconverted Saxons; and Penda, as head of the latter, evidently aimed at possessing the full dignity of Bretwalda as it had been exercised by

Edwin of Northumbria. But the latter prince had laid a broad and sure basis, which enabled the Northumbrians to retain the advantage in their own country, and transmit the dignity to two members of his family.

In the year 634, Oswald, the nephew of Edwin. raised his banner in Northumbria, where Cadwal-Jader, after many successes, seemed to despise precantion. He and his Welsh were surprised near Hexham, and totally defeated by inferior numbers. On the part of the Anglo-Saxons the battle began with kneeling and prayers; it ended, on the part of the Welsh, in the death of Cadwallader, whose detestable erucity, cuming and treachery, prevent us from honouring his bravery or pitying his fall, and in the annihilation of his army, which appears to have assumed the title of "the invincible." Oswald being equally recognized by the two Northumbrian states of Bermeia and Deira, then regained all that his uncle Edwin had lost, and soon after most of the Saxons acknowledged him as Bretwalda. He attributed his success to the God he worshipped; and, to show his gratitude, he invited many monks to complete the conversion of the people of Northumbria. The donation of Lindisfarne, or Holy Island, and the magnificent monastery that rose there, testified to his mumificence. Churches and monasteries spring up in other parts of the North, and undoubtedly forwarded civilization, to a certain point, more than any other measures or establishments. Oswald, who repaired

Another account is, that of the thirty vassal kings or chiefs who followed him to the field, only one escaped, and that this one was the \*King of Gwynedh, a state in North Wales, which seems to have comprised Cardiganshire, part of Merionethshire, and all Caemaryonshire. Twelve abbeys, with broad lands attached, showed the gratified of Oswy for his muexpected victory; and, according

HISTORY OF ENGLAND.

missionary and bishop, he confirmed it in his As Bretwalda, Oswald exercised an authority over the Saxon nations and provinces fully equal to that of his micle Edwin; and he is said, heside, although the fact is disputed, to have compelled the Pictish and Scottish kings to acknowledge themselves Ins vassals. Oswald was slam in battle (A.D. 642) like his uncle Edwin, and by the same enemy, the fierce and still unconverted Penda, king of Mercia, who was as desirons as ever of establishing his own supremacy. But the Northumbrians once more rathed round the family of the beloved Edwin, and on the retreat of the heathens from the well-defended rock of Bamborough, they enabled Oswald's brother, named Oswy, or Oswio, whose wife was the daughter of the great Edwin, to ascend the throne of his father-in-law. His succession, however, was not undisputed, nor did his mander of one of his competitors preserve the integrity of the Northninbrian knigdom. About the year 651 it was re-divided into its two incient

Oswy had soon to contend with the old enemy of his house, the slaver of his two predecessors, Penda, still anxious to obtain the dignity of Bretwalda, which, as on other occasions, seems to have been in abeyance for some vears, after driving the Christian king of Wessex from his throne (AD. 652), advanced once more, and this time with fire and sword, into Northumberland. Barning every

disseverance was a fatal blow from which Nor-

wald reigned in Detra, or the southern part.

thumbara never recovered,

house or but he found in his way, this savage marched as far as Bambotough. Trembling at lis recollections of the past, and his present danger, Oswy entreated for peace, which he at at length obtained by means of rich presents, hostages, and an arrangement of intermarriage. His second son was sent as an hostage to Penda's court. Alchfrid, his eldest son, espoused one of Penda's daughters, and shortly after Penda's son, Peada or Weda, married one of Oswy's daughters, the fair and Christian Alchfreda, who carried four priests in her train, and became instrumental in converting the people of Mercia. "Thus," says Hume, "the fair sex have had, the merit of introducing the Christian doctrine into all the most considerable Lingdoms of the Hentarchy." But as long as Penda was alive in the land there could be no lasting peace. Having desolated East Angha (A.D. 654), he advanced once more against

rapidly overran the comitry of his old cucmics, the Mercans, on whom he inflicted a cruel vengeance He attacked all their territory north of the Treat to his Northumbrian kingdom; and Peada, bis son-in-law, being treacherously nuirdered soon after (it is said by his own wife, who was O-wys daughter), he serzed the southern part of Mercia also. It was probably at this high tide of his fortune (x.n. 655) that Oswa assumed the rank of Bretwalda. The usual broad assertion is made, that the Picts and Scots, and the other natives of Britam, acknowledged his supremacy. There was soon, however, another Bretwalda ; the first instance we believe of two such suns sliming together in our hemispheie. In 656 the coldermen or nobles of Mercia rose up in arms, expelled the Northumbrians, and gave the crown to Welfere, another of Penda's sons, whom they had carefully concealed from the eager

search of Oswy. This Willtere not only retained possession of Mercia, but extended his dominions by conquests in Wessex and the neighbouring countries; after which he became king of all the "Anstralian regions," or Bretwalda in all those parts of the island that lie south of the Humber. About the same time Oswy was further weakened by the ambition of his eldest son Alchfrid, who demanded and obtained a part of Northumbria in independent sovereignty. The sickness called the yellow, or the yellers plague, afflicted Oswy and his enemies alike; for it began in the south, gradually extended to the north, and at length raged over the whole island with the exception of the mountains of Caledonia. Among the earliest victims of this pestilence were kings, archbishops, the Northumbrians, his army being swelled by the hishops, monks, and nuns. As the plague now forces of thirty vassal kings or chieftains, Welsh makes its appearance annually in some of the counor Cumbrians, as well as Saxons. This time gifts tries of the East, so did this yellow sickness break and offers were of no avail. Oswy was obliged to out in our island for twenty years. King Oswy, who is generally considered the last of the Bretfight; and the hardest fought battle that had been

Chap. I.]

of the Hentarchy bad merged into three; for the weak states of Kent, Sussex, Essex, and East Anglia, were now reduced to a condition of vassalage by one or the other of their powerful neighbours; and the great game for supreme dominion remained in the hands of Northimbria, Mercia,

and Wessex. We are also relieved from any necessity of detail. The preceding narrative will convey a sufficient notion of the wars the Anglo-Saxon states waged with one another; and as we approach the praction of the three great streams of Northumbria, Mereia, and Wessex, which were made to flow in one channel under Egbert, we shall notice only the important circumstances that Oswy was succeeded in the greater part of his Northumbrian dominions by his son Egfrid, who was scarcely seated on that now tottering throne

when the Piets seated between the Tyne and the

Forth broke into insurrection. With a strong body of cavalry, Egfrid defeated them in a bloody battle, and again reduced them to a doubtful obedience, Some eight years after, ambitions of obtaining all the power his father had once held, Egfral invaded Mercia – A drawn battle was fought (v.b. 679) by the rival Saxons on the banks of the Trent, and peace was then restored by means of a holy servant of the church; but it was beyond the bishop's power to restore the lives of the brave who had fallen, and whose loss sadly weakened both Mercia and Northumbres. In 685 Egfrid was slam ma war with Bride, the Pictish king; and the Scots and some of the northern Welsh joined the Picts, and carried their aims into England In the exposed parts of Northumbria the Anglo-Saxons were put to the sword or reduced to slavery, and that kingdom became the scene of wretchedness and imarchy. In the course of a century fourteen kings ascended the throne in a manner as irregular as their descent from it was rapid and tragical. Six were murdered by their knismen or other competitors, five were expelled by their subjects, two became monks, and one only died with the crown on his head. Although exposed, like all the Anglo-Saxon states, to sangumary revolutions in its government, Mercia, the old rival of Northumbria, for a considerable period seemed to rise on the decline of the

latter, and to bid fan to be the victor of the three

great states. After many hardly-contested battles

the kings of Wessex were reduced to serve as vassals, and by the year 737 ETHELBALD, the

Mercian king, ruled with a paramount authority

over all the country south of the Humber, with the

exception only of Wales. But five years after the vassal state asserted its independence, and in a great

battle at Burford, in Oxfordshire, victory declared

kingdom of Wessex that lay on the left of the Thumes. Then turning his arms against the Welsh, he drove the kings of Powis from Pengwern (now Shrewshim) beyond the river Wie, and planted strong Saxon colonies between that river and the Severn. To Secure these conquests and protect his subjects from the imonds and forays of the Welsh, he resorted to means that bear quite a Roman character. He caused a ditch and rampart to be drawn all along the frontier of Wales (a line measuring 100 miles), beginning at Basingwerke in Flintshire, not far from the mouth of the Dee, and ending on the Severn near Bristol. There are extensive remains of the work, which the Welsh-still call "Clawdh Offa," or Offa's Dyke. But the work was scarcely finished when the Welsh filled up part of the

ditch, broke through the rampart, and slew many of Ofla's soldiers while they were pleasantly engaged in eclebrating Christmas. Offa the Terrible, as he was called, took a terrible vengeance, He not the mountaineers at Rhuddhan, and encountered them in a battle there, in which the king of North Wales, and the pride of the Welsh youth and nobility, were cut to pieces. The prisomers he took were condemned to the harshest conthtion of slavery. Master of the south, it is said that he now compelled the Northumbraus beyond the Humber to pay him tribute, but the year is not mentioned, and the fact is not very clear. Ten years of victory and conquest, say his monkish enlogists, neither elated him nor swelled him with pride; "yet," adds one of them, "he was not negligent of his regal state; for that, in regard of his great prerogative, and not of any pride, he first instituted and commanded, that even in times of peace, himself, and his successors in the crown, should, as they passed through any city, have trumpeters going and sounding before them, to show that the presence of the king should breed both fear and bonour in all who either see or hear him." We would forgive lum the trumpets, cracked and out of tune as they might be; but Offa, in reality, had the worst kind of pride—the most insatiable ambition; and he was guilty of a series of cruel and treacherous murders that makes the heart shudder, even in the midst of these barbarous aimals, where almost every alternate page is soaked through and

maised him to excess. As a sovereign, however, Offa had indisputable and high merits, and the The Ligger Book of St. Alban's, as quoted in Speed's Chio-

through with blood. William of Malmesbury

declares he is at a loss to determine whether the

ments or crimes of this prince preponderated; but

as Offa was a most munificent benefactor to the

clinich, the monks in general (the only historians of those times) did not partake of this scriple, and country made some progress under his reign and by his example. He had some taste for the elegancies of life and the fine arts; he built a palace at "Tamworth Town," which was the wonder of the age; and his medals and coins are of much better taste and workmanship than those of any other Saxon monarch.\* He maintained an opis-

tolary correspondence with Charlemagne; and it is

highly nutcresting, and a consoling proof of progression, to see the trade of the nation and the commercial intercourse between England and France made a subject of discussion in these royal letters. When, towards the close of his reign, his body being racked with disease and his soul with a late remorse, he gave lumself up to monkish devotion and superstitious observances, there was still a certain taste as well as grandenr in his expiatory donations, and a remarkable happiness of choice (though this is said to have been directed by the accidental discovery of a few bones) in his site for the Abbey of St. Alban's, the most magnificent of all the ecclesiastical edifices he creeted.† According to some of the old writers, his last warlike exploit was the defeat of a body of Danish invaders; and it is generally allowed that, during the latter part of his reign, a few ships' crews, the precursors of those hordes that desolated England soon after. effected a landing on our coast, and did some mischief. On the death of Offa, after a long reign, in the year 795, the great power of Mercia, which his craft, valour, and fortune had built up, and which his chergies alone had supported, began rapidly to decline; and as Northumbria continued in a hope-

At the time of Offa's death the throne of Wessex was occupied by Bultric, or Beortric, whose right was considered very questionable even in those days, when the rule of succession was very far from being settled. Egbert, the son of Alchmund, had a better title but fewer partisans; and, after a short and unsuccessful struggle for the crown, he fled for his life, and took refuge in the court of Offa, the Mercian. Has triumphant rival, Beortric, then despatched ambassadors into Mercia charged with the double duty of demanding the hand of Eadburgha, one of Offa's daughters, and the head of Egbert. Offa readily gave bis daughter (he could hardly have given a greater curse), but he refused the second request. He, however, withdrew his

great rival states, soon had the field to herself.

\* Palgrave Hist.

† The present venerable Abley Church of St. Alban's, which stands on the site of that erected by 0fla, was built three centuries later, by William Rufus. A considerable portion of the materials employed are Roman bricks or tiles taken from the ruins of the ancient city of Verulamium, which stood in the neighbourhood.

time for his life. Egbert repaired to the court or camp of the Emperor Charlemagne, who received him hospitably, and employed him in his armies. During a residence of fourteen or fifteen years on the continent, living chiefly among the French, who were then much more polished than the Saxons, Egbert acquired many accomplishments; and, whether as a soldier or statesman, he could not have found a better instructor than Charlemagne. Eadburgha, the daughter of Offa, and wife of Beortric, was a woman of a most depraved character,—incontinent, wanton, perfidious, and cruel. When men thwarted her love or otherwise gave her offence, she armed the invorious king against them; and when he would not be moved to cruelty, she became the executioner of her own vengeance. She had prepared a cup of poison for a young nobleman who was her husband's favourite; by some madvertence this was so disposed that the king drank of it as well as the intended victim, and died a horrid death (a.b. 800). According to another version of the story she had filled the bowl expressly for the king, and many of his householders and warriors were poisoned by it. The crime was discovered, and the oneen degraded and expelled; the thanes and men of Wessex decreeing, at the same time, that for the future no king's wives should be called queens, nor suffered to sit by their busbands' sides upon the throne. She also took refuge with Charlemagne, who assigned her a residence in a convent or abbey. But in process of time she began to conduct herself so vicionally, that she was turned out of this place of shelter. Some years after her expulsion a woman of foreign mien, and faded beauty, was seen begging alms in the streets of Pavia, in Italy; it was Eadburgha, the widow of the king of the West Saxons, -- the daughter of Offa, monarch of all England south of the Humber. It is believed she ended her days at Pavia. As soon as Egbert learned the death of Beortrie,

he returned from France to Wessex, when the Thanes and the people received him with open arms. The first years of his reign were employed in establishing his authority over the inhabitants of Devonshire and Cornwall; but he had then to meet the hostility of the jealous Mercians, who invaded Wessex with all their forces. Egbert met them at Elyndome, or Ellandum, near, Wilton, in Wiltshire, with an army very inferior in numbers, hat in superior fighting condition; being, to use the expression of one of our quaint old chroniclers, "Ican, meagre, pale, and long-breathed," whereas the Mercians were "fat, corpulent, and shortwinded." He gained a complete victory, and was soon after enabled to attach Mercia and all its de pendencies to his kingdom. He established subregnli, or under-kings, in Kent and East Anglia; and, not satisfied with the dominion of the island south of the Humber, he crossed that river, and penetrated into the heart of Northumbria. He invaded that once powerful state when anarchy was

Chap. I.] CIVIL AND MILITARY TRANSACTIONS.

TRANSACTIONS. 151
EGBERT, however, did not assume the title of King

at its height. Incapable of resistance, the Northumbrans made an offer of entire submission (AD. 825); and Eaured, their king, became the vassal and tributary of the great monarch of Wessex. It appears, however, that Egbert granted much milder terms of dependence to the Northumbrians than to any of the rest.

SILVER COIN OF EGBERT. - From British Museum.

Thus, in the first quarter of the ninth century, and three hundred and seventy-six years after the first landing of Hengist and Horsa, was effected what some historians call the reduction of all the kingdoms of the Heptarchy under one sovereign.

of England. He contented himself with the style of King of Wessex, and with the dignity and anthority of Bretwalda. This authority was sometimes questioned or despised in more than one part of the kingdom; but counting from the river Tweed to the shores of the British Chaimel and the extremity of Cornwall, there were none could make head against him; and during the last ten years of his reign he possessed, or absolutely controlled, more territory, not only than any Saxon sovereign that preceded him, but than any that followed him. Even Wales, if not conquered, was at one time coerced and kept in a dependent state.

But no sooner had England made some approaches towards a union and consolidat is, and

trolled, more territory, not only than any Saxon sovereign that preceded him, but than any that followed him. Even Wales, if not conquered, was at one time coerced and kept in a dependent state.

But no sooner had England made some approaches towards a union and consolidat in, and the blessings of a regular government, than the Danes or Northmen appeared in force, and began to throw everything into confusion and horror. In the year 832, when Egbert was in the plenitude of his power, a number of these ferocrous pirates landed in the Isle of Sheppey, and having plun-

ARMS AND COSTUME OF DANISH WARRIORS.

dered it escaped to their hips without loss of lunderance. The very next year the maradders landed from thirty-five ships, and were encountered by the brave and active Egbert at Charmouth, it The English were astonished at th ferocity and desperate valour of these new foes who, though they lost great numbers, maintained their position for awhile, and then made good the a retreat to their ships. Indeed, some accounts state that Egbert's army was defeated in the engagement; that two chief captains and two bishops were slam; and that Egbert himself only escaped by the covert of night. In crossing along the English coasts, where they frequently landed in small bodies at defenceless places, the robbers of the North formed an acquaintance with the inhabitants of Cornwall, which ended in an ill-asserted alliance. The rigged promontory which stretches out to the Land's End had never been invaded by the Saxon conquerors of the island until the comparatively recent period of 647, and even then, as we have shown, the native population there was not much disturbed. As recently as 809 Egbert had uivaded their territory, where he found them in such force and spirit that he lost many of his troops before he could reduce them to a nominal obedience. They must even now have been numerous and warlike, for on the stipulated landing in their territory of their Danish albes, in 834, they joined them in great force, and marched with them into Devonshine, where they found many old Britons equally willing to rise against the Saxons who had settled among them. But Fighert was again on the alert. He met them with his wellappointed army at Hengsdown-hill, and defeated them with enormous slaughter.

This was the last martial exploit of Egbert, who died in 836, after a long reign. The knigdom he had in a manner built up out of many pieces began to fall asunder almost before his coffin was deposited in the church of Winchester. He was succeeded by his eldest surviving son Etherwells, one of the first operations of whose government was to give the kingdom of Kent, with its dependencies, Sussex and Essex, in separate sovereignty to his son Athelstane. \* He retained Wessex; but Mercia, which Egbert hid subdued, again started into independence; and thus, when mion was becoming more and more necessary, to face an enemy as terrible to the Saxons as the Saxons had

SHAFE COIN OF ETHELWELF

been to the Britons, the spirit of disunion, jealonsy, and discord assumed a fatal ascendancy.

The Scandmaxian pirates soon found there was no longer an Egbert in the land. They ravaged all the southern coasts of the kingdoms of Wessex and Kent; they audaciously sailed up the Thames and the Medway; and stormed and pillaged London, Rochester, and Canterbury. The idea of the need of a common co-operation at last suggested itself, and a sort of congress composed of the bishops and thanes of Wessex and Mercia, was held at Kingsbury, in Oxfordshare (v.n. 851). Some energetic, and for the most part successful measures followed these deliberations. Barhulf, King of Mercia, was defeated and slain; but Ethelwulf and his son Ethelbald, at the head of their men of Wessex, gained a complete victory over the Danes at Okeley, in Surrey, and achieved such a slaughter as those maranders had never before suffered in any of the several countries they had invaded. Soon after Athelstane, the King of Kent, with Alchere, the Eelderman, deficited the pirates, and took nine of their ships at Sandwich, The West of England also contributed a victory, for Coorl, with the men of Devon, defeated the Danes at Wenbury. These severe checks, together with the disordered state of France, which favoured their incursions in that direction, where they soon laid Paris in ashes, seem to have induced the maranders to suspend for awhile then great attacks on England; but such was the mischief they had done, and the apprehensions they still inspired, that the Wednesday of each week was appointed as a day of public prayer to implore the Divin assistance against the Danes. During the confusion then attacks caused in England, the Welsh many times descended from their mountains, and fell upon the Saxons. Ethelwalf is said to have taken vengeance for this, by marching through their country as far as the Tsle of Anglesey, and compelling the Welsh to acknowledge his authority; but precisely the same stories are vaguely related (as this is) of several Saxon kings, who certainly never preserved any conquest or anthority there for any length of time.

Ever since their conversion the Saxons of superior condition had been singularly enmuoned of journeys a pilgrimages to Rome; and besides the prelates who went upon business, many princes and knigs, rowned or uncrowned and dethroned, had told their orisons before the altar of St. Peter. Etuelwulf, whose devotion was fervent, though his sense of some moral duties was languad, now felt the general desire, and, as the island was tranged, he passed over to the confinent (a.p. 853), and, crossing he Alps and the Apenmies, arrived at Rome, where ie was honomrably received, and tarried nearly one year. On his return, forgetting that he was an old man, he became enamoured of Judith, the fair and youthful daughter of Charles the Bald, king of the Franks, and espoused that princess with great columnity in the cathedral of Rheims, where he placed her by his side, and caused her to be

<sup>•</sup> Ethelwulf bad been sub-regulus of Kent under his father, but then be was in reality subordinate to Egheri, who minitained full authority. It is not quite clear whether Athelsiane was the cidest son of the brother of Ethelwalf.

crowned as queen. Athelstane, his eldest son, was dead, but Ethelwulf land still three sons of man's estate, -- Ethelbald, Ethelbert, and Ethered, besides Alfred, then a boy, who was destined to see his Inothers ascend and descend the throne in rapid succession, and to become himself "the Great." From the usual thirst for power, it is probable that, before this Freich marriage, Ethelbald, who was already intrusted with the government of part \forall ed his father's kingdom, was anxions to possess hunself of the whole; but the marriage and the enconstances attending it gave plausible grounds of complaint, and Prince Ethelbald, Adelstane, lashop of Sherborn, Enwulf, carl of Somerict, ad the other thanes and men of Wessex that joined in a plot to definence the absent king, set forth in their managesto that he had given the name and authority of queen to bis French wife, had scated her by his side on the throne, and "openly caren with her at the table;" all which was against the constitution and laws of Wessex, which had for ever abolished the queenly dignity in consequence of the crimes of Eadburgha. It is probable also that the layour shown to the boy Alfred laid some there are Ethelbald's re-entment. Ethelwulf bad carried his favour te son with him to Rome, where the Pope an outed him as king with hely oil, and with his own bands. It is more than likely that Affred had always been destined by las father to fill a musor throne in the kin dong, but this act, and the wonderful estimation the oil of conservatron was held in, in those days, especially when adminatered by the Pontill of the Christian world, may have induced his brothers to respect that the Bergamm of the family was to be preferred to A recent historian— an indefatigable careby into the idd chronicles and records of the kingdom is of opinion that, though the fact is not incutioned in express terms in our ancient historians, Oslanglar, his first wife, and the mother of his children, was not dead at the time, but merely put away by Ethelwulf to make room fer Judith.\* In spite of their devotion and zeal, for the church, such progeedings were not incommon among kings on the undelte age ; but if Ethelwulf so acted, the madutifulness of his elde tism, who had a mother's wrongs to avenge, would appear the more excusable. Whatever were then motives and grievances, a form-dable faction, in arms, opposed Ethelwulf when he returned to the island with his young bride. Yet the old king had many friends; his

VOL. L

ploty gained strength after his arrival among them, and it was thought be might have expelled Ethelbald and his adherents. But the old man shrunk from the accumulated horrors of a civil war waged between father and son, and consented to a compromise, which, on his part, was attended with great sacrifices. Retaining to lamself the castern part of the kingdom of Wessex, he resigned all the western, which was considered the richer and According to some of the chroniclers, sie: Queen Osburgha was slive twenty seven years after Lithelwall's murrage with Judith, and in 878 repaired to Athelney, in Somensetsline, the refreat of her son Alfred.

which, by means of its lashops in England, at last gained Ethelbald's reluctant consent to a divorce, According to other old authorities, the marriage was only dissidyed by his death, and prasts and people generally attributed the shortness of his reign, which did not last two years, to the sinful marriage, which had drawn down God's vengeance. As she is connected by her posterity with many succeeding ages of our history, we must devote a few words to the rest of the chequered career of Audith.—Either on her divorce, or at the death of Ethelbald, she retued to France, and lived some tune in a convent at Scalis, a few unles to the is ith of Pairs. Them this convent she either cloped with, or was forcibly curred off by, Baldwin, the grand fore ter of Aide nies. Her father, Charles the Bald, made his fishops excommunicate Baldwin for laying ray shed a widow; but the Pope took a milder view of the case, and by his meduation the marriage of the still vontbful Judith with her third husband was solemnized in a regular manner, and the carldom of Flanders was bestowed on Baldwar. Judith then lived in great state and magnificence: licr son, the accord earl of Flanders, esponsed Effrida, the youngest daughter of om Alfred the Great, from whom, through five lineal descents, proceeded Mand, or Matabla, the wife of William the Conqueror, from whom again descended all the subsequent kings of England. Ethelbald was succeeded in the kingdom of Wessex by his brother ETHELBURET, who had a short reign, troubled beyond measure by the Danes, who now made inroads in almost every part of the island. He had the mortification to see them burn Winchester, his capital, and permanently establish themselves in the Isle of Thanet, which they made their micleus, and the key of their conquests, just as the Saxons had done more than four cerduries before. This king died in the year \66 or 867, and was succeeded by his brother ETHITRLD, who, in the course of one year, had to fight muc pitched and murderous battles ugainst the Danes. he was thus busied in resisting the invaders in the south and west parts of the island, the kings and

division," says Speed, "gave great suspicion that

the revolt was rather grounded upon ambition than

any inclination they had for their laws." Ethel-

wulf did not long survive this partition, dying in

widow also; for, according to the chresticlers,

howsoever unwilling he had been that this fan

queen should sit in state by his father's side, yet,

contrary to all laws both of God and man, he

placed her by his own, and by impiral rites brought

her to his simful and meestions bed. A tolerably

well-grounded supposition that Judith was only

twelve years old when Ethelwulf married her, and

that their marriage had never been consummated.

may diminish our horror; but such a union could

in no sense be tolerated by the Romish Church,

ETHERBALD then not only succeeded to the whole of his father's kingdom, but to his young

857, in the twenty-first year of his reign.

HISTORY OF ENGLAND.

and, only thinking of themselves, they gave no timely aid to one another or to the common cause, Thus left to then own resources, the men of Wes-

cluefs of Mercia and Northembria wholly with-

sex maintained a doubtful struggle, at times losing, and at others gaining battles. According to the old writers, the destruction of the Danes was im-

mense, and during the five or six years of Ethel-

queror had a much greater affinity with the Danes red's reign there were killed in the field inne varls and Anglo-Saxons than is generally imagined. or earls, one king, "besides others of the meaner sort without number." But this loss was constantly the remorseless cruelties practised by Charlemagne supplied by firsh forces from the north, who from the year 772 to 803, upon the Pagan Saxons settled on the Rhine and in Germany, were the brought as eager an appetite for plunder as their cause of the fearful reaction and the confirmed precursors, and whose vengeance became the more adolates of that people \* There can be little doubt inflamed as the number of deaths of then breshien was increased. In most of these conflicts Affred, that this was partly the ease; and it is a wellestablished fact that the Northmen or Normans who was already far more fitted to command, fought along with Ethelied, the last of his brothers; and made the imbecile posterity of Charlemagne pay dearly for their father terrelty. Retreating from at Aston or Ashenden, in Berkshire, while the king was engaged at his prayers, and would not the arms, the priests, and the compulsory baptisms move with his division of the Saxon army till mass of this conqueror, many of these Saxons fixed then was over, Alfred sustained the brunt of the whole homes in the permisala of Jutland, which had been nearly evacuated three centuries before by the Danish force, and mainly contributed to a splendid Intes and Angles who went to conquer England. victory. The victory of Aston was followed by the defeats of Basing and Mereton; and, soon after, A maxed population, of which the Jutes formed the Ethelied died (871), at Whitingham, of wounds larger portion, had, however, grown up in the inreceived in battle, upon which the crown fell to terval on that pennisula, and, as they were uncon-

and for life against the formulable Danes The practical bordes called Danes, or Norsemen by the English, Normans by our neighbours the French, and Normann by the Italians, were not merely natives of Denmark, properly so called, but belonged also to Norway, Sweden, and other cometries spread round the Baltic sea. They were offshoots of the great Scandmayian branch of the Teutons, who, under different names, conquered and re-composed most of the states of Enrope on the downfall of the Roman empire. Such of the Scandmayian tribes as did not move to the south and the west to establish themselves permanently in fertile provinces, but remained in the barren and bleak regions of the north, devoted themselves to preacy as a profitable and honourable profession, The Saxons, then scattered along the south of the Baltic, did this in the fourth and fifth centuries, and now, in the minth century, they were becoming the victims of their old system, carried into practice by their kindred the Danes, Swedes, Norwegians,

and others. All these people were of the same race as the Saxons, being an after-to-rent from

the same Scandinavian fountain-head; and though

time, and a change of country and religion on the

part of the Anglo-Saxons had made some difference between them, the common resemblance in phy-

Alered, the only surviving and the best of all

the sons of Ethelwulf. But, under existing cu-

constances, the crown was a jewel of no price, and

for many years the hero had to fight for territory

land were probably joined by many of then neighbonts from the month of the Baltic, the islands of Zeland, Funen, and the islets of the Cattegat these might probably be called Danes; but there are reasons for believing that the invaders of our island, under Alfred and his predecessors, were chiefly Norwegians and not Dabes; and that the real Damsh invasions, which ended in final conquest, were not commenced until nearly a century Our old chromelers, who applied one general name to all, call Rollo "the Ganger," one of the most formidable of our rayaders, a Dane, and yet at is well ascertamed that he was a Norwegian nobleman. It is difficult, however, and not very important, to distinguish between two nations

speaking the same language and having the same

manners and pursuits. All the maritime Scan-

dirayian tribes, from Intland to the head of the

Baltic,—from Copenhagen nearly to the North Cape,—were pirates abke; and the fleet that sailed

from the coasts of Norway would often be mixed

with ships from Jutland and Denmark, and vice

versa. Moreover, on certain great occasions, when

their highest immerical force was required, the "Sea-kings," the leaders of these hordes, were

verted, they were in Inied to give a friendly reception

to brethren suffering in the cause of Woden. The

next step was obvious, and in the reprisals made on

the French coasts, which were ravaged long before

those of England were touched, the men of Jut-

[Book IL

race of men, bearing different names at different

epochs; for the Normans of the eleventh century

were called Danes in the ninth, and were of the

same stock as the Danes and Saxons they subdued

in England. A settlement of 200 years in France,

and an inderinisting with the people of that comtry, had wonderfully modified the Scandinavian

character, but stell the followers of William the Con-

Hume and other historians are of opinion that

sical appearance, language, and other essentials, \* Charlemagne massacred the Saxons by thousands, even after they had laid down their arms. The alternative by offered was death or a Christom baptesm. Those who renowned their old gods, or pretended to do so, be sent in colonies into the interior of France. was still strong. It is indeed remarkable that the three different conquests of England made in the course of six centuries, were all the work of one Some were even louried into Italy.

known to make very extensive leagues.

In their origin the piratical associations of the Northmen partook somewhat of the nature of our privateering companies in war-time, but still more closely resembled the associations of the Corsairs of the Barbary coast, who, crossing the Mediterranean as the Danes and Norwegians did the German Ocean and the British Channel, for many ages plundered every Christian ship and country they could approach. The governments at home, such as they were, beensed the depredations, and partook of the spoils, having, as it seems, a icgularly fixed portion allotted them after every successful expedition. Like the Saxons we have described, the Danes, the Norwegians, and all the Scandinavians were familiar with the sea and its dangers, and expert nurmers. Every family had its hoat or its slup, and the younger sons of the noblest of the land had no other fortune than then swords and then chindes" (keels) With these they lought their way to fame and futime, or perished by the tempest or buttle, which were both considered most honomable deaths. All the males were practised in the use of aims from then nifancy, and the art of war was cultivated with more success than by any nation in Europe. The aston-sling progress of the Daues (as they were called) in England, of the Normans in France, and later, in Italy and Sicily, not only prove their physical vigour, their valour and perseverance, but their military skill and address. Their religion and literature (for they had a literature at least as carly as the eighth century) were subscritent to the ruling passions for war and plander, or, more properly speaking, they were both cast in the monld of those passions, and stamped with the deep impress of the national character. The blood of their enemics in war, and a ride hospitality, with a barbarrais excess in drinking, were held to be the meense most acceptable to the god Woden, who limiself had perhaps been nothing more than a mighty slayer and drinker. War and feasing were the constant themes of their scalds or bards; and what they called their history, which is mixed with fable to such a degree that the fragments remaining of it are seldom intelligible, recorded little else than piracy and bloodshed. Like their brethren the Saxons, they were not at one time very bigoted, or very intolerant to other modes of faith, but when they came to England, they were em-. butered by recent persecution, and they treated the Saxons as renegadoes who had forsaken the faith of their common ancestors to embrace that of their deadly enemies. This feeling was shown in their merciless attacks on priests, churches, monasteries,

Chap. L.

rapidity; and all the skill and bravery of the Saxons were generally haffled by these intrenchments. Then slops were large and capable of containing many men; but in most of their expeditions they were attended by vessels drawing httle water, that could easily run up the creek sand invers of our island Many of our rivers, however, unist have been deeper in those times, for we constantly hear of then ascending such as would not now that the smallest embarkation. They frequently drew their vessels on shore, and having formed an intrenchment around them (as Carsar had done with his invading fleet), they left part of their force to grand them, and then scattered themselves over the country to phinder and destroy. On many occasions they dragged their vessels overland from one river to another, or from one mrn of the sea to another inlet. If they met a superior force, they fled to their slups, and disappeared; for there was no dishonour in retreat, when they carried off the pullage they had made. They then suddenly appeared on some other distant or imprepared coast, and repeated the same mancenvres; thus, at length, as their numbers increased more and more, keeping every part of England in a constant state of alarm, and preventure the people of one country from marching to the assistance of those of another, lest in their absence their own district should be invaded, and their own families and property fall the victims of the maranders. The father and brothers of Alfred bad established a sort of local district imbitia; but the same causes of self-interest and alarm contimied, and it was seldom that a sufficient force could be concentrated on one point, in time to prevent the depredations of the pirates. On some occasions, however, there armed burghers and peasants, throwing themselves between the Danes and their ships, recovered the booty, and inflicted a fearful vengeance; quarter was rarely given to the defeated invaders. For a considerable time, the Danes carefully avoided coming to any general engagement; for, like the Piets and Scots of old, their object was merely to make forays, and not conquests and settlements. Their success, with the weakness and divisions of England, gradually enlarged their views. They brought vo horses with them; but as cavalry was necessary to scour the country, and an important component of an armed force, they seized and mounted all the |• horses they could catch; and as then operation extended in-land, their first care was to provide themselves with those animals, for the procuring of which they would promise neutrality or an exemption from plunder, to the people or districts that

furnished them. Thus, on one occasion, the men

indebted to the conquest, and intermixture with

them, of the Danes for the high fame they after-

wards emoved as bowmen. They had great \$kill

in choosing and fortifying the positions they took

was dug, and a rampart raised with extraordinary

Wherever a camp was established, a ditcle

With good steel arms the Danes were abundantly provided. Their weapons seem to have been much the same as those used by the Saxons at their invasion of the island, but the Scandinavian mace and battle-axe were still more conspicuous, particularly a double-bladed axe. "To shoot well with the bow" was also an indispensable qualification to a Danish warrior; and as the Saxons had totally of East Anglia mounted the faithless robbers, who rushed upon the men of Mercia, vowing they would not injure the horse-lenders. But no prumises or vows were regarded,—no treaty was kept sacred by the Danes, who had always the ready excuse (when

vows were regarded,—no treaty was kept sacred by the Danes, who had always the ready excuse (when they thought fit to make one), that the peace or truce was broken by other hands, over whom those who made the treat, had no control. Thus, when the mea of Kent resorted to the fatal expedient of offering money for their forherance, the Danes concluded a treaty, took the gold, and, breaking from their permanent head-quarters in the Isle of Thanet, ravaged the whole of their country shortly after. The old writers continually call them truce-breakers;" and the Danes well deserved the name.

We need not follow the gradual development

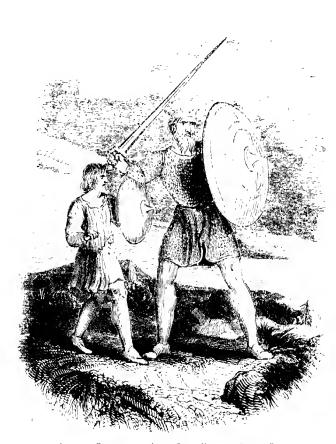

after. The old writers continually call them truce-breakers;" and the Danes well deserved the name.

We need not follow the gradual development of this sanginary stay, nor trace, step by step, how the Danes established themselves in the island. It will be enough to show then possessions and power on the accession of Alfird to the degraded throne. They held the Isle of Thanet,

and the coasts of Kent and Essex; they had thoroughly overrim or conquered all Northumbia, from the Tweed to the Humber; they had planted streng colonies at York, which city, destroyed during the wars, they rebuilt. South of the Humber, with the exception of the Isle of Thanet, then iron grasp on the soil was less sure, but they had desolated Nottinghamshire, Lincolnshire, Cambridgeshire, Norfolk, and Soffolk; and, with numbers con tantly increasing, they ranged through the whole length of the island, on this side the Tweed, with the exception only of the western counties of England, and had estable hed fortified comps between the Severn and the Thames. The Anglo-Saxon standard had been gradually retreature towards the south-western corner of our island, which melades Somersetsline, Devon line, and Cornwell, and which was now about to become the scene of Affied's most comantic adventures Tor as lule,

Chap. L.]

The next year (x o 875) one mmy under Halfibm, or Halfdane, was employed in settling Noithumbrie, and in waging war with that probably muxed population that still dwelt in Cumberland, Westmoreland, and Galloway, or what was called the kingdom of Strathelyde. They now came into hustale calle our with the Scots, who were baced to retreat beyond the Friths of Chyde and Forth. Halfdame then divided the mins of the Northambrian territory among his followers, who, settling among the Anglo-Saxons there, and, intermarrying with their, became, in the course of a few generafrom, so mixed as to form almost one people. is not casy, from the yagueness of the obl writers, to fix limits, but this fusion was probably felt

Halfdane was pursing these measures in the math,

statics are still detected among the people.

a still stronger many, commanded by three krugs, marched upon Cambridge, which they fortified and made their winter-quarters. By this time the Anglo-Saxon kingdoms of Northumbers, Mercia, and East Anglia, were entirely obliterated, and the contest lay between the Danes and Alfred's men of Wessex. At the opening of the year 876, the host that had wintered in Cambridge took to their ships, and, icsolving to entry the war they had renewed into the heart of Wessex, they lamiled on the coast of Dorrived from the employment of slaps along the coast, where they might either prevent the landing of an energe, or cut off their supplies and remisted ments, which generally came by sea, and es frequently from the continent as diewhere. The first flotilla he set affort was small and almost continuable; but in its very first encounter with the enemy, it proved victorious, afterlying a Danish squadron of seven slips, one of which was taken, the reat put to fleght. This happened immediately after the surpuse of Warchiner; and when, in a few days, the Dancs agreed to treat for gonce, and evacuate the territory of Wersex, the confequences of the victory were magnified in the eyes of the people, In concluding this peace, after the Danish chiefs or kings, bad sworn by then golden bracelets—a most

solemn form of path with them. Alfred, who was

Before this, his second sea victory, Alfred had come up with his land forces, and invested Exeter; and King Gathrim, the Dane, who helds that town, on learning the destruction of his fleet, capitulated, gave loctages and oaths, and marched with his northmen from Exeter and the kingdom of Wessex aito Mercia. Alfred had now felt the value of the fleet be had created, and which, weak as it was, maintained his cause on the sea during the retreat to which he was The creas of these now about to be condemned. \* Asset, 28

HISTORY OF ENGLAND.

and faithfully. It is curious to reflect, that they came from the same country which ages before had

sent forth many of the Angles to the commest of Britton; and they may have felt even at that distance of time a strong sympathy with the Anglo-Saxon adherents of Alfred. The reader has already weighed the value of a Damsh treaty of peace. Guthrun had no sooner retreated from Exeter, than he began to prepare for another war; and this he did with great art, and by employing all his means and influence; for he had learned to appreciate the qualities of his enemy, and he was himself the most skilful, steady, and persevering of all the invaders. He fixed his head-quarters at no greater distance from Alfred than the city of Gloncester, around which he had broad and fertile lands to distribute among his warriers. His fortimate rayen attracted the birds of rapine from every quarter; and when everything was ready for a fresh memsion into the west, he crafuly proceeded in a new and unexpected insumer. A winter campaign had hitherto been unknown among the Danes, but on the first day of January, 878, his choicest warmers received a secret order to meet him on horseback, at an appointed place. Alfred was at Chippenham, a strong residence of the Wessex kings. It was the feast of the Epiphany, or Twelfth-night, and the Saxons were probably celebrating the festival, when they heard Guthrun and his Danes were at the gates. Surprised thus, by the celerity of an overwhelming force, they could offer but an meffectual resistance. Many were slain; the foe burst into Chippenham, and Alfred escaping with a little band, retired, with an auxious mind, to the woods and the fastnesses of the Moors. As the story is generally told, the king could not make head against

the Danes; but other accounts state that he unmediately fought several battles in rapid succession, We are inclined to the latter behef, which renders the broken spirits and despair of the men of Wessex more intelligible; but all are agreed in the facts that, not long after the Danes stole nato Chippenham, they rode over the kingdom of Wessex, where no army was left to oppose them; that numbers of the population fled to the Isle of Wight and the opposite shores of the continent, while those who remained tilled the soil for their bard taskmasters, the Danes, whom they tried to conciliate with presents and an abject submission. The brave men of Somerset alone retained some spirit, and continued, in the main, true to their king; but even in their country, where he finally sought a refuge, he was obliged to linde in fens and coveries, for fear of being betrayed to his powerful for Guthrum. Near the confluence of the rivers Thouc and Parret, there is a tract of country still called Athelney, or the Prince's Island. The waters of the little rivers now flow by corn-fields, pasture-land, a farm-house, and a cottage; but in the time of

fishing, and the spoil they could make by sudden and secret forays among the Danes. From an ambignous expression of some of the old writers, we might believe he sometimes plandered his own subjects; and this is not altogether unprobable, if we consider his pressing wants and the necessity nuder which he lay, of concealing who he was. This secret seems to have been most scrupnlou by

kept by his few adherents, and to have been main-

tained, on his own part, with infinite patience and

forbearance. A well-known story, endeared to us

all by our earliest recollections, is told by his cotemporary and bosom friend, the monk Asser;

it is repeated by all the writers who lived near the time, and may safely be considered as authentic as

it is interceing. In one of his exemsions he took

refuge in the humble cabin of a symehoid, where

he stayed some time. On a certain day, it hap-

pened that the write of the swam prepared to bake her loudas, or loaves of bread. The king, sitting

Alfred, the whole tract was covered by a dense

wood, the sechided haunt of deer, wild boars, wild goats, and other beasts of the forest. It has

now long ceased to be an island; but in those days, when not washed by the two rivers, it was

m-ulated by bogs and mundations, which could

only be passed in a boat. • In this secure lurkingplace the king abode some time, making himself a

small hold or forticss there. For sustenance, be and his few followers depended upon hunting and

[Book II.

at the time near the hearth, was making ready his bow and arrows, when the shrew beheld her leaves She ran hastily and removed them, scolding the king for his shameful negligence, and exclaiming, "You man! you will not turn the bread you see burning, but you will be glad chough to eat it." "This unlineky woman," adds A ser, "little thought she was talking to the King Alfred." From his all but inaccessible retreat in Athelney, the king maintained a correspondence with some of his faithful adherents. By degrees, a few bold warriors gathered round him in that islet, which they more strongly fortified, as a point upon which to retreat in case of reverse; and between the Easter and Whitsuntide following his flight, Alfred saw hopes of his emerging from obscurity. According to some of the superstitions old chromeler, these hopes were first raised by a supernatural intervention. We have passed in silence over the miracles and marvels that swarm in all these ages,

touching picture of Alfred's destitution and benevolence. The incident is thus related by an old writer: " Upon a time, when his company had departed from him in search of victuals to eat, and he for pastime was reading on a book, a poor pulgrim came to him, and asked his alms, in God's name. The king lifted up his hands to heaven, and said, ' I thank God of his grace that he visiteth his poor man this day by another poor man, and youchsafeth to ask of me that which he hath given me.'

but the following is a good trait of the times, and a

Then the king anon-called his servant, that had

mstree, and be merciful to the poor men, and re-

but one loaf and a very little wine, and bade him

give the half thereof unto the poor man, who re-

ceived it thankfully, and suddenly vanished from

his sight, so that no step of him was seen on the

fen or moor he passed over; and also what was

given to him by the king, was left there even as it

had been given unto him. Shortly after, the company returned to their master, and brought with them great plenty of fish that they had then taken.

The night following, when the king was at his rest,

there appeared to him one in a bishop's wede, and

charged lam that he should love God, and keep

will make an end of thy sorrow and care; for tomorrow strong helpers shall come to thee, by whose help thou shalt subdue thme enemies.' 'Who art thou?' said the king. 'I am St. Cuthbert,' said he; the poor pilgran that yesterday was here with thee, to whom thou gavest both bread and wine. an busy for thee and thine; wherefore have thou mind hereof when it is well with thee.' Then Affred, after this vision, was well comforted, and showed himself more at large " To descend to more sober history. The men of

shire began to flock in; and, with a resolute force, Alfred was soon enabled to extend his operations against the Danes. In the interval, an important event in Devonshire had favoured his cause. Hubba, a Danish king or chief of great renown, in attempting to land there, was slain, with eight or nine hundred of his followers; and their magical banner, a raven, which had been embroidered in one noon-tide by the hands of the three daughters of the great Lodbroke fell, into the hands of the Saxons. after, receiving the welcome news at Athelney, the king determined to convert his skirmishes and loose partisan warfare into more decisive operations. Previously to this, however, he was anxious to

Somersetshire, Wiltshire, Dorsetshire, and Hamp-

know the precise force and condition of the army which Guthrun kept together; and, to obtain this information, he put himself in great jeopardy, trusting to his own resources and address. He assumed the habit of a wandering minstrel, or gleenan, and with his instruments of music in his hands, gained a ready entrance into the camp and the tents and pavihous of the Danes. As he amused these idle warriors with songs and interludes, he espied all their sloth and negligence, heard much of their councils and plans, and was soon enabled to return to his friends at Athelpey with a full and

satisfactory account of the state and habits of that

army. Then secret messengers were sent to all

quarters, requesting the trusty men of Wessex to

meet in mains at Egbert's stone, on the cast of Selwood Forest ! The smanner was obeyed, though most knew not the king had sent it; and when Albed appeared at the place of rendezvous, he was received with enthusiastic joy—the men of Hamp-

160

shire, and Dor et, and Wilts rejoicing as if he had been risen from death to life. In the general battle of Eilandune which ensued (seven weeks after Easter), the Danes were taken by surprise, and thoroughly beaten. Alfred's conceadment, courting from his flight from Chappenham, did not last above five months.

It is reasonably supposed that the present Yakton, ab at five miles from Chippenham, is the representative of Etlanding, or Assundance; but that the battle was tought a little lower on the Avon, at a place called "Slaughter-ford," where, according to a tradition of the country people, the Danes suffered a creat skaughter. Outland retreated with the membral residue of his army to a fortified position. Alred followed him fluther, cut off all his communications, and established a close blockade. In fourteen days, famine obliged the Danes to accept the conditions offered by the Saxons. These conditions were liberal, for, though victorions. Alfred could not hope to drave the Danes by one, may, may by twenty buttles, out of England They were too mamerous, and had recured themselves in too considerable a part of the is land. The first points assisted upon in the treaty were, that Guthrun should evaccute all Wester, and submit to be bautized. Without a conversion to Chratranity, Alfred thought it impossible to rely on the promises or eaths of the Danes; he saw that a change of religion would, more than acything clse, detach them from their savage Scandinavian brethren neross the reas; and as he was a devout man, with priests and manks for his connsellors, religion, no doubt, was as precious to him as policy, and he was moved with an aidest hope of propagating and extending the Christian faith. Upon Guthran's ready acceptance of these two conditions, an extensive cession of territory was unide to him and the Danes; and bere the great amud of Alfred probably, contemplated the gradual fusion of two people - the Saxons and the Daneswho differed in but few essentials, and foresny that the pursuits of agriculture and industry, growing up among them, after a tranged settlement, would win the rovers of the north from their old plundering, puntical habits. As soon as this took place, they would guard the coasts they formerly desolated. It it had even been in Alfred's power to expel them all (which it never was), he could have had no security against their prompt return and incressant attacks. There was territory enough, fertile though neglected, to give away, without stratening the Saxons. In the most happy time of the Roman occupation, a great part of

mines, the pestilences, the almost meessant wars . Asset, 33. The word extended from Prome to Builder and was probably much larger at one time.

Britain was but thinly inhabited; and the fa-

which had followed since then, had depopulated whole causties, and left immense tracks of land without hands to till them, or mouths to cat the produce they promised the agriculturist. Alfred thus drew the line of demarkation between him and the Dares: -" Let the bounds of our dominion stretch to the river Tlames, and from themse to the water of Laa, even unto the

head of the same water; and thence straight unto Bedford, and finally, going along by the river Ouse, let them end at Wallang-street." Beyond these lines, all the cast side of the whead, as an as the Humber, was surrendered to the Danes; and as they had established themselves in Northambria, that terratory was soon mated, and the whole eastern country from the Tweed to the Thames, where it washes a part of Essex, took the name of the Danclands, or "Dane-law," which it retained for many ages, even down to the time of the Norman conquest. The cession was large; but it should be remembered that Alfred, at the opening of his reign, was driven into the western corner of England, and that be now gained tranquit possession of five, or perhaps ten finnes more territory than be then possessed,4 In more respects, there his modenste measures answered the end he proposal Soon after the conclusion of the treats, Gothenic, relying on the good faith of the Saxon, went with only thaty of his chiefs to Aulie, near Athelney. His old but galland and generous county, Alfred, answered for lum at the baptismal fout, and the Dane was christened under the Saxon name of Athelston. The next week the ceremony was completed with great solemnity at the royal town of Wedmor, and after spending twelve days as the guest of Alfred, Guthrun departed (v.p. \$78), fonded with presents, which the mank Asser anywere magnificent. Whatever were his mwood convictions, or the efficacy and sincerity of ka coaversion, the Danish prince was certainly captivated by the merits of his victor, and ever afterwards continued the faithful friend and ally (if not vass if) of Alfaed. The subjects under his rule in the Danclagh, or "Danc-law," assumed babits of industry and tranquillity, and gradually adopted the maniners and customs of more civilized life. By muthal agreement, the laws of the Danes were assimilated to those of the Saxons; but the former long retained many of their old Scandmayian usages. In the jurisprudence of those days, the life of an Englishman was estimated according to his rank, at so many shillings or pieces of coined money; and now it was agreed that the lives of the Danes should be considered of equal value with the lives of the Anglo-Saxons In other words, the same money was to be paid in fine by him who

killed a Dane, as by him who slew an Englishman,

supposing always the rank of the slain to be cqual.

The fines payable for all offences were determined

<sup>•</sup> Merca fell completely into the power of Alfred, after the defeat of Galliani. disputes arising from their difference of currency. A wise regulation, considering the recent hostilities and implacable hatred that had existed between those forces, forbade all sceret intercourse between the soldiery of the Saxon and Damsh armies. All sales, whether of men, horses, or oven, were declared illegal, unless the purchaser produced the voucher of the seller. This was to put a stop on both sides to the lifting of cattle, and the carrying off of the peasantry as slaves. Both kings engaged to promote the Christian religion, and to punish apostasy. We are not well informed as to the progress the faith made among his subjects on Guthrun's conversion; but it was probably rapid, though impertect, and accompanied with a lingering affection for the divinities of the Scandinavian mythology.

An ornament of gold, apparently intended to hang round the An original or goal, appearing instance of mag forms of neck, found in Atheliney, and now in the Ashimolean Misseum, Oxford. fred's breaking up from his retreat at Athelney, and gaining the victory of Ethandune, that, moved by the love of humane letters which distinguished him all his life, he invited Asser, esteemed the most learned man then in the island, to his court or camp, in order that he might profit by his instructive conversation. The monk of St. David's, who was not a Saxon, but descended from a Welsh family, obeyed the summons, and, according to his own account, he was introduced to the king at Dene, in Wiltshire, by the thanes who had been sent to fetch him. A familiar intercourse followed a most courteous reception, and then the king in-

constantly with him, conversing and reading with lum all such books as the king possessed. On the Christmas eve following, Alfred, in token of his high regard, gave the monk an abbey in Wiltshire, supposed to be at Amesbury, and another abbey at Banwell, in Somersetshire, together with a rich silk pall, and as much incense as a strong man could carry on his shoulders, assuring him at the same time that he considered these as small things for a man of so much merit, and that hereafter he should have greater. Asser was subsequently promoted to the bishopric of Sherburn, and thenceforward remained constantly with the king, enjoying lus entire confidence and affection, and sharing m all his joys and sorrows. This rare friendship between a sovereign and subject continued unbroken till death; und when the grave closed over the great Alfred, the honourable testimony was read in his will, that Asser was a person in whom he had full confidence. To this singular connexion Alfred and his subjects were, no doubt, indebted for some improvements in the royal mind, which wrought good alike for the king and for the people; and we, at the distance of nearly a thousand years, owe to it an endearing record of that monarch's personal character and habits. Asser was a sort of Boswell of the dark nges; and the hero whose private as well as public life he delineated, well deserved so attentive a chronicler. But some time had yet to pass ere Alfred could give lumself up to quiet enjoyments, to law-making, and the intellectual improvement of his people. Though Guthrun kept his contract, hosts of maranding Danes, who were not bound by it, conunued to cross over from the continent, and infest the shores and rivers of our island. In 879, the very year after Guthrim's treaty und baptism, a great army of Pagans came from beyond the sea, and wintered at Fullanham, or Fulham, hard by the river Thames. From Fulham, this host proceeded to Ghent, in the Low Countries. At this period the Northmen alternated their attacks on It was about this time, or very soon after Al-England, and their attacks on Holland, Belgium, and East France, in a curious manner, the expedition beginning on one side of the British channel and German Ocean frequently ending on the other side. The rule of their conduct, however, seems to have been this-to persevere only against the weakest enemy. Thus, when they found France strong, they thed England; and when they found the force of England consolidated under Alfred, they turned off in the directions of France, or the

neighbouring shores of the continent. It is a

melancholy fact, that England then benefited by

the calamities of her neighbours. In the year 886,

The vows of Asser and his attachment to his mo-

nastery, where he had been nurtured and instructed,

interfered with this arrangement; but, after some

delays, it was agreed he should pass half his time

in his monastery, and the rest of the year at court.

Returning at length to lifted, he found him at a

place called Leonaford. He remained eight months

Alfred took that favourable opportunity to rebuild

and fortify the city of London. Amongst other cities, we are told, it had been destroyed by fire, and the people killed; but he made it habitable again, and committed it to care and custody of his son-in-law, Ethelred, earl or colderman of the Mercians, to whom before he had given his daughter Ethelfieda. Each of the six years immediately preceding the rebuilding of London, he was engaged in hostilities; but he was generally fortunate by sea as well as by land, for he had increased his navy, and the care due to that truly national service. In the year 882 his fleet, still officered by Frieslanders, took four, and, three years after (in one fight), sixteen of the enemy's ships. the latter year (885) he gained a decisive victory over a Danish host that had ascended the Medway, and were besieging Rochester, having built them a strong castle before the gates of that city. By suddenly falling on them, he took their tower with little loss, seized all the horses they had brought with them from France, recovered the greater part of their captives, and drove them with the sword in their rems to their slips, with which they returned to France in the utmost distress. Alfred was now allowed some breathing time, which he wisely employed in strengthening his kingdom, and bettering the condition of his people.

Instead, however, of tracing these things strictly

in their chronological order, it will add to the per-

spicuity of the narrative, if we follow at once the

warlike events of his reign to their close. The siege of Paris, to which we have alluded, and which began in 886, employed the Dancs or Northmen two whole years. Shortly after the heathens burst into the country now called Flanders, which was then a dependency of the Frankish or French kings, and were employed there for some time in a difficult and extensive warfare. horrid famine cusued in those parts of the continent, and made the lungry wolves look elsewhere for su-tenance and prev. England now revived by a happy repose of seven years; her corn fields had borne their plentiful crops; her pastures, no longer swept by the tempests of war, were well sprinkled with flocks and herds; and those good fatted beeves, which were always dear to the capacious stomachs of the Northmen, made the island a very land of promise to the imagination of the famished. It is true that of late years they had found those treasures were well defended, and that nothing was to be got under Alfred's present government without hard blows, and a desperate contest, at least doubtful in its issue; but hunger imnelled them forward; they were a larger body than had ever made the attack at once; they were muted under the command of a chief equal or superior in fame and military talent to any that had preceded

him; and therefore the Danes, in the year 893, once

more turned the prows of their vessels towards England. It was indeed a formidable fleet, As

ships four miles up the river towards the weald, and there mastered a fortress the peasants of the country were raising in the fens. They then proceeded to Apuldre or Appledore, at which point they made a strongly fortified camp, whence they ravaged the adjacent country for many miles, Nearly simultaneously with these movements, the famed Haesten, or Hasting, the skilful commanderm-chief of the entire expedition, entered the Thames with another division of eighty ships, landed at and took Milton, near Sittingbourn, and there threw up prodigiously strong entrenchments. Their past reverses had made them extremely cautious, and for nearly a whole year the Danes in either camp did little else than fortify their positions and scour the country in foraging parties. Other piratical squadrons, however, kept hovering round our coasts to distract attention and create alarm at many points at one and the same time. The honourable and trustworthy Gathrun had now been dead three years; and to complete the most critical position of Alfred, the Danes settled in the Danelagh, even from the Tweed to the Thames, violated their oaths, took up arms against him, and joined their marauding brethren under Hasting.

It was in this campaign, or rather this succession

of campaigns, which lasted altogether three years,

that the unhtary genus of the Anglo-Saxon monarch

shone with its greatest lustre, and was brought into

full play by the ability, the wonderful and eccentric

rapidity, and the great resources of his opponent

Hasting. To follow their operations the reader

must place the map of England before him, for they run over half of the island, and shifted the

scene of war with almost as much rapidity as

as the winds and waves wafted it forward they

counted two hundred and fifty several ships; and

every ship was full of warriors, and horses brought

from Flanders and France for the immediate

mounting of them as a rapid, predatory cavalry.

The invaders landed near Romney marsh, at the

eastern termination of the great wood or weald of

Anderida (already mentioned in connexion with an

invasion of the Saxons), and at the mouth of a river, now dry, called Limme. They towed their

Book II.

that with which the decorations of a theatre are changed. The first great difficulty Alfred had to encounter was in collecting and bringing up sufficient ferrees to one point, and then in keeping them in adequate number in the field; for the Saxon "fyrd," or *levée en masse*, were only bound by law to serve for a certain time (probably forty days), and it was indispensable to provide for the safety of the towns, almost everywhere threatened, and to leave men sufficient for the cultivation of the country. Alfred overcame this difficulty by dividing his army, or militia, into two bodies; of these he called one to the field, while the men composing the other were

left at home. After a reasonable length of service

those in the field returned to their homes, and those

Снар. 1.] left at home took their places in the field. spectacle of this large and permanent army, to which they had been wholly unaccustomed, struck Hasting and his confederates with astonishment and dismay. Nor did the position the English king took up with it give them much ground for comfort. Advancing into Kent, he threw himself between Hasting and the other division of the Danes: a forest on one side, and swamps and deep waters on the other, protected his flanks, and he made the front and rear of his position so strong that the Danes dared not look at them. He thus kept asymder the two armies of the Northmen, watching the motions of both, being always ready to attack either, should it quit its entrenchments; and so active were the patrols and troops he threw ont in small bodies, and so good the spirit of the villagers and town-folk, cheered by the presence and wise dispositions of the sovereign, that in a short time not a single foraging party could assue from the Damsh camp without almost certain de-Worn out in body and spirit, the Northmen resolved to break up from their camps, and, to deceive the king as to their intentions, they sent submissive messages and hostages, and promised to leave the kingdom. Hasting took to his shipping, and actually made sail, as if to leave the well-defended island; but while the eyes of the Saxons were fixed on his departure, the other division, in Alfred's rear, rushed suddenly from their entrenchments into the interior of the country, in order to seek a ford across the Thames by which they boped to be enabled to get into Essex, where the rebel Danes that had been ruled by Guthrun would give them a friendly reception, and where they knew they should meet Hasting and his division, who, instead of putting to sea, merely crossed the Thames, and took up a strong position at Benfleet, on the Essex coast. Alfred had not ships to pursue those who moved by water; but those who marched by land he followed up closely, and brought them to action on the right bank of the Thames, near Farnham in Surrey. The Danes were thoroughly defeated. Those who escaped the sword and drowning marched along the left bank of the Thames through Middlesex into Essex; but being hotly pursued by Alfred, they were driven right through Essex and across the river Coln, when they found a strong place of refuge in the isle of Mersey. Here, however, they were closely blockaded, and soon obliged to sue for peace, promising hostages, as usual, and an immediate departure from England. Alfred would have had this enemy in his hand through sheer starvation, but the genius of Hasting and the defection of the Northmen of the Danclagh called him to a distant part of the island. Two fleets, one of a hundred sail, the second of forty, and both in good part manned by the Danes who had been so long, and for the last fifteen years so peacefully, settled in England, eet sail to attack in two points and make a formidable diversion. The first of these, which had probably been equipped in Norfolk and Suffolk,

coast as far as Devonshire, and laid siege to Exeter: the smaller fleet, which had been fitted out in Northumbria, and probably sailed from the mouth of the Tyne, took the passage round Scotland and the extreme north of the island, ran down all the western coast from the Wrath to the Bristol Channel, and, ascending that arm of the sea, beleaguered a fortified town to the north af the Severn. Though Alfred had established friendly relations with the people of the west of England, who seem on many occasions to have served him with as much ardour as his Saxon subjects, he still felt Devonshire was a vulnerable part. Leaving, therefore, a part of his army on the confines of ·Essex, be mounted all the rest on horses, and flew to Exeter. Victory followed lim to the west; he obliged the Danes to raise the siege of Exeter; he beat them back to their ships with great loss, and soon after the minor expedition was driven from the Severn. The blockade of the Danes in the isle of Mersey does not appear to have been well conducted during his absence, and yet that interval was not devoid of great successes: for, in the mean time, Ethelred, colderman of the Mercians and Alfred's son-in-law, with the citizens of London and others, went down to the fortified post at Benfleet, in Essex, laid siege to it, broke into it, and despoiled it of great quantities of gold, silver, horses, and garments; taking away captive also the wife of Hasting and his two sons, who were brought to London and presented to the king on Some of his followers urged him to put these captives to death,—others to detain them in prison as a check upon Hasting; but Alfred, with a generosity which was never properly appreciated by the savage Dane, caused them immediately to be restored to his enemy, and sent many presents of value with thenc. By this time the untiring Hasting had thrown up another formidable entrenchment at South Showbury, in Essex, when he was soon joined by immbers from Norfolk and Suffolk, from Northumbria, from all parts of the Danclagh, and by fresh adventurers from beyond Thus reinforced, he sailed boldly up the Thames, and thence spread the mass of his forces into the heart of the kingdom, while the rest returned with their vessels and the spoil they had so far made to the entrenched camp at South From the Thames Hasting marched to the Severn, and fortified himself at Buttington. But here he was surrounded by the Saxons and the men of North Wales, who now cordially acted with them; and in brief time Alfred, with Ethelred and two other coldermen, cut off all his supplies, and blockaded him in his camp. After some weeks, when the Danes had eaten up nearly all their horses, and famine was staring them in the Tace, Hasting rushed from his entrenchments. Avoiding the Welsh forces, he concentrated his attack upon the Saxons, who formed the blockade to the east of his position. The conflict was terrific; some hundreds (some of the chroniclers say

spring he set forth with this insual rapidity, and

thousands) of the Danes were slain in their attempt to break through Alfred's lines; many were thrown into the Severn, and drowned; but the rest, headed by Hasting, effected their escape, and, marching across the island, reached their entrenchment and

their slips on the Essex coast. Alfred lost many of his nobles, and must har been otherwise much crippled, for he dgl not molest Hasting, who could

marched through the midland counties. was not far behind hum, but could not overtake hun until he had seized Chester, which was then almost unmhabited, and secured himself there. town had been very strongly fortified by the Romans, and many of the works of those conquerors, still remaining,\* no doubt gave strength to Hasting's position, which was deemed too formidable for attack. But the Saxon troops pressed him on the land side, and a squadron of Alfred's ships, which had put to sea, ascended the Mersey and the river Wirall, and prevented his receiving succour in that direction. Dreading that Chester might become a second Buttington, the Danes burst away into North Wales. After ravaging part of that country, they would have gone off in the direction of the Severn and the Avon, but they were met and turned by a formidable royal army, upon which they retraced their steps, and finally marched off to the north-cast. They traversed Northumbria, Lincolnslure, Norfolk, Suffolk, -nearly the whole length of the Danclagh, where they were among friends and allies, and by that circuitons route at length regained their fortified post at South Showbury, in Essex, where they

Earlier next spring the persevering Hasting sailed to the month of the Lea, ascended that river with his ships, and at or near Ware,† about twenty miles above London, erected a new fortress on the Lea. On the approach of summer the burgesses of London, with many of their neighbours, who were sorely barassed by this move of the Danes, attacked the stronghold on the Lea, but were repulsed with great loss. As London was now more closely pressed than ever, Alfred found it necessary to encamp his army round about the city until the chizens got in their harvest. He then

wintered and recunited their strength as usual.

pushed a strong reconnoissance to the Lea, which

+ Some lopographers contend that this localified camp was not at

Ware, but at Heriford.

till they had traversed the whole of that wide tract of country which separates the Lea from the Severn. Marching for some distance along the left bank of the Severn, they took post close on the river at Quatbridge, which is supposed to be Quatford, near Bridgenorth, in Shropshire. When Alfred came up with them there, he found them already strongly fortified. On our first introducing the Northmen we mentioned their skill in choosing and strengthening nulitary positions, and the course of our narrative will have made their skill and speed in these matters evident, especially in the campaigns they performed under Hasting, who had many of the qualities that constitute a great general. Alfred was compelled to respect the entrenchments at Quatbridge, and to leave the Danes there undis-

turbed during the winter. In the mean time the

citizens of London seized Hasting's fleet, grounded

in the Len. Some ships they burned and destroyed,

but others they were enabled to get affoat and con-

duct to London, where they were received with

exceeding great joy. For full three years this Scandinavian Hamibal had maintained a war in the country of the enemy; but now watched on every side, worn out by constant losses, and probably in good part forsaken, as an milucky leader, both by his brethren settled in the Danclagh and by those on the continent, his spirit began to break, and he prepared to take a reluctant and indignant farewell of England. " In the following spring of 897, by which time dissensions had broken out among their leaders, the Danes tumultuously abandoned their camp at Quatbridge, and atterly disbanded their army soon after, flying in small and separate parties, in (far deeper and broader than now) was covered by various directions. Some sought shelter among their brethren of the Danelugh, either in Northumtheir ships, and afterwards surveyed; at great personal risk, the new fortified camp of the Danes. bria, or Norfolk and Suffolk; some built vessels, and sailed for the Scheldt and the mouth of the Rhine; while others, adhering to Hasting in his evil fortune, wanted until he was ready to pass into France. A small fleet, bearing his drooping raven,

Channel, "sine lucro et sine honore,"-without

the Anglo-Saxons in maritime tactics. A squadron of Northumbrian pnates cruised off the southern coasts with their old objects in view. It was met and defeated on several occasions by the improved ships of the king. Alfred, who had some mechameal skill lumself, had caused vessels to be built far exceeding those of his enemies in length of keel, height of board, swiftness and steadiness; some of these carried sixty oars, or sweepers, to be used, as in the Roman galleys, when the wind failed; and others carried even more than sixty. They differed in the form of the hulk, and probably in their rigging, from the other vessels used in the North Sea. Hitherto the Danish and Friesland

builds seem to have been considered as the best models; but these ships, which were found pecuharly well adapted to the service for which he intended them, were constructed after a plan of Alfred's own invention. At the end of his reign they considerably exceeded the number of one hundred sail: they were divided into squadrous, and stationed at different ports round the island, while some of them were kept constantly cruising between England and the main. Although he abandoned their system of ship-building, Alfred retained many Frieslanders in his service; for they were more expert seamen than his subjects, who still required instruction. After an obstinate engagement near the Isle of Wight, two Danish slips, which had been much injured in the fight, were cast ashore and taken. When the crews were carried to the king, at Winchester, he ordered them all to be hanged. This severity, so much at varian& with Alfred's usual humanity, has caused some regret and confusion to historians. writer says that the Danes do not seem to have violated the law of nations, as such law was then understood, and that, therefore, Alfred's execution of them was inexcusable. Another writer is of opithon that Alfred always, and properly, drew a distinction between pirates and warriors. This line would be most difficult to draw when all were robbers and pirates alike; but the real rule of Alfred's conduct seems to have been this—to distingnish between such Danes as attacked him from

captured at the Isle of light came from Northunsbrua; and the twenty ships taken during the three remaining years of his life, and of which the crews were slain or hanged on the gallows, came from the same country, and the other English lands included in the Danelagh. The eveursions of Hasting were accompanied with other calamities; "so that," to use the words of the chromeler Fabian, "this land, for three years, was vexed with three manner of sorrows,--with war of the Danes, pestilence of men, aml murrain of beasts? The horrors of famine, to escape which the Danes had come to England, are not alluded to; but the pestilence, which is mentioned by all the chroniclers, carried off vast manbers, and among them many of the chief thanes or nobles of the Saxons It seems to have continued some time after Hasting's departure, and then, on its cessation, Alfred enjoyed as much comfort as his

could constantly trouble his tranquality; and

in regard to them he may have been led to con-

sider, after the experience be had had of their

bad faith, that measures of extreme severity were

allowable and indispensable.

The intellectual character of this tilly great sovereign, his literary productions, his efforts for promoting the education of his people, his improvements in laws and administration, will be noticed in their proper places. But before we descend to the far inferior reagns of his successors, we must select from his biographers a few personid details, and cull a few of those flowers which adorned his reign, and which still give it a beauty and an interest we look for in vain-elsewhere during those barbarous ages. Historians have generally attached great consequences to his travels on the continent through

rapidly declining health would permit.

France and Italy, and, mere child as he was, it is not unprobable that Alfred's mind received impressions in those countries that were afterwards of benefit to himself and his kingdom. On the first of these journeys to Rome, Alfred was only in his fifth year, but on the second, when he was accompanied by his father, and anomical by the Pope, he was eight years old. On this last occasion he stand nearly a year at Rome and returning thence, through France, he resided some time at Paris. The eternal city, though despoiled by the barbamans, and not yet curiched with the works of modern art, must have retained much of its ancient splendour; the Cobseum, and many other edifices that remain, are known to have been much more perfect in the days of Alfred than they are now: the prond Capitol was comparatively entire; and in various parts of the city, where we now trace alroad, and such Danes as attacked him from the Danelagh at home. On the services and gratitude little but foundations of walls, and scattered fragof the former he had no claim; but the men of ments, there then stood lofty and elegant buildings. Alfred, who at home had lived, in wooden houses, Northumbria, Norfolk, and Sussex, had, through and been accustomed to see mid-buts with thatched their chiefs and princes, sworn allegiance to him, roofs, could hardly fail of being struck with the had received benefits from him, and stood bound superior splendour of Rome. The papal court, to the protection of his states, which they were

lated with some taste and great order; while the other court at which he resided (the French) was more splended than any in Europe, with the exception of Constantinople. But whatever effect these scenes may have had in enlarging the mind of fred, it should appear

he had not yet dearned to read-an accomplish-

ment, by the way, not then very common even among princes and nobles of a more advanced age. He, however, delighted in listening to the Anglo-Saxon ballads and songs which were constantly recited by the minstrels and glee-men attached to his father's court. From frequent vocal repetition, to which he listened day and night,\* he learned them by heart; and the taste he thus acquired for poetry lasted him, through many cares and sorrows, to the last day of his life. The story told by Asser is well known. One day his mother, Osburgha, was sitting, surrounded by her children, with a book of Saxon poetry in her bands. The precious manuscript was gilded or illuminated," and the contents were probably new, and much to the taste of the boys. "" I will give it," said she, "to him among you who shall first learn to read it." Alfred, the voingest of them all, ran to a teacher, and studying earnestly, soon learned to read Anglo-Saxon, and won the book. But, with the exception of popular poetry, Anglo-Saxon was the key to only a small portion of the literature or knowledge of the times; and as his curiosity and intellect increased, it became necessary for him to learn Latin. At a subsequent period of his life, Alfred possessed a knowledge of that learned language, which was altogether extraordinary for a prince of the ninth century. It is not very clear when he obtained this degree of knowledge; but after teaching himself by translating, he was probably greatly improved in his mature manhood, when the monk Asser, Johannes Erigena, Grimbald, and other learned men, settled at his court. Alfred was accustomed to say that he regretted the neglected education of his youth, the entire want of proper teachers, and also the difficulties that then barred his progress to intellectual acquirements, much more than all the hardships and sorrows and crosses that befell him afterwards. As one of his great impediments had been the Latin language, which, even with our improved system of tuition, and with all our facilities and advantages, is not mastered without long and difficult study, he earnestly recommended from the throne, in a circular letter, addressed to the bishops, that thenceforward "all good and useful books be translated into the language which we all understand; so that all the youths of England, but more especially

chiefly translations from the Latin into Anglo-

Saxon, the spoken language of his people. It ex-

laudable occupations; but he was steady and persevering, regular in his habits, when not kept in the field by the Danes, and a great economist of his time. Eight hours of each day he gave to sleep, to his meals, and exercise; eight were absorbed by the affairs of government; and eight were devoted to study and devotion. clepsydras, and the other ingenious instruments for measuring time were then unknown in England. Alfred was, no doubt, acquainted with the sundial, which was in common use in Italy and parts of France; but this index is of no use in the hours of the night, and would frequently be equally unserviceable during our foggy simless days. He, therefore, marked his time by the constant burning of wax torches or eandles, which were made precisely of the same weight and size, and notched in the stem at regular distances. These candles were twelve inches long; six of them, or seventy-two inches of wax, were consumed in twenty-four hours, or 1440 minutes; and thus, supposing the notches at intervals of an inch, one inch would mark the lapse of twenty minutes. It appears that these time-candles were placed under the special charge of his mass-priests, or chaplains. But it was soon discovered, that sometimes the wind, rushing in through the windows and doors, and the numerous chinks in the walls of the palace, consumed the wax in a rapid and irregular manner. Hence Asser makes the great Alfred the inventor of hornlanterns! He says the king went skulfully and wisely to work; and having found out that white horn could be rendered transparent, like glass, he, with that material and with pieces of wood, admirably (mirabiliter) made a case for his candle,

[Book II.

ness, or for the sake of his health. He then considered every moment of value, as he could acvote it to lofty and improving purposes. We have already mentioned the care and ingenuity he employed in creating a navy. affairs, geography, and the discovery of unknown countries, or rather the descriptions of countries then little known, obtained by means of bold navigators, occupied much of his time, and formed one of his favourite subjects for writing. He endeavoured, by liberality and kindness, to attract to England all such foreigners as could give good information on these subjects, or were otherwise qualified to illuminate the national ignorance. those who are of gentle kind, and in easy eircum-From Audher, or Ohthere, who had consted the stances, may be grounded in letters—for they cannot profit in any pursuit intil they are well able to read English." Alfred's own literary works were continent of Europe from the Baltic to the North Cape, he obtained much information; from

Wulfstan, who appears to have been one of his subjects, and who undertook a voyage round

the Baltic, he gathered many particulars con-

which kept it from wasting and flaring.

In his youth Alfred was passionately fond of

field sports, and was famed as being "excellent

cumning in all hunting;" but after his retreat at

Athelney he indulged this taste with becoming

moderation; and during the latter years of his

reign he seems to have ridden merely upon busi-

cerning the divers countries situated on that sea; and from other voyagers and travellers whom he sent out expressly himself he obtained a description of Bulgaria, Sclavonia, Bohemia, and Germany. All this information he committed to writing in the plain mother tongue, and with the noble design of imparting it to his people. Having learned that there were colonies of Christian Syrians settled on the coasts of Malabar and Coromandel, he sent out Swithelm, bishop of Sherburn, to India—a tremendous journey in those days. The stout-hearted ecclesiastic, however, making what is now called the overland journey, went and returned in safety, bringing back with him presents of gems and Indian spices. Hereby was Alfred's fame increased, and the name and existone of England probably heard of for the first times in that remote country, of which, nine centmies after, she was to become the almost absolute mistress. While his active mind, which anticipated the

national spirit of much later times, was thus engaged in drawing knowledge from the distant corners of the earth, he did not neglect home affairs. He taught the people how to build better houses; he laboured to increase their comforts; he established schools; he founded or rebuilt many towns; and, having learnt the importance of fortifications during his wars with the Danes, he fortified them all as well as he could. He caused a survey to be made of the coast and navigable rivers, and ordered castles to be erected at those places which were most accessible to the landing of the enemy. Fifty strong towers and eastles rose in different parts of the country, but the number would have been threefold had Alfred not been thwarted by the indolence, ignorance, and carelessness of his nobles and people. He revised the laws of the Anglo-Saxons, being aided and sanctioned therein by his witenagemot, or parliament; and he established so excellent a system of police, that towards the end of his reign it was generally asserted that one might have hung golden bracelets and jewels on the public highways and cross-roads, and no man would have dared to touch them for fear of the Towards arhitrary, unjust, or corrupt administrators of the law, he was inexorable; and, if we can give credit to an old writer,\* he ordered the execution of no fewer than forty-four judges and magistrates of this stamp in the course of one year. Those who were ignorant or careless he reprimanded and suspended, commanding them to qualify themselves for the proper discharge of their office hefore they ventured to grasp its honours and emoluments. He heard all appeals with the utmost patience, and, in cases of importance, revised all the law proceedings with the utmost industry. His manifold labours in the court, the camp, the field, the hall of justice, the study, must have been prodigious; and our admiration of this wonderful man is increased by the well-esta-

blished fact, that all these exertions were made in spite of the depressing influences of physical pain and constant bad health. In his early years he was severely afflicted by the disease called the ficus. This left him; but, at the age of twenty or twenty-one, it was replaced by another and still more menting malady, the inward seat and unknown mysterious nature of "which haffled all the medical skill of his "leeches." The accesses of excruciating pain were frequentat times almost unintermittent; and then, if by day or by night, a single hour of case was mercifully granted him, that short interval was embittered by the dread of the sure returning anguish.\* This malady never left him till the day of his death, which it must have bastened. He expired in the month of October, six nights before All-Hallows-mass-day, in the year 901, when he was only in the fifty-third year of his age, and was buried at Winchester, in a monastery lie had founded.

SILVER COINS OF ALFRED .- From Specimens in the British Museum.

In describing his brilliant and meontestable deeds, and in tracing the character of the great Alfred, we, in common with nearly all the writers who have preceded us in the task, have drawn a general enlogy, and a character nearly approachmg to ideal perfection. But were there no spots in all this brilliancy and purity? As Alfred was a mortal man, there were, no doubt, many; but to discover them, we must ransack his private life, and his vaguely reported conduct when a mere stripling king; and the discovery, after all, confers no honour of sagacity, and does not justify the exulting yell with which a recent writer announces to the world, that Alfred had not only faults, but crimes to bemoan. It is passed into a trusm that he will seldom be in the wrong, who deducts alike from the amount of virtue and vice, in the characters recorded in Instory; but this deduction will be made according to men's tempers; and while some largely reduce the amount of virtue, they seem to leave the vice untouched—their incredulity extending rather to what elevates and emobles human nature, than to the things which degrade and debase it. The directly contrary course, or that of reducing the crime, and leaving the vistue, if not the more correct (which we will not decide) is certainly the more generous and improving. Every people above the condition of barbarity have their heroes and their national objects of veneration, and are probably improved by the high standard of excellence they present, and by the very reverence they pay to them. We may venerate the memory

<sup>\*</sup> Andrew Horne, author of " Miroir des Justices," who wrote, in Norman French, under Edward 1, or Edward 11.

of our Alfred with as little danger of paying an numerited homage as any of them. subject the late Sir James Mackintosh, whose historical sagacity was equal to his good feeling, says, " The Norman historians, who seem to have had his charies and note-books in their hands, chose

HISTORY OF ENGLAND.

Alfred as the glory of the and which had become their own. There is no subject on which unammous tradition is so nearly sufficient evidence as on the ribinence of one man over others of the same condition. His bright image may long be held up before the national mind. This tradition, however paradoxical the assertion may appear, is, in the case of Alfred, rather supported than weakened by the fictions which have sprung from it. Although it be an infirmity of every nation to ascribe their institutions to the contrivance of a man rather than to the slow action of time and circumstances, yet the selection of Alfred by the English people, as the founder of all that was dear to them, is surely the strongest proof of the deep unpression left on the minds of all of his transcendant wisdom and A D. 901. Alfred, with all his wisdom and power, had not been enabled to settle the succession to the throne on a sure and lasting basis.

On his death, it was disputed between his son Edward, and his nephew Ethelwald, the son of Ethelbald, one of Alfred's elder brothers. party armed; but as Ethelwald found lumself the weaker, he declined a combat at Wimburn, and fled into the Danelagh, where the Danes hailed him as their king Many of the Saxons who lived in that country mixed with the Danes, preferred war to the restraints of such a government as Alfred had established; and an internal war was renewed, which did infinite mischief, and prepared the way for other horrors. Ethelwold was slam in a terrible battle fought in the year 905, upon which the Danes concluded a peace upon equal terms; for Edward was not yet powerful enough to treat them as a master. The sons of the princes and yarls, and in many instances the individuals themselves, who had been trangent and submissive under Alfred, soon aimed, not merely at making the Danelagh an independent kingdom, but at conquering the rest Edward was not deficient in valour or military skill. In the year 911 he gained a most signal victory over the Danes, who had advanced to the Severn; but the whole spirit of Alfred scemed more particularly to survive in his daughter Ethelfleda, sister of Edward, and wife of Ethelied, the colderman of Mercia, who has been so often mentioned, and whose death, in 912, left the whole care of that kingdom to his widow. Her brother Edward took possession of London and Oxford, but she claimed, and then defended the rest of Mercia, with the bravery and ability of an experienced warrior. Following her father's example, she fortified all her towns, and constructed ramparts, and entrenched camps in the proper

vntuc,"\*

EDWARD.

By war and policy he reduced nearly all Wales to an inoffensive tranquallity, if not to vassalage. A tribute was certainly paid during a part of the reign, aml together with gold and silver, and becves, the Welsh were bound to send their best bounds and hawks to the court of Athelstave. He next turned his arms against the old tribes of Cornwall, who were still turbulent, and impatient of the Saxon yoke. He drove them from Devonshire, where they had again made encroachments, and reduced them to obedience and good order beyond the Tamar. In 937 he was assailed by a more powerful confederacy than had ever been formed against a Saxon Olave, or Anlaf, a Danish prince, who had already been settled in Northumbria, but who had lately taken. Dublin, and made considerable conquests in Ireland, sailed up the Humber with 620 ships; his friend and ally, Constantine, king of the Scots, the people of Strathelyde and Cumbria,

and the northern Welsh, were all up in arms and ready to join him. Yet this coalition, formidable as it was, was utterly destroyed on the bloody field of Brunnaburgh,\* where Athelstane gamed one of the most splendid of victories, and where five Danish kings and seven earls fell. Aulaf escaped with a wretched fragment of his forces to Ireland;

[Book II.

places: allowing them no rest, she drove the

Danes out of Derby and Leicester, and compelled

many tribes of them to acknowledge her authority.

In the assumlt of Derby, four of her bravest com-

manders fell, but she boldly urged the combat until

the place was taken. As some of the Welsh had

become troublesome, she conducted an expedition

with remarkable spirit and rapidity against Breecanmere, or Brecknock, and took the wife of the

Welsh king a prisoner. In socing these her warlike operations, says Ingulf, one would have

believed she had changed her sex. The Lady

Ethelffeda, as she is called by the ebroniclers, died

m 920, when Edward succeeded to her authority

in Mercia, and prosecuted her plan of securing the

country by fortified works. He was active and

successful: he took most of the Danish towns be-

tween the Thames and the Humber, and forced

the rest of the Danclagh that lay north of the Humber to acknowledge his supremacy. The Welsh,

the Scots, the inhabitants of Strathelyde and Cum-

bria (who still figure as a separate people), and

the men of Galloway, are said to have done him

homage, and to have accepted him as their "father,

far exceeded in extent that of his father Alfred;

but his son Athelstane, who succeeded lum in 925,

established a more brilliant throne, and made a still

nearer approach to the sovereignty of all England.

Edward's dommen

lord, and protector."

Atheistany, a.d. 925.

Supposed by some to be Burn in the south of Lincolnshire, by others, Brugh in the north of the same county.

Constantine, bemoaning the loss of his fair-haired

son, who had also perished at Brunnahurgh, fled

to the hilly country north of the Friths. After

this great victory, none seem to have dared

again to raise arms against Athelstane in any part

It appears to have been from this time that Athelstane laid aside the modest and limited title of his predecessors, and assumed that of "King of the Anglo-Saxons," or "King of the English"titles which had been given to several of them in the letters of the Roman popes and bishops, but had never till now been used by the sovereigns His father, and his grandfather themselves. Alfred, had simply styled themselves kings of Wessex, or of the West Saxons.

Under Athelstane, the English court was polished to a considerable degree, and became the chosen residence or asylum of several foreign

Harold, the king of Norway, entrusted his son Haco to the care and fintion of the enlightened Athelstane; and this son, by the aid of England, afterwards succeeded to the Norwegian throne, on which he distinguished himself as 'a legislator. Louis d'Outremer, the French king, took refuge in London before he secured the throne; and even the Celtic princes of Armorica, or But-tany, when expelled their states by the Northmen or Normans, fled to the court of Athelstane, in preference to all others. He bestowed his sisters in marriage on the first sovereigns of those times, and, altogether, he enjoyed a degree of respect, and exercised an influence on the general politics of Europe, that were not surpassed by any hymg

Pourion of the First Chapter of the Gospel, or St. John,—from the Cottonian MS. Tiberius, A. 2, a Copy of the Latin Gospels, which, from an inscription on the volume, appears to have been presented by King Athelstane to the Cathedral Chirch of Camerbury (Dombenenss Cathedrae). This is believed to have been the volume on which the Anglo-Saxon kings after Athelstane took the Cormation Oath. From the names found on a page at the beginning, Odda Rex, and Mixthied Marker Ress, is is conjectured by Mt. Turner to have been a present from the Empress Maulda of Germany, and her son the Emperor Otho, who married the sister of Athelstane.

or decrease, and he showed a determined taste for

sovereign.\* A horrid suspicion of guilt-the

crime of murdering his own brother Edwin-has

been cast upon him; but this is scarcely proved by

any cotemporary evidence, and his conduct as a

shvereign seems almost irreproachable. He re-

vised the laws, promulgated some new and good

ones, made a provision for the poor and helpless,

HISTORY OF ENGLAND.

elegance and improvement, which obtained for him the name of "the Magmiltent;" but his reign was troubled from the beginning, and he was cut off in his prime by the hand of an assassin. scarcely ascended the throne when the Danes of Northnubra recalled from Ireland Anlaf, the old opponent of Athelstane at Brunnaburgh. Damsh prince came in force, and the result of a war was, that Edmund was obliged to resign to lum, in separate sovereighty, the whole of the island north of Watling-street. But Anlaf did not enjoy these advantages many months; and when he died, Edmund repossessed himself of all the territory he had ceded. During his troubles the people of Cumbria, who had submitted to Athelstane, broke out in rebellion. He marched against them in 946, expelled their king, Dunmail, and gave the country as a fief to Malcolm of Scotland, whom he at the same time bound to defend the north of the island against Danish and other mvaders. The two sons of Dunmail, whom he took prisoners, he barbarously deprived of their eyes. Such abominable operations, together with the amputating of limbs, criting off of tongues and noses of captive princes, had become common on the contment; but, intherto, had very rarely disgraced the Anglo-Saxons. Edmund did not long survive the perpetration of this atrocity. On the festival of St. Augustin, in the same year, as he was carousing with his nobles and officers, his eye fell upon a banished robber, named Leof, who had dared to mingle with the company. The royal cup-hearer or dapifer ordered him to withdraw. The robber refused. Incensed at his insolence, and heated by wine, Edmund started from his seat, and, seizing

him by his long hair, tried to throw him to the

Among the costly presents sent to Athelstane by foreign sovereggs, was one from the King of Norway, "of a goodly ship of fine workmanthin, with gitt stern and purple sails, furnished round about the deck within with a row of gilt pavises (or shields)."

Leof had a dagger hid under his cloak, and in the scuffle he stabbed the king in a vital The desperate villain was cut to pieces by Edmund's servants, but not before he had slain and limit divers of them. The body of the king was interred in Glastonbury Abbey, where Dunstan, who was soon to occupy a wider scene, was then Abbot, EDRED (946), who succeeded his brother Edmund, was another son of Edward the Elder, and grandson of Alfred. He was not twenty-three years old, but a loathsome disease had brought on a memature old age. He was afflicted with a constant cough,-he lost his teeth and hair,-and he was so weak in his lower extremities that he was nick-named "Edredus debilis pedibiis" (Edred weak in the feet). According to some authorities, his mind was as feeble as his body, and the vigour that marked his reign sprung from the energy of Dunstan, the abbot of Glastonbury, who now began to figure as a statesman, and of Torketul, another churchman, who was Chancellor of the kingdom. Other writers, however, affirm that Edred's weak and puny body did not affect his mmd, which was resolute and vigorous, and such as became a grandson of Alfred. Though, in common with the other states of the north, the Danes of Northumbria had sworn fealty to Edred at Tadwine's Cliff, they rose soon after his accession, and being joined by Eric and other princes and pirates from Denmark, Norway, Ireland, the Orkneys, and the Hebrides (where the sea-kings had established themselves), they once more tried the fortune of war with the Saxons. The operations of Edred's armies, though disgraced by crnelty and the devastation of the land, were marked with exceeding vigour and activity, and, after two or three most obstinate and sanguinary battles, they were crowned with success. The Danes in England, lumbled, and apparently crushed, were condemned to pay a heavy pecuniary fine; Northumbria was incorporated with the rest of the kingdom much more completely than it had hitherto been, the royal title was abolished, and the administration put into the hands of an earl appointed by the king. Even the victorious Athelstane had left the title of king or sub-king to the Danish rulers of Northumbria; and it is assumed that the constant rebellions of those rulers were principally excited by their anxious wish to throw off the allegiance due to the English crown.

believe, however, there was a powerful excitement

ocean in search of plunder or settlements; many princes or chiefs in Denmurk and Norway claimed

kindred with those who had made conquests and

obtained kingdoms in England, and whenever an

opportunity offered they pretended to those possessions by an indefeasible, hereditary right. Such

a right might not be recognised by the Anglo-

Saxons, but it would pass unquestioned among the

aware that the discovery of them would east any very important light on our annals. Edred died soon after the reduction of Northumbria, and, leaving no children, was succeeded by the

son of his brother and predecessor on the throne.

EDWY was a boy of fifteen when he began his troublons reign (A.D. 955). One of the first acts of his government seems to have been the appointment of his brother Edgar (whom the monks soon played off against him) to be sub-regulus or vassalking of a part of England,\* most probably of the old kingdom of Mercia, where he was to acknow-Iedge Edwy's supremicy. As the Northumbrians remained in subjection, and as the Danes generally serm to have ceased from troubling the land, he might have enjoyed a tranqual reign but for some irregularities of his own, and his quarrels with a body more powerful then than warriors and seakings, and who fought with a weapon more deadly than the sword.

We now reach an interesting part of our history,

which, after passing current for many ages, has been fiercely disputed by some recent writers, whose

mam course of argument is weakened by the

glaring fact, that in shifting all the blame from Dunstan to Edwy, they had party or sectarian pur-

unpartial between a king and a monk, we think the old narrative has been disturbed without rendering any service to historical truth; and that this is proved to be the case, almost to a demonstration, by a learned and acute writer who has sifted the whole question. + Lake nearly every other part of the Saxon Instory, the story of Edwy and Elgiva is certainly involved in some difficulties or obscurities. Avoiding discussion and disputations, we will briefly state the facts as they seem to us best established. Edwy, who was gav, handsome, thoughtless, and

very young, became enamoured of Elgiva, a young lady of rank, and married her although she was related to him in a degree within which the canonical laws forbade such unions. She was probably his first or second cousin, and we need not go nearer, as such marriages are still illegal in Catholic countries without the express dispensation of the Pope. Her mother Ethelgiva lived with her at the court of Edwy, and seems to have been a person of good repute, for, under the honourable designation of the "king's wife's mother," she attested an agreement between St. Ethelwold and the Bishop of Wells, to which three other bishops were subscribing witnesses. We are entitled to

assume that had there been anything more than a

"This fact, which is of some importance, is proved, like many other points of a similar description, not by historians, but by a charter. The document, however, does not designate the locality of the dominions assigned to Edgar." Pulgrave, Hist Eng. chap xit. We follow this learned investigator in supposing it was Mercia.

† See atticle on Lingard's "Autiquates of the Angla Saxon Church," in Edinburgh Review, vol xxv. pp 346—354; and atticle on Lingard's "History of England," in the same work, vol. xin. pp. 1—31. Both those Reviews are acknowledged to be by John Aden. Esq., in his "Letter to Francis Jeffrey, Esq., in teply to Dr. Lingard's Vindication," 8vo. Lon. 1827.

of Elgiva, or had she and her mother been the depraved characters some writers have represented them, such personages as saints and bishops, and most orthodox churchmen, would not be found frequenting the court where both the ladies lived in pre-emmence and honour. Dunstan and his party, however, must stirely have had other provocathous than the irregularity of the marriage, or the thoughtlessness of Edwy in quitting their company, when they proceeded to the insolent extremities we are now to relate. On the day of the king's coronation the chief nobles and clergy were bidden to a feast, where they sate long caronsing, deep in their cups, which they were too much accustomed to do.\* The stomach of the youthful king may have been incapable of such potations, his taste may have been revolted by such coarse excesses; he was still passionately enamoured of his beautiful bride, and, stealing from the banqueting hall, he withdrew with her and her mother to an inner apartment of the palace. His absence was remarked by Odo, the Archbishop of Canterbury, a Dane by birth, + a harsh, ambitious man, who may be more than suspected of having played false with Edwy's father, King Edmund, when engaged in the Northumbrian troubles, and obliged to renounce half the island to Anlaf. Odo was probably exposes to serve. For ourselves, who are perfectly asperated himself, and perceiving that the company were displeased at the king's leaving them, he ordered some persons to go and bring him back to partake of the general convivality. The individuals addressed seem to have declined the office from motives of respect and decency, but Dunstan, the friend of Odo, feeling no such scruples, rushed to the inner apartment, dragged the young king from the side of his wife, and thrust Inni back into the banqueting-hall by main force, Such an outrage,—such a humiliation in the face of his assembled subjects, - must have passed Edwy's endurance. Nor was this all the wrong. While in the chamber Dimstan addressed the queen and her mother in the most brutal language. and threatened the latter with infamy and the gallows. The king had a ready rod wherewith to scourge the monk. Dunstan, among other offices, filled that of treasurer to Edred, the preceding sovereign, and Edwy had all along suspected him of having been guilty of peculation in his charge. If Edwy had ever whispered these suspicions,and from his youth, imprudence, and hastmess of temper, he had probably done so often,—this alone would account for Dunstan's ire. "However this may be, the fiery Abbot of Glastonbury, who returned from the festival to his abbey, was now questioned touching the moneys: his property was sequestered, his court places were taken from him, the monks who professed cembacy were driven out, and his monastery was given to the secular elergy, who still insisted on having wives like other men; "Quibus Angli nimis sunt assueti," Wallingford. + He was the son of one of the chieftanis who had invaded ling-

slight infringement of church-law in the marriage

HISTORY OF ENGLAND.

Dunstan. He fled for the monastery of St. Peter's m Ghent, but was scarcely three miles from the shore, on his way to Flanders, when messengers

reached it,-despatched by Edwy or his motherin-law, -- and who, it is said, had orders to put out his eyes if they caught him in this country. Before this extreme rupture Exlwy had probably meddled with the then stormy politics of the church, or betrayed an inclination to favour the secular clergy in opposition to the monks; and this

again would, and of itself, suffice to account for Dunstan's ontrageous behaviour at the coronation feast. After Dimistan's thight the king certainly made lumself the protector of the "" married clerks;" for, expelling those who professed celibacy, he put the others in possession, not only of Glastonbury and Malmsbury, but of several other abbeys, which he thus made (to speak the language of Dinistan's adherents and successors) "styes for canous." In so doing Edwy, fatally for limiself, espoused the weaker party, and still further exasperated Odo, the Archbishop of Canterbury, who entertained the same views in state matters and church discipline as his friend Dunstan.

The disputes of these churchmen of the tenth century, together with the extraordmary character of Dunstan, will be noticed more at length in the Chapter of Religious History. Here we have only indicated a few features to render intelligible the story, to the tragical conclusion of which we must now hasten. Shortly after the departure of Dinistan, a general rising of the people, instigated by Odo, took place in Northumbria (the reader will bear in mind that the Archbishop was a Dane), and a corresponding movement following under the same influence or holy sanction in Mercia, it was determined to set one brother in hostile array against the other; and, in brief time, Edgar was declared independent sovereign of the whole of the island north of the Thames! stan then returned in triumph from his brief exile, which had scarcely lasted a year. But while these events were in progress, and before they were completed, the young soul of Edwy was racked by an anguish more acute than any that could be caused by the loss of territory and empire. Some knights and aimed retainers of the implacable Archbishop tore his beautiful wife Elgiva from one of his residences, branded her in the face with a red-hot iron to destroy her beauty, and then lunried her to the coast, whence she was transported to heland, probably as a slave. Her

may be, the deed was undemably done by the adherents of those churchmen (for the Mercians were armed in then quarrel), and praised as an act of inflexible virtue by their encomasts. The palliation set up by a recent historian, who cannot deny the fact of the hamstringing, that such a mode of pumsliment, "though cried, was not unusual in that age," leaves the question of justice and law untouched, and seems to us to be conceived in the spirit of an inquisitor of the worst ages. Edwy did not long survive his wife; he died in the f llowing year (958), when he could not have been more than eighteen or inneteen years old. His death is generally attributed to gricf and a broken heart, but it is just as probable that he was assassmated by his enemics.\* From the coincliness of his person, he was generally called Edwy the Fair.

Libear (958-9), his brother, who had been put

forward against him in his life-time, now suc-

ceeded to all his dignities. As a boy of fifteen, he

could exercise little authority; he was long a

passive instrument in the hands of Dunstan and

his party, who used their power in establishing

their cause, in enforcing the celibacy of the clergy,

and in driving out, by main force, from all abbeys,

monasteries, cathedrals, churches, and chantries,

all such married clergymen as would not separate

from their wives. At the same time, it cannot be

denied that Dunstan and the monks ruled the

but all the early accounts agree in stating that she

was there barbarously mangled and hamstrung,

and expired a few days after in great tortine. The

generally received statement is, that the perpetra-

tors of this atrocious deed were armed retainers of

the Archbishop Odo: others, however, are of

opinion that the young queen fell into the hands of

the Mercians, who were in insurrection against her

husband, and that in neither case was the execution

ordered either by Odo or Dinistan. However this

BOOK II.

knigdom with vigour and success, and consolilated the detached states into compacter integrity and union than had ever been known before. Several causes favoured this process, others, Edgar, who had been brought up among the Danes of East Anglia and Northumbria, was endeared to that people, who, in consequence, allowed him to weaken their states by dividing them into several separate carldons or governments, and to make other innovations, which they would have resented under any of his predecessors with arms in their hands. The fleet was also wisely increased to the number of 360 sail; and these ships were so well disposed, and powerful melancholy fate, her high birth, gracefulness, and squadrons kept so constantly in motion, that the youth (for slic seems to have been now not more sea-kings were kept in check on their own elethan sixteen or seventeen years old), probably ment, and prevented from landing and troubling gained her friends among a kind-hearted people. the country. violent or flagitions manner.

anthentic cases, in an early part of his reign, during

the life of his first wife, he carried off from the mo-

nastery of Wilton a beautiful young lady of noble

birth, named Wulfreda, who was either a professed

nun, or receiving her education under the sacred

covering of the yed. It has been said that Dunstan

Peaceable, or Pacific; for, luckily, during his whole reign, his kingdom was not troubled by a single war. He commuted a tribute he received from a part of the whole of Wales, into 300 wolves' heads annually, in order to extirpate those ravenous ammals; and, according to William of Malmsbury, this tribute ceased in the fourth year, for want of wolves to kill. The emrency had been so dimmished in weight by the fraudulent practice of chipping, that the actual value was far inferior to the nominal. He therefore reformed the comage, and had new coms assued all over the kingdom. Though Edgar was now in mature manhood, there is pretty good evidence to show that these measures, with others, generally of a beneficial nature, were suggested and cartied into effect by Dunstan, who, most indubitably, had his full share in the next operations which are mentioned with especial laud and trimmph by the monkish writers. He made married priests so scarce or so turnd, that their faces were nowhere to be seen; and he founded or restored no fewer than fifty monasteries which were all subjected to the rigid rules of the Benedictine order. It is curious that the monks, who had a debt of gratifule to pay, and who, in their summary of his whole cha-

here interfered with a conrage which absolves hom from the charge of reserving los reproves for those who stood like the unfortunate Edwy in the position of enemies. But what was the amount of his interference in this extreme case, where the sametity of the cloister itself was violated? denned the king to lay aside an empty, inconvement banble - not to wear lus crown on his head for seven years,—and to a penance of fasting, which was probably in good part performed by deputy. This was not the measure of punishment that was meted out to Edwy; and, for all that we can learn to the contrary, Edgar was allowed to retain Wulfreda as his mistress! On another occasion, when the guest of one of his nobles at Andover, he ordered that the fair and honourable daughter of his host should be sent to his bed. The young lady's mother actfully substituted a handsome slave, or servant; and this menial was added to his barem, or taken to court, where, according to William of Malmsbury, she enjoyed his exceeding great fayour until he became enamoured of Elfrida, his second lauful wite Romantic as are its incidents, the story of his marriage with the execrable Elfrida rests on about as good authority as we can find for any of the events of the time. The fame of this young lady's beanty reached the ears of Edgar, ever hungiv of such reports. To ascertam whether her charms were not exaggerated, the royal voluptuary despatched Athelwold, las favourite commer, to the distant castle of her father, Ordgar, carl of Devonsbure, with whom Athelwold became hunself enashe resided. moured of the beauty, wedded her, and then represented her to the king as being rich, indeed,

but not otherwise commendable. Edgar suspected, or was told, the real truth. He insisted on paying her a visit. The inducky husband was allowed to precede him, that he might put his house in order; but he failed in his real object, which was to obtain his wife's forgiveness for having stepped between her and a throne, and to induce her to disguise or conceal the brilliancy of her charms by boniely attire and rustic demeanour. The visit was made; the king was captivated, as she mtended he should be. Soon after Athelwold was formed murdered in a wood, and Edgar married his racter, indeed, uphold Edgar as a godly, virtuous widow. This union, begun in crime, led to the prince, should have recorded actions which prove ford murder of Edgar's eldest son; and under the him to have been one of the most viciously profligate imbecile Ethelred, the only son be had by Elfrada, of the Saxon kings. The court of this promoter of the glory of the house of Altred was eclipsed for celibacy and chastity swarmed at all times with conever. He himself did not survive the manage "Nothing," says Mr Turner, "can more strongly display Edgat's vanux than the pompous and boasting titles which he assumes in his charters. ficent by vast outlays of money and donations of once

land. EDWARD, commonly called the Martyr, who succeeded A.D. 975, was Edgar's son by his first marriage. Like all the kings since Athelstane, he was a mere boy at his accession, being not more than fourteen or fifteen years old. His rights were disputed, in favour of her own son, Ethelred, who was only six years old, by the ambitious and remorseless Elfrida, who boldly maintained that Edward, though the elder brother, and named king in his father's will, was excluded by the illegitimacy of his birth. The legitimacy of several of the Saxon princes who had worn the crown was more than doubtful; but in the case of Edward the challenge seems to have been unfounded. The cause of Edward and his half-brother was decided on far different grounds. As soon as Edgar was dead the church war was renewed, and Dunstan, after a long and unopposed triumph, was compelled

once more to descend to the arena with his old opponents the "married clerks," or secular clergy, who again showed themselves in force in many parts of the kingdom, and claimed the abbeys and churches of which they had been dispossessed. The nobles and the governors of provinces chose different sides. Affere, the powerful colderman of Mercia, declared for the secular clergy, and drove the monks from every part of his extensive dominions: Alwyn of East Anglia, on the contrary, stood by Dunstan and the monks, and chased the Elfrida, no doubt because Dunstan and his friends had got possession of Edward, gave the weight of her son Ethelred's name and herself to the party of Alfere and the seculars, which soon proved again to be the weaker of the two factions. Ilad it been the stronger, Ethelred would have been crowned; as it turned out, Dunstan was enabled to place Edward upon the throne. But the animosities of two religious parties were not to

be reconciled by the decisions of national or church councils, by disputations, or even by miracles; nor was the ambition of the perfidious Elfrida to be cured by a single reverse.

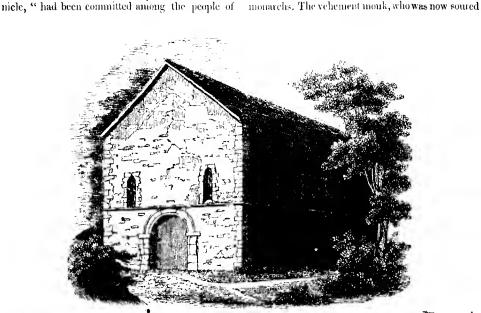

She continned her intrigues with the secular party; she united herself more closely than ever with Alfere, the colderman of Mercia; and soon saw herself at the head of a powerful confederacy of nobles, who were resolved her son should reign, and Dunstan he deprived of that immense power he had so long But not even this resolution would prepare us for the horrible catastrophe that followed. About three years after his accession, as Edward was hunting one day in Dorsetshire, he quitted his company and attendants to visit his half-brother, Ethelred, who was living with his mother, hard by, in Corfe Castle. Elfrida came forth with her son to meet him at the outer gate: she bade him welcome with a smiling face, and invited him to dismount; but the young king, with thanks, dechied, fearing he should be missed by his company, and craved only a cup of wine, which he might drink in his saddle to her and his brother, and so

The wine was brought, and as Edward was carrying the cup to his his one of Elfrida's attendants stabbed him in the back. The wounded king put spurs to his horse, but soon fainting from loss of blood, he fell out of the saddle, and was dragged by one foot in the stirrup through woods, and rugged ways until he was dead. His but teo negligent companions in the chase traced him by his blood, and at last found his disfigured corpse, which they hurned, and then buried the ashes of it at Warcham without any pomp or regal ceremonics.

" No worse deed than this," says the Saxon chro-

the Angles since they first came to the land of Britain." It is believed that Alfere, the colderman of

Mercia, with other nobles opposed to Dunstan and the monks, was engaged with the queen-downger in a plot to assassinate Edward, but that Elfrida impatiently seizing an unlooked-for opportunity, took the bloody execution instantly and wholly upon The boy ETHELRED, who was not ten years old, had no part in the guilt which gave him a crown, though that crown certainly sate upon him like a curse. It is related of him that he dearly loved his half-brother Edward, and wept his death, for which his virago mother, seizing a large torch at hand, beat him with it until he was almost dead himself. Such, however, was the popular odnum that fell both on son and mother, that an attempt was made to exclude him from the throne by substituting Edgitha, Edgar's natural daughter by the lady he had stolen from the numbery of Wilton. This Edgitha was berself at the time a professed mm in the same monastery from which her mother had been torn; and it is said that nothing but her timidity, and the dread inspired by her brother Edward's murder, and her firm refusal to exchange the tranquillity of the cell for the dangers of the throne, prevented Dunstan from causing her to be proclaimed Queen of all England. There was no other prince of the blood royal,—no other pretender to set up,—so the prelates and thanes, with no small repugnance, were compelled to bestow the crown on the son of the munderess; and Dunstan, as primate, at the festival of Easter (A.D. 979), put it on his weak head in the old chapel of Kingston, at this time the usual crowning place of the Saxon

St. Mary's Charge at Kingston, in which Kings Edred. Edward the Martyr, and Ethelred are stated to have been crowned, as it appeared about fitty years since, before its destruction by the falling of the church wall, against which it was built.

ing and endowing monasteries.

to have given public vent to a prophecy of woe and misery, which some think was well calculated

HISTORY OF ENGLAND.

both a secrand e saint, and the words, he dropped could hardly fail of being treasured in the memory of the people, and of depressing their spirits at the approach of danger. Ethelred, moreover, began his reign with an anthocky mckname, which it is believed was given him by Dimstan,-- he was called "the Unready." His personal and moral qualities were not calculated to overcome a had prestige, and the impopular circumstances attending his succession: in him the people lost their warm affection for the blood of Alfred, and by degree. many of them contemplated with indifference, if not with pleasure, the transfer of the crown to a prince of Danish race. This latter feeling more than half explains the events of his reign. During the first part of the minority the infamous Elfrida enjoyed great authority, but, as the king advanced in years, her influence declined, and followed by the executions of nobles and people (even by those

by age, and exasperated at the temporary triumph of his enemies, is said to have pronounced a malediction

on Ethelred, even in the act of crowning him, and

council, nor spirit in the people, these extraneous circumstances had changed, and instead of checking, they threw the men of the North on our shores. Swevn, a son of the king of Denmark, had quarrelled with his father, and been banished from his home. Young, brave, and enterprising, he soon collected a host of mariners and adventurers round his standard, with whom he resolved to obtain wealth, if not a home, in our island. first operations were on a small scale, intended, merely to try the state of defence of the island, and were probably not sonducted by himself. In the third year of Ethelred's reign (A.D. 981) the Danish raven was seen floating in Southampton

the west, as far as the extremity of Cornwall. These operations were continued for some years, during which Ethelred seems to have been much occupied by quarrels with his bishops and nobles. Alfere, the Mercian, who had conspired with

ants carried into slavery. In the course of a few

months Chester and London partook of the fate of Southampton, and attacks were multiplied on dif-

ferent points, -in the north, in the south, and in

[Book II.

Elfrida against Edward the Martyr, was dead, and his extensive carldom had fallen to his son Alfric, --- a notorious name in these annals. In consequence of a conspiracy, real or alleged, this Alfric was banished. The weak king was soon obliged to recall hum, but the revengeful nobleman never forgot the past. In the year 991 a more formulable host of the sea-kings rayaged all that part of East Anglia that lay between 1p-wich and Maldon, and won a great battle, in which Earl Brithnoth, a Dane by descent, but a Christian, and a friend to

the established government was slaun. Ethelied, then, for the first time, had recourse to the fatal expedient of purchasing their forbearance with money. Ten thousand pounds of silver were paid down, and the sea-kings departed for a while, carrying with them the head of Earl Britlingth as a of her own party), she at last retired to expirate her trophy. In the course of the following year the sms, according to the fashion of the times, in buildwitenagemot adopted a wiser plan of defence. A formidable fleet was collected at London, and well Although the Northmen settled in the Danchigh manned and supplied with arms. But this wise measure was defeated by Alfric the Mercan, who, had so frequently troubled the peace of the kingdom, and had probably at no period renonneed the in his batred to the king, had of ened a correspondhope of gaining an ascendancy over the Saxons once with the Danes, and being entricted with a of the island, and placing a king of their own proncipal command in the fleet, he went over to race on the throne of England, the Danes bethem on the eye of a battle with many of his ships, yond sea had certainly made no formidable The trador of course escaped, and Ethelred wreaked attacks since the time of Althelstane, and of late his savage vengenice on Ellear, the son of Alfric, whose eyes he put out. In 993 a Danish host years had scarcely been heard of. This suspension of hostility on their part is not to be attributed landed in the north, and took Bamborough Castle solely to the wisdom and valour of the intermediate. by storm. Three chiefs of Danish origin, who had Saxon kings. There were great political causes been appointed to command the natives, threw connected with the histories of Norway and Dendown the standard of Ethelied, and ranged themmark, and France and Normandy, and circumselves under the raven. All through Northumbria and the rest of the Danclagh the Danish settlers stances which, by giving the Danes employment and settlement in other countries, kept them away gradually either joined their still Pagan brethren from England. But now, when unfortunately there from the Baltic, or offered them no resistance. In was neither wisdom or valour in the king and the mean time the fortunes of Sweyn the exile had undergone a change. By the murder of his father he had ascended the throne of Denmark, and, formidable himself, he had gained a powerful ally in Olave, king of Norway, a prince of the true Scan-

former times, had often pillaged the coast of England. In 994 the two north kings ravaged all the southern provinces of our island, doing "unspeakable harm," and meeting nowhere with a valid resistance. It was again agreed to treat, and buy them off with money. Their pretensions of course rose, and this time sixteen thousand pounds of silver were exacted and paid. By a clause in the treaty Olave and seme chiefs were bound to cmbrace the Christian religion. Sweyn had been water, and that city was plundered, and its inhabitbaptized already more than once, and had relapsed

dinavian race, -a son of an old pirate who, in

by which we are to understand that the marauder had submitted to what he considered an idle ceremony whenever it suited his convenience. Olave, the Norwegian king, however, stood at the fount with a better spirit; his conversion was sincere; and an oath he there took, never again to molest the English, was honourably kept. During the four following years the Danes continued their desultory invasious; and when (in 998) Ethelred bad got ready a strong fleet and army to oppose them, some of his own officers gave the plunderers timely warning, and they retreated unburt. On their next returning in force (A.D. 1001), Ethelred seems to have had neither fleet nor army in a condition to meet them; for, after two conflicts by land, they were allowed to ravage the whole kingdom from the Isle of Wight to the Bristol Channel, and then they were stayed not by steel, but by gold. Their price, of course, still rose: this time twenty-four thousand pounds were paid to purchase their departure. These large sums were raised by direct taxation upon land; and the "Dane-geld," as it was called, was an oppressive and most lumiliating bonden that became permanent. Nor was this all. The treaties of peace or truce generally allowed bands of the maranders to winter in the island at Southumpton or some other town; and during their stay the English people, whom they had phundered and beggared, were obliged to feed them. Their appetites had not decreased since the days of Gutbrun and Hasting. As if the Dancs were not enemies enough, Ethelied had engaged in hostilities with Richard H., Dake of Normandy, and had even, at one time, prepared an armament to myade his dominious, The quarrel was made up by the mediation of the Pope; and then the English king, who was a widower, thought of strengthening his lands by marrying Emma, the Dike of Normandy's sister. The alliance, which laid the first grounds for the pretext of Norman claims on England, afterwards pressed by William the Conqueror, was readily accepted by the Duke Richard, and in the spring of 1002 Emma, "the Flower of Normandy," as she was styled, arrived at the court of Ethelred, where she was received with great pomp. The long rejoicings for this marriage were

to idolatry. One of the chiefs boasted that he had

been washed twenty times in the water of baptism;

scarcely over when a memorable atrocity suddenly covered the land with blood and horror. This was the sudden massacre of the Danes, perpetrated by the people with whom they were hving intermixed as fellow-subjects. It is imiversally asserted that the plot was land before and,—the fatal order given by the king himself; and there is little in Ethelred's general conduct and character to awaken a doubt in his favour. At the same time, be it observed, the people must have been as guilty, as secret, as treacherous, as cruel, as the king; and must have entered fully into the spirit which dictated the

bloody order of which they were to be the execu-

tioners. Such being the case, we think they were

VOL. I.

vengeance that signalise a nation's despair, are nearly parallel in their circumstances; and in England, as afterwards in Sicily, it was the insults offered by the invaders to their women that extinguished the last sentiments of humanity in the hearts of the people. The outrages of the Danish pagans were extreme. According to the old chromelers, they made the English veomanry, among whom they were settled, perform the most memial offices for them; they held their houses as their own, and, cating and drinking of the best, scantly left the real proprictor his fill of the worst: the peasantry were so sorely oppressed that, out of fear and dread, they called them, in every house where they had rule, "Lord Danes." Their wives and daughters were everywhere a prey to their list, and when the English made resistance or remonstrance, they were killed or beaten, and laughed at. All this description seems to point at soldiers and adventurers, and men recently settled in the land, and not to the converted married Danes, who had been living a long time in different parts of the country (as well as in the Danclagh, where they were too numerous to be touched), who had contracted quiet, orderly habits, and successfully cultivated the friendship of the English. It was resolved, however, to destroy them all at one blow, -- the good with the bad, -- the innocent infant at the breast with the hardened inflian,—the neighborn of years with the introder of yesterday.  ${f As}$ the story is told, Etherred sent secretly to all his good burghs, cities, and towns, charging the rulers thereof to rise, all on a fixed day and hour, and, by falling suddenly on the Danes, exterminate them from the land by sword and fire. By whatever means this simultaneous movement was arranged, it certainly took place. On the 13th of November 1002, (the holy festival of St. Brice,) the Danes, dispersed through a great part of England, were attacked by surprise, and massacred without distinction of quality, age, or sex, by their hosts and neighbours. Gunhilda, the sister of Sweyn, king of Denmark, who had embraced Christianity and married an English earl of Danish descent, after being made to witness the execution of her hasband and child, was barbarously murdered herself.

and that, from the loose, unguarded manner in

which the Danes lived scattered among them, such

a mode of disposing of them would naturally sug-

gest itself to a very imperfectly civilized people,

maddened by the harsh treatment and insults of

their invaders. In the simultaneous massacre of

the French invaders all over Sicily in 1282 the

Same mystery was observed; but it is still a matter of doubt whether the "Sicilian vespers" were

ordered by John of Proceda or spring spon-

taneously from the people. These two cases, which

belong alike to the class of the terrible acts of

This tale of horror was soon wafted across the ocean, where Sweyn prepared for a deadly revenge. He assembled a flect more numerous than any that had hitherto invaded England. The Danish war-2 K

riors considered the cause a national and sacred one; and in the assembled host there was not a slave, or an emancipated slave, or a single old man, but every combatant was a free man, the son of a free man, and in the prime of life.\*

178

These choice warriors embarked in lofty ships, every one of which bore the ensign or standard of its separate commander. Some carried at their prow such figures as lions, bulls, dolphins, dragons, or armed men, all made of metal and gaily gilded; others carried on their topmast-head the figures of large birds, as eagles and ravens, that stretched out

HISTORY OF ENGLAND.

embroidered banners were profusely displayed, and the whole wealth of the pirates of the Baltic was made to contribute to this barbaric point. ship that bore the royal standard of Sweyn was moulded in the form of an enormous serpent, the sharp, head of which formed the prow, while the lengthening tail coiled over the poop. It was called "The Great Dragon." The first place where the avengers landed was near Exeter, and that important city was presently surrendered to them through the treachery of Ethelred's governor, a Norman nobleman, and one of the train of favourates and dependants that had followed Queen Emma.

After plundering and dismanthing Exeter, the Danes marched through the country auto Wiltshire, committing every excess that a thirst for vengeance and rapine could suggest. In all the towns and villages through which they passed, after gaily eating the repasts the Saxons were forced to prepare for them, they slew their hosts, and, departing, set fire to their houses.† At last an Anglo-Saxon army was brought up to oppose their destructive progress; but this force was commanded by another traitor,—by Alfric the Mercian,—who had already betrayed Ethelred, and whose son, in consequence, had been barbarously blinded by the king. We are not informed by what means he had been restored to favour and employment after such extreme measures; but Alfric now took the opportunity offered him for further revenge on the king. He pretended to be seized with a sudden illness, called off his men when they were about to join lattle, and permitted Sweyn to retire with his army and his immense booty through Salisbury to the sea-coast. In the following year Norwich was taken, plundered and burnt, and the same fate befell nearly every town in Norfolk, Suffalk, Cambridgeshire, Huntingdonshire, and Lincolushire. The Danes then (a.n. 1004) returned to the Baltic, retreating from a famine which their devastations had caused in England. By marrying the Norman princess Emma, Ethelred had hoped to secure the assistance of her brother, Duke Richard, against the Danes; but it was

\* Sax. Chron.

the ships were painted with different bright colours,

and, larboard and starboard, from stem to stern,

shields of burnished steel were suspended in even

their wings and turned with the wind: the sides of mandy, and this force, after effecting a landing near Contances, was thoroughly defeated. We are inchied to believe that the expedition was less important than the Norman chronicles represent it, but it shows the impolicy of the Saxon king, and lines, and glittered in the sun. Gold, silver, and had, no doubt, some effect in weakening an already weak and dispirited nation. In 1006 Sweyn, whose vengeance and rapacity were not yet satisfied, returned, and earried fire and sword over a great part of the kingdom; and when

soon found that the only Normans who crossed the

Channel were a set of intrigning, ambitious cour-

tiers, hungry for English places and honours; and by his inconstancy and neglect of his wife, Ethel-

red so irritated that princess that she made bitter

complaints to her brother, and caused a fresh quarrel between England and Normandy. Duke

Richard seized all the native English who chanced

to be in his dominions, and, after shamefully killing some, threw the rest into prison. According to

Walsingham, and some of the old Norman writers,

Ethelred then actually sent a force to invade Nor-

[Book II.

with gold, 36,000*l*, was the sum demanded. The frequent raising of these large sims utterly exhausted the people, whose doors were almost constantly beset either by the king's tax-gatherers or the Danish marauders. Those few who had, as yet, the good fortune of escaping the pullage of the Danes, could not now escape the exactions of Ethelred, and, under one form or another, they were sure of being plundered of all they possessed. By an insolent and cruel mockery the royal taxgatherers were accustomed to demand an additional sum from those who had paid money to the Danes directly, in order to save their persons and their houses from destruction, affecting to consider such transactions with the enemy as illegal.

In 1008 the people were oppressed with a new

it was resolved in the great council to buy hum off

burden; but had this been properly apportioned, had the country been less exhausted, and had the measure for which the money was to be applied been carried vigorously and honestly into effect, it seems as if it ought to have saved England from the Danes. Every 310 hides of land were charged with the building and equipping of one ship for the defence of the kingdom; and in addition to this, every nme hides of land were bound to provide one man, armed with a helmet and iron breastplate. It is calculated that, if all the land which still nominally belonged to Ethelred had supplied its proper contingent, more than 800 ships, and about 35,000 armed men, would have been provided. The force actually raised is not stated, but, in spite of the exhaustion of the comptry, it appears to have been large; some of the old writers stating, particularly as to the marine, that there never were so many ships got together in England before. This fleet, however, was soon rendered valueless by dissentions and treachery at home. Ethelred, who had

always a favourite of some kind, was now governed by Edric, a man of low birth, but elo-

quent, clever, and ambitious. He obtained in

"Gold, bishop! give us

gold! gold!'' was their cry, as they gathered about

him in menacing attitudes. Still unmoved, he

looked round that circle of fierce men, who pre-

sently broke up in rage and disorder, and running

of Archbishop Alphege.\*

Brihtrie, the brother of this powerful favourite, conspired against Earl Wulfnoth. Wulfnoth fled, and carried twenty of the new ships with

him, with which he plundered all the southern coast of England, even as if he had been a Danish Eighty other ships were placed under the command of Brilitric, who pursued the man be had sought to run. A storm arose; these eighty vessels were wrecked on the coast, where Wulfnoth succeeded in burning them all; and then the rest of the king's fleet appear to have dispersed in anarchy and confusion. This story, like so many others of the period, is imperfectly told; but the annalists agree in stating that the new navy was dissipated or lost; and that thus perished the last As soon as the intelligence of this disaster reached the mouth of the Baltic a large army of Danes, called, from their leader, "Thurkill's host," set sail for England, where, during the

three following years, they committed incalculable mischief, and, by the end of that period, had made themselves masters of a large part They now and then sold of the kingdom. short and uncertain truces to the Saxons, but they never evenced an intention of leaving the island, as Sweyn had left it on former occasions, when well loaded with gold. As Ethelred's difficulties increased he was surrounded more and more by the basest treachery, and he seems, at last, not to have had a single officer on whom he could depend. During this lamentable period of baseness and cowardice a noble instance of courage and firmness occurred in the person of a churchman. Alphege, Archbishop of Canterbury, defended that city for twenty days, and when a traitor opened its gate to the Danes, and he was made prisoner and loaded with chams, he refused to purchase liberty and life with gold, which he knew must be wrung from the people. Tired out by his resistance, they

hope of England.

thought to overcome it by lowering the rate of his ransom; and they proposed to take a small sum from him, if he would engage to advise the king to pay them a further amount as a largess. "I do not possess so much money as you demand from me," replied the Saxon archbishop, "and I will not ask or take money from any body, nor will l advise my king against the honour of my country." He continued immovable in this resolution, even refusing the means of ransom voluntarily offered by his hrother, saying, it would be treason in him to enrich, in any degree, the enemies of England. The Danes, more covetous of money than desirons of his blood, frequently renewed their demands. "You press me in vain," said Alphege; "I am not the man to provide Christian flesh for Pagan teeth, by robbing my poor countrymen to enrich their enemies." The Danes, at length, lost patience, and one day, when they were assembled at a drunken banquet, they eaused him to be dragged

Thinkill took the oaths of peace, and became, with many of his chiefs, and a large detachment of his host, the ally and soldier of the weak Saxon monarch. It is probable that Earl Thurkill entered the service of Ethelred for the purpose of betraying him, and acted all along in concert with Sweyn; but the Danish king affected to consider the compact as treason to himself, and, with a show of jealonsy towards Thurkill, prepared a fresh expedition, which he gave out was equally directed against Ethelred and his vassal Thurkill. The

fact, at all events was, that Sweyn, who had so

often swept the land from east to west, from north

to south, had now resolved to attempt the perma-

neut conquest of our island. He sailed up the

Humber with a numerous and splendid fleet, and

landed as near as he could to the city of York.

As the Danes advanced into the country, they

stuck their lances into the soil, or threw them into the current of the rivers, in sign of their entire domination over England. They marched, escorted by fire and sword, their ordinary satellites. \to Nearly all the inhabitants of the Danclagh joined them at once: the men of Northumbria, Lindesey, and the " Five Burghs," welcomed the banner of Sweyn, and finally all the "Host" north of Watling-street took up arms in his favour. Leven the provinces in the centre of England, where the Danish settlers or troops were far less numerous, prepared [themselves for a quiet surrender. Leaving his fleet to the care of his son Canute, Sweyn conducted the main body of his army to the south, exacting horses and provisions as he marched rapidly along. ford, Winchester, and other important towns threw open their gates at his appreach; but he was obliged to retire from before the walls of London and the determined valour of its citizens, among whom the king had taken refuge. Sweyn then turned to the west, where he was received with The colderman of Devoushire and nearly every other thane in that part of the king-

dom repaired to his head-quarters at Bath, and did

homage to him as their lawful or chosen sovereign. Seeing the whole kingdom falling from him, Ethel-

sieged by Canute and all his host, and fighting five pitched battles with unvarying valour, but with various success, Ironside proposed that he and his rival should decide their claims in a single combat, saying " it was pity so many lives should be lost and perilled for their ambition.24 Camite declined the duel, saying, that he, as a man of slender make, would stand no chauce with the stalwart Edmand; and he added, that it would be

Book II.

This unready king then fled to the Isle of Wight, whence he secretly sent his children with Emnia, his Norman wife, to the court of her brother at Rouen. He was for some short time doubtful where he should lay his own head; for, after the hostilities and irrsults which had passed between them, he reasonably doubted the good-will of his brother-in-law. The Duke of Normandy, however, not only received Emma and ber children with great kindness, but offered a safe and honourable asylmin to Ethelred, which that linckless prince was fam to accept as his only resource. Sweyn was now (about the middle of January,

1013) acknowledged as "Full King of England;"

but the power which had been obtained with so

much labour, and at the expense of so much blood-

general example, and submitted to the Danes.

shed and wretchedness, remained to the conqueror a very short time. He died soddenly at Gamsborough; and, only six weeks after the time when he had been allowed to depart for Normandy, " abandoned, deserted, and betrayed" by all, Ethelred was invited by the Saxon nobles and prelates to return and take possession of his kingdom, which was pledged to his defence and support provided only that he would govern them better than he had done before. Ethelred, before venturing himself, sent over his son Edward, with solemn promises and assurances. Pledges were exchanged for the faithful performance of the new compact between king and people. A sentence of perpetual ontlawry was pronounced against every king of Danish name and race; and, before the end of Lent, Ethelred was restored to those donnnions which he had already misgoverned thirtyfive years. In the mean time, the Danish army in England had proclaimed Camte, the son of Sweyn, as king of the whole land; and in the northern provinces they and their adherents were in a condition to maintain the election they lad made. deed, north of Watling-street, the Daues were all

powerful; and Canute, though beset by some diffi-

cultics, was not of a character to relinquish his hold

of the kingdom without a hard struggle. A san-

guinary warfare was renewed, and, murdering and

bribing, hetraying and betraved, Ethelred was fast

losing ground when he died of disease, about three

years after his return from Normandy.

The law of succession continued as loose as ever; and, in seasons of extreme difficulty like the present, when so much depended on the personal character and valour of the sovereign, it was altogether neglected or despised. Setting aside Ethelred's legitimate children, the Saxons chose for their king a natural son, Edmund, surnamed Ironside, who had already given many proofs of courage in the field and wisdom in the council. general consent, indeed, EDMUND was a hero; but the country was too much worn out and divided, and the treasges that had torn his father's court and camp were too prevalent in his own to permit of his restoring Saxon independence throughout the kingwiser and better for them, both to divide England between them, even us their forefathers had done m other times. This proposal is said to have been received with enthusiastic joy by both armies, and, however the negotiation may have been conducted, and whatever was the precise line of demarcation scitled between them, it was certainly agreed that Canute should reign over the north, and Edimund Ironside over the south, with a nominal superiority over the Dane's portion. The brave Edmund did not survive the freaty more than two months. His death, which took place on the feast of St Andrew, was sudden and mysterious. As Canute profited so much by it, as to become sole monarch of England immediately after, it is generally believed be planned his assassination; but, judging from the old chroniclers who lived at or near the time, it is not clear who were the contrivers and actual perpetrators of the deed, or whether he was killed at all. There is even a doubt as to the place of his death, whether it was London or Oxford. SILVER COIN OF CANUTE, -From a Specimen in the British Museum. CANUTE. A.D. 1017. Although the death of prostrate before the Danes, Canute began with a show of law and moderation. A great council of the bishops, "duces," and "optimates," was con-

Edmund removed all obstacles, and the south lay vened at London; and before them Canute appealed to those Saxons who had been witnesses to the convention and treaty of partition between limiself and Edmund, and called upon them to state the terms upon which the compact was concluded. Intimidated by force, or won by promises, and the hopes of conciliating the favour of the powerfu survivor, who seemed certain to be king, with or without their consent, they all loudly testified that Edmund had never intended to reserve any right of succession to his brothers, the sons of Ethelred. who were absent in Normandy, and that it was his (Edmund's) express wish that Camite should be the guardian of his own children during their The most imperfect and faint remblance of a right being that established, the Saxon chiefs took an oath of fidelity to Canute, as king of all \* Malmsb.

and benevolent, and clasped their hands with his naked hand, in sign of sincerity. A full amnesty was promised; but the promise had searcely passed the royal lips ere Canute began to proscribe those whom he had promised to love. The principal of the Saxon chiefs who had formerly opposed him, and the relations of Edmund and Ethelred, were banished or put to death. "He who brings me the head of one of my enemies," said the ferocious Dane, "shall be dearer to me than a brother." The witenagemot, or parliament, which had so recently passed the same sentence against the Damsh princes, now excluded all the descendants of Ethelied from the throne. They declared Edwy, a grown up brother of Ironside, an outlaw, and when he was pursued and murdered by Canute, they tacitly acknowledged the justice of that execu-

This Edwy bore the curions title of "King of the Churls, or Peasants," concerning the proper meaning of which there have been some disputes. We incline to the opinion of a recent writer—that this designation did not imply a real dignity, and that it may be conjectned to have been merely a name given to Edwy on account of his popularity among the peasants.\* Such a popularity in the Saxon prince would naturally excite the jealousy of the Danes, who, however, sought the destruction of all the race. Edmind and Edward, the two infant sons of the deceased king, Edmind Tronside, were serzed, and a feeling of shame, mingled perhaps with some fear of the popular odium, preventing him from imirdering them in England, Cannite sent them over sea to his ally and vassal, the king of Sweden, whom he requested to dispose of them in such a manner as should remove his mneasmess on their account. He meant that they should be numbered; but the Swedish king, moved by the innocence of the little children, instead of executing the horrid commission, sent them to the distant court of the king of Hungary, where they were affectionately and honourably entertained, beyond the reach of Camite. Of these two orphius Edmund died without issue, but Edward married a daughter of the German emperor, by whom he became father to Edgar Atheling, Christina, and Edgar will be frequently mentioned in our subsequent pages. Margaret became the wife of Malcolm, King of Scotland, and through her the rights of the line of Alfred and Cerdic were transmitted to Malcolm's progeny, after the Norman conquest of England. There were still two princes whose claims to the crown might some day disquiet Cannite, but they were out of his reach in Normandy. These were Edward and Alfred, the sons of King Ethelred, by Emma. Their uncle Richard, the Norman duke, at first sent an embassy to the Dane, demanding, on their behalf, the restitution of the kingdom; but though his power was great, he adopted no measures likely to induce Canute to a surrender or partition of the territories he was \* Palgrave, Hist, ch. xiii. We hear of no "King of the Churls" either before or after Edwy. It certainly looks like a nickname.

the widowed "Flower of Normandy;" and the heartless Emma, forgetful of the children she had borne, and only anxious to become again the wife of a king, readily gave her hand to the man who had caused the rum and hastened the death of her lmsband Ethelred. In this extraordinary transaction an old chronicler is at a loss to decide whe ther the greater share of dishonour falls to Queen Emma or to her brother Duke Richard.\* Having soon become the mother of another son, by Canute, this Norman woman neglected and despised her first-born; and those two princes being detained at a distance from England, became, by degrees, strangers to their own country, forgot its language and its manners, and grew up Normans instead of Saxons. The Danish dynasty of Cannie was not destined to take root; but the circumstance just alluded to most essentially contributed to place a long line of Norman princes upon the throne of England. Cannite was not one that loved blood for the sake of bloodshedding. When he had disposed of all those who gave him fear or umbrage, he stayed his hand, and was praised, like so many other conquerors and tyrants, for his merciful forbearance. The Danish warriors insulted, robbed, and sorely oppressed the Saxons, and be himself wrung from them more "geld" than they had ever paid before; but by degrees Canute assumed a mild tone towards his new subjects, and partially succeeded in gaining their good-will. They followed him willingly to his foreign wars, of which there was no lack, for, besides that of England, Canate now held, or pretended to, the crowns of Denmark, Sweden, and Norway. In these distant wars the Saxons, who had not been able to defend themselves, fought most bravely under their own conqueror, for the enslaving of other nations. But this is a case of very common occurrence, both in ancient and modern history. Cannte's last military expedition (a.b. 1017-19) was against the

peace which followed them, together with the sobering influence of increasing years, though he

was yet in the prime of manhood, softened the

conqueror's heart; and, though he continued to rule

despotically, the latter part of his reign was marked with no acts of crucity, and was probably, on the

whole, a happier time than the English had known

cheerful and accessible to all his subjects, without distinction of race or nation. He took pleasure in

old songs and ballads, of which both Danes and

HISTORY OF ENGLAND.

patronised the scalds, minstrels, and glec-men, the poets and musicians of the time, and occasionally wrote verses himself, which were orally circulated among the common people, and taken up and sung by them. He could scarcely have hit upon a surer road to popularity. A ballad of his composition continued long after to be a special favourite with the English peasantry. All of it is lost except the first verse, which has been preserved in the Historia Eliensis, or History of Ely. resting royal fragment is simply this :-Merie saugen the muneches binnen Ety, Tha Cunt Ching ieu there by, Roweth, cubtes, ner the Lind, And here we thes muneches seeng.

Merrily sung the monks within Ely, When Cunte king rowed thereby.— Row, my kinghts row near the land, And hear we these monks' song.

that is:-

The verses are said to have been suggested to him one day as he was rowing on the river Nemie, near Ely Minster, by hearing the sweet and solemn music of the monastic choir floating over the waters. \* In his days of quict the devotion of the times

had also its full influence on the character of Cannte. This son of an apostate Christian showed himself a zealous believer, a friend to the monks, a visitor and collector of relies, a founder of churches and monasteries. His soul was assailed with remorse for the blood he had shell and the other crimes he had committed; and, in the year 1030, he determined to make a pilgrimage to Rome. He started on his journey to the Holy City with a wallet on his back and a pilgrim's staff

in his hand. He visited all the most celebrated churches on the road between the Low Countries and Rome, leaving at every one of them some proof of his liberality. According to a foreign chronicler, all the people on his way had reason to exclaim-"The blessing of God be upon the king of the English!" But no one tells us how dearly this munificence cost the English" people. Returning from Reme, where he resided a considerable time, in company with other kings (there seems to have been a sort of royal and ecclesiastical congress held), be purchased, in the city of Pavia, the arm of St. Augustine, "the Great Doctor." This precious relic, for which he paid a hundred talents • The meaning of "cold English" merry," and "merrily," it is to be semember." As shiftment from that which we now altach to the words. English, both nobles and commoners, greeting." This curious letter, which appears to have been carefully preserved, and which is given entire by writers who hived near the time, begins with explaining the motives of his pilgrinage, and the nature of the sacred omnipotence of the Church of Rome. It then continues,— "And be it known to you that, at the solemn festival of Easter, there was held a great assemblage of illustrious persons; to wit,—the Pope John, the Emperor Conrad, and the chiefs of all the nations from Mount Garganus to the neighbouring sea. They all received me with distinction,

and honoured me with rich presents, giving me

vases of gold and vessels of silver, and stuffs and

garments of great price. I discoursed with the Lord Pope, the Lord Emperor, and the other

princes, on the grievances of my people, English as well as Danes. I endeavoured to obtain for my people justice and security in their journeys to Rome, and, above all, that they might not benceforth be delayed on the road by the shutting up of the mountain passes, the erecting of barriers, and the exaction of heavy tolls. My demands were granted both by the Emperor and King Rudolf, who are masters of most of the passes; and it was enacted that all my men, as well merchants as pilgrims, should go to Rome and return in full security, without being detained at the barriers, or forced to pay unlawful tolls. I also complained to the Lord Pope that such enormous sums had been extorted up to this day from my archbishops, when, according to custom, they went to the apostolic sec to obtain the pallium; and a decree was forthwith made that this grievance likewise should eease. Wherefore I return sincere thanks to God that I have successfully done all that I intended to do, and have fully satisfied all my wishes. And

now, therefore, be it known to you all that I have

dedicated my life to God, to govern my kingdoms

with justice, and to observe the right in all things.

If, in the time that is passed, and in the violence

and carelessness of youth, I have violated justice,

it is my intention, by the help of God, to make

full compensation. Therefore I beg and command

those unto whom I have entrusted the government,

as they wish to preserve my good will, and save

their own souls, to do no injustice either to rich or poor. Let those who are noble, and those who are not, equally obtain their rights, according to the laws, from which no deviation shall be allowed, either from fear of me, or through favour to the powerful, or for the purpose of supplying my treasury. I want no money raised by injustice." The last clause of this remarkable and characteristic epistle had reference to the clergy. entreat and order you all, the bishops, sheriffs, and officers of my kingdom of England, by the faith which you owe to God and to me, so to take measures that before my return among you all our debts to the church be paid up; to wit, the plough alms, the tithes on cattle of the present year, the Peter-pence due by each house in all towns and villages, the tithes of fruit in the middle of August, and the kirk-shot at the feast of St. Martin to the parish church. And if, at my 'return, these dues are not wholly discharged, I will punish the delinanents according to the rigour of the laws, and without any grace. So fare ye well." \* It does not clearly appear whether the old

writers refer the following often-repeated incident

Roman pilgrimage. When at the height of his power, and when all things seemed to bend to his lordly will (so goes the story), Canute, disgusted one day with the extravagant flatteries of his courtiers, determined to read them a practical lesson. He caused his throne to be placed on the verge of the sands on the sea-shore as the tide was rolling in with its resistless night, and, scating himself, he addressed the ocean, and said,—"Ocean! the land on which I sit is mine, and thou'art a part of my dominion—therefore rise not—obey my commands, nor presume to wet the edge of my robe," He sate for some time as if expecting obedience, but the sea rolled on in its immutable course; succceding waves broke nearer and nearer to his feet, till at length the skirts of his garment and his legs were bathed by the waters. Then, turning to his courtiers and captains, Cannte said,-" Confess ye now how frivolous and vain is the might of an carthly king compared to that Great Power who rules the elements, and can say unto the ocean, 'Thus far shalt thou go, and no farther.' 'The chrometers conclude the apologue by adding that he immediately took off his crown, and depositing it in the cathedral of Winchester, never wore it again.

 Ingulf—Malmsb. Florent, Wigorn. The substance of the letter is also found in Torfar Hist, Norveg, and in Ditman Script, Rev. Danicar.

CANUTE REPROVING HIS FLATTERIES. - Smarke

HISTORY OF ENGLAND 184 This great Danish sovereign died in A.D. 1035,

at Shaftesbury, about three years after his return from Rome, and was buried at Winchester. The churches and abbeys he creeted have long since disappeared, or their fragments have been imbedded

in later edifices erected on their sites; but the great public work called the King's Delf, a causeway connecting Peterborough and Ramsey, and carried through the marshes by Canute's command, is still scrviteable. On his demise there was the usual difficulty and contention respecting the succession. Canute left

but one legitimate son, Hardicamite, whom he had by Ethelred's widow, the Lady Emma of Normandy. He had two illegitimate sons, Sweyn and Harold. In royal families bastardy was none, or a very slight objection in those days; but, according to the contemporary writers, it was the prevalent belief, or popular scandal, that these two young men were not the children of Cimute, even illegitimately, but were imposed upon lum as such by as acknowledged concubing Alfgiva, daughter of the calderman of Southampton, who, according to this gossip, knew full well that Sweyn was the son of a priest by another woman, and Harold the offspring of a cobbler and his wife. Whoever were

their fathers and mothers, it is certain that Canute intended that his dominions should be divided among the three young men, and this without any apparent prejudice in favour of legitimacy; for Harold, and not Hardicanute (the lawful son), was to have England, which was esteemed by far the best portion. Denmark was to fall to Hardicanute. and Norway to Sweyn. Both these princes were in the north of Europe, and apparently in possession of power there, when Canute died. The powerful Earl Godwin, and the Saxons of the south generally, wished rather to choose for king of England either one of the sons of Ethelred, who were still in Normandy, or Hardicanute, the son of Emma, who was at least connected with the old Saxon line. But Earl Leofric of Mercia, with the thanes north of the Thames, and all the Danes, supported the claims of the illegitimate Harold; and when the influential city of London took this side, the emise of Hardicanute seemed almost hopeless. But still all the men of the south and the great Earl Godwin adhered to the latter, and a civil war was imminent (to escape the horrors of which many families had already fled to the morasses and forests), when it

have all the provinces north of the Thames, with

London for his capital, while all the country south

of that river should remain to his real or fictitious

difficulty from a formidable force, and fled back to Normandy, determined, it is said, never again to touch the soil of his fathers. The second invasion from Normandy was attended with more tragical results, and part of the history of it is enveloped in an impenetrable mystery.

rold, however, who saw his superiority over his

absent half-brother, took his measures for attaching

the provinces of the south to his dominions; and two

fruitless invasions from Normandy only tended to mcrease his power and facilitate that aggrandizement.

Normandy, Edward, the eldest of the surviving sons

of Ethelred by Emma, and who eventually became

king of England under the title of Edward the Con-

fessor, made sail for England with a few ships, and

landed at Southampton in the intention of claiming

the crown. He threw lumself in the midst of his

mother's retainers, and was within a few miles of

her residence at Winchester. But Emma had no affection for her children by Ethelred; she was at

the moment making every exertion to secure the

English throne for her son by Canute, and, instead

of aiding Edward, she set the whole country in

hostile array against him. He escaped with some

Soon after the news of Canute's death reached

[Book 11.

An affectionate letter,\* purporting to be written by the queen mother, Emma, was conveyed to ber sons Edward and Alfred, reproaching them with their apathy, and mgmg that one of them, at least, should return to England and assert his right against the tyrant Harold. This letter is pronounced a forgery by the old writer who preserves it; but those who are disposed to take the darkest

view of Emma's character may object, that this

writer was a paid encomiast of that queen's (and

paid by her hving self), and therefore not likely to confess her guilty of being a participator in her own son's murder, even if such were the fact. The same authority, indeed, even praises her for her illassorted, shameful marriage with Cannte, which undeniably alienated her from her children by the former muon. For ourselves, although she did not escape the strong suspicion of her contemporaries any more than Earl Godwin, who was then in close alliance with her, we rather incline to the behef that the letter was forged by the order of Harold: though, again, there is a possibility that it may have been actually the product of the queen, who may have meant no harm to her son, and that, the harm he suffered may have fallen upon him through was wisely determined to effect a compromise by means of the witenagemot. This assembly met Godwin, on that chief's seeing how he came atat Oxford, and there decided that Harold should tended. However this may be, Alfred, the younger

of the two brothers, accepted the invitation. The

instructions of Emma's letter were to come without

any armament; t but he raised a considerable force

(milites non parvi numeri) tim Normandy and Bou-

was a far superior force there, which rendered his landing hopeless. He therefore bore round the

North Foreland, and disembarked "opposite to Canterbury," probably about Herne Bay, between the Triculvers and the Isle of Sheppey. Having advanced some distance up the country without any opposition, he was met by Earl Godwin, who is said to have sworn faith to him, and to have undertaken to conduct him to his mother Emma. Avoiding London, where the party of Harold was predominant, they marched to Guildford, where Godwm billeted the strangers, in small parties of tens and scores in different houses of the town. There was plenty of meat and drink prepared in every lodging; and Earl Godwin, taking his leave for the night, promised his dutiful attendance on Alfred for the following morning. Tried with the day's journey, and filled with meat and wine, the separated company went to bed, suspecting no wrong; but in the dead of night, when disarmed and burned in sleep, they were suddenly set upon by King Harold's forces, who seized and bound them all with chains and gives. On the following morning they were ranged in a line before the executioners. There are said to have been 600 victims, and, with the exception of every tenth man, they were all barbarously tortured and massacred. Prince Alfred was reserved for a still more cruel He was hurried away to London, where, it should seem, Harold personally insulted his misfortunes; and from London he was sent to the Isle of Ely, in the heart of the country of the Danes. He made the sad journey mounted on a wretched horse, naked, and with his feet tied beneath the animal's belly. At Ely he was arraigned before a mock court of Danish nuscreants, as a disturber of the country's peace, and was condemned to lose his eyes. His eyes were instantly torn out by main force, and he died a few days after in exquisite Some believe that Earl Godwin was gnilty of betraying, or at least deserting, the prince after he had landed in England, without having premeditated treachery in inviting him over; and they say his change of sentiment took place the instant he saw that Alfred, instead of coming alone to throw himself on the affections of the Saxon people, had surrounded himself with a host of ambitions foreigners, all eager to share in the wealth and honours of the land. Henry of Huntingdon, a writer of the twelfth century, supports this not irrational view of the case, and says that Godwin told his Saxon followers that Alfred came escorted by too many Normans, that he had promised these Normans rich possessions in England,-and that it would be an act of imprudence in them, the Saxons, to permit this race of foreigners, known through the world for their andacity and cunning, to gain a footing in England. The whole life of the great Earl abounds in sudden resolutions and changes; nor did he ever hesitate at bloodshed; but without going into a discussion which would fill many pages, and leave us in uncertainty at last, we will quit this horrid tragedy, of the truth of which there is no reason to doubt, by confessing that the motives

VOL. I.

it appears had been entrusted to his charge by Canute, he laid them on the altar, and said, "Harold! I will neither give them to thee, nor pievent thee from taking the ensigns of royalty; but I will not bless thee, nor shall any bishop consecrate thee on the throne." It is said that, on this, like a modern conqueror, the Dane put the crown on his head with his own hands. According to some accounts he subsequently won over the Archbishop, and was solemnly crowned. Other authorities, however, assert that he was never crowned at all, -that, out of spite to the Archbishop, he showed an open contempt for the Christian religion, absenting himself from all places of worship, and uncoupling his hounds, or calling for meat and wine at the hours when the faithful were summoned to mass and prayer. His chief amusement was builting; and, from the fleetness with which he could follow the game on foot, he nequired the name of "Harold Harefoot." Little more is known about him, except that he died after a short reign of four years, in A.D. 1040, and was buried at Westminster. HARDICANUTE, his half-brother, was at Bruges, and on the point of invading England, when After long delays in Denmark, he Harold died. listened to the urgent ealls of his exiled mother, the still stirring and ambitious Emma; and, leaving a greater force ready at the month of the Baltic, he sailed to Flanders with nine ships to consult his parent. He had been but a short time at Bruges when a deputation of English and Danish thanes arrived there to invite him to ascend the most brilliant of his father's thrones in peace. The two great factions in England had come to this agreement, but, addreding to the chroniclers, they were soon made to reprint of it by the exactions and rapacity of Harmeanute.

which each had in it, cannot be established from the accounts of the old chroniclers, who hold very different language, and contradict each other. Shortly after the murder of Alfred, Emma was either sent out of England by Harold, or retired a voluntary exile. It is to be remarked that she did not fix her residence in Normandy, where her son Edward, brother of Alfred, was living, but went to the court of Baldwin, Earl of Flanders. Haroth had now little difficulty in getting himself proclaimed "full king" over all the island. The election, indeed, was not sanctioned by legislative anthority; but this authority, always thictuating and uncertain, was at present almost worthless. A more important opposition was that offered by the church, in whose ranks the Saxons were far more numerous than the Danes, or priests of Danish descent; and in all these contentions

the two hostile races must be considered, and not

merely the quarrels or ambition of the rival princes.

The question at issue was, whether the Danes or

noth, the Archbishop of Canterbury, who was a

Saxon, refused to perform the ceremomes of the

coronation. Taking the crown and sceptre, which

the Saxons should have the upper land.

of the parties concerned, and the share of guilt

Relying more on the Danes, among whom he had lived so long, than on the English, and being averse to part with the companions of his revels and drinking-bouts, he brought with him a great number of Danish chiefs and courtiers, and retained an expensive Damsh army and navy. This obliged him to have frequent recourse to " Dancgelds," the arbitrary levying of which by his "Huscarles," or hon-chold troops, who were all Danes, cansed frequent insurrections or commotions. The people of Worcester resisted the His-

carles with arms in their hands, and slew Feader and Turstane, two of the king's collectors. revenge for this contempt, that city was burnt to the ground, a great part of the surrounding country laid desolate, and the goods of the citizens put to the spoil "by such power of lords and men-of-war as the king sent against them." It should appear that not even the church was exempted from these oppressive levies of Danc-geld, for a monkish writer complains that the clergy were forced to sell the very chalices from the altar in order to pay their assessments.

On his first arriving in England, Hardicanute

showed his horror of Prince Alfred's murder, and his revenge for the injury done by Harold to himself and his relatives, in a truly barbarous manner. By his order, the body of Harold was dug up from the grave; its head was struck off, and then both body and head were thrown into the Thames. To increase the dramatic interest of the story, some of the old writers, who maintain that the great earl had numbered Alfred to serve Harold, say that Godwin was obliged to assist at the disinterment and decapitation of the corpse, the mutilated remams of which were soon after drawn out of the river by some Damsh fisbermen, who secretly interred them in the churchvard of St. Clement Danes, "without Temble-bar at London." Earl Godwin, indeed, a very short time after, was formally accused of Alfred's murder; but he cleared hunself, in law, by his own oath, and the oaths of many of his peers; and a rich and splendid present is generally supposed to have set the question at rest between him and Hardicanute, though it failed to acquit him in popular opinion. This present was a ship of the first class, covered with gilded metal, and bearing a figure-head in solid gold: the crew, which formed an intrinsic part of the gift, were four score picked warriors, and each warrior was furnished with dress and appointments of the most costly description—a gilded helmet was on his head, a triple hauberk on his body, a sword with a hilt of gold hung by his side, a Danish battle-axe, damasked with silver, was on his shoulder, a gold-studded shield on his left arm. and in his right hand a gilded ategar,\*

During the remainder of Hardicanute's short. reign, Earl Godwin, and Emma the queen-mother, who were again in friendly alliance, divided nearly

all the authority of government between them, leaving the king to the tranguil enjoyment of the things he most prized in life—his banquets, which were spread four times a day, and his carousals at night. From many incidental passages in the old writers, we should conclude that the Saxons themselves were sufficiently addicted to drmking and the pleasures of the table, and required no instructors in those particulars; yet it is pretty generally stated that hard drinking became fashionable under the Danes; and more than one chromicler laments that Englishmen learned from the example of Hardicanute "their excessive gour-This king's death was in keeping with the tenor

mandizing and numeasurable filling of their bellies with meats and drinks." of his life. When he had reigned two years all but ten days, he took part, with his usual zest, in the marriage feast of one of his Danish thancs, which was held at Lambeth, or, more probably, at Clapham.\* At a late hour of the night, as he stood up to pledge that jovial company, he suddenly fell down speechless with the winc-cup in his hand: he was removed to an inner chamber, but he spoke no more; and thus the last Danish king in England died drunk. He was buried in the church of Wnichester, near his father Canute.

SHARR COINS OF EDWARD THE CONFESSOR .- From Sperimens in the

Edward the Confessor. Hardicaimte was scarcely in his grave when his half-brother Edward, who was many years his senior, ascended the throne (a.b. 1042) with no opposition, except such as he found from his own fears and scruples, which, had be been left to himself, would probably have induced him to prefer a monastery or some other quiet retirement in Normandy. During his very brief reign, Hardicanute had recalled the exile to England, had received him with honour and affection, granted him a handsome allowance, and even proposed, it is said, to associate him in his government. Edward was, therefore, at hand, and in a favourable position at the moment of crisis; nor, according to the modern laws of hereditary succession, could any one have established so good a right; for his half-nephew, Edward, who was still far away in Hungary, was only illegitimately descended from the royal line of Cerdic and Alfred, his father, Edmund Ironside, though older than Edward, being a natural son of their common father But, in truth, rules of succession had little to do with the settlement of the crown, which

The same scythe-shaped weapon as the Moorish "assagay," the Turkish "winaghan," &c. It was a common weapon with the Danes, and I still so in the East.

<sup>\*</sup> The name of the byde's father, in whose house the feast is supposed to have been held, was Osgod Chapa; and Clapa-ham, the hame or home of Chapa, is taken as the ctymology of our suburban village.—Palgrave, Hist. ch., xiii.

CIVIL AND MILITARY TRANSACTIONS.

CHAP. I.] was effected by a variety of other and more potent The connexion between the Danish and English crowns was evidently breaking off; there was a prospect that the two parties in England would soon be left to decide their contest without any intervention from Denmark; for some time the Saxon party had been gaining ground, and, before Hardicanute's death, formidable associations had been made, and more than one successful battle fought against the Dancs. On their side, the Danes, having no descendant of the great Canute around whom to rally, became less vehement for the expulsion of the Saxon line, while many of them settled in the south of the island were won over by the reputed virtue and sanctity of Edward. If we may judge by the uncertain light of some of the chronicles, many leading Danes quitted England on Hardicannte's decease; and it seems quite certain that when the nobles and prelates of the Saxons (were there not Dancs among these?) assembled in London, with the resolution of electing Edward, they encountered no opposition from any Damsh faction. But the great Earl Gadwin, the still suspected murderer of the new king's brother, Alfred, had by far the greatest share in Edward's eleva-This veteran politician, of an age considered barbarous, and of a race (the Saxon) generally noted rather for stupidity and dulness, than for acuteness and advortness, trimmed his sails accordmg to the winds that predominated, with a degree of skill and remorselessness which would stand a comparison with the managuvres of the most celebrated political intriguers of the most modern and civilized times. In all the struggles that had taken place since the death of Canute he had changed sides with astonishing facility and rapidity,—going back more than once to the party he had descried, then changing again, and always causing the faction he embraced to trimmph just so long as he adhered to it, and no longer. Changes, rumous to others, only brought him an accession of strength. At the death of Hardicanute, he was carl of all Wessex and Kent; and by his alliances and intrigues, he controlled nearly the whole of the southern and more Saxon part of England. His abilities were proved by the station he had attained; for he had begun life as a cow-herd. He was a fluent speaker; but his cloquence, no doubt, owed much of its faculty of conveying conviction to the power or material means he had always at hand to enforce his arguments. When he rose in the assembly of thanes and bishops, and gave it as his opinion that Edward the Atheling, the only surviving son of Ethelred, should be their king, there were but very few dissentient voices; and the earl carefully marked the weak minority, who seem all to have been Saxons, and dreve them into exile shortly after. It is pretty generally stated, that his relation, William, Duke of Normandy (afterwards the Conquerer), materially aided Edward by his influence, having firmly arnounced to the Saxons, that if they failed in their duty to

the sons of Emma, they should feel the weight of his vengeance; but we more than doubt the authenticity of this fact, from the simple circumstances of Duke William's being only fifteen years old at the time, and his states being in most lamentable confusion and anarchy, pressed from without by the French king and troubled within by factions nobles, who all wished to take advantage of his vonth and inexperience. The case, perhaps, is not very rare, but it must always be a pannful and perplexing one. Edward hated the man who was serving lum; and while Godwin was placing him on the throne, he could not detach his eyes from the bloody grave to which, in his conviction, the earl had sent his brother Alfred. Godwin was perfectly well aware of these feelings, and, like a practised politician, before he stirred in Edward's cause, and when the fate of that prince, even to his life or death, was in his bands, he made such stipulations as were best calenlated to secure him against their effects, obtained an extension of territories, honours, and commands for humself and his sons—a solemn assurance that the past was forgiven, and, as a pledge for future affection and family union, he made Edward consent to marry his daughter. The fair Editha, the daughter of the fortunate earl, became queen of England; but the heart was not to be controlled, and Edward was never a Imsband to her. Yet, from contemporary accounts, Editha was deserving of love, and possessed of such a union of good qualities as might to have removed the deep-rooted antipathies of the king to herself and her race. Her person was beautiful; her manners graceful; her disposition cheerful, meek, pious, and generous, without a taint of her father's or brothers' pride and arrogance. mental accomplishments far surpassed the standard of that age; she was fond of reading, and had read many books. Ingulphus, the monk of Croyland, who was her contemporary and personal acquaintance, speaks of her with a homely and subdued enthusiasm that is singularly touching. He says she sprung from Godwin as the rose springs from the thorn. "I have very often seen her," he continues, " m my boyhood, when I used to go to visit my father, who was employed about the court. Often did I meet her as I came from school, and then she questioned me about my studies and my verses; and, willingly passing from grammar to logic, she would catch me in the subtletics of argument. She always gave nie two or three pieces of money, which were counted to me by her hand-maiden, and then sent me to the royal larder to refresh myself?" If Edward neglected, and afterwards persecuted his wife, he behaved in a still harsher and more summary manner to his mother Emma, who, though she has few claims on our sympathy, was, in spite of all

her faults, entitled to some consideration from him.

But he could not forgive past in hi. es he could

not forget, that, while she lavished her inflections

and ill-gotten treasures on her children by Canute,

she had left him and his brother to languish in poverty in Normandy, where they were forced to eat the bitter bread of other people; and he seems

HISTORY OF ENGLAND.

never to have relieved her from the horrid suspicion of having had part in Alfred's murder. feelings were probably exasperated by her refusing to advance him money at a moment of need, just before, or at the date of his coronation. after his cormation he held a council at Gloucester, whence, accompanied by Earls Godwin, Leofric, and Siward, he hurried to Winchester, where Emma had again established a sort of court, seized her treasures, and all the cattle, the corn, and the forage on the lands which she possessed as a dower, and behaved otherwise to her with great harshness. Some say she was committed to close enstody in the abbey of Wearwell; but, according to the more generally received account, she was permitted to retain her lands, and to reside at large at Winchester, where, it appears, she died in 1052, the tenth year of Edward's reign. We omit the story of her alleged amours with Alwin, bishop

of Winchester, and her exculpating herself by

walking unscathed with naked feet over nine red-

hot plough-shares, as rather a fabulous legend,

1043), a fault demonstration to re-establish the

Scandmavian supremacy in England was made by Magnus, king of Norway and Dennark; but the Saxons assembled a great fleet at Sandwich; the Danes in the land remained quiet, and, his last hopes expiring, Magnus was soon induced to declare that he thought it "right and most convement' that he should let Edward enjoy his crown, and content himself with the kingdoms which God had given bim. But though undisturbed by foreign invasions or the internal wars of a competitor for the crown, Edward was little more than a king in name. This abject condition arose in part, but certainly not wholly, from his easy, pacific disposition; for he not unfrequently showed himself capable of energy, and firm and sudden decisions; and although superstitious and monkridden, he was, when roused, neither deficient in talent nor in moral conrage. A wider and deeper spring, that sapped the royal authority, was the enormous power Godwin and other earls had possessed themselves of before his accession; and this power, be it remembered, he himself was obliged to augment before he could put his foot on the lowest step of the throne. When he had kept his promises with the "Great Eafl"-and he could

not possibly evade them—what with the territories

and commands of Godwin, and of his six sons,

Harold, Sweyn, Wulnoth, Tostig, Gurth, and Le-

ofwine, the whole of the south of England, from

Lincolnshire to the end of Cornwall, was in the

hands of one family. Nor had Edward's autho-

rity a better basis elsewhere, for the whole of the

morth was unequally divided between Leofric and

the greater Earl Siward, whose dominions extended

from the Humber to the Scottish border.

earls possessed all that was valuable in sovereignty within the territories they held. They appointed their own judges, received fines, and levied what troops they chose. The chief security of the king lay in the clashing interests and jealousies of these mighty vassals; and, notwithstanding the remark of a great writer,\* that this policy of balancing opposite parties required a more steady hand to manage it than that of Edward, it appears to us that he for some time acquitted himself skulfully in this particular. As the king endeared himself to his people by reducing taxation, and removing the odious Dane-geld altogether, - by reviving the old Saxon laws, and administering them with justice and promptitude;—as he gamed their reverence by his mild virtues, and still more by his ascetic devotion, which eventually caused his canonization, he might have been enabled to curly the family of Godwin and the rest, and raise his depressed throne by means of the popular will and affection; but, unfortunately, there were circumstances interwoven which neutralized Edward's advantages, and gave the favourable colour of nationality and patriotism to the cause of Godwin, whenever he chose to quarrel with the king. was perfectly natural, and it would have been as excusable as natural, if the imprudence of a king ever admitted of an excuse, that Edward should have an affection for the Normans, among whom the best years of his life had been passed, and who gave him food and shelter when abandoned by all the rest of the world. He was only thurteen years old when he was first sent into Normandy; he was somewhat past forty when the ascended the English throne; so that, for twenty-seven years, commencing with a period when the young mind is not formed, but ductile and most susceptible of impressions, he had been accustomed to foreign manners and habits, and to convey all his thoughts and feelings through the medium of a foreign language. He was accused of a predilection for the French, or "Romance," which by this time had superseded their Scandinavian dialect, and became the vernacular language of the Normans; but it is more than probable he had forgotten his Saxon. It is not at the mature age of forty that a man can shake off all his previous tastes, habits, and connexions, and form new ones. Thus the king, as a matter of course, preferred the society of the Normans to that of his own subjects; and, whatever may have been the relative civilization of the two kindred people half a century before, it is quite certain that the Danish wars, from the time of Ethelred downwards, had caused the Saxons to retrograde, while it is probable the Normans had made considerable advances in refinement in the Relying on Edward's gratitude same interval. and friendship, several Normans came over with him when he was invited to England by Hardicanute: this number was augmented after his accession to the tlare; and as the king provided for then, all, or gave them constant entertainment

nation, preferred to himself?" ‡

body of the Saxon people, and highly irritating to Earl Godwin, who is said to have exacted an express and solemn promise from the king not to inundate the land with Normans, ere he consented to raise him to the throne. The earl could scarcely take up a more popular ground; and he made his more private wrongs,—the king's treatment of his daughter, and disinclination to the society of himself and his sons,—all close and revolve round this centre. Even personally the sympathy of the people went with him. "Is it astonishing," they said, "that the author and supporter of Edward's reign should be wroth to see new men, of a foreign

Norman pattern. Not one of these things was tofling mots influence—united, their effect must have been most important; and it seems to us that historians in general have not sufficiently borne them in mind as a prelude to the great All this, however, was distasteful to the great who had married the Lady Goda, a daughter of Ethelred, and sister to Edward. This Enstace was a prince of considerable power, and more pretension. He governed hereditably, under the supremacy of the French crown, the city of Boulogne and the contiguous territory on the shores of the Channel; and as a sign of his dignity as chief of a maritime country, when he armed for war he attached two long aigrettes, made of whalebone, to his helmet. This loving brother-in-law,

restored to his government.

with rather a numerous retirme of warroors and men-at-arms, was hospitably entertained at the court of Edward, where he saw Frenchmen and Normans, and everything that was French and foreign, so completely in the ascendant, that he was led to despise the Saxons as a people already conquered. On his return homewards Enstace slept one night at Canterbury. The next morning he continued his route for Dover, and when he was within a mile of that town he ordered a halt, left his travelling palfrey, and mounted his warhorse, which a page led in his right hand. also put on his coat of mail: all his people did the same; and in this warhke harness they entered Dover. The foreigners marched insolently through the town, choosing the best houses in which to pass the night, and taking free quarters on the citizens without asking permission, which was contrary to the laws and customs of the Saxons. One of the townsmen boldly repelled from his

threshold a retainer who pretended to take up his quarters in his house. The stranger drew his sword, and wounded the Englishman,-the Englishman armed in baste, and he, or one of his house, slew the Frenchman. At this intelligence Count Eustace and all his troop mounted on horseback, and, surrounding the house of the English-

man, some of them forced their way m, and murdered him on his own hearth-stone. This done,

they galloped through the streets with their naked

weapons as they had, and met the mailed warriors in a mass. which nmeteen of the foreigners were slain and many more wounded, Eustace, with the rest, being unable to reach the port and embark, retreated out of Dover, and then galloped with loose rein towards Gloucester to lay his complaints before the king. Edward, who was, as usual, surrounded by his Norman favourites, gave his peace to Eastace and his companions, and believing, on the simple assertion of his brother-iu-law, that the inhabitants of Dover were in the wrong, and had begun the affray, he sent immediately to Earl Godwin, in whose government the city lay. "Set out forthwith," said the king's order,\* "go and chastise with a military execution those who attack my relations with the sword, and trouble the peace of the country." "It ill becomes you," replied Godwin, "to condemn, without a hearing, the men whom it is your duty to protect." † The circumstances of the fight at Dover were now known all over the country: the assault evidently had begin by a Frenchman's during to violate the sanctity of an Englishman's house, and, right or wrong, the Saxon people would naturally espouse the cause of their countrymen. Instead, therefore, of chastising the burghers, the Earl sided with Before proceeding to extremitics Godwin proposed that, instead of exercising that indiscrimmate vengeance on all the inhabitants, which was implied by a military execution, the magistrates of Dover should be ented in a legal manner to appear before the king and the royal pudges, to give an account of their conduct. It should seem that, transported by the indignation of his brotherin-law the Earl Eustace, and confounded by the clamours of his Norman favourites, Edward would not listen to this just and reasonable proposition, but summoned Godwin to appear before his foreign court at Gloucester; and on his hesitating to put himself in so much jeopardy, threatened him and his family with banishment and confiscation. Then the great earl armed, and in so doing, though some of the chroniclers assert it was only to redress the popular grievances, and to make an appeal to the English against the courtiers from beyond sea, and that nothing was further from his thoughts than to offer insult or violence to the king of his own creation, we are far from being convinced of the entire purity of his motives

or the moderation of his objects.

he Chron, Sax,

Godwin, who ruled the country south of the Thames, from one end to the other, gathered his forces together, and was joined by a large body of the people, who voluntarily took up arms. Harold, the eldest of dis sons, collected many men all along the eastern coast between the Thames and the city of Boston; and Sweyn, his second son, † Malmsb.

association among the Saxons who dwelt on the banks of the Severn and along the frontiers of Wales. These three columns soon concentrated near Gloucester, then the royal residence; and, with means adequate to enforce his wish, Godwm demanded that the Count Eustace, his companions, and many other Normans and Frenchmen, should be given up to the justice of the nation. Edward, knowing he was wholly at the mercy of his irritated father-in-law, was still firm. To gam time he opened a negotiation; and so much was he still esteemed by the people, that Godwin was obliged to save appearances, and to grant him that delay which, for a while, wholly overcast the earl's fortunes. Edward had secured the good-will of Godwin's great rivals,—Siward, Earl of Northumbria, and Leofric, Earl of Mercia: to these chiefs he now applied for protection, summoning to his aid at the same time Ranuli or Ralph, a Norman kuight, whom he had made Earl of Worcestershare. When these forces united and marched to the king's rescue, they were equal or superior in mmber to those of Godwin, who had thus lost his moment. The people, however, had improved m wisdom; and on the two armies coming in front of each other, it was prescutly seen, by then respective leaders, that old animosities had in a great measure died away,—that the Anglo-Dam's from the north were by no means anxious to engage their brethien of the south for the cause of Normans, and men equally alien to them both, and that the Saxons of the south were averse to shedding the blood of the Anglo-Danes of the north. The whispers of individual ambition, the mutterings of mutual revenge,—the aspirations of the great, were mute, for once, at the load and universal voice of the people. An armstice was concluded between the king and Godwin, and it was agreed to refer all differences to an assembly of the legislature, to be held at London in the following antumn. Hostages and oaths were exchanged—both king and carl swearing "God's peace and full friendship" for one another. Edward employed the interval between the armistice and the meeting of the witenagemot in pulilishing a ban for the levying of a royal army all over the kingdom, in engaging troops both foreign and domestic, and in strengthening himself by all the means he could command. the same time the forces of Harold, which consisted in chief part of burghers and yeomen, who had armed under the first excitement of a popular quarrel, and who had neither pay nor quarters in the field, dwindled rapidly away. According to the Saxon Chronicle, the king's army, which was

cantoned within and about London, soon became

the most numerous that had been seen in this

commands in it, were given to Norman favourites,

who thirsted for the blood of Earl Godwin. At the appointed time the carl and his sons were sum-

cerned.

lives. The sudden fall of this great family confounded and stupified the popular mind. "Wonderful would it have been thought," says the Saxon Chronicle, " if any one had said before that matters would come to such a pass." Before the expiration of the five days' grace a troop of horsemen were sent to pursue and seize the earl and his family; but these soldiers were wholly or

inoned to appear before the witenagemot without

any military escort whatsoever; and that, too, in

the midst of a most formidable army and of deadly

This reasonable demand was repeated, and twice

refused; and then Edward and the great council

pronounced a sentence of banishment, decreeing

that the earl and all his family should quit the

land for ever within five days. There was no

appeal; and Godwin and his sons, who it appears

had marched to Sonthwark, on finding that even

the small force they had brought with them was

thurned by honrly desertion, fled by night for their

chiefly Saxons, and either could not, or would not

overtake them. Godwin, with his wife and his

directions, Sweyn, Tostig, and Gurth, and a ship

well stored with money and treasures, embarked

on the east coast, and sailed to Flanders, where he

was well received by Earl Baldwin: Harold and

bis brother Leofwin fled westward, and embarking

sonally informing lumself of the strength and condition of the country, and by influencing the councils of the king, who had no children to suceced him, and was said to be labouring under a yow of perpetual chastity, even as if he had been a cloistered monk. William was the natural son of Robert, Duke of Normandy, the younger brother of Duke

Richard III., and the son of Dake Richard II., who was brother to Queen Emma, the mother of King Edward and of the murdered Alfred, by Ethelred, as also of the preceding kings Harold and Hardicanute, by her second husband, Canute the Great. On the mother's side William's descent was sufficiently obscure. One day as the Duke Robert was returning from the chase he met a fair girl, who, with companions of

Struck by her surpassing beauty, he sent one of his discreetest knights to make proposals to her family. Such a mode of proceeding is startling enough in our days; but in that age of barbarism and the license of power, the wonder is he did not serze the lowly manden by force, without treaty or negotiation. The father of the maiden, who was a currier or tanner of the town of Falaise, at first received the proposals of Robert's love-ambassador with indignation; but, on second thoughts, he went to consult one of his brothers, a hermit in a neighbouring forest, and a man enjoying a great religious reputation; and this religions man gave

it as his opinion that one ought, in all things, to conform to the will of the powerful man. name of the mand of Falaise was Arlete, Harlotta, or Herleva, for she is indiscriminately called by these different appellations, which all seem to come from the old Norman or Danish compound Herlove, "The much loved." And the Duke continued to love her dearly, and he brought up the boy William he had by her with as much care and honour as if he had been the son of a lawful

spouse. Although—or perhaps it will be more correct to say-because their conversion was of a comparatively recent date, no people in Europe surpassed the Normans in their devotion, or their passion for distant pilgrimages. When Wilham was only seven years old his father, Dake Robert, should live in comfort when her parents and her resolved to go to Jerusalem, as a pilgrim, to obtain brethren were banished the realm," we must have

could not be put in the balance against his spiritual welfare. The Norman cluefs, still anxions to retain him among them, represented that it would be a bad thing for them to be left without a head. The native chrohiclers put the following naif reply into the month of Duke Robert: "By my faith,

before.

Sirs, I will not leave you without a seigneur. have a little bastard, who will grow big, if it pleases God! Choose him from this moment, and, before you all, I will put him in possession of this Duchy as my successor." The Normans did what the Duke Robert proposed, "because," says the chronicle, "it suited them so to do." According to the fendal practice, they, one by one, placed their hands within his hands, and swore fidelity to Robert had a presentiment that he should not return; and he never did: he died about a year after (A.D. 1034) on his road home. He had scarcely donned his pilgrim's weeds and departed from Normandy, when several of the chiefs,

and above all the relations of the old Dnke,

the remission of his sins. As he had governed his states wisely, his people heard of his intention with

alarm and regret; but his worldly advantage

192

protested against the election of William, alleging that a bastard was not worthy of commanding the children of the Scandmaynans. A civil war cusued, in which the party of William was decidedly victorious. As the boy advanced in years, he showed an indomitable spirit and a wonderful aptitude in learning those knightly and warlike exercises which then constituted the principal part of education. This endeared him to bis partisans; and the important day on which he first put on armour, and mounted his battle-steed without the aid of stirrup, was held as a festal day in Normandy. Occasions were not wanting for the practice of war and battles, but were, on the contrary, frequently presented both by his own turbulent subjects and his ambitious neighbours. From his tender youth upwards, William was habituated to warfare and bloodshed, and to the exercise of policy and craft, by which he often succeeded when force and arms failed. His contemporaries tell us that he was passionately fond of fine horses, and caused them to be brought to him from Gascony, Auvergoe, and Spain, preferring above all those steeds which bore proper names by which their genealogy was distinguished. His disposition was revengeful and pitaless in the extreme. At an after period of life, when he had imposed respect or dread upon the world, he scorned the distinctions between legitimate and illegitimate birth, and more than once bravingly, put "We, William the Bastard" to his charters and declarations;\* but at the commencement of his career he was exceedingly susceptible and sore on this point, and often took sanguinary vengeance on those who scoffed at the stain of his birth. One day while he was beleaguering the town of Alencon, the besieged took it into their heads to cry out from the top of their

of Hoveden, "to live or die with Godwin."

who had brought over a considerable force in men and ships from Ireland. From the Isle of Wight the Saxon chiefs sailed to Sandwich, where they landed part of their forces without opposition, and

CIVIL AND MILITARY TRANSACTIONS.

ing along the Sussex coast to the Isle of Wight, he was met there by his sons Harold and Leofwin, then, with the rest, boldly doubled the North Foreland, and sailed up the Thames towards London. As they advanced, the popularity of their cause was manifestly displayed; the Saxon and Angle-Damsh troops of the king and all the royal ships they met went over to them; the burghers and peasants hastened to supply them with provisions, and to join the cry against the Normans. In this easy and triumphant manner did the exiles reach the suburb of Southwark, where they anchored, and landed without being obliged to draw a sword or pull a single bow. Their presence threw everything into confusion, and the court party soon saw that the catizens of London were as well affected to Godwin as the rest of the people had slown themselves. The earl sent a respectful message to the king, requesting for himself and family the revision of the rrregular sentence of exile, the restoration of their former permitories,

nonours, and employments, -- promising, on these conditions, a dutiful and entire submission. Though he most bave known the critical state of his affairs, Edward was firm or obstructe, and sternly refused the conditions. Godwin despatched other messengers, but they returned with an equally positive refusal; and then the old earl had the greatest difficulty in restraining his irritated partisans. But the game was in his hand, and his moderation and aversion to the spilling of kindred blood greatly strengthened his party. On the opposite side of the river a royal fleet of fifty sail was moored, and a considerable army was drawn up on the bank; but it was soon found there was no relying either on the marmers or the soldiers, who, for the most part, if not won over to the cause of Godwin, were averse to civil war. Still, while most of his party were trembling around him, and not a few seeking safety in flight or concealment, the king remained inflexible, and, to all appearance, devoid of fear. The boldest of his Norman favourites, who foresaw that peace between the Saxons would be their ruin, ventured to press him to give the signal for attack: but the now openly expressed sentiments of the royal troops, and the arguments of the priest Stigand and of many of the Saxon nobles, finally induced Edward to yield, and give his relactant consent to the opening of negotiations with his detested father-in-law. At the first report of this prospect of a speedy reconciliation, there was a lurried gathering together of property or spoils, and a shoeing and saddling of horses for flight. No Norman or Frenchman of any consequence thought his life safe, Robert, the archbishop of Canterbury, and William, bishop of London, having armed their retainers, took horse and fought their way sword in hand through the city, where many Eng-VOL. 1.

mandy; and from this circumstance there arose a curious episode or under-act in the treacherous and sanginnary drama The exclusion of Sweyn from pardon, and a nominal restoration to the king's friendship, did not arise from the active part he had taken in the Norman quarrel, but was based in his old crimes, and more particularly the treacherous murder of his consac Beorn. It seems that his family acquiesced in the justice of his sentence of banishment, and that Sweyn banself, now lumble and penitent, submitted without a struggle. He threw aside his costly mantle and his chains of gold, his armour, his sword, and all that marked the noble and the warrior; he assumed the lowly garb of a milgram, and, setting out from Flanders, walked barefoot to Jerusalem—that great pool of moral purification, which, according to the notion of the times, could wash out the stame of all guilt. He reached the holy city in safety—he wept and prayed at all the hobest places there, - but, returnmg through Asia Minor, he died in the province of Lycia. Godwin did not long survive the re-establishment of Saxon supremacy, and his complete victory over the king. According to Henry of Huntingdon and other chroniclers, a serv short time after their feigned reconciliation, as Godwin sat at table with the king at Windsor, Edward again

reproached the earl with his brother Alfred's mur-

with headlong speed to Ness, in Essex So great

was the danger or the panic of these two prelates,

that they threw themselves into an ill-conditioned

small open fishing-boat; and thus, with great suffering, and at an immoment hazard, crossed the

Chaimel to France. The rest of the foreign fa-

vourites fled in all directions, some taking refuge m the castles or fortiesses commanded by then

countrymen, and others making for the shores of

the British Channel, where they lay concealed

until favourable opportunities offered for passing

moned; and when Godwin, in plenitude of might,

appeared before it, after having visited the binnbled king, the "earls" and "all the best men of

the land" agreed in the proposition, that the Nor-

mans were guilty of the late dissentions, and God-

win and his sons innocent of the crames of which

they had been accused. With the exception of four or five obscure men, a sentence of outlawry

was horled against all the Normans and French;

and, after he had given hostages to Edward, Godwm and his sons, with the exception only of Sweyn,

received full restitution; and, as a completion of

his triumph, his daughter Editha was removed from her monastic prison to court, and restored to

all her honours as queen. The hostages granted

were Wilnot, the vonngest son, and Haco, a

grandson of Godwin. Edward had no sooner got them into his lands, than, for safer custody,

he sent them over to his consur William of Nor-

over to the Continent.

lish were killed or wounded. They escaped through the eastern gate of London, and galloped bread to choke me!" He put the bread to his

mouth, and of course, according to this story, was

choked, and dled instantly. But it appears, from better authority, that Godwin's death was by no

means so sudden and dramatic; that though he

fell speechless from the king's table on Easter Monday (most probably from apoplexy), he was

taken up and carried into an inner chamber by

his two sons Tostig and Gurth, and did not die till the following Thursday. Harold, the eldest, the

handsomest, the most accomplished, and in every respect the best of all the sons of Godwm, suc-

194

ever, still showed himself so powerful, that Harold was obliged to treat with him. By these negotiations, he was restored to his former possessions and honours; and when, very shortly after, his father Leofric died, Algar was allowed

HISTORY OF ENGLAND.

ceeded to his father's territories and commands,

and to even more than Godwin's authority in the nation; for, while the people equally considered him as the great champion of the Saxon cause, he was far less obnoxious than his father to the king; and, whereas his father's from frame was sinking under the weight of years, he was in the prime and vigour of life. The spirit of Edward, moreover, was subdued by misfortune, the fast-coming infirmities of age, and a still increasing devotion, that taught him all worldly dominion was a bauble not worth contending for. He was also conciliated by the permission to retain some of his foreign bishops, abbots, and clerks, and to recall a few other favourites from Normandy. The extent of Harold's power was soon made manifest. On succeeding to Godwin's earldom, he had vacated his own command of East Anglia, which was bestowed by the court on Algar, the son of Earl Leofne, the hereditary enemy of the house of Godwin, who had held it during Harold's disgrace and exile. As soon as he felt confident of his strength, Harold caused Algar to be expelled his government and banished the land, upon an accusation of treason; and, however unjust the sentence may have been, it appears to have been passed with the sanction and concurrence of the witenagemot. Algar, who had married a Welsh princess, the daughter of King Griffith, fled into Wales, whence, relying on the power and influence possessed by his father, the Earl Leofric, and by his other family connexions and allies, he shortly after issued with a considerable force, and fell upon the county and city of Hereford, in which latter place he did much harm, burning the minster and slaving seven canons, besides a multitude of laymen. Rulf, or Radulf, the earl of Hereford, who was a Norman, and a nephew of the king's, made but a feeble resistance; and, it is said, he destroyed the efficiency of the Saxon troops, by making them fight the Welsh on horseback, "against the custom of their country." Harold soon bescened to the scene of action, and advancing from Gloucester with a well-appointed

army, defeated Algar, and followed him in his

retreat through the mountain defiles and across

to take possession of his vast earldoms. The king seems to have wished that Algar should have been a counterpoise to Harold, as Leofric had once been to Godwnr; but both in council and camp Harold carried everything before him, and his jealonsy being agam excited, he again drove Algar into banishment. Algar, indeed, was no mean rival. Both in boldness of character and in the nature of his adventures, he bore some resemblance to Ha-This time he fled into Ireland, whence he soon returned with a small fleet and an army, chiefly raised among the Northmen who had settled on the Irish coasts, and who thence made repeated attacks upon England. With this force, and the assistance of the Welsh under his father-inlaw King Griffith, he recovered his carldoms by force of arms, and held them in defiance of the decrees of the king, who, whatever were his secret wishes, was obliged openly to denomice these proecedings as illegal and treasonable. After enjoy-

the moors and morasses of Wales.

tories and commands.

mg this trumph little more than a year, Algar died (a.b. 1059), and left two sons, Morear and  ${f E}$ dwm, who divided between them-part of  $\ln s$  term-While these events were in progress, other circumstances had occurred in the north of England which materially augmented the power of Harold. Siward, the great Earl of Northumbria, another of Godwin's most formidable rivals, had died, after an expedition into Scotland; and as his elder son Osberne had been slain, and lns vounger son Waltheof was too young to succeed to his father's government, the extensive northern earldom was given to Tostig, the brother of Harold. Siward, as will be presently related more at length, had proceeded to Scotland to assist in scating his relation Prince Malcolm, the son of the late King Duncan, upon the throne of that country, which had been usurped by Duncan's murderer, Macbeth. It was in this enterprise, and before it was crowned with final success, that, as has just been mentioned, Osberne, the pride of his father's heart, was slain. He appears to have fallen in the first battle fought with Macbeth (A.D. 1054) near the hill of Dunsi-

Checking his natural emotions, the old earl asked how the young man had fallen; and being told that he had received all his wounds in front, hke a brave man, he said he was satisfied, and wished no better death for himself. He did not, however, die in battle, nor would he die in his bed,—a death he held to be dishonourable. Soon after his return from Scotland he was attacked by a fatal disorder. As he felt his end approaching he said to his attendants, "Lift me up. that I may die on my legs, like a soldier, and not crouching, like a cow! Dress me with my coat of mail,cover my head with my helmet,-put my shield

CHAP. I.]

CIVIL AND MILITARY TRANSACTIONS.

near descent, was much beloved by the Northumbrians, who were themselves chiefly of Damsh They called him Sigward-Digr, or Siward the Strong; and many years after his

death they showed, with pride, a rock of sold granite which they pretended be had split in two with a single blow of his battle-axe. To his irregular successor, Tostig, the brother of Harold, they showed a strong dislike from the first, and this aversion was subsequently increased by acts of tyranny on the part of the new earl. In another

direction the popularity of Harold was increased by a most successful campaign against the Welsh, who had inflamed the hatred of the Saxon people by their recent forays and ernel marders. great leader, King Griffith, had been weakened and exposed by the death of his son-in-law, and Harold's rival, the Earl Algar, in 1059; and after some minor operations, in one of which Rees, the brother of Griffith, was taken prisoner and put to death, by the order of King Edward, as a robber

and murderer, Harold was commissioned, in 1063,

to carry extreme measures into effect against the

ever-turbulent Welsh. The great earl displayed

his usual ability, bravery, and activity, and by

skilfully combined movements, in which his brother

Tostig and the Northumbrians acted in concert

with him, by employing the fleet along the coast,

by accoutring his troops with light helmets,

targets, and breast-pieces made of leather (instead

of their usual heavy armour), in order that they

might be the better able to follow the fleet-footed

Welsh, he gained a succession of victories, and

finally reduced the mountaineers to such despair

that they decapitated their king, Griffith, and sent

his bleeding head to Harold, as a peace-offering

and token of submission. The two half-brothers

of Griflith swore fealty and gave hostages to King

Edward and Harold. They also engaged to pay

the ancient tribute; and a law was passed that

every Welshman found in arms to the cast of

Offa's dyke should lose his right hand. From this

memorable expedition, the good effects of which

were felt in England, through the tranquillity of the Welsh, for many years after, Harold returned in a sort of Roman triumph to the mild and peaceable Edward, to whom he presented the ghastly head of Griffith, together with the rostrum or beak of that king's chief war-ship. The king's devotion still kept increasing with his years, and now, forgetful of his bodily infirmities, which in all probability would have caused his death on the road, and indifferent to the temporal good of his people, he expressed his intention of going in pilgrimage to Rome, asserting that he was bound thereto by a solemn vow. The Witan objected that, as he had no children, his absence and death would expose the nation to the dangers of a disputed succession; and then the

\* Hen, Hunt .- Higden,

king for the first time turned his thoughts to his nephew and namesake Edward, the son of ins half-brother, Edmund Ironside. The long neglect of this prince of the old race of Cerdic and Alfred, which, counting from the time of King Edward's accession, had extended over a period of more than twenty years, shows but slight affection

for that Saxon family; and, as the king had never expected any children of his own to succeed him, at seems to confirm the statement of those old writers who say he had all along intended to bequeath his crown to his cousin William of Normandy. But at this moment Norman interest and influence, though not dried up, were at a low ebh: be his wishes what they might, Edward durst not propose the succession of William, and being pressed by the Witan, and his own eager desire of travelling to Rome, he sent an embassy to the German emperor Henry III., whose relative the

young prince had married, requesting he might be

restored to the wishes of the English nation. Edward the Atheling, or Edward the Outlaw, as he is more commonly called, obeyed the simmons with alacrity, and soon arrived in London with his wite Agatha and his three young children -Edgar, Margaret, and Christma. The race of their old kings was still dear to them; Edmund Propside was a national hero inferior only to the great Alfred; his gallantry, his bravery, his victories over the Danes, were sung in popular songs, and still formed the subject of daily conversation among the Saxon people, who therefore received his son and grandclildren with the most hearty welcome and enthusiastic joy. But though King Edward had invited over his nephew with the professed intention of proclaiming him his hear to the crown, that prince was never admitted into his presence. This circumstance could not ful of creating great disgust; but this and all other sentiments in the popular mind were speedily absorbed by the deep and universal grief and despondence caused by Prince Edward's death, who expired in London shortly after his arrival in that city, and was buried in the cathedral of St. Paul's. sudden catastrophe, and the voluntary or constrained coyness of the king towards his nephew, have awakened horrid suspicions of foul play. The more generally received opinion seems to be that the prince was kept at a distance by the machinations and contrivances of the jealous

poisoned, in order to remove what he considered the greatest obstacle to his own future plans. In justice, however, the memory of Harold ought not to be loaded with a crime which, possibly, after all, was never committed; for the prince might very well have died a natural death, although his demise tallied with the views and interests of Harold. His long neglect of him proved that the king had no affection for his nephec, whom he had recalled at last by compulsion of the nation. The animosities horne by sovereigns against those who are to succeed them, even when their successors  $2 \circ 2$ 

Harold, and that that earl caused bim to be

are their own children, have prevailed in all ages. These causes would sufficiently account for Prince Edward's not being readily received by his uncle, who, moreover, in many circumstances of his life, showed himself a moody, wayward man, wanting 'the natural touch." There is no proof, nor shadow of proof, that Harold circumvented and then destroyed the prince. It is merely presumed that, because the earl gained most by his death, he caused him to be killed. But William of Normandy gamed as much as Harold by the removal of the prince, and was, at the very least, as capable of extreme and treacherons measures. his visit in England the king may have promised the duke that he would never receive his nephew Edward; and, while this circumstance would of itself account for the king's shyness, the coming of the prince would excite the jealousy and alarm of William, who had emissaries in the land, and friends and partisans about the court. Supposing, therefore, Prince Edward to have been murdered (and there is no proof that be was), the crune was as likely to have been committed by the orders of the duke as by those of the carl.

The demise of Edward the Outlaw certainly cut off the national hope of a continuance of the old Saxon dynasty; for, though he left a son, called Edgar the Atheling, that prince was very young, feeble in body, and in intellect not far removed from idiotey. The latter circumstance forbade all exertion in his favour; but, had he been the most promising of youths, it is very doubtful whether a minor would not have been crushed by one or other of two such bold and skilful competitors as William and Harold. As matters stood, the king, whose journey to Rome could be no more talked of, turned his eyes to Normandy, while many of the Saxons began to look up to Harold, the brother of the queen, as the best and most national successor to the throne.

Here we again reach a point in our annals that, like so many others, is involved in mystery and the most perplexing contradictions. According to some writers, Edward now for the first time made a will, bequeathing the crown to his cousin; according to others he had made this will long before, when the recall of Prince Edward was not thought of, and lad privately communicated the nature of his testament to Duke William, through the medium of Robert, the Norman Archbishop of Canterbury. On one side it is stated that Harold was, to the last, kept in the dark as to these proceedings; on another, it is as confidently asserted that, in 1065, about a year before the king's death, Harold lumself was the messenger appointed to convey to William the intelligence of the will, which (according to this version of the story) was now first executed.

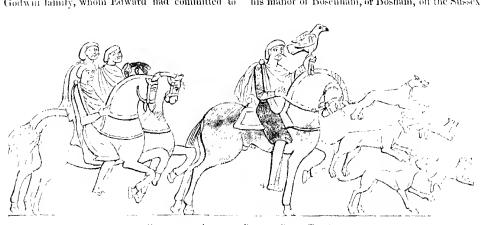

HAROLD TAKING LEAVE OF EDWARD ON HIS DEPARTURE FOR NORMANDY. From the Bayeux Tapestry \*

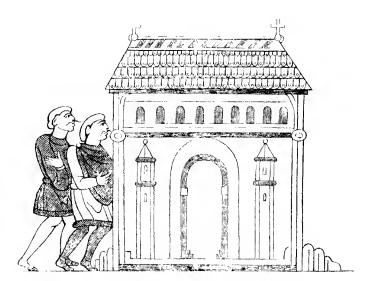

<sup>•</sup> The Bayean Tapestry is a roll of linea 20 makes broad, and 214 feet in length, on which is worked with woodlen thread, of different colonia, a representation, in seventy-two district compartments, of the whole history of the Norman compact of England, from the departure of Hardell for Normandy to the ront of the Saxons at the battle of Hastings. It embraces all the lacidents of Hardel's sky in Normandy, and has preserved some that have not been induced, by any of the chonneless. Every compartment has a superscription in Laim, inducing its subject, a specimen of these litles is given in one of the cuts below. The Bayean tapestry is said by tradition to have been the work of the Competent's queen, Mattldia, and to have been presented by her to the calledral of Bayean, or which her husband's hall-brother, Odo, one of those who rendered the most effective service in the invision of England, was bishop; and the defineations, which correspond in the numbers built with whether the beginners of battery and the strongest relicince that it is of this antiquity. It was unserved in the rathedral of Bayean, or the points with whether would be exhibited for some days in every year to the people, in the nave of the church, round which it exactly went. It is now in the hole of the prefective of that city, where it is Capticular in an or lower hole it is involved in the rate of the church, was published by the Society of Antiquaries, in the sixth vol, of the 'Vetusta Monumenta,' The cuts we have given are reduced from these plates.

That Harold went to Normandy at this time is certain, but it is said that his sole object in going was to obtain the release of his brother Wulnot and his nephew Haco, the two hostages for the Godwin family, whom Edward had committed to

the custody of Dake William, but who the king was now willing should be restored. Another opinion is, that Harold's going at all was wholly accidental According to the latter version, being one day at his manor of Bosenham, or Bosham, on the Sussex

with but few attendants, and those not very expert narmers, and scarcely was be launched into the deep when a violent storm suddenly arose, and drove the ill-managed boat upon the opposite coast of France; but whether he went by accident or design, or whatever were the motives of the voyage, the following facts seem to be pretty generally admitted.

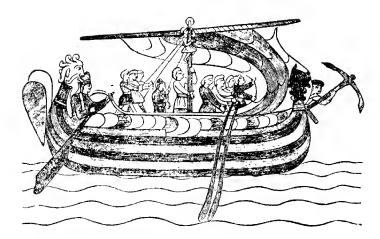

coast, he went into a fishing-boat for recreation

admitted.

Harold was wrecked or stranded near the mouth
of the river Somme, in the territory of Guy, Count
of Ponthueu, who, according to a barbarous practice
1 of uncommon, and held as good law in the middle

ages, seized the wreck as his right, and made the passengers his prisoners until they should pay a heavy ransom for their release. From the castle of Belram, now Beaurain, near Montreul, where the carl and his retinue were shut up; after they had been despoiled of the best part of their baggage, Godwin made his condition known to Duke William, and entreated his good offices. The duke could not be blind to the advantages that might be derived from this accident, and he instantly and carnestly demanded that Harold should be released and sent to his

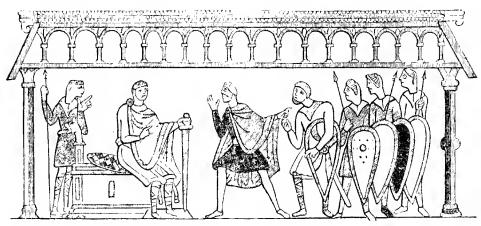

court. Careful of his money, William at first em-

HAROLD COMING TO ANCHOR ON THE COAST OF NORMANDY. Bayenx Tapestry.

ployed threats, without talking of ransom. The Count of Ponthieu, who knew the rank of his captive, was deaf to these menaces, and only yielded on the offer of a large sum of money from the duke, and a fine estate on the river D'Eanne. Harold then went to Rouen; and the bastard of Normandy had the gratification of having in his court, and in his power, and bound to him by this recent obligation, the son of the great enemy of the Nor-

mans,—one of the chiefs of the league that had banished from England the foreign courtiers, the friends and relations of William, those on whom his hopes rested, the intriguers in his favour for the royalty of that kingdom. Although received with much magmificence, and treated with great respect, and even a semblance of affection. Harold soon perceived he was in a more dangerous prison at Rouen than he had been in the castle of Belram. The aspirations

HAROLD'S APPLARANCE AT THE COURT OF DUER WILLIAM. Bayeux Tapestry.

to the English crown could be no secret to himself, and his inward conscience would make him believe they were well known to William, who could not be ignorant of his past life and present power in the island. If he was indeed uninformed as yet as to William's intentions, that happy ignorance was soon removed, and the whole peril of his present situation placed full before him by the duke, who said to him one day, as they were riding side by side,—"When Edward and I lived together,

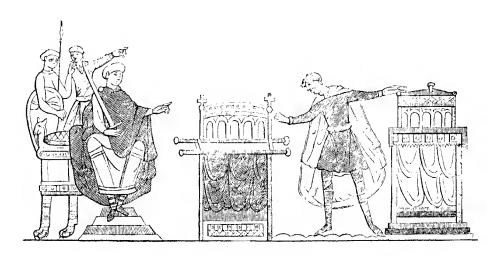

like brothers, under the same roof, he promised me that, if ever he became king of England, he would make me his successor. Harold! I would, right well, that you helped me in the fulfilment of this promise; and be assured that if I obtain the kingdom by your aid, whatever you choose to ask shall be granted on the instant." The liberty and life of the earl were in the hands of the proposer, and so Harold promised to do what he could. William was not to be satisfied with vague pro-

mises. "Since you consent to serve me," he continued, "you must engage to fortify Dover Castle, to dig a well of good water there, and to give it up to my men-at-arms: you must also give me your sister, that I may marry her to one of my chiefs; and you, yourself, must marry my daughter Adele. Moreover, I wish you, at your departure, to leave me, in pledge of your promises, one of the hostages whose liberty you now reclaim: he will stay under my guard, and I will restore him to you in England when I arrive there as king." Harold felt that to refuse or object would be not only to expose hnnself, but his brother and nephew also, to min; and the champion of the Saxon cause, hiding his heart's abhorrence, pledged himself verbally to deliver the principal fortress of his country to the Normans, and to fulfil all the other engagements, which were as much forced upon him as though William had held the knife to his defenceless But the ambitions, crafty, and suspicious

In the town of Ayranches, or, according to other authorities, in the town of Bayeux, William summoned a grand conneil of the barons and headmen of Normandy to be witnesses to the oaths he should exact from the English earl. The sanctity of an oath was so frequently disregarded in these devout ages, that men had begun to consider it not enough

Norman was not vet satisfied,

to swear by the majesty of heaven, and the hopes of eternal salvation, and had invented sundry plans, such as swearing upon the host or consecrated wafer, and upon the relics of saints and martyrs, which, in their dull conception, were things far more awful and binding. But Wilham determined to gain this additional guarantee by a On the eve of the day fixed for the assembly, he caused all the bones and relecs of saints preserved in all the churches and monasteries in the country to be collected and deposited in a large tub, which was placed in the council-chamber, and covered and concealed under a cloth of gold. At the appointed meeting, when Wilham was scated on his chair of state, with a rich sword in his band, a golden dradent on his head, and all his Norman chieftams round about lum, the missal was brought in, and being opened at the evangelists, was laid upon the cloth of gold which covered the tub, and gave at the appearance of a rich table or altar. Then Duke William rose and said, "Earl Harold, Frequire you, before this noble assembly, to confirm, by oath, the promises you have made me—to wit, to assist me in obtaining the kingdom of England, after king Edward's death, to marry my daughter Adele, and to send me your sister, that I may give her in marriage to

one of mme."

HAROLD'S OATH TO WILLIAM Bayenk Topestry.

Harold, who, it is said, was thus publicly taken by surprise, durst not retract: he stepped forward with a troubled and confused air, laid his hand upon the book, and swore. As soon as the oath was taken, at a signal from the duke, the missal was removed, the cloth of gold was taken off, and the large tub was discovered filled to the very brim with dead men's bones and dried up bodies of saints, over which the son of Godwin had sworn

without knowing it. According to the Norman chroniclers, Harold shuddered at the sight.\*

Having, in his apprehension, thus made surety doubly sure, William loaded Harold with presents, and permitted him to depart. Liberty was restored to young Haco, who returned to England

HAROLO'S INTERVIEW WITH KING EDWARD ON HIS RETURN FROM NORMANDY. BAYON Tapestry

with his micle, but the politic duke retained the other hostage, Wilhot, as a further security for the faith of his brother the earl,

Harold had scarcely set foot in England when he was called to the field by circumstances which, for the present, gave him an opportunity of showing his justice and impartiality or his wise policy, but which soon afterwards tended to complicate the difficulties of his situation. His brother Tostig, who had been entrusted with the government of Northumbria on good Siward's death, behaved with so much rapacity, tyranny, and cruelty, as to provoke a general rising against his authority and person. The insurgents -the hardiest and most warlike men of the land-marched upon York, where their obnoxious governor resided. Tostig fled like a coward; his treasury and armoury were pillaged, and two hundred of his body-guard, the tools of his tyramy, were massacred in cold blood on the banks of the Ouse. The Northumbrians, then, despising the weak authority of the king, determined to choose an earl for themselves; and their choice fell on Morear, one of the sons of Earl Algar, the old enemy of Harold and his family. Morear, whose power and influence were extensive in Lincoln, Nottingham, and Derbyshire, readily accepted the authority offered him, and, gathering together an armed host, and securing the services of a body of Welsh auxiliaries, he not only took possession of the great northern carldom, but advanced to Northampton, with an evident intention of extenderg his power towards the south of England. But here he was met by the active and intrepid Horold, who had never yet returned vanquished from a field of battle. Before drawing the sword against his own countrymen, the son of Godwin<sup>t</sup> proposed a conference. This was accepted by the Northumbrians, Who, at the meeting, exposed the wrongs they had suffered from Tostig, and the motives of their insurrection. Harold endeavoured to palliate the faults of his brother, and promised, in

his name, better conduct for the fature. If they would receive him back as then carl lawfully appointed by the king But the Northumbrans unanimously protested against any reconciliation with the chief who had tyraimised over them "We were born free men," said they, "and were brought up in freedom; a proud-clief is to as unbearable—for we have learned from our ancestors to live free, or die "

The crimes of Tostig were proved, and Harold, giving up his brother's cause as lost, agreed to the demands of the Northumbrians, that the appointment of Morear as earl should be confirmed. A trace being concluded, he hastened to obtain the consent of the king, which was little more than a pratter of form, and granted immediately Northumbrians then withdrew with their new earl, Morenr, from Northampton; but during Harold's short absence at court, to complete the treaty of pacification, and at their departure, they plundered and burned the neighbourne towns and villages, and carried off some hundreds of the inhabitants, whom they kept for the sake of ransom. The English pulse beats high at the tone of the Northumbrians' protest; but in these barbarous times the heart cannot fully enlist itself in favour of any one cause, or party, or set of men. As for the expelled Tostig, he fled to Bruges, the com- of Baldwin, earl of Flanders, whose daughter he had married, and, burning with rage and revence, and considering himself betrayed or unjustly abandoned by his brother Harold, he opened a correspondence, and sought friendship and support, with William of Normandy.

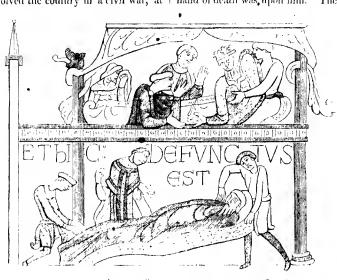

The childless and now childish Edward was A recent historian\* suggests that Harold's moderation in the affair of the Northumbrian insurrection may be partly attributed to a prudent regard for his own interests, which, at this moment of crisis, required his immediate presence in Lon-

. Dr. Lingaid.

don, that he might look after the succession to the crown. There may be some grounds for this supposition, which, however, must add to his reputation for wisdom, policy, and command of temper, however they may detract from his impartiality and abstract love of justice. An inferior statesman would have involved the country in a civil war, at

a moment when, of all others, it was most essential to him and the nation that it should be tranquil and united.

Harold arrived in London on the last day of November; the king grew worse and worse; and m the first days of January it was evident that the hand of death was upon him. The veil of mystery

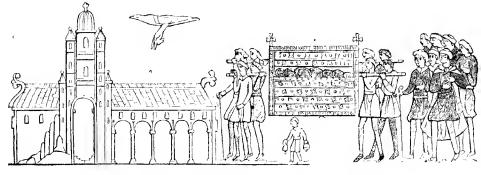

The Sugness and Deadle of Edward the Confessor. Bayenx Tapesby.

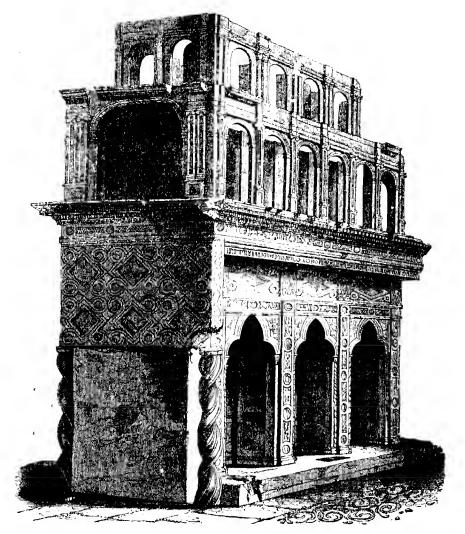

and doubt again thickens round the royal death-The writers who go upon the authority of those who were in the interest of the Norman, positively affirm that Edward repeated the clauses of his will, and named William his successor; and that when Harold and his kmsmen forced their way into his chamber to obtain a different decision, he said to them with his dying voice, "Ye know right well, my lords, that I have bequeathed my kingdom to the duke of Normandy; and are there not those here, who have plighted oaths to seenre William's succession?" On the other side, it is maintained, with equal confidence, that he named Harold his successor, and told the chiefs and churchmen that no one was so worthy of the crown as the great son of Godwin.

The Norman Duke, whose best right (if good or right can be in it) was the sword of conquest, always insisted on the intentions and last will of Edward. But, although the will of a popular king was occasionally allowed much weight in the decision, it was not imperative or building to the Saxon people without the consent and concurrence of the Witenagemot,-the parliament or great conneil of the nation, -to which source of right the Norman, very naturally, never thought of applying. The English crown was in great measure an This fact is sufficiently proved by elective crown. the megularity in the succession which is not reconcileable with any laws of heirship and primogeniture, for we frequently see the brother of a de-

ceased king preferred to all the sons of that king, or a younger son put over the head of the eldest. As the royal mee ended in Edward, or only survived in an imbecile boy, it became imperative to look elsewhere for a successor, and upon whom could the eyes of the nation so naturally fall as upon the experienced, skilful, and brave Harold, the defender of the Saxon cause, and the near relation by marriage of Harold, therefore, derived his their last king? anthority from what ought always to be considered its most legitimate source, and which was actually acknowledged to be so in the age and country in which he lived. William, a foreigner of an obnoxious race, rested his claim on Edward's dying declaration, and on a will that the king had no faculty to make or enforce without the consent and ratification of the states of the kingdom; and, strange to say, this will, which was held by some to give a plansible, or even a just title (which it did not), was never produced, whence people conchided it had never existed. If a signed and scaled will would have been little, the dving declaration, subject to all sorts of misinterpretation, ought to be considered as nothing. The probabilities however are, that Edward, bound by old promises and affections, and moved by old animosities, really wished to appoint the Duke and exclude the Earl, -that in the presence of his wife and her family he had not courage to insist on this wish, and that, when worn out by importunities, he family declared, as is reported, that the English

FUNERAL OF LOWARD THE CONFESSOR AT WESTMINSTER ADBEY. Bayens Tapesby.

REMAINS OF THE SHRINL OF LOWARD THE CONFESSOR, WESTMINSTER ABERY,

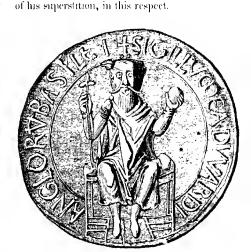

nation might name Harold or whomsoever they liked best for their king. He probably knew better than any man the resolute character of both competitors, and may therefore laive trembled at the prospect of the war and misery about to befal his people, to whom, in spite of his weaknesses and foreign prejudices, he was sincerely attached. The chrometers agree in stating that he was visited by frightful visions, - that he repeated the most menacing passages of the Bible, which came to his memory myohintarily, and in a confused manner, and that the day before his death, he pronounced a fearful prophecy of woe and judgment to the Saxon people. At these words there was "dole and sorrow enough," but Stigand, the Archbishop of Canterbury, could not refram from laughing at the general alarm, and said the old man was only dreaming and raying as sick old nich are wont to do-

During these his last days, however, the anxions mind of the king was in good part absorbed by the care for his own sepulture, and his carnest wish that Westminster Abbey, which he had rebuilt from the foundation, should be completed and consecrated before he departed this life. The works, to which he had devoted a tenth part of his revenue, were pressed,—they were finished; but an the Festival of the Innocents, the day fixed for the consecration, he could not leave his chamber; and the grand ceremony was performed in presence of Queen Editha, who represented her dying husband, and of a great concourse of nobles and priests who had been bidden in unusual numbers to the Christmas festival, that they might partake in this solemn celebration. He expired on the 5th of January, 1066; and, on the very next day, the Festival of the Epiphany, all that remained of the last Saxon king of the race of Cerdic and Alfred was interred with great pomp and soleminty, within the walls of the sacred edifice he had just lived time. enough to complete. He was in his sixty-fifth or

sixty-sixth year, and had reigned over England nearly twenty-four years.

In the character of Edward the Confessor there were many annable and excellent traits. In an age when war was considered the fittest and noblest occupation for a king, he was a sincere and consistent lover of peace. He was an enemy to all wiolence, force, and oppression, and studied, not insuccessfully, to relieve the body of the people from the heavy hand of power, and to establish the mild empire of the law. The body of laws he compiled, and which were so fondly remembered in after times, when the Saxons were ground to the dust by Norman tyranny, were selected from the eades or collections of his predecessors Ethelbert, Ina, and Alfred, few or none of them originating in himself, although the gratitude of the nation long continued to attribute them all to him. He felt keenly for the privations and misfortunes of the people; he was averse to buildening them with taxes; and his own economy, together with the comparatively peaceful state in which the kingdom was kept under him, enabled him to lighten the load which had oppressed them during several preceding reigns. It is said he could never look on a heap of gold and silver in his treasury without making melancholy reflections as to the manner in which it must have been wring from the people. On one occasion, when he was led by his courtiers to contemplate, as a pleasurable sight, the money that had just been collected by a tax, his imagination was so affected by the prodigious mass, that (says Ingulf) be fancted be saw the Devil leaping exultingly about it, and ordered it to be immediately restored to his poor subjects who had been forced to contribute it. Later historians laugh at this hallucination; but it would have been well for the people if many of the later kings had partaken of Edward's squeamishness of conscience, or even

IMPRESSIONS FROM THE GREAT SEAT OF EDWARD THE CONFESSOR.

Superstition, a boundless credulity, and an ascetic and mimanly devotion were, however, the foibles and vices of Edward's character, and though they obtained him canonization from a thankful

church, they certainly narrowed the limits of his usefulness in this world, unfitted him, in some essential respects, for the task of government, and entailed a legacy of inisery on the Anglo-Saxon nation.

THE CROWN OFFERED TO HAROLD BY THE PLOPLE. Bayen's Lipestry.

Harold was proclaimed king in a vast assembly of the chiefs and nobles, and of the citizens of London, almost as soon as the body of Edward was deposited in the tomb; and the same evening witnessed his solemn coronation, only a few hours intervening between the two ceremonics. The common account is, that Stigand, the Archbishop of Canterbury, who, in right of his office, should have crowned the king, having quar-

relled with the court of Rome, and then lying under a sentence of suspension, the ecclesistic next in dignity, Aldred, Archbishop of York, officiated in his stead; other authorities affirm that Hanold crowned himself, or put the crown on his head with his own hands; but both William of Poictiers, a contemporary writer, and Ordericus Vitalis, who lived in the next century, assert that the act was performed by Stigand. This ac-

CORONATION OF HAROLI. Bayenk Tapestry.

count seems to be confirmed by the representation of the ceremony on the Bayenx tapestry, where Harold appears scated on the throne, with Stigand standing on his left. In this moment of excitement the strong mind of the Saxon, though not destitute of superstition, may have risen superior to the terrors of the ilead men's bones, and the paths that had been extorted from him most foully and by force in Normandy; but the circumstances, no doubt, made an unfavourable impression on the minds of most of such of his countrymen as were acquainted with them. Still all the southern counties of England hailed his accession with joy, not was be wanting to himself in exertious to increase his well-established popularity. studied by all means which way to win the people's favom, and omitted no occasion whereby be might show any token of bounteons liberality, gentleness, and courteons behavion towards them. grievous customs also and taxes, which his predicessors had raised, he either abolished or dimanished; the ordinary wages of his servants and men of war he increased, and further showed himself very well bent to all vntne and goodness."\* A writer who lived near the time, adds, that from the moment of his accession he showed himself pious, limible, and affable; and that he spared limiself no fatigue, either by land or by sea, for the defence of his country. I

The court was effectually cleared of the unpopular foreign favourites; but their property was respected, they were left in the enjoyment of their civil rights, and not a few retained their employ-Some of these Normans were the first to aunounce the death of Edward, and the coronation of Harold, to Duke William. At the moment when he received this great news he was in his hunting grounds near Ronen, holding a bow in his hand with some new arrows that he was trying. On a sudden he was observed to be very pensive; and giving his bow to one of his people, he threw hunself into a skiff, crossed the river Seme, and then hurned on to his palace of Romen without saying a word to any one. He stopped in the great hall, and strode up and down that apartment; now sitting down, now rising, changing his sent and his posture, as if mable to find rest in any. None of his attendants durst approach, he looked so fierce and agitated: they all kept themselves at a distance, staring at each other in silence. An officer of rank, and one who enjoyed the intimate confidence of the duke, having arrived at the palace, was immediately surrounded by the attendants, all eager to know from him why their prince was so sore troubled. "I know nothing certain," said the officer, "but we shall soon be well informed;" and then advancing alone to William, he thus addressed him:—"My Lord, where is the use of linding your news from us?what will you gain by so doing? It is a common rumonr in the town that the king of England is

dead, and that Harold has seized the kingdom, belying his faith towards you." "They speak the truth," replied the duke; "my spite comes from the death of Edward, and the wrong that Haroid has done me " "Well, suc," continued the rourtier, "be not wroth at what ran be mended. For the death of Edward there is no help, but there is one for the wrongs of Harold: justice is on your side, and you have good soldiers; undertake boldly. — a thing well begin is half done," \* Recovering from his reverse, William agreed that ambassadors should be minediately sent to England. When these envoys appeared before Harold, they said, " William, Duke of the Normans, reminds thee of the oath thou hast sworn him with thy mouth and with thy hand on good and holy relies." "It is true," replied the Saxon king, "that I made an oath to William, but I made it under the influence of force. I promised what did not belong to me, and engaged to do what I never could do; for my royalty does not belong to me, nor can I dispose of it without the consent of my country. In the like manner I cannot, without the consent of my conntry, esponse a foreign wife. As for my sister, whom the duke claims in order that he may marry her to one of bis chiefs, she has been dead some time,—will be that I send him her corpse?" A second embassy terminated in mutual reproaches, and then William, swearing that, in the course of the year, he would come to exact all that was due to hun, and pursue the perfured Harold even into the places where he believed his footing the most sure and firm, pressed those preparations for war which he had begin almost as soon as he learned the course events had taken in England.

On the continent the opinion of most men was in favour of William, and Harold was regarded in the light of a sacrilegions outh-breaker, with whom no terms were to be kept. The habitual love of war, and the hopes of obtaining copions plunder, and rich settlements in England, were not without their effect. In the cabinet council which the diske assembled there was not one dissentient voice - all the great Norman lords were of opinion that the island ought to be invaded; and knowing the magnitude of the enterprise, they engaged to serve him with their body and goods, even to the selling or mostgaging their inheritance. "But this is not all," said they: "you must ask the aid, and also the advice, of the Norman people; for it is but right that those who pay the expense should be summoned to consent to it." William then convoked the great parliament or assembly of men of all conditions—warriors, priests, merchants, famuers, and others, at Lillebonne, where he explained has project, and solicited their assistance. hearing the duke's discourse the members retried, **in order that they might deliberate more freely out** of the reach of any influence. The Normans were as yet a comparatively free people, and the debate which ensued was loud and stormy. Rising from

HISTORY OF ENGLAND

to the enterprise was, that their sovereign had no right to command any of his vassals to cross the seas on military service. In the midst of this disorder William Fitz-Osborn, the grand seneschal of Normandy, raised his voice, and said, "Why de you dispute in this sort? William is your lord; he has need of you; your duty would be to make him the offer of your services, without waiting for his asking them. If you fail him at this crisis, and he obtain his ends without you, by the hving God he will remember it against you. Shew, then, that you love him, and act now with a good will " "No doubt," cried the opposition, " he is our lord; but is it not enough for us to pay him his rents? We owe him no aid in his going beyond sea: he has already overburdened us by his wars, and now, if he fails in this new enterprise, our country will be entirely runied." After a long dispute it was agreed that the seneschal Fitz-Osborn, who was acquainted with the property and means of all of them, should be the person deputed to excuse the assembly for the smallness of its offers. members all returned to the presence of the duke, when the seneschal, hurried on by his own ardent zeal, delivered a message very different from that which had been agreed upon, declaring nothing less than that each fendatory was ready to serve him beyond sea,—that he who lutherto had furnished only two horse-soldners would now provide four,-

and that m all things his Norman vassals would

render double the service to which they were

bound by their tenures. At this unexpected discourse a long shout of rage and disapprobation

shook the hall. "No! no!" eried the members,

" we never charged you with such an answer,-we did not say that,—that will never be. If the duke is pressed in his own country we will serve him, as it is due to him we should, but we are not bound to assist him in conquering the country of other men. Besides, if we do him double service once, and if we follow him once beyond sea, he will hold it as his right and a precedent for the future,-he would thus exact it from our children! This must not be!—this shall never be!" The assembly then broke up in a general tumult. William was exasperated, for he never brooked an opposition to his decided will; but he was not disheartened, and was sufficiently master of his passion to have recourse to cajolery and artifice. He summoned the members of the assembly into his presence one by one, beginning with the richest and most influential; and, charming them with his condescension, and dazzling them with the certain prospect of gain and glory, he proceeded to assure them that whatever they did now should be considered as voluntary and gratuitous, and should in no sense be held as a right or established as a precedent for future times; and he offered to give

them security for this by letters scaled with his

great seal. The opposition of the mass was thus

merchants their stuffs, and the farmers their com and provender. A clerk stood near the duke with a large book open before him, and as the vassals made their promises he wrote them all down in his register. The ambitious William looked far beyond the confines of Normandy for soldiers of fortune to assist him in his enterprise. He had his ban of war published in all the neighbouring conntries; he offered good pay to every tall, robust man who would serve him with the lance, the sword, or the cross-bow. A multitude flocked to him from all parts,—from far and near,—from the north and the south. They came from Mame and Anjon; from Porton and Bretagne; from the country of the French king and from Flanders; from Aquitaine and from Burgandy; from Piedmont beyond the Alps and from the banks of the Rhme. Adventurers by profession, the idle, the dissipated, the profligate, the enfans perdus of Europe, hurried at the summons.\* Of these, some were kinghts and chiefs in war, others simple foot-soldiers; some demanded regular pay in money; others merely their passage across the Channel, and all the booty they might make. Some demanded territory in England—a domain, a castle, a town; while others, again, simply wished to secure some rich Saxon lady in marriage. All the wild wishes, all the pretensions of human avarice, were wakened into activity. "William," says the Norman chronicle, "repulsed no one, but promised and pleased all as much as he could." He even sold, beforehand, a bishopric in England to a certain Remi of Fescamp (afterwards canonized as St. Remigius), for a ship and twenty men-at-arms. When the pope's bull arrived, justifying the

expedition, and with it the consecrated banner that was to float over it, the matrons of Normandy sent their sons to enrol themselves for the health of their sonls: and the national eagerness for war was mereased twofold. Three churchmen, the celebrated Lanfranc, Robert of Jumnèges, archbishop of Canterbury, who had been expelled by Earl Godwin and his sons, and a deacon of Lisicux, had been sent on an embassy to Rome, where they urged the eause of William with entire success, and obtained from Alexander III. a holy licence to invade England; on the condition, however, that the Norman dake, when he had conquered our island, should hold it as a fief of the church. This measure was not carried through the consistory without opposition. The man who combated most warmly in its favour was the fiery Hildehrand, then archdeacon of the church of Rome, and afterwards the celebrated Pope Gregory VII. In after years, when William could mock the power he now courted, and quarrelled with the pope, this Gregory re-

## \* Thierry.--Chron. de Normandie.

minded him of these services in a vehement epistle. "Thou art not ignorant," wrote the pontiff, " of the pains I took in by-gone times for the success of thy enterprise, and that, above all, I suffered on thy account infamy and reproaches from some of my colleagues. They murmured to see me display so much warmth and zeal for the cause of such an homicide; but God knows my intention was good; I believed thee the friend of holy church, and I hoped that, by the grace of Heaven, thy bounty to the church would increase with thy power." The most valid reasons William or his amhassadors could present to the pope were the will of King Edward the Confessor, which was never produced, the perjury and sacrilege of Harold, the forcible expulsion from England of the Norman prelates, and the old massacre of the Danes on St. Brice's day by Kmg Ethelred. But if there was any want of plausibility in the argumentative statement of his case, William, as already intimated, was most liberal and convincing in his promises to the pope, to whom, among other things, he offered an aimual tribute, to be levied in England after the fashion set by Camite

 $\Lambda$  pontifical diploma signed with the cross, and sealed, according to the Roman usage, with a seal m lead of a round form\* was sent to the Norman

Duke, and, in order to give him still more confidence and security in his invasion, a consecrated banner, and, a ring of great price, containing one of the hairs of St. Peter, were added to the bull. William repaired in person to St. Germann, in order to solicit the aid of Philip I., king of the This sovereign, though tempted by flattering promises, thought fit to refuse any direct assistance; but he permutted (what he probably could not prevent) that many hundreds of his subjects should join the expedition. William's fatherm-law, Baldwin of Flanders, gave some assistance in men, ships, and stores; and the other continental princes, pretty generally, cucouraged William, in the politic hope, that a formulable neighbour might be kept at a distance for the rest of his life if the expedition succeeded, or so weakened as to be no longer formidable, if it failed. But there was one state, whose history in old tintes had been singularly mixed and interwoven with that of Britain, which might have proved an impediment. Armorica, now called Bretagne, or Britany, had become a sort of hef to Normandy; but Coman, the reigning clife or duke of the Bretons, sent a message to William, requiring that, since he was going to be king of England, he should deliver up his Norman duchy to the legitimate descendants of

WILLIAM GIVING ORDERS FOR THE INVASION. BAYERS Topostry.

Rollo the Ganger, from whom the Breton said he issued by the female line. Comm did not long survive this judiscreet demand; and his sudden death, by poison, was generally, and above all in Brittany, unputed to William the Bastard. Eudes, or Eudo, the successor of Conan, raised no pretensions, but voluntarily yielding to the influence of William, sent him two of his sons (which he was not bound to do) to serve him in his wars against the English. These two young Bretons, named Brian and Allan, t came to the rendezvous accom-

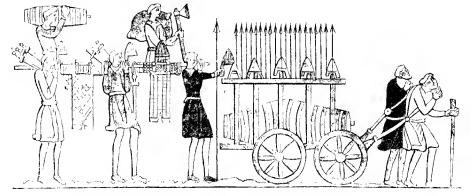

panied by a troop of men of their own country, who gave them the title of Mac Tierns (the sons of the chief), while the Normans styled them Counts. Other rich Bretons, as Robert de Vitry, Bertrand de Dinan, and Raoul de Gael, flocked to William's standard, to offer their services as volunteers or as soldiers of fortune.

From early spring all through the summer months the most active preparations had been carried on in all the sea-ports of Normandy. Workmen of all classes were employed in building and equipping ships; smiths and armomers forged lances and made coats of mail; and porters passed incessantly to-and-fro carrying the arms from the workshops to the ships. These notes of pre-

<sup>\*</sup> Called in Lesin " bulla ," hence the common name " buil! for the

paration soon sounded across the channel, where Harold became anxions to ascertain the amount and nature of the forces which Wilham had ruised. Concealment would have been difficult, and was not considered needful, the Duke probably hoping to astound his rival with the magnitude and completeness of his preparations. At least there is an old story, that a detected spy from England was permitted to see what he chose, and dismissed without hurt, with this message from William—"That Harold need not trouble humself to ascertain the Norman strength, which he should see, and feel too, before the year was at an end."

The first storm of war that burst upon England did not, however, proceed from Normandy, and, but for his own unnatural brother, Harold might possibly have decided the proud threat of William. It will be remembered how this brother, Tostig, expelled from Northambria, fled with freacherous intentions to the court of the Earl of Flanders, and opened communications with the Duke of Normandy. Some after Harold's coronation Tustig repaired in person to Rouen, where he boasted to William that he had more credit and real power in England than his brother, and promised him the sure possession of that country if he would only unite with bin for its conquest. William was no doubt too well informed to credit this assertion; but he saw the advantage which might be derived from this fraternal hate, and gave Tostig a few ships, with which that miscreant ravaged the Isle of Wight aid the country about Sandwich. ing before the naval force of lns brother, Tostig then went to the coast of Lincolnshire, where he did great harm. He next sailed up the Himber, but was presently driven thence by the advance of Morear, carl of Northumbria, and his brother Edwin, which two powerful chiefs were now living in friendship with Harold, who had esponsed their sister Algitha, and made her queen of England. From the Humber Tostig fled with only twelve small vessels to the north of Scotland, whence, forgetful of his alliance with the Norman duke, he sailed to the Baltic to invite Sweyn the king of

Denmark to the conquest of our island. Sweyn wisely declined the dangerous myitation, and then, earing little what rival he raised to his brother, he went to Norway and pressed Harold Hardrada, the king of that country, to invade England. Hardrada, who was powerful, warlike, and ambitions, could not resist the temptation, and early in antunin he set sail with a formidable fleet, consisting of two hundred war-ships, and three hundred storeships and vessels of smaller size. Having touched at the Orkneys, where he left his queen, and procured a large reinforcement of pirates and adventurers, Hardrada made for England and suled up the Tyne, taking and plundering several towns. He then continued his course southwards, and, being joined by Tostig, sailed up the Humber and the Ouse. The Norwegian king and the Saxon traitor landed their mitted forces at Riccall, or Richale, not far from the city of York. Notwithstanding his former infamous conduct, Tostig had still some friends and retamers in that country: these now ralled round his standard, and many others were won over or reduced to an impatriotic neutrality by the imposing display of force on the part of the invaders. The earls Morear and Edwin, true to Harold and their trust, marched boldly out from York; but they were defeated after a desperate conflict, and compelled to fly. The citizens of York then opened their gates to the Norwegian conqueror, who made himself the more formidable to Harold by the wisdom and moderation of his conduct.

Through all the summer months the last of the Saxon monarchs had been busily engaged watching the southern coasts, where he expected William to land; but now, giving up for the moment every thought of the Normans, he united nearly all his forces and marched most rapidly to the north, to face his brother and the king of Norway. This march was so skilfully managed that the invalers had no notion of the advance, and they were taken by surprise when Harold burst upon them like a thinder-bolt in the neighbourhood of York a very few days after their landing. Hardrada drew up

he rode found them his horse stumbled, and he fell to the ground; but he presently sprang up unhunt, and, in order to stop a contrary augmy, exclaimed, that this was a good omen. Harold saw what had happened, and inquired who that Norwegian chief was in the sky-blue mantle and with the splendid helmet. He was told that it was the king of Noiway; upon which be added, "He is a large and strong person, but I augur that fortune has forsaken Before joining battle, Harold detached twenty mail-clad horsemen to parley with that wing of the enemy where the standard of Testig was seen; and one of these warriors asked if Earl Tostig was there. To-tig answered for linnset and said, "You know he is here!" The horseman then, in the name of his brother King Harold, offered him peace and the whole of Northimbria; or, if that were too little, the third part of the realin of England. "And what territory would Harold give in compensation to my ally Hardrada, king of Norway?" The horseman replied, "Seven feet of English ground for a grave; or a little more, s that Hadrada is taller than most men." -" Ride back, ride back," ened Tostig, "and bid King Harold make ready for the fight! When the Northmen tell the story of this day they shall never say that Earl Tostig forsook King Hardrada the son of Sigurd - He and I have one turnd and one resolve, and that is either to the in battle or to possess all England" Soon after, the action commenced: it was long, fierce, and bloody; but the victory was decisive, and in favour of Harold, Hardrada fell with nearly every one of his chiefs, and the greater part of the Norwegians perished, Tostig, the cause of the war, was slain soon after Hardrada. Even the Norwegan fleet fell into the

hands of the conqueror, who had the generality to

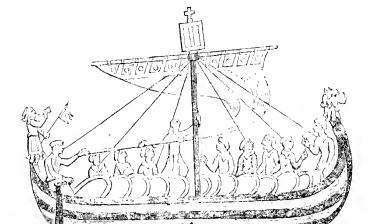

his forces as best he could at Stamford Bridge; as

permit Olave, the son of Hardrada, to depart with all the survivors in twenty-four slips, after that prince had sworn that he would for ever maintain taith and friendship to England.

Only three days after this signal victory the

Only three days after this signal victory the Normans landed in the south, Hardd received this news as he was sitting joyfully at table in the good city of York; but, taking his measures with his usual rapidity, he instantly began his march towards London. Upon his way his forces, which had suffered tremendously in the battle against the Norwegums, were weakened by discontents and descrition; and not a few men were left behind by the velocity of his march, from the effects of their wounds and from sheer fatigue. In number, spirit, discipline, appointment, and in all other essentials, the enemies he had now to encounter were most formidable. They have well been called "the most remarkable and formidable armament which the western nations had seen, since some degree of regularity and order had been introduced into their civil and inditary arrangements "? By the middle of August the whole of William's

theet, with the land-troops on board, had assembled at the mouth of the Dive, a small river which falls into the sea between the Seme and the Orie. The total number of vessels amounted to about 3000, of which 600 or 700 were of a superior order. During a whole mouth the winds were contrary, and kept the Norman fleet in that port. Then a breeze spring up from the south, and carried the ships as far as 8t. Valery, near Dieppe; but there the weather changed; a storm set in, and they were obliged to cast anchor and wait for several days. During this delay some of the ships were wreeked and their crews drowing on the coalt. In the forced idleness to which the soldiers were condemined, they passed their time in \*Sn+Meckintosb, Itist, Eng.

back the same sad and disconraging ideas.

and exaggerated the number of ilead bodies which the sea had thrown upon the sands. In consequence

HISTORY OF ENGLAND.

Hurold's ships, which so long had cruised on that coast, had been called elsewhere, or had returned into port through want of pay and provisions. \* It was on the 28th of September, 1066, that the Normans landed imopposed at a place called Bulverbithe, between Pevensey and Hastnigs. The archers hair was shaved off; then the horsemen landed, wearing from easques and timies and chausses (or defences for the thighs) of mail, being armed with long and strong lances and straight double-edged the army, pioneers, carpenters, and smiths, who carried on shore, piece by piece, three wooden castles, which had been cut and prepared before-

of all this not a few of the disconraged adventurers broke their engagements, and withdrew from the army; and the rest were inclined to believe that check these feelings, which might have proved fatal to his projects, William cansed the bodies of the slupwrecked to be privately buried as soon as they were found, and increased their rations both of food and strong drink. But their mactivity still brought is mad!" murumred the soldiers; "that man is very mad who seeks to take possession of another's country! God is offended at such designs, and this he shows now by refusing us a fair wind." The Duke then had recourse to something more potent than bread and wine. He caused the body of St. Valery, the patron of that place, where a town had grown up around his cell, to be taken

from his shrine, and carried in procession through the camp, the knights, soldiers, camp-followers, and sailors all devoutly kneeling as it passed, and praymg for the samt's intercession. In the course of the ensuing might the weather changed, and the wind blew fair from the Norman to the English The troops repaired to their several ships, and, at an early hour the next morning, the whole fleet set sail. William led the van in a vessel which had been presented to limi for the occasion by his wife Matilda, and which was distinguished by its splendid decorations in the day, and in the darkness of night by a brilliant light at its mast's head. The vanes of the ship were gilded,—its sails were of different bright colours, -the three hons, the arms of Normandy, were painted in several places,—and its sembifured figure-head was a child with a drawn bow, the arrow ready to fly against the hostile land. The consecrated banner sent from Rome by the Pope floated at the mani-top-mast, and the invader had put a cross upon his flag, in testimony of the holmess of his undertaking. This ship sailed faster than all the rest, and, in his impatience, William neglected to order the taking in of sail to lessen its speed. In the course of the night he left the whole fleet far astern. Early in the morning he ordered a sailor to the mast-head to see if the other ships were coming up. "I can see

nothing but the sea and sky," said the mariner; and then they lay-to. To keep the crew in good heart, William ordered them a sumptuous breakfast, with wines strongly spiced. The saflor was again sent aloft, and this time he said he could make out four yessels in the datance; but mounting a third time shortly after, he shouted, "Now I see a forest of masts and sails!" A few hours after this the united Norman fleet came to anchor on the Sussex

[Воок П.

coast without meeting with any resistance; for

After there descended the workmen of

hand in Normandy. The Duke was the last man to

land; and as his foot touched the sand, he made a

fulse step, and fell upon his face. A minimum

instantly succeeded this triffing mishap, and the

soldiery cried out, "God keep us! but here is a

bad sign!" In those days the Compueror's pre-

sence of mind never forsook him, and, leaping

garly to his feet, and showing them his hand full of

English earth or sand, he exclaimed, "What now"

tached corps of Normans then overran all the neighbouring country, pillaging and Burning the \* Thierry -Southey's Naval Hist, of Eng.-Chron. de Normand

cealed their goods and their cattle, and repaired in crowds to their churches, which they believed the smest asylum against their enemies, who, after all, were Christians like themselves. But the Normans cared little for the smentry of English churches, and respected no asylum. William personally surveyed all the neighbouring country, and occupied the old Roman castle of Pevensey with a strong detachment. It should appear that he was presently welcomed into England by several forcemers, the remnant of the old Norman court

houses. The English fled from their abodes, con- !

party which had been so predominant in the days of the late king. One Robert, a Norman thane who was settled in the neighbourhood of Hastings, is particularly mentioned as giving him advice immediately after his landing. It is probable that the disembarking the army, barse and foot, and the landing of the provisions and military stores, would occupy two or three days, but sixteen days chipsed between their arrival and the battle, and in all that time Wilham under no advance into the country, but lingered within a few miles of the coast where he had landed.

COURTNO AND FOR TING OF THE NORMANS AT HASTINGS. Bayenz Tapestry.

700 yessels, and sent them round to hinder Wilham's escape—for he made no doubt of vanquishing the Normans, even as he had so recently vanquir hed the Norwegians. Reinforcements of troops came in from all quarters except from the north; and another of his Norman spies and advisers, who was residing in the capital, informed the Duke there were grounds for apprehending that in a few days the Saxon army would be swelled to 100,000 But Harold was irritated by the ravages committed in the country by the invaders; he was impatient to meet them, and hoping to profit a second time by a sudden and unexpected attack, be marched off for the Sus-ex coast by night, only six days after his arrival in London, and with forces inferior in numbers to those of William. camp of William was well guarded, and, to prevent all surprise, he had thrown out advanced posts to a considerable distance. These posts, composed of good cavalry, fell back as the Saxous approached, and told William that Harold was rushing on with the speed and fury of a madman. On his side Harold despatched some spies, who spoke the French language, to ascertain the position and state of preparation of the Normans. Both these the returning spies reported to be formidable, and they added, with astomshment, that there were priests in William's camp than there were soldiers. in the English army. These men bad mistaken for priests all the Norman soldiers that had short

barr and shaven apper lips; •far it was then the

fashion of the English to let both their hair and

their mustaches grow long. Harold smiled at

On reaching London, where he appears to have

been well reserved by the people Harold manned

they are worth? He then halted his army at Sentue, since called Battle, and changing his plan, surrounded his camp with differs and palisades, and waited the attack of his rival in that wellchosen position. One whole day was passed in fruitless negotiations, the nature of which is differently reported by the old chroniclers. According to William of Porctices, who was chaplain to the Conqueror, and had the best means of information, and the writer or writers of the Chronicle of Normandy, a monk named Hugh Margiot was despatched to demand from Harold, in the name of William, that he would do one of three tarings resign his crown in favour of the Normon; submit to the arbitration of the pope, or decide the quarrel by single combat. Harold sent a refusal to each of these proposals, upon which William changed the monk with this last message; "Go, and tell Harold, that if he will kep his old bargain with me, I will leave him all the country Beyond the river Humber, and will give his brother Gorth all the lands of his father, Earl Godwin; but if he obstantely refuse what I offer han thou will tell him, before all his people, that he is perjored, and a liar; that he and all those who shall support him are excommunicated by the pope, and that I carry a bull to that effect." The Norman Chronicle rays that the mank Hugh pronounced this message a solemn tone, and at the word 'excommunication,' the English chiefs gazed upon one another in great dismay; but that, nevertheless, they all resolved to fight to the last, well knowing that the Norman had

then mistake, and said, "Those whom you have

found in such great numbers are not priests, but

brave men of war, who will soon show as what

HARLING THOU THE PARKIGHT DOWN.

promised their lands to his nobles, his captains, and

his knights, who had already done homage for them The Normans quitted Hastings, and occupied an enumence opposite to the English, planuly showing that they intended to give battle on the morrow. Several reasons had been pressed upon Harold by his followers, and were now repeated, why he should decline the combat, or absent linuself from its perilons chances. It was neged, that the desperate situation of the duke of Normandy forced him to bring matters to a speedy decision, and put his whole fortune on the issue of a battle, for his provisions were already exhausted, and his supplies from beyond sea would be rendered precarious both by the storms of the coming winter and the operations of the English fleet, which had already blockaded all the ships William kept with him in the ports of Pevensey and Hastings; but that he, the king of England, in his own country, and well provided with provisions, might bide his own time, and harass with skirmishes a decreasing enemy, who would be exposed to all the discomforts of an inclement season and deep miry roads; that if a general action were now avoided, the whole mass of the English people, made sensible of the danger that threatened their property, their honour, and their liberties, would reinforce his army from all quarters, and by degrees render it invincible. he turned a deaf car to all these arguments, his luother Gmth, who was greatly attached to him, and a man of bravery and good counsel, endeayoured to persuade him not to be present at the action, but to set out for London, and bring up the

Evies, while his best friends should sustain the attack of the Normans. "Oh! Harold," said the young man, " thou can't not deny, that either by force or free-will, thou hast made Duke Williams an oath upon the body of samts; why, then, adventure thyself in the dangers of the combat with a perjury against thee? To us, who have sworn nothing, this war is proper and just, for we defend Leave us, then, alone to fight this our country. battle-thou wilt succour us if we are forced to retreat, and if we die thou wilt avenge us." this touching appeal Harold answered, that his duty forbade him to keep at a distance whilst others risked then lives; and, determined to fight, and full of confidence in the justice of his cause, he waited the morrow with his usual courage. night was cold and clear: it was spent very differently by the hostile armies; the English feasted and rejoiced, singing, with a great noise, their old national songs, and emptying their horn-enps, which were well filled with beer and wine: the Normans having looked to their arms and to their horses, listened to their priests and monks, who prayed and sing lituries; and, that over, the soldiers confessed themselves, and took the sacrament by thousands at a time.

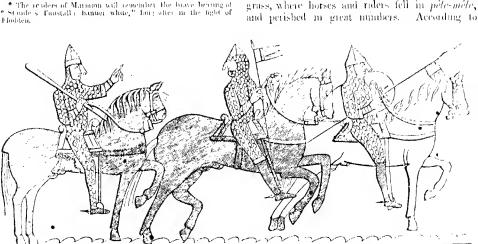

The day of trial - Saturday, the 14th of October was come. As day dawned, Odo, the bishop of Bayenx, a half-brother of Duke William, celebrated mass, and gave his benediction to the troops, being armed the while in a coat of mail, which he wore under his episcopal rochet; and when the mass and the blessing were over, he mounted a warhorse, which the old chroniclers, with their interesting minimteness of detail, tell us was large and white, took a lance in his hand, and marshalled Ins brigade of cavalry. The whole army was divided into three columns of attack; the third column, composed of native Normans, and including many great lords and the choicest of the knights, being headed by the duke in person. William rode a fine Spanish horse, which a rich Norman had brought him on his return from a pilgrimage to the shrine of St. Iago of Galicia: he wore suspended round his neck some of those revered relies upon which Harold had sworn, and the standard blessed by the pope was carried at his side by one Tonstain, surnamed "the White," or " the Fair," who accepted the honourable but danactons office, after two Norman barons had declined it. Just before giving the word to advance, he briefly addressed his collected host - "Make up your maids to fight valuantly and slay you ruemics. A great hooty is before is; - for if we cononer we shall all be rich; what I gain, you will gam, if I take this land, you will have it in lots among you. Know ye, however, that I am not come lither solely to take what is my due, but also to avenge our whole nation, for the felomes, permines, and treachery of these English. They mar sacred our knismen the Danes-men, women, and children,- on the night of St. Brice; they murdered the knights and good men who accompanied Prince Alfred from Normandy, and made my consin Alfred expire in tortine. Before you is the son of that Earl Godwin, who was charged with these murders. Let us forward, and punish bun,

A gigantic Norman, called Taillefer, who united the different qualities of champion, ministrel, and juggler, spirred his horse to the front of the van, and sing, with a loud voice, the popular ballads which immortalized the valour of Charlemagne,

with God to our aid!"

and Roland, and all that flower of chivalry that fought in the great fight of Roncesvalles. As he sang he performed feats with his sword, throwing it into the air with great force with one hand, and catching it again with the other. The Normans repeated the builden of his song, or cried Dieu aide! Dien aide! This accomplished brayo graved permission to strike the first blow; he am one Englishman through the body, and felled a second to the ground; but in attacking a third cavalier be was himself mortally wounded. The English, who, in reply to the Dieu aide t or "God is our help!" of the Normans, shouted "Christ's rood!—the holy rood!" remained in thear position on the ridge of a hill fortified by trenches and palisades; and within these defences they were marshalled after the fashion of the Danes, shield against shield, presenting an impenetrable front to the enemy. According to old privilege, the men of Kent were in the first line, and the burgesses of London had the honour of being the body guard, and were drawn up close round the royal standard. At the fact of this banner sto d. Harold, with his two brothers, Gurth and Leofwin, and a body of the brovest thanes of England. The Normans attacked along the line with their bowmen and crossbowmen, who produced no impression; and when their cayalry charged, the English, in a compact body, received the assailants with battle-axes, with which they broke the lances and cut the coats of mail, on which the Normans relied. The Normans, despairing of forcing the Euglish palisades and ranks, retired in some disorder to the division where William communided in person. The duke then threw forward all his archers, and supported them by a charge of cavalry, who shouted, as they couched then lances, "Notre Dame! Notre Dame! Dien aide! Dien aide!" Some of this cavalry Troke through the English line, but presently they were all driven back to a

deep trench artfully covered over with Joushes and

<sup>\*</sup> The senders of Maismon will remember the brave being of Sende's Transfell: banner white," hory after in the light of

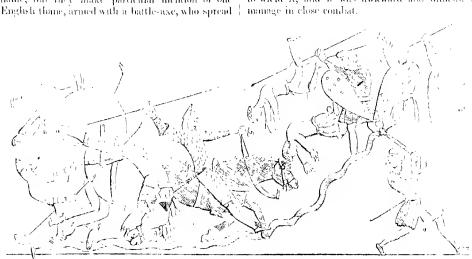

some accounts more Normans fell here than in any other part of the field. For a moment there was a general panie: a cry spread that the duke was killed, and at this report a flight commenced. William threw lumself before the fugitives, and stopped then passage, threatening them and striking them with his lance; then, uncovering his face and head, he ched, "Here I am! look at me! am still alive, and I will conquer by God's help " In another part of the field the rout was stopped by the fierce Bishop of Bayenx, and the attacks on the English line were renewed and multiplied. From time in the morning till three in the afternoon the successes were nearly balanced, or, if anything, seemed rather to preponderate on the English side. William had expected the greatest advantage from the charges of his numerous and brilliant cavalry; but the English foot stood firm (a thing which infantry seldom did in those days under such circumstances), and they were so well defended by their closed shields, that the arrows of

the Normans had little effect upon them. The duke ther ordered his bowmen to alter the direction of their shafts, and, instead of shooting point-blank, to direct their arrows upward, so that the points should come down like hall from above upon the heads of the enemy. The manustre took effect, and many of the English were wounded, most of them in the face, but still they stood firm, and the Normans, almost disheartened, had recourse to a stratagem. William ordered a thousand horse to advance, and then turn and fly; at the view of this pretended rout the English lost their cochiess, and leaving their positions, a part of the line gave pursuit with their battle-axes slining round their necks. At a certain distance a fresh corps of Normans joined the thousand horse, who drew tem and faced about; and then the English, surprised in their disorder, were assumed on every side by fances and swords. Here many hundreds of the English tell; for, encompassed by horse and foot, they could not retreat, and they would not a mrender. The latter

word, indeed, is never once used in any of the many old accounts of the battle of Hastings Norman writers speak with admination of the valour of several of Harold's thanes, who fought single-handed against a host of toes, as though each of them thought to save his country by his individual exertions. They have not preserved his name, but they make particular mention of one

dismay among the invaders. The battle-axe appear to have been the arm chiefly used by the English This ponderous weapon had its advantages and it disadvantages; wielded by nervous men, it backe in pieces the coats of imal, and cleb the steel exceptes of the Normans, as no swords could have done, but from its weight and size it required both handto wield it, and it was awkward and difficult to manage in close combat.

BATTLE OF HASSINGS Bayenx Tapestry.

English, with equal success. But still the main body maintained its position behind its stakes and palisades on the ridge of the hill; and such was their mishaken conrage, that the Normans were of liged to try the same stratagem a third time; and a third time the brave but imprudent victims fell into the snare. Then the Norman horse and foot burst rato the long-defended enclosure, and lacke the English line in several points. But even now the English closed again round Harold, who, throughout the day, had shown the greatert activity and bravery. At this pineture he was struck by ar arrow, shot at random, which entered his left eye, and penetrated into his brain. The English there gave way, but they retreated no further than then standard, which they still sought to defend The Normans beaumed them in, making the most desperate efforts to seize the harmer. Robert Fitzrest had almost grasped it, when a battle-axe land him low for ever. Twenty Norman knights then undertook the task, and this attempt succeeded, after ten of their number had perished. The standard of England was then lowered, and the consecrated banner, sent from Rome, raised m its stead, in sign of victory. Guith and Leofwin, the brave brothers of Harold, died at that last rallying point. The combat had lasted time bours, for it was now six o'clock in the evening, and the sna was setting, After a desperate attempt at rallying made by the men of Kent and the East Angles, which cost the lives of many of the victors, the English troops, proken and dispirited by the

the field, and, owniz to the impetuosity of the

English turned and made a stand wherever they could, they suffered severely in this pursuit, and soon gave it up. In every clause of their narrative the Norman writers express their admiration of the valour of the foe; and most of them confess that the great superiority of his forces alone enabled William to obtain the victory. During the sairguinary conflict the fortunate duke had three horses killed under him, and at one moment he was nearly laid prostrate by a blow struck upon his belinet by au English cavaher. The proud band of lords and knights that followed him from the continent was fearfully thuned, as was well proved on the morrow, when the muster-roll be had prepared before leaving the port of St. Valery was called over. He lost one-fourth of his army, and he did not gain by the battle of Hastings a fourth part of the kmgdom of England; for many an after-field was fought, and his wars for the conquest of the west, the north, and the east, were protracted for seven long The conquest effected by the Normans was a slow, and not a sudden one \* "Thus," to use the energetic language of an old writer, t " was fried by the great assize of God's judgment in battle, the right of power between the English and Norman nations; a battle the most memorable of all others; and howseever miserably lost, yet most nobly fought on the part of England," \* Sn.) DEATH OF HABOUR. Bayens Tapestry,

As the preceding narrative we have seen the Saxons frequently engaged in wars, and occanoually also connected by alliances, with various other nations dwelling around them in the same island. The largest as well as the fairest portion of Britain was conquered and occupied during the

period we have been reviewing by these Germanic invaders; but much of it still remained in the possession of the races of other lineage, by whom it had been either colonized, or was seized upon by invaders like themselves, but from a different quarter. All the east and south, from the Channel

to the Tweed, was Saxon; in the west, along the whole extent of the Saxon dominion, were the alien and generally hostile tribes of Carnwall and Wales; on the north-west were the independent sovereignties of Cumbria and Strathelyde (if these

were really two distinct kingdoms); and to the east and north of these was the powerful and extensive kingdom of the Piets, originally, it should seem, embracing the whole of the rest of modern Scotland. Behind the Piets, however, in the north-west, a colony of Scots from Ireland, not long after the arrival of the Saxons in the south, founded another new power of foreign origin, destined in like manner in course of time to bear down before it the elder thrones of its nwn part of the island.

The doubtful and confused annals of the several

destined in like manner in course of time to bear down before it the elder thrones of its own part of the island.

The doubtful and confused annals of the several Cornish and Welsh principalities of those times offer nothing to detain the lustorian. Cornwall appears to have usually formed one kingdom, South Wales another, and North Wales a third. But the subjects of these several states, and also those of Cinidnia and Stratlelyde, tarther to the north, may be regarded as having been in the main one people. It seems not improbable that they may have been a mixture of the old Celtae Britons who fled before the Saxous, or were the original inhabitinits of this strip of country, and of Cinibrans originally from the north of Germany and Denmank, the proper progenitors of the present Welsh. At what date these Cinibrans first found then way from the east coast of Scotland, where they seem to have carbest settled, to the west coast of England, and there mixed with and established a dominion over the nutive British occupants, no chronicles have told us. But some ancient relation between the Welsh and the Piets seems to be indicated by the strong evidence of language; and the close connection that subsisted between Wales and the Scotlish kingdom of Strathelyde, down to the extinction of the latter, is established by abundance of historic testinony. If, in the mixture of the two races, the ascendancy

and Denmark, the proper progenitors of the present Welsh. At what date these Combrians first found then way from the east coast of Scotland, where they seem to have earliest settled, to the west coast of England, and there muxed with and established a dominion over the native British occupants, no chrotocles have told us. But some ancient relation between the Welsh and the Pacts seems to be indicated by the strong evidence of language; and the close connection that subsisted between Wales and the Scottish knugdom of Strathclyde, down to the extinction of the latter, is estain the mixture of the two races, the ascendancy remained with the Celtic Britons anywhere, it was most probably in Cornwall. Everywhere else both the government and the language appear to have become chiefly Chubram, the national denonumation of the Welsh in their vernacular tangue to this day. One of the northern Welsh kingdoms was actually called the kingdom of Cumbria, whence our modern county of Cumberland; and if the kingdom of Strathelyde was a different state from this (which is doubtful), we know at least that in that district of Scotland also, the native land and residence of Merlin and Aneurin, and many other personages famous in Cumbrian song and story, the language, and government, and all things else, were Welsh. At what time the various tribes of the north, often spoken of under the general appellation of the Caledonians, although that name was properly applicable only to the occupants of the woody and mountamous regions of the west and north-west,

exception of the district of Strathelyda in the south-west, had been established some considerable tune before the evacuation of South Britain by the Romans in the middle of the fifth century. Records, the authenticity of which does not adout of any reasonable doubt, make the Pictish sovereign, when this event took place, to have been Durst, the son of Erp, for whom his warlike achievements against the provincialized Britons of the south, and the length of his reign, have obtained from the Trish armalists, the portic title of King of a Hundred Years and a Hundred Battles. The Picts, as our preceding pages have already informed the reader, came into collision with the Saxons of Northumberland not long after the estiblishment of the two kingdoms of Deniciand Benns car, the princes of the latter of which appear to have claimed as within their boundaries the whole of the ferritory along the east coast as far as to the Firth of Forth - For some time, accordingly, all this district formed a sort of debateable land, alternately subject to the Northumbrian Saxons and to the Piets. The Saxons are believed to have begun to settle in the territory as early as the anddle of the fifth century, and probably from this date the population continued to be mainly Saxon; but after the great battle of Dimmechtan (supposed to be Dunnichen in Augus), fought in 685 between the Pictish king Bridei, the son of Beh, and the Northumbrian Egfrid, it became permanently a part of the Pictish dominions. This is the tract of country which in a later age came to be called by the name of Lodoma, or Landoma, still surviving in the Lothians, the modern designation of the greater Lodonia appears to be a Tentonic word, signifying the Marches or Borders.

tribes. Antiquaries are generally agreed that a kingdom under the name of the kingdom of the

Picts, which, in pretension at least, extended over

the whole of what is now called Scotland, with the

[Book II.

In the earliest times of the Pictish monarchy its capital appears to have stood near the present town of Inverness. It was here that king Bridei, or Brude, son of Merlothon, was visited soon after the middle of the sixth century by St. Cohmelia, Afterwards, on the extension of their power towards the south, the kings of the Piets transferred their residence to Forteviot in Perthshire, and here they seem to have fixed themselves so long as the monarchy subsisted. The history of the state, so far as it has been preserved, is made up of little else than a long succession of hostilities, sametimes with the Saxons, sometimes with the neighbouring kingdom of Strathelyde, sometimes with the Scots from Ireland, who from the commencement of the sixth century continued to encreach upon the territories of the Picts, and the pressure from whom perhaps had some

the clucif seat of their sovereignty from its ancient position in the heart of the true Caledonia. The meagre narrative is also varied by some domestic wars, principally arising out of the competition of various claimants for the crown, to which there seems to have been no definitely settled rule of succession. Bede tells us that a preference was usually given to the female line,that is to say, the brother of the deceased sovereign by the same mother, or his uncle, who was the son of his grandmother, was preferred to his This practice, which still prevails among many barbarous tribes, was probably concerved to be recommended by the double advantage of better scenring the purity of the blood royal, and at the same time, of generally providing a man of mature age, instead of a boy or a child, to fill yacant throne. In the end of the eighth and the beginning of the ninth centary the Picts found a new enemy in the northern pirates or sca-kings, the same marauders who in the same age rayaged the neighbouring coasts of England and France, and indeed it may be said generally of all the north-west of Europe The dissolution of the aucient Pictish royalty, however, and the extinetion of the name of the Picts as that of an inde-

pendent people, were now at hand.

The carbest colony of Irish, or Scots, as they

were called, is said to have settled on the west coast of North Britain about the middle of the

third century. They were led by Carbry Risala,

prince or sub-regular of a district called Dahiad,

in 14ster; and they were long known by the name

of the Dalriadians, from this their native seat. The

share in inducing the latter eventually to remove

Dalmadians, however, do not appear to have set up any pictenees to an independent sovereignty in the country of their adoption until after the beginning of the sixth century, when their mimbers were greatly augmented by an immigration of their hish kindred, under the conduct of Lorn, Fergus, and Angas, the three sons of Erck, the then prince of Dalriada. This new colonization seems to have amounted to an actual invasion of North Britain, and the design of its leaders probably was from the first to wrest the country or a part of it from its actual possessors. Very soon after this we find the Picts and Scots meeting each other in arms. A still more decided proof of the growing strength of the latter nation is, in course of tune, afforded by a matrimonial alliance between the king of the Dalriadians and the Pictish royal This connexion took place in the reign of Achains, who is reckoned the twenty-seventh of the Scottish kings from Forgus, in whose line and in that of the descendants of his elder brother, Lorn, the sovereign power had been all along pre-Achaius married Urgusm, the sister of the Pictish kings Constantine and Ungus, who reigned in succession from A.D. 791 to 830. The issue of this marriage, and the successor of Achains, was Alpin, and his son and successor was

VOL. I.

between the two untions appears to have ensued; but at last, in A.D. 8-13, Kenneth, baving subducd all opposition, was acknowledged•king both of the Scots and the Picts. There is no reason to suppose, as is asserted by some of the Scottish chroniclers who wrote in a comparatively recent age, that the Pictish people were upon this event either destroyed or driven, from their country; it is probable enough that the chiefs of the faction that had resisted the claim of Kenneth, and also perhaps many of their followers, may have fled from the vengeance of the conqueror, and taken refuge in the Orkney islands and elsewhere; but the great body of the inhabitants no doubt remained the subjects of the new king. It appears that Kenneth and his immediate su ressors stylol themselves, not kings of Scotland and of Pictavia or Pietland, but kings of the Scots and the Piets; and the Picts are spoken of as a distinct people for a century after they thus ceased to form an independent state. Meanwhile the kingdom of Strathelyde, the capital of which was Alcloyd, the modern Dnnbarton, still subsisted, and withheld a large portion of the present Scotland from the sway of the Dal-

tors in the year \$36. Three years after, the Pictish

king Uven, the son and successor of Ungas, fell

in battle with the Danes. Kenneth, as the near

relation of its deceased occupier, immediately

claimed the vacant throne; a contest of aims

capital of which was Alcloyd, the modern Dimbarton, still subsisted, and withheld a large portion of the present Scotland from the sway of the Dalriadian prince. There is some appearance of Kenneth Mac Alpin having attempted to possess limiself of that additional throne by the same combination of policy and force by which he had acquired the dominion of the Piets. After long fighting, be concluded a peace with Ca or Caw, the king of Strathelyde, and gave him his daughter in marriage. No opportunity, however, was found of turning this orrangement to account in the manner which its projector probably contemplated; and the kingdom of Strathelyde, though distressed and weakened both by the pressure of its powerful neighbour and the frequent predatory and devistance attacks of the Dances from her and sens, constanting attacks of the Dances from her and sens, constanting attacks of the Dances from her and sens, constanting attacks of the Dances from her and sens, constanting attacks of the Dances from her and sens, constanting attacks of the Dances from her and sens, constanting attacks of the Dances from her and sens, constanting attacks of the Dances from her and sens, constanting attacks of the dance.

e The account here given is that which is now generally received; but it is proper in notice that the Tobe story of the conjunct of the Picts by Kennich, and also kennichs extraction from the old toyal line of the Irish Sorts, have been called in junction in the old toyal line of the Irish Sorts, have been called in junction and dement by Pinkerton in his "I impury me the History of Scotland preceding the regard Malcolin III.," a work of much beating and an increases, and also of gived value for the quantity of materials entherted in those previously inexplored sources. Lat disfigured by many preprinter asserbins and a providing spart of proprinter and paradox. tinued to maintain a nominal independence till the native government was finally subverted, and the country incorporated with the rest of the Scottish dominions, by the defeat of its last king, Dunwallon, by Kenneth III., the king of the Scots (the great-grandson of Kenneth Mac Alpin), at the battle of Vucornar, in a.d. 973. Even before this event, however, North Britain had begun to be known, after its Irish conquerors, by the name of Scotland. It is so called for the first time in the Saxon Chronicle under the year 934.

Meanwhile the united Scattish kingdom founded by Kenneth Mac Alpin continued to consolidate and strengthen itself under the sway of his descendants. Kenneth himself, in the remaining part of his reign, hal to make good his position by his sword, sometimes in defensive, sometimes in aggressive contests, both with the Danes, the Saxons, and his neighbours of Strathelyde; but he died at last in bed at his capital of Forteviot, a D-859. He was succeeded by his brother Donald 111, who reigned till a d. 863. Constantine 11., the son of Kenneth, followed, and, during a reign of eighteen years, was engaged in almost uninter-

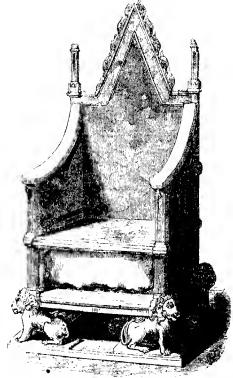

rapted warfare with the Danes, who harassed him both from Ireland and from the Contment, and penetrated into the heart of the kingdom by all its maritime inlets,-by the Clyde from the west, and by the Friths of Moray, Tay, and Forth from the east. It is asserted by the old historians that these invaders were first called in by the fugitive or subpugated Picts, a fact which may be taken as some confirmation of the common northern origin of both The enemy, therefore, with whom Constanting had to contend had friends and supporters in the heart of his dominions; and while he endeavoured to repel the foreigners with one band, he must have had to keep down his own subjects with the other. Nor were the Picts altogether defranded of their revenge on the son of their conqueror. They and their allies the Danes appear to have wrested from the Scottish king not only the Orkney and Western islands, but also the extensive districts of Caithness, Sutherland, and part of Ross-shire, on the continent of Scotland; and these acquisitions continued to be governed for many ages by Norwegian princes cutively independent of the Scottish crown. The traditionary ac-

Sculptured Stone lately due up in the ameient chapel of St, Regulus, at St. Andrew's. This is given as a specimen of many stone of a similar kind who is act found in various phees along the rast coast of Spadand, where the Purish dominions by. The present stone has not been before registred, and is, besides, remarkable as heigh, we believe, the only specimen of these stones which has been found as far north south of the Tay. In the county of Angus, on the other side of that river, they are very numerous; and they have been found as far north south of the Tay. In the county of Angus, on the other side is of the principal part of the immunes of the Parts, if cy have generally been and to ease in which they were rivered. But all suits of conjectures have been found as the north supposed to the menuments of that people is whom refer them chiefly to the much and the two of three belowing centimes, and to connect them with the counts of the Danois not source of times, others have cannot them has to the age in which the famous King Arthur Is supposed to have flour held with whose highly and exploit, in the pupillar radiannes. Notwithstanding the figure of the cross, which is not unfrequently found on these shores, it must be considered doubtful if they are Claustian memorials, for that symbol is midualisedly instances among their decorations. The support is also into a musual figure. In one instance only, as far as we ore want, has any changing an intend on apparently herd characters been found—manely, on one of two stones discovered a few varies can at Primardor, in Mr. Pulketin describes, "seem to resemble the Auglo-Saxon, as published by Hickes, especially those on the cours of the kings of North and the course of the much centure."

count, repeated by the later historians, of the termination of Constantine's disastrons reign is, that he was killed in a battle with the Danes, or put to death by them immediately after the battle, near Crail, in Fife. A cave in which he was massacred is still shown, and called the Devil's Cave. The older writers, however, place his death in A b. 882, a year after the great battle in Fife. Canstantine's miniculate successor was his

Frather Dugh; but he was dethroned the same year by Grig, the chieftain of the district now forming the slines of Abrideen and Banff, who, associating with himself on the throne Eocha, or Lith, son of the king of Strathelyde by a daughter of Kennith Mac Alpin, is said to have reigned for about twelve years with a more extensive authority than had been enjoyed by any of his predecessors. The monkish chromelers, indeed, who designate bun by the pompons title of Gregory the Great, absardly make him not only to have held his own with a frong found, but to have actually reduced to subjection all the neighbouring states, including both the English and the Irish. He appears to have been a favourer of the church, upon which he and ably leant for support in the deficiency of las bareditary title. However, he and his partner in the averaginty were at length defirrenced by a

popular insurrection, a.n. 893; on which their place was supplied by Domild IV., the son of Constantine II A succession of combats with the Danes, again, one of the most memorable of which was fought at Collin, near Scope, for the possession of the famous Stone of Destury which Kenneth Mac Alpin had transferred thither from the original British nestling-place of his antiquerace in Argyleshire, form almost the only recorded events of his The northern invaders were beaten at Collin; but a few years after, in 904, Donald fell in fight near Forteviot, against another band of them from Ireland. He was succeeded by Constantine III., the son of his uncle Hugh. This was the Scottish king who, as related in a preceding page, made an inroad, in 937, into the dominous of the Saxon Athelstane in conjunction with Olave or Anlat, the Danish chief of Northumberland, when their imited forces were routed in the bloody day of Brimanburgh, and Constantine with difficulty escaped from the shaughter in which his eldest son fell. A few years after this humiliating defeat, in a n 944, he exchanged his crown for a cowl, and he passed the last eight or nine years of his life as Abbot of the Culdees of St. Andrews. Meanwhile the throne was ascended by Malcolm L, son of Donald IV. The most important event of this reign was the cession by the Saxon king Edmund of the district of Cumbria, which he had recently conquered from its last king Dimmail, to Malcolm, to be held by him on condition of his arming when called upon in the defence either of that or of any other part of the Fighsh territory. Cumberland remained an appamage of the Scottish crown from this time till 1072, when it was recovered by William the Conquetor

Malcolm I, came to a violent death at the hands of some of his own subjects in 953, and left his sceptre to Indulf, the son of his predecessor Constantine 111. The reign of Indult was gravously translifed by repeated attacks of the Northmen; and he at last lost his life in what the old writers call the Battle of the Bands, fought in 961, near the Bay of Cullen, in BantIshire, where several bariows on a moor still preserve the memory of the defeat of the foreigners. Duff, the son of Malcolm I, now became king, acrording to what appears to have been the legal order of succession at this time, when each king for many generations was almost uniformly succeeded not by his own on, but by the son of his predecessor. But the effects of the natural disposition of the sovereign in possession to retain the enecession exclusively in ins own line now began to show themselves; and the right of Duff was disputed from the first by Indulf's son Culen, whose partizans, although defeated in the fair fight of Dunctub, in Perthsbuc, are asserted to have afterwards opened the way to the throne for their leader by the assassmation of his rival. This event took place at Forres in 965. But Culen did not long retain his guiltily acquired power. Disregarding all the duties of his place,  $2 \times 2$

her violator; and Culen fell in a battle fought with them at a place situated to the south of the Forth

HISTORY OF ENGLAND.

after all perpetrated to no purpose.

Kenneth's acts of severity, and perhaps also of cruelty and vengeance, recoiled upon him to his

own destruction. After the suppression of a com-

motion in the Mearns, he had thought it necessary

to signalize the trimiph of the royal authority by

taking the life of the only son of the chief of the

district, either because the young man had been

one of the leaders of the vanquished faction, or

perhaps because his father had not shown sufficient energy in meeting and putting down their designs,

By some means or other, however, Kenneth was

some time after induced to trust lumself in the

hands of Fenella, the mother of his victim, by

visiting her in ther castle near Fettercaun. Here he was murdered either by her orders, or not nu-

probably by her own hands, for it is related that

she fled the instant the deed was done, although she was soon taken, and suffered the same bloody

death she had avenged and inflicted. The reign

feated in the great battle of Lunearty, near Perth,

still famous in Scottish story and tradition for what

we fear must be designated the fable of the origin

of the nobility of the Hays Earls of Errol, from the incident of their ancestor, a husbandman, who

chanced to be busy at work in a neighbouring field,

We ought not to omit to notice that it was in the early part of this reign that the Danes were de-

of Kenneth was thus terminated A.D. 944.

The crown now fell to Kenneth III., another son of Malcolm f, and the brother of Duff. The reign of Kenneth III, is one of the most important in the early lustory of Scotland. He was a prince of remarkable ability, and of a daring and unscrupulons character; he occupied the throne for a sufficient length of time to enable him to lay a deep foundation for fus schemes of policy, if not to carry them into complete effect; and he came at a crisis when the old order of things was naturally breaking up, and the most favourable opportunity was offered to a bold and enterprising genius like his of establishing, or at least originating, a new system. It was one of those conjunctions of circumstances and of an individual mind fitted to take advantage of them, by which most of the great movements in national aflairs have been produced. effort was to follow out the war with the dechning

state of Strathelyde until he wound it up, as has been intimated above, with the complete subjugation of that rival kingdom and its incorporation with his hereditary dominions. With the exception, therefore, of the nominal independence, but real vassalage in everything except in name, of the Welsh, the whole of Britain was now divided into the two sovereignties of England and Scotland. The Saxon power of Wessex had swallowed up and absorbed everything clsc in the south, and in the north every other royalty lead in like manner falfen before that of the Celtic princes of Dalriada. Peace and intimate alliance, also, had now taken place of the old enunty between the two monarchies; and an opening most have been made for the passage to Scotland of some rays from the superior civilization of her neighbour, which would naturally be favourable to mutation in the airangements of the government as well as in other matters. It was in this position of affairs that Kenneth proceeded to take measures for getting rid of what we have seen was the most remarkable peculiarity of the Scottish regal constitution, the participation of two distinct lines in the right of succession to the throne, a rule or custom to which, notwithstanding some advantages, there would seem to exist an all-sufficient objection in its very tendency to excite to such attempts as that which Kemieth now made. Kenneth's mode of proceeding was characteristically energetic and direct. To put an end in the most effectual manner to the pretensions of Malcolm, the son of his brother Duff, he had that prince put to death, although he had been already recognized as Tamst, or next heir to the throne, and had as such been invested, according to custom, with the lordship of Cumberland. We shall see, however, that this deed of blood was

having, accompanied by his two sons, armed only with their ploughbeams, opposed a chief division of their countrymen when flying from the fight in a moment of panic, and driven them back to victory. The armorial bearing of this ancient family, which exhibits three escutcheous, supported by two peasants, carrying each the beam of a plough on his shoulder, is appealed to in proof of the story; but it is just as likely that the story may have been invented to explain the arms. At all events the arms are of much less antiquity than the battle of Luncarty, at the date of which event armoral ensigns were ninknown. It is well established

that the Hays are a branch of the Norman De

Hayas, whose ancestor came over to England with

the Conqueror,—that they did not come to Scotland till more than a hundred years after the battle

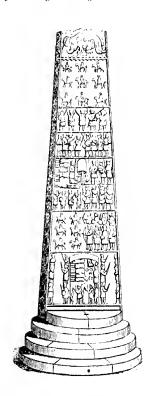

of Luncarty,-and that they only obtained the

{Book 11.

Another of

lands of Errol from King William the Lion of Scotland, about the middle of the twelfth century. It was not till the middle of the fourteenth century that they were ennobled. The throne left vacant by the death of Kenneth appears to have been contested from the first by three competitors. Of these, a son of Culen, under the name of Constantine IV., is regarded as having been first crowned; but, within a year, he fell fighting against one of his rivals, a son of King Duff, and younger brother of the unirdered Prince Malcolm, who immediately assumed the sovereignty as Kenneth IV. The Scottish chroniclers call him Kenneth the Grim. There was still, however, another claimant to the succession of Kenneth III., Malcolm, the son of that king, whom his father

violent removal of his cousin, the other Malcolm. The two competitors met at last, in A.D. 1003, at Monivaird, when a battle took place, in which Kenneth the Grim lost both the day and his life alone with it. The vigorous line of Kenneth III, was now again seated on the throne in the person of Malcolm II. The earlier part of Malcolm's reign appears to have been consumed in a long succession of herce contests with the Danes, in the course of which these persevering invaders are said to have been defeated in the several battles of Mortlach in Moray, in the parish church of which place the skulls of the shaightered foreigners were, not many years ago, to be seen built into the wall,—of Aberlenuro, where barrows and sculptured stones are held still to preserve the memory and to point out the scene of the conflict,-of Panbride, where the

The sculplined stone, commonly called Sugno's Pillar, at Forres. This stone, which is twenty live feet in length by about four feet in breadth at the base, is the most remarkable of the ancient sculp lined stones found along the east coast of Scotland. The side here represented is the east side, on which the sculptimes are the most numerous. No satisfactory explanation has been given of the ligues, but in this instance the popular name by which the stone is known, would seem to point out its comection with the Danish invasions. Yet what can we make of the elephant by which the whole should be the property of the property of the property of the stone is the property of the pro delineation is surmounted?

with the principality of Cumberland after the memoration of the Scottish victory. It was in 1020, also, in the reign of this king, that a formal cession was obtained from Eadnlf, the Danish, Earl of Northumberland, of the portion of modern Scotland south of the Forth, then called Lodonia, the possession of which had for a long period been disputed between the Scots and the Saxons, although in the mean time such numbers of the latter had settled in it that its population appears already to have become in the greater part Saxon, and the country itself was often called Saxonia or Saxony. Malcolm 11., the ability of whose admmistration was long held in respectful remembrance, died in 1033. This king, unfortimately for the peaceful success of his father's scheme of changing the old rule of succession, left no son; but, imitating his father's remorseless policy, he had done his utmost to make a similarity even in that respect between himself Danish commander Camus was slam,—and of and the rival branch of the royal stock by having, a Cruden, near Forres, where a remarkable obelisk, short time before his decease, had the only existing covered with engraven figures, is supposed, but male descendant of Kenneth the Grim, a son of his son Boidhe, put in the most effectual manner out of the way. In these circumstances no opposition appears to have been made in the first instance to the accession of Duncan, the grandson of Malcolm II., by his daughter Bethoc or Beatrice, who was married to Crinan, Abbot of Dunkeld,-in those days a personage of great enumence in the state. Boidhe, however, besides the son who was murdered, had left a daughter, Gruoch; and this lady lad other wrongs to avenge besides those of the line from which she was spring. Her first linsband, Gilcomeain, marmor or cluef of Moray, having been defeated in an attempt to support the cause of his wife's family by arms against King Malcolm, had been burnt in his castle along with fifty of his friends, when she berself had to fly for her life, with her infant son Lulach. She sought shelter in the remoter district of Ross, of which the famous Macbeth appears to have then been the hereditary lord, maintaining probably within his bounds an all but nominal independence of the royal authority, if he and his people indeed even professed to acknowledge the sovereignty of the Scottish king. This part of Scotland, it may be remembered, had been torn scarcely a century before from Constantine 11. by the Danes, and Macbeth himself may possibly have been of Danish Inneage. Be this as it may, to him the Lady Gruoch now gave her hand. She is the Lady Macbeth, made familiar to us all by the wonderful drama of Shakspeare. It would appear that for some time after the accession of Duncan, Macbeth and his wife had feigned an acquiescence in his title, and had probably even won the confidence of the good and unsuspecting king (the pure-breathed Dimican, as he is designated in Celtic song) by their services or professions. The end of their plot,

however, was, that Dinican was barbarously assassinated in 1039, not as Shakspeare has it, in Macheth's castle at Inverness, but at a place called Bothgouanan, ucar Elgin.\* Macbeth immediately

mounted the throne, and the accounts of the oldest

chromelers give reason to behave that he filled it

government. The partizans of the race of Ken-

neth III., however, resisted the new king from the

first; for Dinican had left two sons, the elder of

whom, Malcolm, fled on his father's assassination

to Cumberland, and the younger, Donald, to the

Western Isles. One revolt in favour of Malcolm's

restoration was headed by his grandfather, the

Abbot of Dunkeld; but this and several other

similar attempts failed. At length, in 1054, Mac-

duff, marmor or cluef (unproperly called by later writers Thane) of Fife, his patriotism inflamed, it

is earl, by eme personal inputes, called to arms

his manicious retuncts; and Siward, the Danish Eurlot Northumberland, whose sister Dune in had

married, having joined him at the head of a for-

midable force, the two advanced together upon Macbeth. Then fort encounter appears to have

taken place, as tradition and Shakspeare agree in

representing, as the neighbourhood of Dunsman Hill in Angus, on the summit of which Macheth

probably had a shoughold to Defeated here, the

usurper refreated to the fastnesses of the north, where he appears to have protracted the war for

about two years longer. His last place of refuge is supposed to have been a fortress in a solitary valley

this neighbourhood he was attacked by the forces under the command of Machiff and Malcolm, on

the 5th of December, 1056, and fell in the fight, struck down, it is said, by the hand of Macduff.

of Malcolm I, in the same degree in which his

rival was descended from Malcolm's younger son,

Kenneth III, might be affirmed to have had the

better right to the throne of the two. Lulach, however, a fugitive all the while that he was a

king, did not long bear the empty title that thus mocked his fortunes. His forces and those of

Malcolm met on the 3rd of April, 1057, at Eassie,

in Anger; and that day ended his life, and also broke for ever the power of his faction. In a few

days after this (on the 25th of April, the Festival

of St. Mark) Malcolm III, was crowned at Scone,

in the parish of Lumfanan, in Aberdeenshire.

HISTORY OF ENGLAND.

His followers, however, did not even yet everywhere throw down their arms. They immediately set up as Kang Ladach, the son of Lady Macbeth, who indeed, as descended from Duff the elder son

But the history of his reign belongs to the next period. O The word Bothgonanan means in Gaelic, the Smith's Dwelhing. It is probable that the nessessins lee or anothers, and minded him at a smith's house or the neighbourhood of 10gm "— Barles's Annals, i. I. (Edit of 1819.)

† The foundations of an aircent stone building are still to be found buried in the soil on the top of the bill. Dinstitum is donit eight miles multi-cast from Perit, the hill is of very regular shape, and although more than a thousand feet above the level of the sea, it has been supposed to be in great part artificial. See Chalmers's Caledonta, vol. 1.

merings of historic light break through the confusion and darkness of the national traditions The fables of the bards, indeed, make mention of three still earlier races by whom the island was successively colouised, -the Partholaus, so called from their leader Partholan, a descendant of Japhet, who arrived four hundred years after the flood; the Nemedians, who came from the Envine three

centuries afterwards; and the Fourierians, from

Muca, who were the immediate predecessors of

the Fubolgs. But all that can be gathered from the class of wild inventions which forms this first

part of the Insh story is, that probably before the

arrival of the Fuboles the country had been peopled by that Critic race to which the great body

of its population still continues to belong. These primitive Celtic colonists, whose blood, whose

speech, whose manners and customs remain, in spite of all subsequent foreign unhisions, doramant

throughout the island to this day, would seem to

be the Partholans of the Jegendary second. The Fomoraus, again, who came from Africa, were

perhaps the Phemeians or Carthaguean-

It will be convenient, also, before we close the

present chapter, to turn for a few moments to the

course of events in Ticland, which, although not

politically connected with England in the period

under review, had already acquired a remarkable

celebrity, and begin to maintain a considerable

intercourse both with Britain and with continental Europe. Taking up the Instory of Ireland at the

point where we left it in the Introduction, we find

the country at the commencement of our cra sub-

jected to the rule of the Scots, a foreign people,

who had wrested the supreme dominion of it from

the Tuath de Danans, in the same manner as the

latter had displaced then predecessors the Enbolgs,

with which last-mentioned occupants the first glim-

BOOK II.

Nemedians, the Tuath de Damins, the Emboles, and the Scots or Milesians, are affirmed to have all been of the same race, which was different from that of the Partholans; a statement which is most easily explained by supposing that all these subsequent bodies of colonists or invaders were of the Gotluc or Tentome stock, and came, as indeed the bardic narrative makes them to have done, from the north of continental Europe. It seems, at all events, to be most probable that the Scots were a Gothic people; Seythie, Scoti, Gothi, Getæ, indeed, appear to be only different forms of the sacce word \* The Scots are supposed, by the ablest impurers, not to have made their appearance in Ireland very long before the commencement of our era, if their colonization be not, indeed, a still more recent event; for we believe no trace of their occupation is to be discovered before the second or From the fourth century down to third century. the eleventh, —that is, during the whole of the period with which we are at present engaged, -Ireland was known by the name of Scotia or Scotland, and the Irish generally by that of the Scoti the Origin and Progress of the Scythians or Goths, Part i, chap. 1.

<sup>\*</sup> See this matter very ably heated in Prokerton's Dissertation on

CIVIL AND MILITARY TRANSACTIONS.

Chap. L.

Scots of North Britain were spoken of, they were so designated as being considered to be a colony of The bardic account, however, carnes back the

arrival of the Scotic colony, under the conduct of Heber and Heremon, the sons of Milesius, to a much more ancient date; and the modern inquirers who bave endeavoured to settle the chronology of that version of the story have assigned the event, in the most moderate of their calculations, to the fifth or sixth century before the birth of Christ.

Others place it nearly a thousand years earlier. It is related that the two brothers at first divided the island between them, Heber, the elder, taking to limiself Lemster and Munster, and Heremon getting Ulster and Commught; but, in unitation of Romalus and Rennis (if we ought not rather to suppose the laish to have be nothe prototype of the classic medient), they afterwards quarrelled, and, Heber having been slain, Heremon became sole sovereign. From him is deduced a regular succession of monarchs of all Ireland down to Kirabaoth, who is reckoned the fifty-seventh in the list, and is said to have reigned about two bundled value before our era. Besides the supreme monorch, it is admitted that there were actions from subordinate kings, reigning each over his province; and the history is made up in great part of the wars of these reguli, not eeb, with one another, but frequently also with their common sovereign lord. Tacitus relates that occust the regula of Ireland, who had been driven from he country by some domestic revolution, conserves to Britain to Agricula, who kept bin with him moder the semblance of friendship, in the hope of some time or other baying an opportuists of making use of him. It was the opinion of Agricola that Ireland inight, have been conquered

screed to them and the extent of their foreign com-We need not further pursue the obscure and undoubtedly in great part fabulous annals of the

its ports and harbours were better known than those of Britain, through the merchands that re-

country before the introduction of Christianity. It reprobable that some knowledge of the Christian religion had penetrated to Ireland before the mission of St. Patrick; but it was by the labours of that celebrated personage that the general conversion of the people was effected in the early part of the fifth century. The first Christian king of treland was Leogaire, or Laogaire Mac Neil, whose reign is stated to have extended from  $\lambda. b. 428$  to A.D 463. The twenty-ninth king, counting from hun, was Donald III., who reigned from A.D. 743

† Agric, 24.

the line of the notive princes. Box new bands speedily arrived from the north to avenge then countrymen; and ma few years all the chief ports and towns throughout the south and along the east coast were again in their bands. The struggle between the two races for the dominion of the country continued with little intermission and with various fortune for more than a century and a half, although the Danes, too, had embraced Christianity about the year 948. The closing period of the long contest is illustrated by the heroic deeds of the renowned Brien Boromdie, or Born, the " Brief the Braye" of song, who was first king of Minister, and afterwards king of all Ireland. He occupied the national throne from 1003 to 1014, in which latter year he fell, sword in hand, at the age of eighty-eight, in the great battle of Clonburf, in which, however, the Danish power received a discomfiture from which it never recovered. Brien,

however, though his merits and talents had raised

him to the supreme power, not being of the ancient

royal house, is looked upon as little better than a

usurper by the Irish historians; and the true king

of this date is reckoued to have been. Mackechlan

Mac Dombmall, more manageably written Melach-

lan, or Malachi, whom Brien deposed. Malachi,

too, was a great warrior; the same patriotic poet who me our own day, and me our Saxon tongue,

has celebrated "the glories of Brien the Brave,"

the Danes or Northmen made their first descent

upon Ireland. In 815, in the reign of Aodhus V.,

these inviders obtained a fixed settlement in A1-

magh; and thirty years afterwards, their leader, Targesius, or Targes, a Norwegian, was fac-

claimed king of all Ireland. At length a general

massacre of the foreigners led to the restoration of

Which he won from her proud invader,"and on the death of Brien, Malachi was restored to the throne, which he occupied till 1022. He is

reckoned the forty-second Christian king of Ireland.\* The interruption of the regular succession, however, by the elevation of Brien, now brought upon the country the new calamity of a contest among several competitors for the throne; and the death of Malachi was followed by a scuson of great confusion and national misery. The game was eventually reduced to a trial of strength between Donchad, the son of Brien, and Donchad's nephew, Turlogh; and in 1064 Turlogh succeeded in overpowering his uncle; who, bidding farewell to arms and to ambition, retired across the sea, and ended his days as a monk at Rome. Turlogh, reckoned a usurper by the native annalists, but acknowledged

## CHAPTER II.

## THE HISTORY OF RELIGION.

Section 1 - Saxon Paganism.

F the heatherism of the Angles, Jutes, and Saxons, the three tribes of northern Germany that supplied the invaders and conquerors of Brītain in the lifth and sixth centuries, of these races had any system of superstition peculiar to them-

selves, we can hardly be said to know anything. But there is reason to believe that their invthology was the same which is known to have flonrished at the same period, or not long after. among their kindred who remained in their original seats around the Baltic. The historic traditions of the Saxons as well as of the micient Danes and Swedes, all ascend to and terminate with Woden, or Odin, the celebrated head of that mythology. This system is preserved to us in the two books of the Edda, the first compiled about A.D. 1057 by Soemand Sig-fusson; the second about A.D. 1180 by Snorro Sturleson, from such sacred poems of the ancient scalds, or bards of northern paganism, as still survived either in the memory of the people, or in a written form. more compendious view of the religion of Odin is also given in the singular poem cutitled the Vo-Inspa, that is, the Prophecy of Vola, which is certainly more ancient than the second Edda, in which it is often quoted as an authority, and is believed, as well as the first Edda, to be the composition of Soemond. In describing the religion of the north, therefore, we are not, as in the case of the Druids, left to the vague inferences that may be drawn from a few notices, probably in many respects mistaken, left to us by writers of another ereed, of doctrines which their votaries auxiously enheavoured to conceal from the uninitiated; but we have the fullest information on all the particulars of the system from the most competent authorities, its believers and professors themselves.

When we attempt, however, to investigate its earliest history, we are encountered by the same. difficulties that are found to exist in the case of every similar creed. The source from whence it issued, the period of its first promulgation, and the agents by whom it was planted in the several

countries where it flourished, are historical dullienlines that still remain to be settled. Instead of facts, we are here presented with fables which it is impossible to restore to their original truth; and for the carthly founder of a religion, we have a shadowy form armed with the attributes of divimity, and receiving divine honours, after a life of miracles on earth. The most probable account that can be given of the matter appears to be the following :- Sigge, the son of Fridulph, chief of the Asi, a Seythian tribe, originally perhaps from the north of Persia, being oppressed, in common with the other chieffams of the country to the north of the Euxine, by Pompey, at the chie of the Mith datic war, in the century immediately preceding our era, resolved to maintain his liberty by abandoning the land of his fathers Gathering, therefore, his people together, he led them in safety from the Euxine to the shores of the Baltic. There he found a country far wilder than that he had abandoned, and a scanty population, inferior in arts and arms to his warlike Scythians. The result of superior knowledge was soon exhibited. houseless fugitive became a conqueror—the martyr to liberty an enslaver of nations. In a short period the subjugation of the surrounding regions attested the power of his arms, while, by his superior nitelligence, he endeavoured to cavilise those tribes which his valour had subdued,\*

It was natural, under these circumstances, that the son of Fridulph should become a god. A rude and credulous people would easily be persnaded to deify a mortal who had come thus strangely among them, and wrought so wonderful a revolution in their social condition. The resistless conqueror was also a poet, a sage, a legislator. and a priest; and while his powers of persuasion are described as miraculous, he is supposed also to have distinctly claimed a divine commission. Political expediency might suggest to him such a step, to bind more firmly the tribes he had conquered by a common religion. In this manner Sigge, the conqueror and lawgiver of the north, is supposed to have become Odm, its presiding deity. Whether this was the name of the supreme Being whom the northern tribes had worshipped before his arrival, and which he was afterwards pleased to assume, is uncertain. His children. who were numerous, were invested by him with the government of the conquered provinces; and

. Mallet's Northern Antiquities, chap. IV.

it was natural that they should subsequently find a place in the same mythology which had originated in the defication of their sire. This was but a new form of the Cretan Jupiter and his offspring. The end of the ambitions Scythian was well fitted to complete and consolidate his labric of delusion. Funding his death approaching, he inflicted nine wounds in a circle upon his body, and telling his people that he was departing to his native land to become a god, he expired.\*

In considering the career of this remarkable personage, the imagination naturally turns to the mysterious bistory of the first Pernylan Inca. But a still closer parallel is to be found between the Scythan Odru and the Arabian Mohaunned, Both were impostors upon a gigantic scale, and the fluenced the destinies of a large portion of the we ran race. Under their anspices, the tribes of the East and the North were brought together, and inspired for the momentous part they were in due season called upon to act in the drameof the world. when they came an their irresistible might to destroy, that they might regenerate. The philosophy of history scarcely presents a more interesting subject of conjecture than the probable fate of the civilised world, had the two great superstitions sent forth their myriads simultaneously. would have been the issue to the human race, had they met upon the great battle-field of the Roman empire, to contend with equal valour and fanatersm, while the possession of the earth itself was the prize in question?

It is proper to mention, however, that the chronology of Odm's emigration has been a subject of much controversy. While Mallet has placed the event as early as the time of Pompey,† others have postponed it till the beginning of the fourth century. It is probable that more than one victorious conqueror or subtle priest assumed the name of Odm, and that in process of time their several qualities and exploits came all to be attributed to the first, just as the achievements of several Greek champions, all assuming the name of Hercules, were bestowed upon a single hero. This supposition will also explain the circumstance of several northern warriors having asserted their descent from Odin at the distance of only four or live generations, at a date so recent as the Saxon unvasion of England.‡

The religious system which the Scythian legislator established was, no doubt, amplified in a more advanced age by the united efforts of priests and poets, although in every stage it continued to correspond with the character of its ferocious votaries. Its breath is that of a furnace, and its "voice is still for war." A wild grandeur as well as a solemn gloom pervades it, harmonising with the scenery

 Mallet's Northern Antiquities, ch. iv.
 † This opinion is Envoined by Snorro Studeson, the Icelandic bislorian who flourished in the thirteenth century, and by the modern of the control of th dem Torfæns.

4 Another theory, however, is, that Odn never existed, and is merely a mythological personnge,—the god of war. See this view supported by Pinkerton in his "Dissertation on the Scythaus," Part n. cf.ap. 5.

VOL. 1.

of its native home; and its fantastic array of tales and miracles was well adapted to the understandings of a people too ignorant to philosophise, and too indolent to cavil. Occasionally, too, there irradiate from its darkness those emanations of truth which are found in mythologies even the most deprayed, and which appear to evince by their purity that they are light from heaven. These are most probably the relies of the simple theism of the patriarchal era. Even the Edda, here probably following the original behef of the rude children of the North, before the arrival of the Scythian, describes the supreme Divinity as "The author of everything that exists; the eternal, the ancient, the living and awful Being; the searcher into concealed things; the Being who never changes—who lives and governs during the ages; who directs everything that is high and everything that is low." But far different are the attributes of Odm. He is called "The terrible and severe god; the father of slaughter; the god that carries desolution and fire; the active. and roaring deity; he who gives victory and revives conrage in the conflict; who names those that are to be slam? Such a divinity was more suited to the imaginations of a people who continually rushed like engles to the slanghter. The former could rule alone; and, therefore, by his simple votaries he was contemplated without the intervention of a delegate, and worshipped without an image. But the Odin of the subsequent mythology required the aid of associates, and therefore his followers liberally furnished him with deputies, for the various operations of heaven and earth. Frigga, or Frea, his wife, was the goddess of love, pleasure, and sensuality. Ther controlled the tempests, Balder was the god of light, Kiord of the waters, Tyr of champions, Brage of orators and poets, and Heimdal was the jainter of heaven, and the guardian of the rambow. Eleven gods in all, and as many goddesses, all the children of Odin and Frea, assisted their parents, and were, like them, objects of worship.

These, however, would still have formed but a scanty polytheism; and when fancy assumes the right of creating gods, the limits are only determmed by its own activity. An immense array of inferior divinities followed. There were three Fates by whom the career of men was predestined; and every individual was supposed, besides, to have a Fate attending him, by whom his life was controlled and its end determined. There were also the Valkeries, a species of inferior goddesses, who acted as celestial attendants, and who were also employed by Odin to determine victory and select the warriors who were to perish. And in addition to all these there was the usual corruption of the idea of an all-pervading Providence in the Genii and Spirits, who mingled in every event, and were possessed of supernatural power whether to bless or injure. The necessary concomitant of infernal agents was also appended to the creed. Their personification of the cycl principle was

Lok, sometimes deprecated as a god, and always dreaded as an enemy, whom the denties, in con-

HISTORY OF ENGLAND.

"the calminator of the gods, the grand contriver of deceif and frauds, the reproach of gods and men." The goddess Hela, the wolf Fenris, the great Dragon, the Giants, and the malignant Genii, completed the dark array of their mythology.

On the subject of a future state, the religion of the North was particularly explicit; and a heaven was formed congernal to a people whose chief employment and greatest pleasure was battle. Those who had led a life of heroism or perished bravely in fight, ascended to Valhalla, and the felicity which awaited them there was rapture to the imagination of a Dane or a Saxon. The day was spent in furious conflict, amidst the stringgle of armies and the cleaving of shields; but at evening the conflict ecased; every would was suddenly healed; and the contending warriors sat down to the banquet, where they feasted on the exhaustless flesh of the Loar Scrinner, and drank luige draughts of mead from the skulls of their enemies.

But the wicked, by which term the cowardly and

the slothful were chiefly intimated, were doomed to the miseries of Nifthelm.\* There Hela dwelt,

and exercised her terrible supremacy. Her palace

was Auguish, her table Faminie, her waiters Expec-

tation and Delay, the threshold of her door was

Precipice, her bed was Leanness, and her look struck terror into every beholder ... It is here that a creed generally terminates; but at this point the northern mythology only finds a resting-place for a moment. A fresh flight is commenced, and a new revelation more mysterious and more august than the former is unfolded.

That bliss and those pumishments are not eternal, but only for a season. After ages have revolved, and when time has arrived at its close, terrible signs in heaven and earth are to announce the coming dissolution; while the human race, unsuspictons of the danger, shall be involved in universal deprayity. And then comes the end. The malignant powers, so long constrained, are to burst from their enthralment; the gods are to perish beneath

their force assault, or in despair, and by mutual

wounds; even Odm linnself expires, while a con-

flagration bursts forth, in which Valhalla, and the

world, and the place of penal anguish, with all their

divine and haman inhabitants, are to be consumed and pass away. But from this second chaos a new world is to emerge in its vonthful grandeur, with a heaven more glorious, than Valhalla, and a hell more fearful than Nifthean; while over all a God appears pre-cument and alone, possessed of greater might and nobler attributes than Odin .. Then, too, the human race are finally to be tried, when higher virtues than bravery, and heavier guilt than cowardice, are to form the standard of good Even the god Balder, because he died a natural death, was consigned to the dominion of Hela. Edda, Fab. 29.

utterable punishments of Nastrande; and either state shall continue through etermty, under the reign of Him who is eternal. In this strange system it is interesting to mark the existence of two distinct creeds, united, yet not incorporated; the one simple and spiritual, the

and evil. The righteous shall then be received into

Gamle, while the bad shall be doomed to the un-

[Book II.

other extravagant and sensual. In other creeds a complete amalgamation has been accomplished between the first principles of pure religion and the adventitions corruptions of succeeding periods, because, in these, the progress from primeval truth to error has been the gradual work of ages. In that case, though a few of those original principles are suffered to remain, which form the common basis of every system of religious belief, yet the fables that gather upon them become gradually so identified with the whole, that they can scarcely be recognised or separated from the geneial mass. But in the system of Odm there is nothing of this complete intermixture and amalga-

mution. Here there is only one system superinduced upon another, while each temanis separate and distinct. The coming of the ferocious and popular creed from Scythia resembled, the sude rush of a lava torrent rather than the gradual concretion of a fresh soil; and under its hard and gloomy surface we can discover the layer of earth still unmixed that, before the immidation, was the source of beauty and sustenance. The son of Fridulph, though he found in his new home a people far inferior to his own, yet found them possessed of a higher system of religion than was known to his more accomplished countrymen; and some of its principles be adopted, while the rest he tacitly sanctioned, or left undisturbed, in the propagation of his new creed. It is thus, perhaps, that we are to account for the discourse ascribed to him called the "Hayamaal," containing a morality not only superior to his general precents, but even at variance with their tenor; and thus also in the Edda have the singularly clear traditions of chaos, the creation of man, the deluge, and the restoration

of the world, come to be mingled with the wildest fables. Thus, above all, may we solve the other-

wise incomprehensible anomaly of the Northern

creed, where we recognise so distinctly the existence of two chief deities, the one a warrior-god

surrounded by his assistant powers, and doomed to perish,-the other a more spiritual and exalted Being, who reigns alone, and shall live for ever; together with the two-fold standard of good and evil, the double heaven, and the double hell. When truth and error thus come into competition the result may easily be anticipated. The former, severe and uncompromising in its authority, is supplanted by the indulgences of the latter; and the prumtive simplicity of its ritual is soon eclipsed by gay festivals and splendid processions. It is for this reason that, among the ficice worshippers of Odin, we can discover no practical results of that patriar-. Mallet's Northern Antiquities, vol. in

of their own system. Their tempest-breathing god, and his paradise of battles, though these were finally to be consumed, were more attractive than the excellencies of a more spiritual deity, and the etermty of a purer beaven, The rites of the popular worship accorded with the spirit of such a grim theology. In Germany, in Denmark, in Sweden, and Norway, there were temples of colossal size but rugged workmanship, in which Odm was represented by a gigantic image armed, and crowned, and brandishing a maked sword; his wife Frea as an hermaphrodite;

Thor wearing a crown of stars, and wielding his

terrible mace; and the other gods and goddesses

delineated according to their respective attributes. Songs composed under that wild inspiration which characterised the muse of the north were chanted in their praise; and, as in other rituals, animals deemed most acceptable to each god were sacrificed, while the blood was sprinkled upon the worshippers. But sterner offerings than these were sometimes deemed necessary, when the emergency was ingent, or when an extraordinary boon was asked of heaven. Human victims dreuched the altar; \* and while crowds of captives and slaves were frequently immolated, for the welfare of the people at large, princes often sacrificed their own children, either to avert a mortal sickness or seeme an important victory.† As they believed that the exclusion from Valladla, which a natural death entailed, could be avoided by the sacrifice of a substitute, every warrior who could procure a slave to put to death with this object, had a motive peculiarly powerful for so horrid a practice. tenful practice of human sacrifice, which seems to have been common to every ancient creed of superstition, was merely the climax of the principle that ascended from a handful of fruits and flowers, to offerings the most costly and valued. When a sacrifice was regarded as a price, it was supposed that the magnitude of the gift should correspond with the importance of the petition, and in this view human life was tendered as the highest offering of all. As females among the northern nations were

regarded with a veneration elsewhere unknown, and were supposed to be chosen receptacles of divine inspiration, they were therefore considered so well fitted to preside over the worship of the The daughters of princes officiated as priestesses of the national faith, were consulted as the oracles of heaven, and were frequently dreaded as the ministers of its vengennee; while those who cultivated the favour of the malignant divinities were held to be witches of mightier power and wilder terrors than the classical enchantresses of Thessaly. On the subject of the authority of the priests among the German nations we are less dis-\* Mallet's Northern Antiquities, vel. ii. Dithmar's Chronicles of

Merseling, Book 1.

† Wommus in Monument, Dan, pp. 25, 26. Saxo Grammatic, lili x. The traditions of the North abound in instances of children sacisfied by their parents.

tinetly informed. Those of the Saxons were not permitted to mount a horse, or handle a warlike weapon; \* and this prohibition has been supposed to have been a mark of disrespect among a people so devoted to arms; but probably it originated rather in their ideas of the superior sanctity of the saccidotal office than in any intention to degrade it, This view seems to be confirmed by the account of Tacitus, who represents the German priests as also invested with magisterial authority. He informs us that they settled controversies, attended the armies in their expeditions, and not only awarded punishments, but inflicted them with their own hands, while the fierce warriors who received their stripes endured them as inflictions from the hand of heaven. The gloomy regions of the north, and the lives

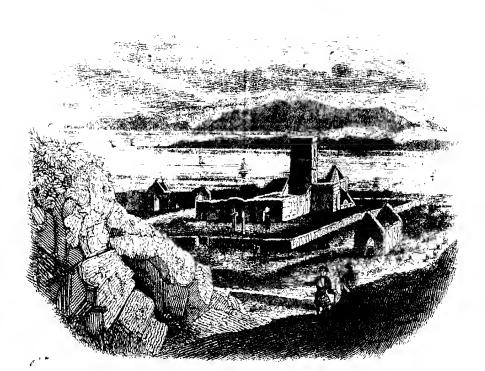

of its inhabitants, alternating between the extremes

of activity and repose, had a strong tendency to murse a superstitions temperament. Among vast forests of perpetual twilight, among mountains rigged with rocks of ice and crested with storms, and the dismal vicissitudes of northern winters, the flitting shadows that traverse the wild scenery become spiritual visitants, while the mysterious sounds of hill and valley are regarded as their supernatural voices. The northern nations were superstitions, not only from the scenery in the midst of which they lived, but from their religion, which gave to every object and event a presiding spirit; and it was believed that from these supernatural intelligences might be extorted, not only counsel for the present, but premoution of the future. The direction of the wind, the aspect of the sky, the flight or voice of birds, the cutrails of a victim, were all heavenly indications, in which the inquirers took counsel of the gods as to the course of an enterprise, and endeavoured to read its issue. The graves were invoked with vehemence, and the dead entreated to answer. The warrior, frequently scorning gentler methods, and resolving to force a reply, rushed, with his sword brandished, into the storm, that he might subdue its guardian spirit, and compel its reluctant utterance. When the knowledge desired was of high importance, the mode of consultation was proportioually solemn. Men were stabbed or thrown into the water; and from the manner in which the blood flowed, or the body sank, a satisfactory reply was cheited. † They also placed great rehance upon incantations; and they had songs by which the elements were controlled, and every evil averted, as well as every benefit obtained . The smith, an important persouage everywhere in the earliest age of civilization, had a song by which the glowing aron beneath his hammer became a breastplate impenetrable to every earthly weapon, and another by which the sword received a clarmed edge that nothing could resist. And when the bark, filled with its armed adventhrers, was ready to rush forth wherever fortune might direct its course, a sure promise of favourable \* Bed, n. ch. 13. † Mallet's Antiquities, chap. vii

winds and a rich harvest of plander was supposed to be seenred, from the chant of some withered beldame sent after it as it left the port. The same superstition that inspired the most transcendent daring could also depress its votaries into childish timility. Those checks would turn pale at the untoward chattering of a bird, which no earthly danger could blanch; and an adverse fold in the entrals of a sacrifice stayed that projected expedition, of which the danger and the difficulty composed the highest chaim.

Such were the general principles and observances of that religion which appears to have generally prevailed among the inhabitants of the North. We find, however, that they were subject to great modifications, according to the situation and circumstances of the several tribes. They were of a more sangunary complexion, and clothed with wilder terrors, among the reckless followers of the sea-kings, than among those who dwelt on shore; and anulst

the dark recesses of Norway, where the mind brooded over their horrors, invisited and unrelieved, they were more extravagant than among the less isolated tribes of Germany. Perhaps the Saxon invaders of Britain might be classed with those among whom the religion assumed its least revolting shape, while the Danes, who afterwards followed in their track, exhibited the worship of Odin in its fiercest and most permeious aspect. With them the primitive superstition was fearfully amplified by the principles and tales of the Scalds, who clothed it in their songs with horrors of which its first founders had probably no conception. Thus, though both Saxons and Danes worshipped the same gods, and beheved in the same future state, yet the former, even while they contained heathers, became peaceful cultivators of the soil which their swords had won, while the latter did not subside into the same social condition until after they had abandoned their original creed.

RUINS OF THE MONASTERY OF IONA, OR I COLUMB KILL."

\* This building, it need searcely be observed, belongs to an age much more recent than that of Columba.

SECTION II.

## CHRISTIANITY.

When Hengist and Horsa, and their followers, arrived in Brutain, in the middle of the fifth century, still pagains themselves, they found Christianity professed both by the inhabitants of the southern part of the island, the late Roman province, and

also by a portion of the natives of the north, the modern Scotland, then known by the name of the Piets. The Christianity of the South Britons, however, there is reason to believe, had, in the distractions and miseries of the time, both ceased to exert much influence over the lives of its professors, and hkewise become mixed with many corruptions of doctrine. Gildas has painted the manners of both

CHAP. H.] THE HISTORY OF RELIGION. people and clergy in the darkest colours; and whatever allowance we may make for an apparently atrabilions temper, and a very vehement and declamatory style, his representations, which are in part adopted by Bede, have all the air of having a foundation of truth. In addition to general profligacy of conduct, he charges the British clergy with what he calls intidelity, by which he would seem to imply something beyond mere heresy or unsoundness of faith. From the oldest remains of the early Welsh poetry, which belong probably to an age not much later than that of Gildas, it would appear as if the ancient religion of Britain, which had no doubt lingered in the remoter corners of the country, had now shot up again into new life in the apsetting of the whole social system which took place at this crisis; for these poems are pervaded y a tone of sentiment and expressions high betrays a strange intermixture of Christianity and Drundism - the latter, however, of the two combined elements, as was to be expected in such a case, being by far the more prevalent. On the part of the Bards, indeed, whose order enjoyed so important a station in the old pagan hierarchy, the design of restoring Druidism to its former ascendancy seems for a long period to have been systematically and perseveringly purshed. Throughout the protracted struggle with the Saxons it would appear to have been in the spirit and through the ritual of this Neo-Drudsso, and not of Christianity, that the national feeling was chiefly appealed to, and the resistance to the foreigners sustained and directed. In the northern division of the island, Ninian, according to Bede, had converted the Picts to the south of the Grampian range, about the year 412. Numan is called Bishop of Whithern, in Wigtonshire, where he founded a manastery, and died A.D. 132. About the same time the heathenism of Ireland had been swept away, and Christianity established there as the national religion, by the

exertions of the celebrated St. Patrick. The year 422 is assigned as the date of the arrival of that Illustrious missionary in the country with which his name was destined to be so honourably connected for all succeeding ages. About the middle of the sixth century Kentigern, or St. Mungo, appeared among the Britons of Strathelyde, and is supposed to have founded the see of Glasgow. But the most distinguished of the missionaries to Calelouia, during this period, was Columba, venerated as the national saint of Scotland until that honour was conferred upon St. Andrew. He was born at Garten, a village now included in the county of Donegal in Ireland, and landed in Scotland, with twelve companions, in the year 563. Illustrious by his birth, being connected with the royal families of Ireland and of the Scots of North Britain, and

possessed of those personal endowments that gain

an ascendancy over a rude people, he addressed

himself with great advantage to his self-imposed

task of converting the heathen Picts to the north

of the Grampians. Their king, Brude 11., to

the nature of the system of ecclemistical polity founded by Columba; one class of writers, at the head of whom is the acute and learned Selden, maintaining it to have been strictly Presbyteman, while others contend that the Culdees, as the clergy generally were called, were subject to episcopal authority. The former is the opinion that has been most generally held, and that seems most conformable to the expressions of Bede, the earliest anthority on the subject.\* The small and barren island of Iona, after this, soon became illustrious in the labours and triumphs of the Christian church; and the Culdees, animated with the zeal of their founder, not only devoted their efforts to enlighten their own country, but became adventurous missionaries to fields the most dangerous and remote, It is gratifying also to observe that, with all the disputation there has been as to their form of church government, there is a general agreement as to the purity and simplicity both of their doctrines and of their lives. Even Bede, though indigmant at their rejection of the authority of the Roman bishop, testifies that "they preached only such works of charity and piety as they could learn from the prophetical, evangeheal, and apostolic writings." Of the care with which they were trained to be the guardians of learning and instructors of the people, we may form some idea from the fact that eighteen years of study were frequently required of them before they were ordained.\* In the south of Dritain, in the first fury of the Saxon invasion, the storm had burst with equal violence upon tower and temple. havor of an exterminating warfare the churches were destroyed and the ecclesiastics massacred, so that at length the former Christianity of the country was chiefly to be traced by heaps of ashes and tokens of devastation. Yet there is no probability, as we have observed in another place, in the common notion that all the native Britons were swept from the soil which was thus overrun; and as the great body of the labouring population were in all likelihood allowed to remain as the honding n of the conquerors, we may suppose that such of them as were Christians, and most, if not all of them must have been so, would be permutted to retain their faith in peace. Without a clergy, however, or any apparatus of which a frace can be discovered for the administration among them of the ordinances of religion, for we find no notice of even a single Christian church being anywhere kept up as a place of worship, it is not easy to conceive that they would very generally or very long retain their knowledge and profession of the truth. But meanwhile, as their position in the country \* Adomnani Vit. Str. Columba.

was baptized, and his subjects immediately followed

the royal example.—Columba then settled in Iona,

became easier and more secure, the Saxons, naturally turning their swords to ploughshares, were themselves gradually losing something of their old ferocity, and acquiring a disposition and habits more favourable for their own conversion to the religion of love and peace. When things were in this state an incident occurred which, simple in itself, led to great results. \*Gregory, afterwards Pope, and surnamed the Great, passing one day through the streets of Rome, was arrested at the market-place by the sight of some young slaves from Britain, who were publicly exposed for sale. Struck with the brightness of their complexions, their fair long hair, and the remarkable beauty of their forms, he eagerly inquired to what country they belouged; and being told that they were Augles, be said, with a sigh, "They would not be Augles, but Angels, if they were but Christians." Continuing his inquiries, he placed in the same whomsical manner upon the name of the district from whence they had been brought, and that of the king who reigned over it. But never, perhaps, were puns expressed in a spirit of piner benevolence or attended with more important consequences. Auxious that a people so endowed by nature should no longer be left without a knowledge of divine truth, he resolved, at every

hazard, to carry the gospel to their shores, and actually set off upon the dangerous pilgrimage. His friends and countrymen, by whom he was enthusastically beloved, were dismayed at his departure, and prevailed upon the Pope to command his return. When, some years after, however, he succeeded to the Popedom, and found a fitting opportunity, he appointed Augustin, prior of the convent of St. Andrew's at Rome, with forty monks, to proceed on a mission to England. The holy men departed accordingly upon their journey, but when they had reached Aix, in Provence, they were so dismayed by accounts of the ferocity of the Anglo-Saxons, that they refused to proceed, and sent to Gregory to ask permission to return. The benevolent pontiff, in his reply, adjured them by every Christian motive to persevere in their enterprise; and, **S**ucilitate its success, he wrote letters in their behalt to the kings and prelates of France. By these they were received with kindness, and supplied with interpreters, the language of the Franks and Saxous being nearly the same; and in the year 597 they landed in the Isle of Thanet. Augustin immediately despatched one of lns companions to the court of Ethelbert, the king of \* Gregor, Epist, iv. 57.

GREGORY AND THE ANGLES .- Singleton.

Kent, announcing the purpose of his coming, and entreating the countenance and protection of the king.

No selection of place could have been more happy for the commencement of the good work. Ethelbert held the important rank of Bretwalda, and his authority extended to the shores of the Humber.\* This queen, Bertha, as we have already mentioned, was a Christian princess; and having stipulated at her marriage for the liberty of professing her own religion, she had several French priests in her train, and a bishop of the name of Lindhard, by whom the rites of the Christian faith were performed in a ruined church that had been \*Bed 1.25. 

\* Bed 1.25. 

\* See ante, p. 145.

repaired for her use, without the walls of Canterbury.\* The king was thus not only in some measure acquainted with the religion of the strangers, and perhaps inclined in its favour, but possessed of power to protect them in teaching it; while in the queen they could avail themselves of an assured and influential friend. On the other hand, the opposition of the Pagan priesthood was feeble and momentary. They advised the king to meet the strangers, not under a roof, but in the open air, as he would there be safe from their magical contrivances—an idea perhaps suggested by those miraculous powers which Christian missionaries, at this period, were but too ready to claim. This

AUGUSTIN PREACHING BEFORE ETHELBIRT,-Tresham.

precaution Ethelbert adopted. Augustin and his companions advanced to the important interview in solemn procession; a silver crucifix, and a hanner on which was parated a picture of the Redeemer, were borne before him, while the attendant monks made the air resound with their melodious anthems, which they sang in alternate choirs. After this impressive commencement, Augustine, through the medium of an interpreter, gave the king a summary delineation of the nature of the Christian faith; and after describing the trimmphs it had achieved, and the blessings it had conferred upon the nations among whom it was established, be implored him to receive this beneficent religion, and allow it to be taught to his subjects. The reply of Ethelbert was cautions, but encouraging. said that he had no intention to forsake the gods of his fathers for a new and uncertain worship; but since the purposes of the strangers were good, and their promises inviting, they should be suffered to instruct his people, while he would secure them from interruption, and maintain them at his own expense. On receiving this favourable answer, the monks joyfully directed their procession towards the neighbouring city of Canterbury; and as they entered within its walls, they chanted these words of solemn intercession: "We beseech thee, O Lord, of thy mercy, let thy wrath and anger be turned away from this city, and from thy holy place; for we have sinned. Hallchijah!"\* They now began to preach among the Saxons of Kent,—the purity of their lives and the simplicity

of their manners forming powerful arguments in The idolaters were favour of their doctrines. compelled to venerate a faith so illustrated, and converts began to crown the labours of the mission-At last Ethelbert hunself, persuaded by their reasoning, and probably induced by the entreaties of his queen, consented to be baptized. This important event happened on the day of Pentecost; and on the ensuing Christmas ten thousand of the people followed the royal example. The joy of Gregory, when he heard these tidings, was so great, that he conferred the primacy of the whole island upon the capital of Kent, and sent the pall to Augustin, who had already been conserated archbishop of Canterbury by the prelate of Arles, to whom he had repaired for that purpose. As emergencies arose in this sudden success which Augustin had not forescen, he sent to the poperat series of questions for solution, some of which appear sufficiently strange in the present day. † He asks, among other things, if a pregnant woman may be haptized?—what interval of time should clapse, after her confinement, before she could be admitted into the church?—and also, lest an infant should die, after how many days it might be baptized? These queries, which were gravely. propounded, were as gravely answered. more important difficulty presented itself respecting the abolition of heathen festivals and eeremonies, to

whose allurements the simple converts were still fondly attached. It was feared that their entire abrogation would be too violent a change in the rude habits of the people, and nught provoke a rehipse into idolatry. By the advice of Gregory, Augustin, instead of destroying the heathen temples, consecrated them as Christian churches; and while the festivals were suffered to remain, they were held in honour of the samts—the same number of animals as before being still eaten, and sober, religious joy assuming the place of outrageous conviviality. From the facility with which the Christian faith

had thus been established in Kent, Augustin hoped for a similar conversion of the whole island. But though Gregory had sent hun additional aids, his resources for this great work were still made-In the emergency he resolved to endeavour to secure the assistance of the Welsh ecclesiastics. Unfortunately, however, these heads of the more ancient British elmrch were indignant at the metropolitan authority which the Roman missionary assumed in virtue of his papal appointment, and the subserviency he demanded to the bishop of Rome, whose claim to universal supremacy in the church they could not comprehend. With this might be connected a lurking feeling of envy at the success of Augustin among the Saxons, and of shame at the rebuke it administered to their own supmeness. There were other grounds of difference also between the native British and the Italian priests, the chief of which was regarding the proper period for the celebration of Easter.\* This state of motters made co-operation between the parties hopeless. At the first meeting, which was attended by only a small number of the Welsh clergy, nothing was concluded. It was agreed, however, that another meeting should take place, at which the native priests promised to assemble in greater force. During the interval, they consulted a hermit, one of their countrymen, famed for his sanetity and wisdom, respecting the claims of Augustin, and received this sententions

<sup>\*</sup> As this matter has been generally misunderstood and misstated, it may be well to quote the following correct explanation: "The difference between the Roman and Eastern church concerning Easter, which began about the year 200, lay in this. The churches of Asia observed this feast, the fourteenth moon, upon whatsoever day of the week it fell out, being the day on which the Jews officied their Paschal lamb. The church of Rome celebrated if on the Sunday following that day, if it thateed not to fall on Sunday, but did not, as the Eastern church off from perpetual practice and tradition, ever done, celebrate kaster on a week day. Thus the hiller-ence between the Roman and Eastern church only consided in secence between the Roman and Eastern church only consisted in saddays at most; and the only question was, whether Easter was to be reliabrated on the week day on which it fell, or on the Sanday following. At the Council of Nice A.D. 325, Asia was forced to follow the European mode; and from that time inl 532, all the world kept Easter alka. Very different was the dispute between the Roman church and those of Bitain and Ireland, concerning Easter. It began in the sixth century upon this ground. In 532, Dionysius Exiguns, a Roman priest, introduced a great variation into the mode of computing Easter, of which the bednical terms would neither match nor entertain the reader. Suffice it to say, that his hole adopted by the Roman church, threw the celebration of Easter a whole month further back than before. But Birlam and Ireland were as obtinate for the cold Easter as they were briefy for the old style; and thus kept Easter a whole month before the Roman church. Cuminlus, who lived at the time, specially mentions this difference of a month (Usser, Sylloge, p. 34); and the dispute between the Roman and diff Birlish and Irish churches was not known till Augustin the monk was sent to convert the Saxons, in 597."—
Pruher ton's Laquay into the Early Hatery of Scotland, ii. 265. (Edit of 1814). ence between the Roman and Eastern church only consisted in six of 1814).

advice: "If the stranger be a man of God, follow "But how," said they, "shall we know that he is a man of God?" "By his lumility," replied the anchorite. As this reply was still vague, he furnished them with the following critenou, by which the humility of Augustin might "When you repair," he said, " to the appointed conference, observe the manner in which he receives you. If he rise at your approach, be sure that he is the leader whom God has appointed you to follow; but if he receive you scated, reject him for his pride." Firmished with this index, the synod, consisting of seven bishops, and the abbot of Bangor, repaired to the conference; but Augustin did not rise at their approach. This instance, whether of arrogance or oversight, set the seal upon his rejection. He limited his demands to three particulars, which were, that they should agree with the Roman church in the time of keeping Easter; that they should use the same ceremomes in the sacrament of baptism, and unite their efforts with his in the conversion of the Saxons. But to these proposals they returned an abrupt and unqualified negative. The indignation of Augustin now burst forth. Assuming the tone of a prophet, he declared to them, that since they refused their aid in converting the Saxons, by the swords of the Saxons they should perish. It has been in-innated by Jeffrey of Monmonth, and the imputation has been re-echoed by successive historians, that the archbishop, by his intrigues, procured the fatal accomplishment of his prophecy, in the slaughter

come time after of the monks of Bangor by the

Northumbrian king Edilfrid. But that appears to

have been a sudden and accidental, not a premedi-

tated act of devastation, and it did not occur till

some years after the death of Augustin.

CHAP. II.]

Notwithstanding the failure of this negotiation with the Welsh church, the commencement of Christianity among the Saxons had been too prosperous for the progress of the faith to be now permanently checked. In the converted Bretwalda himself it found a zealous and efficient advocate. Sebert, king of Essex, his nephew, moved by the example and arguments of Ethelbert, abjured his idols, and received the rite of baptism: this event happened in the year 604. Numbers of the people having as usual immediately followed the example of their king, a Christian church was erected in "London, Sebert's capital, upon the rising ground formerly the site of the Roman temple of Diana. This church was dedicated to St. Paul; and each successive building, upon the same site, has retained the name to the present day. A second royal convert rewarded the zeal of the Bretwalda, in the person of Redwald, the king of East Anglia. We have already related the compromise he made between his own convictions and the opposition of his queen and nobility, by setting up a Christian altar and an idol in the same temple, and leaving his people to judge for themselves between the rival religious.\* This strange and perilous experiment is said to have been attended with full success. The contrast was so striking, that the ancient faith was gradually forsaken, and East Anglia was numbered among the Christian kingdoms of England.

In this same year (604) Augustin died, after

having thus seen the gospel firmly established in the kingdoms of Kent and Essex. The early historians of the English church have adorned him with every apostolic virtue, and the honour of canonization has been awarded to him by the gratitude of the Roman pontiffs. At this distant period it is difficult to form a proper estimate of his character; but we may venture to affirm, that while be felt the paramount importance of Christianity, and laboured devotedly for its extension, he showed himself, in many instances, but little scrupulous as to the means by which he sought to accomplish so desirable an end. Such, indeed, was too gererally the conduct of the saints and missionaries of that period. While they compassed sea and land with all the zeal of the apostolic ages, they never lost sight of Rome and its spiritual supremacy. Augustin consecrated Justus bishop of Rochester, and Mellitus bishop of the East Saxons, and appointed his faithful follower Laurentius to be his successor in the see of Canterbury. Laurentins had to contend with still more

serious difficulties than those which had impeded the efforts of Augustin; and the faith, so lately planted among the Anglo-Saxons, was soon doomed to sustain a violent shock. Sebert, the protector of the Christian church in the kingdom of Essex, died; and his three sons endeavoured to re-establish the ancient superstition. In consequence of the violent measures which followed, Mellitus was banished, and obliged to flee for shelter to his friend Justus. Here, however, he found the church in a condition equally perilous, It has been already related \* how Eadbald, the son and successor of Ethelbert, had married the youthful widow of his father, and in consequence of the remonstrances of the ecclesiastics, had become hostile both to their persons and their religion. In this gloomy posture of affairs Laurentius, Mellitos, and Justus, hastily concluded that their cause was hopeless: the two latter retreated with precipitancy to Ganl, and Laurentius himself prepared to follow them. In such an emergency, which threatened the extinction of Christianity in England, it seemed as if nothing short of a miracle could have sweet it; and, if we may believe the early writers, a nuracle was vouchsafed. On the night previous to his intended departure, Laurentius passed the night in the church dedicated to St. Peter and St. Paul. At midnight the prince of the Apostles appeared to him; and after reproaching him for his lack of zeal in thus abandoning his spiritual charge, he bestowed a severe flagellation upon the trembling archbishop. On the next morning, when Laurentius repaired to the palace, he threw off his cloak, and displayed before the king his back and # Sec ante, p 145

shoulders, bloody and waled. Eadbald, dismuyed at the spectacle, and apprehending a worse visitation for himself, made baste to repair the consequences of his apostacy. He cursed the idolatry into which he had relapsed, and dissolved the nunatural umon in which it had originated. In consequence of his repentance, Melhtus and Justus were recalled, and the cause of Christianity was restored with Iresh lustre. Such is the tale which Bede has delivered, and which he would have thought it imprety to question. We may yenture, without any breach either of faith or charity, to regard the flagellation of Laurentius as one of those well-intended stratagems, or pious frauds, which abound in the proceedings of persons of that age, pursning evidently the worthiest ends and actuated by the highest and purest motives. The most important event in the history of the

Saxon church, after the conversion of Ethelbert, is that of Edwin, by which Christianity was introduced into the powerful kingdom of Northumberland. Here, too, we are encountered by muscles, which indeed make up so much of the story as given by the original anthorities, that it is impossible now to separate what is fact from what is fiction We must repeat the legend, therefore, as Bede has recorded it. Edwin had passed the greater part of his youth as a fugitive and an exile, continually exposed to the machinations of his relentless enemy Edilfrid, who then accupied the Northumbian throne. Driven from the protection of Cadwallon, the king of North Wales, he wandered from court to court, until at last he seemed to have found a permanent shelter with King Redwald in East Angha. But his haunt was discovered by Edilfind, who thereupon immediately sent to Redwald demanding that Edwin should be given up. As the power of Edilfrid was terrible throughout the Heptarchy, the heart of Redwald failed, and he resolved to secure his safety at the expense of hospitality, justice, and religion. A faithful friend advertised Edwin of the deliberation within the palace, and exhorted immediate flight, offering, withal, to conduct him to a place of safety; but the spirit of the noble exile, that had contended so long against misfortune, was weary of the struggle. He declared that be would fly no further; and that it was better to perish by the treachery of his host, and the cruelty of lns enemy, than continue the life of disquietude which he had hitherto led. In this gloomy spirit of resignation be sat down near the gate of the palace, prepared for whatever nught await him.

In the mean time, while has friend left him to gain further intelligence of the deliberation, and Edwin remained thoughtful and alone, revolving the bitterness of his fate, amidst the gloom of the approaching midnight, a stranger (continues the story) advanced, and demanded wherefore he sat there, and awake, at an hour when other men were asleep? Edwin, ruising his head, abruptly asked, in turn, how it could concern his questioner whether he passed the night under shelter or in the

open air? The stranger then told him that he knew well the nature of his present condition, and the causes of his disquictude. "Now tell me," he said, "what thou wouldst give to him, whoever he might be, who should deliver thee from these calamities, and so persuade Redwald that neither he nor his enemies should do thee hurt?" Edwin, enconraged by the prospect, replied that he would show all the gratifude in his power to hun who should render him such a benefit "And what wouldst thou give," again demanded the mysterions stranger, "if he should truly promise thee the destruction of thy engines, and the possession of a kingdom, so that thou shouldst surpass not only all thy predecessors, but all the kings of England who have gone before thee !" To which Isdwin replied, that to limi who should render limi such favours, he would answer by corresponding actions. A third time the strange visitant propounded a prophetic question. "If he who procured such blessmgs should truly foretell to thee what is to come, and give thee, for the security of thy life and fortunes, such counsels as none of thy fathers and kindred ever heard, wouldst thou follow them? and dost thou promise to receive his salutary directions "" Edwin joyfally declared that he who conforred upon form such distinguished benefits should from thenceforth be his guide. The stranger then placed his right hand upon the head of Edwin. "When this sign," he said, "shall come upon thee, remember this time, and our conversation, and the promises than last made ". When he had intered these words he suddenly disappeared, so that Edwin perceived he had been talking, not with a man, but a spirit.

His friend who had lately left him now returned from the palace with joyful aitelligence. The timid Redwald had been awakened to shame, and roused to comage, by the remonstrance of his high-spirited consort, so that he determined tather to brave the vengeance of Edilfrid than facur the repreach of treachery, and had dismissed the ambassadors with a bold refusal of their demands. Aware of the position in which he had placed hunself, he lost no time in mustering his army, and marching against Edilfied. The victory which followed, and the death of Ediffrid, placed Edwin on the throne of Northumbria. The perseented wanderer thus suddenly raised to an eminent station among the kings of the Heptarchy, evincetthe excellence of the lessons of adversity by the prudence and prosperity of his government. After a reign of nine years he sought in marriage Ethelbeiga, the daughter of the late Ethelbert of Kent. But the princess was a Christian, and Endbald, her brother, was averse to her mnion with an ido-This difficulty was removed by the agreement of Edwin that she should be allowed the free profession of her religion; and he even promised to embrace the same faith himself, if, on examination, he should find it worthy of adoption, The queen was accompanied to Northimbria by Paulinus, one of the last of the missionaries whom

Gregory had sent to Augustin; and as, by rather a rare chance, the prudence of this ecclesustic was

equal to his zeal, he forbore to press the subject of Christmany prematurely upon the mind of Edwin, but left the matter to time and opportunity. On the other hand, the king stdl adhered to his idolatry, and seemed to have forgotten both the vision and his marriage agreement. At length a mirrow escape which he made from the dagger of an assassing bappening at the same time with the birth of a daughter, appeared to Paulinus to afford a fit occasion for remonstrance, and in such a susceptible moment the heart of the king was touched. He allowed the infant to be baptized; and he promosed that, should be return victorious from an expedition on which he was about to set out against the king of Wersex, he would himself submit to the same ceremony. He was successful; but still be hesitated. A thoughtfulness and caution, miasual among the royal converts of the Heptarchy, retuned him in painful suspense,\* to the great regret of the Pope, his consort, and Paulinus. At length Paulmus one day entered the apartment while Edwin was absorbed in thought, and, laying be right hand upon the head of the king, he soleanly said, "Dost thou remember this sign, and the engagement it betokened?" In an instant the king tell down at the feet of Paulinia, who, rounediately raising bin up, reminded him that ail which had been promised by the heavenly strager was now infidled. The result was Edwin's metant determination to fulfil also his own part of the engagement. Such is the story. How far it is a mere betion, or how far the facts related were the result of contrivance or of chance, it is now impossible to determine. It comes down to us, as has been observed, on the authority of Bede, who was recapable of inventing it, but whose creditlity

called an assembly of his nobles, that they might discuss the claims of the new faith and the old; and, having amioniced his sentiments, he desired each member to deliver his opinion upon the subject. Corfi, the high-priest, was the first to speak, and, to the surprise of the whole assembly, he declared that the gods whom they Ind hitherto \* Morshipped were utterly useless. None, he proceeded, had served them with greater zeal than humself, and yet others had prospered in the world for more than he had done; he was, therefore, quite ready at least to give a trial to the new religion. One of the nobles followed in a wiser and purer spirit. Comparing the present life of man, whose beginning and end is in darkness, to a swallow entering a hanqueting-hall to find refuge from the storm without, flitting for a

was equal to any demands of that superstitions age. Bede was four within half a century of the date (v p. 627) assigned to the conversion of Edwin. Before he was actually baptized, however, Edw moment through the warm and cheerful apartment, • "Sad et (pse cum esset vir natura segacgssmus, seque din sobus besidens, ore quideou tarrito, sed in intentis rordis multa secum conlaqueus, quid sibi osset faciendam, quie religio servanda, trac-tabat." Bed, n. 9.

and then passing out again into the gloom, he proposed that if Christianity should be found to lighten this obscurity, and explain whence we came and whither we departed, it should immediately be adopted. Confi, upon this, moved that Paulmus should be called in to explain to them the nature of Christianity, which was namediately done; and so cogent were the arguments of the missionary, that the impatient Confi declared there was no longer room for hesitation. He proposed that the national idols should be immediately overturned; and, as he had hitherto been the chief of their worshippers, he offered to be now the first to desecrate them. He therefore threw aside his priestly garments, called for arms, which the Saxon priests were forbidden to wield, and for a horse, which they were not permitted to mount, and thus accontrol he galloped forth before the amazed multitudes, who thought he had become frantic. vancing to a temple in the neighbourhood, where the cluef idol stood, he Inried his lance within the sacred enclosure, by which act the building, was No lightning descended, no earthquake shook the ground; and the crowd, encouraged by the impunity of the daring apostate, proceeded to second his efforts. The temple and its sirroundmg enclosures were levelled with the ground. This event happened at a village still called Godmundham, which means the home or hamlet of the enclosure of the god \*

The conversion of the king was followed by that of multitudes of his subjects; so that Paulians, who was afterwards consecrated Archbishop of York, is said to have baptized twelve thousand converts mone day in the river Swale, the short remainder of his reign Edwin continued to second the efforts of the archbishiop in advancing the cause of religion among his subjects. Being offered the crown of East Augha, on the death of his benefactor Redwald, he refused it in behalf of Eorpwald, the son of Redwald, whom he persuaded to embrace Christianity. now, however, succeeded to the supreme dignity of Bretwalda, which he retained till be fell, while yet in the vigour of his days, in battle against the terrible Penda, in the year 634. consequence of this calamitous event the cause of Christianity in Northumberland was arrested in the midst of its trimmplis; and such was the general apostacy of the people, that Pauliums was obliged to abandon his see, and retue into Kent. This general apostacy, however, was counteracted on the accession of Oswald. Having spent his youth in Iona, to which northern sanctuary he had repaired for shelter, and having been taught Christianity among that primitive community of Culdees, he naturally sent thither for spiritual instructors to his people when he was established upon the throne. Corman, a monk, was accordingly sent from the monastery of lona to Northumberland, but, disheartened by the difficulties of his office, he quickly returned. While he was descant-

ing to the ascembled chapter of his order on the barbarous dispositions and gross intellect of the Northumbrians, and vindicating, on that score, his abandonment of his task, a voice of rebuke was heard from aundst the throng, -" Brother, you seem to have forgotten the apostohe injunction, that little children should be fed with milk, that they might afferwards be fitted for stronger food!"! Every eye was turned upon the speaker, who was Aidan, a monk of the order; and he was immediately appointed to the mission, and sent to the court of Oswald. The learning and picty of the ardent Culdee vindicated the choice of his brethren. He addressed himself with zeal and patience to reclaim the apostate Northumbrians; and in these labours he was well seconded by the king, who interpreted his sermions to the people. Aidan, in the year 635, fixed his seat, and founded a momastery upon the bleak island of Lindisfarne, directed perhaps or his choice by its resemblance to his beloved Jona; and there his religious commanity flourished for more than two centuries, until it fell beneath the fury of the Danes. Oswald, \* Bed 10 5.

who as well as Aidan has been honoured with the title of saint, was solicitous for the conversion in tonly of his own people, but of those of the other states of the Heptarchy; and, having repaired to the court of Wessex, to demand the daughter of King Cynegils in marriage, he prevailed upon both the king and the royal bride to embrace the Christian faith. Bermus, a missionary, sent from Rome to the court of Wessex, was thus enabled to preach successfully to the West Saxons, and an episcopal see was founded at Dorchester, of which he was consecrated bishop.

The introduction of the gospel into the powerful kingdom of Meicia was the next event by which its progress was distinguished; and, as in several preceding cases, it was the consequence of a royal marriage. Peada, the son of the terrible Penda, in whom the Christianity of England had hitherto found its deadliest enemy, solicited, while his father was yet alive, the hand of Alchileda, the daughter of Oswy, king of Northumberland; but the princess refused to be imited to an unbelieving husband. The prince, in consequence, abjured

CONSECRATION OF A SAXON CHURCH. From the Cottonian MS, of Caedmon's Metrical Paraphrase of parts of Scripture

his idols, and became a Christian; and on his return to Mercia, he brought with him four missionarres, who were successful in converting many of his father's subjects. The aged monarch, though he refused to be himself baptized, tolerated the labours of the Christian priests; and he even reguned consistency of conduct in those of his court who professed the Christian faith.\* The small kingdom of Sussex was now the only state of the Heptarchy the subjects of which still remained idolaters; but they, too, were converted about the close of this century, by the exertions of Wilfind, hishop of York, who found shelter among the South Saxons when driven from his see, and is said to have obtained a great influence over them by instructing them, among other things, in the art of fishing. Thus, in less than innety years from the arrival of Angustin, Christianity was established over the whole of England.

The conversion of a great country, inhabited by different tribes, and divided into several kingdoms, often at war with each other, was thus accomplished with a rapidity and facility resembling more the immaculous triumphs of the apostolic age, than the progress of Christianity in after times. It is evident, from the view already given of the northern mythology, that it was only fitted for predatory savages. Its clement was carnage, its negatify a code of strife, and its rewards plunder liked in 21.

and revenge; and however, therefore, such a ferocious system might have suited the Saxons when they were wont to rush from the gloom of the forest into the storms of the ocean, it lost much of its influence when they sat down quietly in a conquered kingdom, to enjoy their spoils. Nay, the Saxons, thus situated, may have begun to regard even with a jealous eye a religion that might animate, in turn, a more adventurous people than themselves to land upon their shores, and bereave them of the fruits of their victories. All the local attachments also which endear a national faith to a people were completely broken, when the roving Saxons became stationary cultivators of the soil. The sanguinary sacrifices, the wild rites, and turbulent festivals of the system of Odm, could only flourish in their native north, and aimdst its hurricanes and storms, and must have drooped, when transplanted into the "gay greenwood" and tranquil atmosphere of England. While the conquerors of Britain were thus loosely held by a religion unsuitable to their new condition, and whose chief attractions were left behind, the Christian faith was brought to their shores. peculiar wants, and the general circumstances of the time, were equally favourable to its acceptance. It was fitted for the settled occupants of a land, because it was a religion of Tove, and peace, and order; and it was the established faith of that civilized world around them in which it was now

A CHRISTIAN MISSIONARY PREACHING TO THE BRITISH PAGANS,-Multimer.

necessary for them to become unturalized.

HISTORY OF ENGLAND.

admitting, therefore, the piety, and smeerity of the first royal converts of the Heptarchy, we may still be inclined to conjecture that they were in some degree also favourably disposed towards the new faith by their conviction of the advantages they

would derive from its adoption, in forwarding the civilization of their kingdoms, and then adopting iato the family of Europe Further, the importers of Christianty into Fugland were not a handful of obscure adventurers They came from Rome, still a anglity came, and regarded as the metropolis of all that was intellectual and venerable and they came recommended

238

by kings and prelates. Their arrival was, thereforc, a great national embassy. Thus highly accredited, the Roman ceels astres were certain, not only of a safe reception, but also of a patient Then principal task which remained, therefore, and for which they were well qualified, was to show the superiority of knowledge over ignorance, and of a true religion over one that was false. It was then that their intrepidity, then lotty ambition, and persuasive powers, combined with purity of character and religious xeal, gave them their due superiority, and produced the natural results The missionanes wisely addressed themselves, in the first instance, to the kings of the Heptatchy; and these having readily embraced a religiou so atfractive as Christianity, and soudyantageous for then political enginestances, their subjects were naturally eager to follow the example. Each royal convert

was carnest to scenre the conversion of his adhes, and frequently accomplished, by a friendly visit, or a political convention, the religious change of a whole kangdam. It has often been observed, that wherever the Christian buth has entered, it has found its most zealous advocates among the feroale. sex, to whom in particular it recommends itself, not only by its mirrousic excellence, but by the equality to which it raises them with the other sex. This was remarkably exemplified among the Anglo-Saxons. The women here, possessing an influence in society unknown to the most refined nations of antiquity, were enabled powerfully to promote the extension of the faith; and while the princesses refused to espouse idolatrous kings, unless they consented to be baptized, we can well magne that, in numberless instances, among persons of inferior rank, the "unbelieving linsband was converted by the believing wife." Nor was the influence of the Saxon females impaired by the adoption of Christianity. A prioress might preside over a meeting of ecclesiastics, and legislate for the government of the clinich; and might take prece-

dence in rank of all the assembled presbyters, as was the case in the council of Becanceld, convoked, in the year 694. A variety of powerful causes were thus combined in behalf of Christianity, and their effect was exhibited in its rajud and cordial adoption.

also worthy of remark, that all was accomplished

ceived their instructors from Rome and France. To this was added the difference between the Romish and Scottish churches, upon the form of the ecclesinstical tonsure. While the priests of the former wore the hair round the temples in imitation of a crown of thorns, they were horror-struck at the latter, who, according to the custom of the Eastern church, shaved it from their forcheads into the

ever, triumphed over these difficulties. visited the several churches throughout England, and so effectually employed authority and conciliation, that at a conneil called at Hertford, in the year 673, the bishops generally consented to the canons which he had brought with him from Rome,

THE HISTORY OF RELIGION.

by which a complete agreement in faith and worship was established † Theodore now addressed himself with vigour to the yindication of his authority as primate of all England, a pre-emmence with which he contended the Archbishop of Canterbury had been invested by Pope Gregory, and in right of which he claimed for lamself-scarcely less than a papal-supremacy over the British church. In the prosecution of this object he was involved in a long contest with Wilfind, the Bisliop of York, whose extensive diocese be wished to divide, on the pretext that it was taclarge for the supermitendence of one man Wilfrid was not a character to submit tamely to such a stretch of power. Appealing from the Archbishop to the Pope, he set off for Rome, where he was graciously received, and he soon obtained a decree rescruding the partition of his bishopric. Though the papal numbate was so little regarded that Kine Egirid, on Wilfrid's retain, Commutted him to prison, yet this precedent was afterwards additioned by ecclesiastical appeals to Rome, which terminated, as in other countries, in the universal supremises of the Pope — Our limits do not permit it to trace the singular career of Walfield, so full of vier-itiales, or to delimente his character that percently combined so many inconsistencies, With h's laughoness in power, and his restless ambition, be united, in the hour of adversity, the meckness and self-demal of an apostle. Being shipwrecked on his voyage to Rome upon the shores of Frieskind, he embraced the opportunity of preaching the forth to the barbarous natives; and when driven into Sussex by the resentment of Egfrid, he there ales, as already noticed, turned his ill-fortune to an recusion of usefulness, and, engaging with ready

zeal in a new work of conversion, succeeded in maining over to Christminty the last district in England in which the ancient superstition survived. In the mean time, Theodore being delivered from the presence of so formidable an adversary, was chabled to proceed with his division of the larger That of Mercia, m particular, which had till now embraced the whole of the state to called, was divided by King Ethelred, at his instigation, into the four dioceses of Lichfield, Worcester, Hereford, and Chester. Many other reforms were also prosecuted by the energetic Primate. He encouraged the wealthy to build parish churches, by conferring upon them and their heirs the right of patronage. The sacred edifices, till now for the most part of timber, began to give place to larger and more durable structures of stone; the Beautiful chauting, hitherto confined to \* For the lengthened discussion at this council, see Bede in, 25,

tomed, in the discharge of their office, to wander from place to place, had fixed statious assigned to them. They and the churches had as yet been maintained solely by the voluntary contributions of the people; but, because this was a precarious resource when the excitement of novelse had ceased, Theodore provided for the regular support of religion, by prevailing upon the kings of the different states to impose a special tax upon their subjects for that purpose, under the name of kirk-scot, \* By these and similar measures, all England, long before the several kingdoms were united under one sovereign, was reduced to a state of religious uniformity, and composed a single spiritual empire. After bying to witness many of the benefits of his important labours, this illustrious Primate died in 690, after a well-spent and active life of nearly ninety years. The age of the Christian church in England that numediately succeeded its establishment was distinguished by the decline of true religion, and the capid increase both of worldly-mindedness among the clergy, and of familiersm and superstition among the people — From the humble condition of a dependence upon the alms of the faithful, the clurch now found itself in the possession of revenues which chabled its behops to vie in pump and luxury with the chief nobdity, and even conferred no small consuderation upon many of its inferior immosters. If is generally held that tithes were first imposed upon the Mercanis in the latter part of the eighth century by their king Offa, and that the tax was extended over all England by King Ethelwulf, in 855. But the subject of this assumed donation of Ethelwuff to the clurch is involved in great

obscurity. † All that is certain is, that in after ages the clergy were uniformly wont to refer to his charter as the foundation of their claim. tithes of all England, however, at this early period, if such a general tax then existed, would not have been sufficient of themselves to weigh down the church by too great a burden of wealth. A great portion of the soil was still composed of waste or forest land; and the tithes appear to have been charged with the repair of churches, the expenses of worship, and the relief of the poor, as well as with the maintenance of the elergy. It was from the lavish benevolence of individuals that the church principally derived its large revenues. Kings, under the influence of piety or remorse, were cager to pour their wealth into the ecelesiastical treasury, to bribe the favour of Heaven, or avert its indignation; and wealthy thanes were in like manner wont to expeate their sins, as they were taught they might do, by founding a church or endowing a monastery. Among other consesquences of these more ample resources, we find that the walls of the churches became covered with foreign paintings and tapestry; that the alters and sacred vessels were formed of the precious metals, \* Bedle Epistol ad Egbert See Turner's Anglo S. Cons. 1, 479-4-1.

and sparkled with genis; while the vestments of

monasteries in particular, founded at first as abodes

of piety and letters, and refuges for the desolate and the pendent, soon became the haunts of idle-

ness and superstation. Many of the numerics

were mere receptacles of profligacy, in which the

roving debanched was sure of a welcome.\* In the

year 747 the Council of Cloveshoe found it neces-

sary to order that the monasteries should not be

turned into places of amusement for harpers and

buffoons; and that laymen should not be admitted

within their walls too freely, lest they might be

seandalised at the offences they should discover

there. + Most of the monasterics in England, too,

were double houses, t in which resided commu-

nities of men and women; and the natural conse-

quences often followed this perilous juxtaposition

of the sexes, living in the midst of plenty and

idleness. These establishments also continued to

nultiply with a rapidity that was portentons, not

only from the tendency of the idle and deprayed to

embrace such a life of indulgence, but from the

doctrine current at the end of the seventh century,

that the assumption of the monastic habit absolved.

from all previous sin. Bede, who saw and la-

Many nobles, desirous of an uninterrupted life of

sensuality, pretended to devote their wealth to the

service of Heaven, and obtained the royal sanction

for founding a religious house; but in their new

character of abbots, they gathered round them a

brotherhood of dissolute monks, with whom they lived in the commission of every vice; while their

wives, following the example, established mmne-

rics upon a similar principle, and filled them with

the most deprayed of their sex. To these evils

was added the bitterness of religious contention.

Men, thus pampered, could scarcely be expected

to live in a state of mutual harmony; and fierce

dissensions were constantly raging between the

monks, or regulars, as they called themselves, and

the seculars, or unmonastic clergy, about their re-

service into the vulgar tongue; and south of the Thames, not one. 13 After the land had begun to recover from the

immediate effects of this visitation, and the church had resumed its wonted position, the celebrated Dunstan appeared. He was born in Wessex, about the year 925. Although he was of noble birth, and remotely related to the royal family, as well as connected with the church through two uncles, one

of the Northmen might be traced by the ashes of sacred edifices, that had been pillaged and con-The effects of these devastations upon both religion and learning may be read in the mournful complaint of Alfred. At his accession, he tells us, in the interesting preface to his translation of Pope Gregory's tract on the Duties of Pastors he could find very few priests north of the Humber, who were able to translate the latin

was chiefly directed against the churches and monasteries. Those miracles lately so plentiful, and so powerful to deceive, were impotent now to break or turn back the sword of the invader. The priest was massacred at the altar; the mank perished in his cell; the nuns were violated; and the course

the treasures of the land, at the first alarm, were deposited in the sacred edifices, which were fondly believed to be safe from the intrusion even of the most daring, the tempest of the Damsh warfare

the preceding. These spoilers of the north, devoted to their ancient idolatry, naturally abborred the Christianity of the Saxons, corrupted though it was, as a religion of lummanity and order; and as

dered a little contraband traffic, when opportunity offered, as detracting from the ments of their religious tour; while ladies of rank, who undertook the same joinney, frequently parted with whatever virtue they possessed by the way.† While such was the state of the English church, the invasions of the Danes commenced at the end of the eighth centmy, and were continued in a succession of immdations, each more terrible than

the spiritual purity of imwashed linen. In addition to the feeling of remorse by which such expiations were inspired, a profligate state of society will multiply religious observances as a cheap substitute for the practice of holiness and virtue; and

only exerte contempt or disgust, whether they ascend to the extravagance of St. Gurthlake, who endeavoured to fast forty days after the fashion of Elias,\* or sink to the low standard of those noble ladies who thought that heaven was to be won by

THE HISTORY OF RELIGION.

stane, who seems to have been delighted with his imisic. \* But Dunstan's character for saintship,

attested though it had been, was still imperfect

To his other endowments, he had added a famili-

arity with the heathen songs of the ancient Saxons;

and this acquisition was considered by many as not

a little unprofessional and profane. A miracle that

would have canonized him in the cloister, almost

brought about his rain in the court. Upon one

occasion, when he had hung his harp upon the

wall, it was heard to utter, of itself, the words and

time of an anthem. Whether this effect was pro-

duced by ventriloquism on the part of Dimstan, or an excited imagination in the bearer, or whether

the harp was one of those called Æohan, of which

the circumstance has obtained for him, with some,

the credit of being the inventor, it is impossible to

conjecture; but if he here actually attempted a

puracle, the occasion was ill chosen, and the effect

imfortunate. The courtiers, who envied hims the

favour of the king, londly denounced hum as a

dealer in sorcery, and procured his expulsion from the court; and, not contented with this victory,

they pursued him, bound lum hand and foot,

trampled upon him, and threw him into a maish,

where they left him to perish. He escaped, however, from this immment peril, and sought refuge

strange repulchiet was at once his bed-chamber,

his oratory, and his workshop; and it was here

that one of his most celebrated combats with the

prince of darkness took place. One evening, while

deemed enough for the future aspirant to clerical supremacy, without the corroboration of a miracle. His career was, therefore, indicated before he was born. While his mother Cynedrith attended dryme service, in the church, at the festival of Candlemass, the lights which the worshippers carried were suddenly extinguished, and a supernatural darkness involved the whole building. But in the midst of the consternation which such a portent excited, her candle was rekindled by fire which seemed to descend from heaven. Of course, the interpretation was easy, and all were thus taught what a light would proceed from her, to illiminate the church and kingdom.\* While a boy, he was also honoured by divine manifestations, church of Glastonbury, still humble in its dimensions, needed enlargement, and sought it at the bands of the embryo saint; for this purpose, a venerable man appeared to him in a vision, led him over the bindding, explained the scale on which it was to be enlarged, and stamped the whole plan so indelibly upon his mind, that he could not for-

get it. His early studies having been pursued

with an intensity that soon exhausted his feeble constitution, a fever ensued, and, under the deli-

rusm it produced, he escaped from his bed dining

the night, and burned to the church. Having found the doors locked, he scaled the walls by the

help of a ladder, reached a scaffolding—the build-

ing being under repair—and safely descended into

the body of the church, where he was found asleep

danger of an attempt upon which no same person

would have ventured, appeared toothers, and perhaps

to humself, as nothing less than infractions; and

his restored health, which the excitement might

have produced, gave countenance to the supposi-

tion. The story was, therefore, amplified and em-

bellished in the spirit of the age. It was an angel

that had visited his couch by night, and suddenly

restored burn to health. An impulse of holy gratitude had hurned him to church, that be might return thanks to heaven for the miracle; but here, it was added, his adversary, the devil, accompanied by his dogs, had opposed his path, and endeavoured to drive him back; however, the intrepid youth, with pious ejaculations and a staff, ronted the fiend and his formidable hell-hounds, when angels came to his aid, and wafted him into the church in safety. Thus heralded in his career, Dunstan was careful to omit no efforts on his own part that might aid his claims to the cliaracter he proposed to assume; and therefore he accomplished himself in all the learning that might give him an influence in society. He was an excellent composer in music; he played skillfully upon various instruments; was a painter, a worker in design, and a

calligrapher; a jeweller and a blacksmith.

 Dabernus de Vit. S. Donst in Anglia Sacra, n. p. 90; et Eadmer in Vit. Dunst., ibid., ii. 213. VOL. I.

Dunstan patiently endured the annovance until his tongs were red-hot in the fire, when, snatching them suddenly up, he seized with them the nose of the loul fiend, who bellowed in agony till the neighbourhood resumded with his clamour. Such were the gross ideas at this time entertained of the nature and agency of spirits. In this and many similar legends Satan appears merely as the clown in the pantomme, and generally to be outwitted and

baffled. 1 By all this mortification Dunstan gradually repaired the error or unsfortune into which he had fallen. His character for sanctity became 🔭 Herum eum (Dunstinnus), videret dominum regem swenkarbus Peuris fatigatino psallebat in tympano sive in cythara," Kr. 1. In the narrative of Dinistan's feat, the riv of Satan, at his departure, was, "O quid feet calvus iste!" O quid ferit calvus iste! Ancha Sacra, h. 97. In another coullet the saint strick the devil so fierrely with his pasteral stuff that it broke in three pieces.

with his micle, the bishop of Winchester. A new scene now opens in the life of this extraordinary person. Contiguous to the church of Glastonbury he erected a cell, five feet in length by two in breadth, the floor of which was sunk beneath the surface, while the roof, on the outside, was only breast high, so that he could stand upright in it, though mumble to he at full length. This

more illustrious than ever; and Ethelfleda, a noble lady who occupied a cell near lins own, made him, at her death, her sole executor. He distributed the personal property among the poor, and bestowed the lands upon the church of Glastonbury, endow-

ing that establishment at the same time with the whole of his own patrimony, which had lately fallen to him. This ambition, indeed, however inordinate and reckless, was certainly of too lofty a character to stoop to lucrative considerations.

[Book II.

Runs or Grastonbury Amery, as they appeared in 17-5.-St. John's Charch, and St. Michael's Tower, on the Ten Hill in the Distance

Dunstan was recalled to court; but, in spite of his recent exploits and penances, he was still opposed by the courtiers, who probably saw his ambition, and dreaded his talents. Their intugues again procured his dismission, but once more he was recalled through the opportune interference of a miracle; and the king not only made him Abbot of Glastonbury, but greatly increased the privileges of that monastery. Edred, the successor of Edmund, showed him equal favour, and would have made him bishop of Crediton; but Dunstan, who seems to have contemplated a still higher elevation, refused the offer. The following day he declared that St. Peter, St. Paul, and St. Andrew had visited him in the night in a vision; and that the last, having severely chastised limit with a rod. for rejecting their apostolic society, commanded him never to refuse such an offer again, or even the primacy, should it be offered him; assuring him, withal, that he should one day travel to Rome.

Edmund having now succeeded to the throne,

It is probable that Dunstan's ultimate aim all this while was to effect what he deemed a reformation of the church, and that, according to the morality of the times, he justified to himself the means to which he resorted by the importance of the object he had in view. The ecclesiastical reformation to which his efforts were directed was such as might have been expected from his character. A fierce champion for the faucied holiness of celibracy, he determined to reduce the clergy under the monastic yoke; and, as during the late political troubles many both of the secular and the regular priests had married when they were driven from their homes, he insisted that those who had so acted should put away both their wives and families. Those clergy also who dwelt with their respective bishops were required to become the immates of a monastery. In these views he was happy in having for his coadjutor Archlashop Odo. This personage, horn of Danish parents, and distinguished in the early part of his life as a soldier, retained ever after the firmness and ferocity of his

brown an Blummarion in the Cottoman MS Claud, A. ni.

first calling. We have already related the part be acted along with Dimstan in the tragedy of the im-When Dunstan, soon after this, happy Elgiva. was obliged to fly from England on being accused of embezzlement in the administration of the royal revenues, it is related that while the officers were employed at the Abbey of Glastonbury, in taking an inventory of his effects, his old adversary, the devil, made the sacred building resound with obstreperons murth at the discompture of its abbot. But Dunstan checked his triumph by the prophetic intimation of a speedy return.\* He then hastened to leave the kingdom, and was so fortunate as to escape the pursmt of the queen's messengers, who, it is said, were commissioned to put out his eyes.

The death of Edwy immediately brought about the recal of Dinistan, and the restoration of his influence, and he was appointed by Edgar Bishop of Worcester, in 957. Three years afterwards, on the death of Odo, he was promoted to the Archheshopric of Canterbury, when, according to custom, he repaired to Rome to receive the pall at the hands of the Pope, thus fulfilling the prediction of his vision.

He was now possessed of imbinited ecclesiastical authority; and though he no longer enjoyed the powerful co-operation of Odo, he was seconded by the no less zealous efforts of Oswald and Ethelwald, the former of whom he bad promoted to the

see of Worcester, and the latter to that of Winchester, and both of whom were afterwards canonized with their principal. He had also the superstitions Edgar under his control, and afterwards the youthful Edward. Being thus surrounded with political and spiritual coadjutors, he proceeded with merciless zeal in his projects of reformation, and alternately adopted force and stratagem for the accomplishment of his purposes. The clergy were now imperiously required to dismiss their wives and conform to the law of celibacy, or resign their charges; and when they adopted the latter alternative, they were represented as monsters of wickedness by whose presence the church was polluted. The secular canons were driven out of the cathedrals and monasteries, and their places were filled with monks. On one occasion Ethelwald entered his cathedral during the celebration of mass, and causing his servants to throw a heap of cowls which they had brought with them upon the floor, he commanded the astonished canons to assume these habits or resign. In vain they pleaded for time to deliberate; the command was imperative, and must be instantly obeyed. Eventually a few only complied with the haughty mandate.\* Miracles were necessary for such obstmate recusants, and therefore, besides the wonderful legends that were devised and propagated in praise of St. Bencinfinite loquacity Dunstan, perplexed by the

arguments of such an antagonist, produced his final

fix in the wall, exclaiming, "Do it not! do it not!

you have judged well, and you would do ill to change it." \*\* This intracle, however, so far from

convincing the canons, only produced confusion, and broke up the meeting. A second meeting

was held, but with no better result. A third was appointed at Calne, and there a prodigy was to be exhibited of a more tremendous and decisive cha-

HISTORY OF ENGLAND.

chained, " and you endeavour to overcome me. am more disposed to silence than contention, confess I am intivilling that you should vanquish me; and to Christ limiself, as pidge, I commit the cause of his church," At these words, the floor suddenly gave way, and fell to the ground with his adversaries, of whom some were crushed to death, and many grievously injured, while the part which Dunstan occupied, with his adherents, remained immoved. It is no violation of charity to suspect, from this incident, that the archbishop was skilled in the profession of the carpenter as well as in that of the blacksmith. Dunstan lived for ten years after this sanguinary deception, and spent them in still prosecuting his favourite schemes of ecclesiastical reform. His last moments are irradiated in the legend of his life by a whole galaxy of miracles; but enough of this sort of matter has been already quoted. in the reign of Ethelred in a n. 988. The history of the Anglo-Saxon church, from the death of Dinistan to the Norman conquest, presents httle to interest the general reader. The cause for which Dinistan and his coadjutors had laboured remained completely in the ascendant; monasteries continued to be founded or endowed in every part of the kingdom; and such were the multitudes who devoted themselves to the cloister, that the foreboding of Bede was at length accomplished above a third of the property of the land was in possession of the church, and exempted from taxes and military service. It is probable that an increase of superstation of a certain kind was one of the consequences of the invasions of the Danes. In a canon of the reign of King Edgar we find the elergy enjoined to be diligent in withdrawing the people from the worship of trees, stones, and fountams, and other heathen practices which are therein specified; and the laws of Canute prohibited the J

their tongues, their lips, their palates, their han, their marrow-by everything soft or haid, moist or dry. The penances imposed upon the larty for their sins had a reference to the spirit of the age and people. They chiefly consisted in a prolubition from carrying arms; in abstinence from flesh, strong liquors, soft beds, and warm baths; in not polling the head and beard, or paring the units; and if they were rich, they were required to bankl and endow monasteries. Some of the prescribed fastings would appear intolerable, but for the methods which they had discovered of vicanous penance in this particular. The abstincuce of another, which might be obtained by purchase, was carried to the account of the offender; so that he upon whom was imposed a cessation from food for seven years, might fmish the whole in three days, if he could procure eight hundred and fifty men to fast along with him on bread, water, and vegetables. Exemption, too, was to be directly bought at a stipulated price; so that a year's fasting would be remitted on payment of a fine of thirty shillings to the church. In the canons of Elfric, who was Archbishop of Canterbury from 995 to 1005, we learn that there were seven orders of clergy in the church, whose names and offices were the following:—1st. The Ostrary, who took charge of the church doors and rang the bell. 2nd. The Lector, or reader of Scripture to the congregation, 3rd. The Exorcist, who drove out devils by sacred adjurations or invocations. 4th. The Acolyth, who held the tapers at the reading of the gospels and the celebration of mass. 5th. The Sub-deacon, who produced the holy vessels, and attended the deacon at the altar. 6th. The Deacon, who minustered to the mass-priest, laid the oblation on the altar, read the gospel, baptized children, and gave the encharist to the people. 7th. The Mass-priest, or Presbyter, who preached, baptized, and consecrated

firebrands, or any infernal devices. The peniten-

tial by some ascribed to Dunstan requires that

penitents shall confess whatever sins have been

committed by their bodies, their skin, their flesh,

their bones, their smews, their veins, their gustles,

BOOK II.

these, but higher in honour, was—the Bishop. During this long period the history of the Church of Scotland is involved in much obscurity. While the remoteness and barbarism of the country, however, protected it from the extending influence of Rome, it appears that the Culdees diffused themselves over the territory to the south as well as over that to the north of the Grampians, and in course of time came to form exclusively, or almost exclusively, the national clergy. Of either the doctrines or ecclesiastical government of the Culdees we know little positively, although the subject has given rise to a great deal of angry disputation. But it would appear that whatever may have been the principles of their founder, Columba, they eventually came to be considered as

opposed to many of the claims of the Roman sec.

the Eucharist. Of the same order with the last of

worship of heathen gods, the sm, moon, fire,

rivers, fountains, rocks, or trees; the practice of

witchcraft, or the commission of murder by magic,

the Culdees.\*

On this account, although a great part of the north of England was converted by missionaries sent from Iona, it was decreed at the Council of Cealhythe, in the year 816, that no Scottish priest should for the future exercise his functions in England. The English writers of that age, nevertheless, bear testimony to the parity of their lives and the zeal of their apostolic labours, while they denounce their exclusive devotedness to the authority of Scripture, their rejection of the Romish ceremonies, doctrines, and traditions, the makedness of their forms of worship, and the republican character of their ecclesiastical government. It has been maintained also by some Protestant writers that the Culdees rejected the practice of auricular confession, and various other points of ecremony and doctrine peculiar to the Rounsh church. It is certain that, as had happened in every part of the Christian world, even those of them who belonged to monasteries came at length to marry, although there is much reason to suspect that this was a corruption of the rule originally established by St.

Columba. The office of Culdee in Scotland would

even in some cases appear to have become here-

Scottish priests were thrown, by circumstances, to the English church founded by Augustine and his companions upon the Roman model, naturally fixed them to the maintenance of their own creed, worship, and discipline, and consolidated their church into an establishment nearly if not altogether independent of that of Rome. Their separation from the Roman church, and opposition to its doctrines, was so strong, that Margaret, the Anglo-Saxon queen of Malcolm Cammore, was shocked, on her arrival in Scotland, to find the faith and worship of the people so different from the rules of that church in which she had been She therefore endeavoured to rouse, against what she considered a profane schism, the influence of her husband, and for a time succeeded; but the Scottish chutch appears to have reverted, after her death, to its former condition. It is from the debates which she held with the king upon the subject that we learn a considerable portion of the httle we know respecting the religious opinions of

The attitude of opposition into which the

## CHAPTER III.

## HISTORY OF THE CONSTITUTION, GOVERNMENT, AND LAWS.

HE Roman civilization, such as it was, passed away, and a long, dreary tract of disorder and darkness succeeded. Yet, that chaotic mass which then constituted society contained the clements of modern European civilization;

and in proportion to that very confusion, to the number and heterogeneous character of the component elements of that chaos, are the richness and completeness of the civilization which has been the result of them. Our business in the present chapter is with the particular element that belonged to those wild, free, warlike bulbarians who, in the fifth and sixth centuries, overran and conquered the larger portion of

the Roman world.

"Tacitus," says M. Gnizot, "painted the Germans, as Montaigne and Rousseau did the savages, in a fit of spleen against his country; his book is a satire upon Roman manners; the eloquent outbreak of a patriot philosopher who desires to see virtue there where he does not find the disgraceful efferminacy and elaborate depravity of an old society."\*

Not that M. Guizot infers that Tacitus stated facts that were inaccurate. On the contrary, he admits that all subsequent inquiries have gone to prove the general accuracy of his statements. But from

\* Guizot, Cours d'Illistone Moderne, tom. ii. p. 253.

The only kings of the continental Saxons appear to have been temporary leaders, appointed to hold the general command in time of war. This is the statement made by Casar respecting all the German

calls the moral colouring of the picture has in it

somewhat of a lalse and misleading tinge. Several German writers in modern times have followed the

course of Tacitus, though from a motive different

from his, giving a highly-coloured picture of the

virtues of their ride ancestors, who differed, however, as is satisfactorily shown by M. Guizot,

very little from other communities similarly

Germanic tribes, the germs of three great systems of institutions which, from the fall of the Roman

empire, have divided Europe amongst them.—

1. Assemblies of freemen, in which the common

affairs of the nation are delated. 2. Kings; some

hereditary, others elective. 3. The principle of

aristociatic patronage; either of a military chief

over his companions in arms, or of a landed pro-

When the bands of Saxons arrived and took

possession of any tract of country, the chiefs appro-

priated to themselves extensive domains, while the

larger portion of the warriors who accompanied

them continued to live around them. Gradually,

however, the distance between the chief and his

companions—at first not very great—increased,

partly from the circumstances natural to their re-

spective positions, and partly from a circumstance

upon which it will be necessary to bestow a few

words of explanation.

prictor over his family and his husbandmen \*

We perceive among the Saxons, as among other

situated.

nations in his time, and it is repeated nearly eight centuries afterwards by Bede as still applicable to the Saxons who remained in their original seats The king, according to Bede, when a war broke out, was elected by lot from among the chiefs: as soon as the war was ended, all the chiefs became again of equal power. In like manner, there is every reason to believe, the first kings of the Saxons in England were merely the captains of the several invading bands, or those appointed to succeed them in the conduct of the war with the Britons. long continuance of that contest first made the office

permanent, and converted the military commander

into the supreme magistrate of his nation. The

Saxon word *cyning*, of which our modern *king* is

an abbreviation, appears to have meant the offspring or creature of the community. † That in

early times, among the Anglo-Saxons, the person of

the king was not sacred, is proved by the fact that

the law afforded Inm the same security (in kind, though different in degree) for his life that it did

to the meanest of his subjects. It gave him the

protection of his weregild, - that is, a certain pecu-

mary value put upon his life,—and nothing more. We have said that the Roman civilization passed

\* Guizot, Cours d'Histoire, tom. u.p. 268 † Allen's Inquiry into the Rise and Growth of the Royal Pre-rogative in England, 8vo. 1830. land, proportioned to the services which he had performed. It is at least probable, however, that something similar took place in Britam to what is

known to have happened in other parts of the Roman empire, where, on the settlement of the northern conquerors, though of the former inhabitants many were reduced to slavery, many retained their liberty; and shough the estates of some were totally confiscated, in general the vanquished were

left in possession of part of their land. This was

literally, the meeting of the wise men; but before

proceeding to examine its constitution, it will be

necessar; to say a few words respecting the several

As the Saxons conquered Britain, every warrior obtained a munber of captives, and a portion of

classes of the Saxon population.

the mode adopted by the Burgandians in Gaul, the Visigoths in Spain, and the Ostrogoths in Italy.\* Owing to the vigorous opposition made by the Britons, which was much beyond what the conquerors had to encounter in other parts of the Roman empire, such as Gaul and Italy, a much larger

mind and influence the actions. Those things borrowed by the northern nations from the Roman civilization, which are most important to be here noted for their ellect on modern European civilization were, 1st. the idea of imperial power; and, 2nd, the municipal institutions. This idea of imperial power found much favour

in the sight of our Auglo-Saxon kings, as it did in

that of their Tentonic brethren in whatever part of

which had overshadowed the earth for so many

centuries with its mighty wings should disappear,

like the unreal fabric of a dream, without leaving a

wreck behind. On the contrary, the Roman em-

pire left marks that are undelible, not merely such as, like the vast material relies of its greatness, only

affect the senses, but such as sink deep into the

the earth they had succeeded the Roman occupants of the soil. But though the Anglo-Saxon princes might assume some of the external insignia, they had but little of the substance of the imperial sovereignty. The Anglo-Saxon government would seem to have been an aristocracy in a somewhat wide incaning

of the term. Thus, instead of the purely monarchical form of the Roman imperial legislation, their style runs thus: "Ego Dei giatia, &c. cum consilio et cum doctrina-Episcopi mei, et-Episcopi met, et cum omnibus meis Senatoribus, et Semoribus sapientibus populi mei, et multa enni societate ministroium Dei," &c. &c.—that is, "I, by the grace of God, &c., with the advice and consent of certain of my bishops (naming them), and along with all my senators and the wise elders of my people, and a large associated immber of the munisters of God," &c. Whence it appears that the laws were made by the king and a national assembly or parliament, composed of the nobility and others. This was called the Witenagemot,-

· Allen's Inquity, pp. 138-9.

number of invaders, in proportion to the native inhabitants, was required to effect the conquest than in the case of Gaul. This would be one good reason, even if no other could be found, for the

ordinary divisions of land among the Saxon conquerors not being very large ones; and we find accordingly that the land was divided into "hides,"

HISTORY OF ENGLAND.

each comprehending as much as could be cultivated by a single plough. It is likely that this ciremustance may have something to do with the more popular character of the Anglo-Saxon institutions as compared with those of their continental brethren, whether remaining in Germany or transplanted to France and Italy. When the estate of an Anglo-Saxon was large, one part of it was occupied by the kindred and free retamers of the proprictor, who gave in return military service; another part was parcelled out

into different farms, and committed to the management of particular bondmen, from whom, at the end of the year, he required an account of the produes. The former came eventually to receive the name of "vassals," the latter of "villams." The distinction between the original proprietor and his vassals gave rise to the division of landed estates into "allodial" and "fendal," the former being those held without, the latter those held with, a lord superior. The feudal estates, beneficia, or fiefs, or feuds, appear to have been held originally during the pleasure of the superior, then for a determinate time, afterwards for life, and at length to have become hereditary. M. Guizot, who has treated this subject with his usual ability and research, has come to the following conclusions:-I. Originally the grants were generally made in

usufract and for life, provided that the grantce

events constantly tended to render them hereditary.\*

We may here add that the constant tendency also was, during the turbulence of the middle ages, to

convert allodial into feudal property, in consequence

of the more effectual protection afforded by that

description of tenure. †

Connected with this subject is the celebrated Saxon distinction of land into "folcland" and "boeland," upon which Mr. Allen has the merit of having thrown a considerable quantity of new light. When the Saxons had secured a territory, after appropriating certain portions to individuals according to their claims (as stated above), they considered what remained as belonging to the state or community at large, and called it "folcland," which is interpreted by Spelman "terra popularis," that is, the land of the public, ‡ It corresponded to the fisc of the continental nations. When a particular portion of land was severed from the folcland, and appropriated, provided the conveyance

was made by a written instrument, it received the name of "bocland." The proprietor of bocland,

unless specially fettered, appears to have had an

of these was that out of which their kings were taken; for though the Anglo-Saxon kings were

unlimited power to dispose of it as he chose.

Moreover, when once severed from the folcland or property of the community, whatever were the bur-

dens and services imposed upon it, provided it was

alienated by writing, an estate received the name of

bocland.\* However, it is, as Mr. Allen remarks,

not quite correct to say that all the lands of the

Anglo-Saxons were either folcland or bocland,

because land was not properly borland unless con-

veyed by a written instrument, and at an early

period conveyances were made by the delivery of a

That the Anglo-Saxon knigs had private property

in land, that is, borland, is decisively proved by

the will of King Alfred, still extant. When the

kings in process of time began to be considered as

the representatives of the state, the term terra regrs,

or crown land, took the place of the word folcland.

This is the terra regrs of Domesday. † In time the bocland, or private estate of the king, came to be

The Anglo-Saxons, like the other Teutonic na-

tions, were divided into various castes. The highest

staff, a spear, an arrow, &c.

mixed up with it.

[Book II.

elective, not hereditary, they were usually chosen out of a certain particular family or race. The Anglo-Saxon chieftains of this family were all deseeded from the deified monarch of the Asi, Odin or Woden. "It may be admitted," observes Sir Francis Palgrave, "that their proud genealogies had no foundation in truth." ‡ Nevertheless these pretensions of theirs may probably bave had some share in originating the Divine right doctrine of later times. The second great caste among the Anglo-Saxons remained faithful to the grantor. 2. The course of were the nobility, who bore the title of corls, or corlemdmen, or thane-born. § The pervading principle, as we have already remarked, of the

> among the Anglo-Saxons, nobility, to have its full pre-eminence, required the addition of property. Noble birth, though it raised a man above the condition of villainage, did not place him on a level with those who possessed land in absolute domínion, as well as nobility of birth. We have already spoken of the system of hlafords and men, or, in the fendal phrase, lords and vassals. If a noble did not possess the property sufficient to constitute a lordship, he was then "ranked," says Sir Francis Palgrave, "in the very numerons class, whose members in Wessex and its dependent states were originally known by the name of Sithcundmen; an appellation which we may paraphrase by the heraldic expression of 'gentle by birth and blood.'" The Sithcundman appears to have originally had the privilege of choosing his own lord

or superior. After the reign of Alfred, the Sith-

cundmen came to be commonly known by the name

of Sixhaendmen,—a denomination, as Sir Francis

Angla-Saxon government, was aristocratic. But

their masters over them, while in actual slavery,

protected.

were limited. The coorls were entirely destitute

of political power, \* and consequently their rights

could not, however well ascertained, be very well

generally of British or Saxon origin. Sir Francis

Palgrave, who has exammed the subject with care,

seems to incline to the supposition "that the

ceorls were originally the British cultivators of the

soil, but into whose class individuals and families

of Anglo-Saxon birth and blood may have been

entirely destitute of political rights,-they did not

similar to that of the negro or the Roman slave.

Some of the theowes may have been the offspring

of British serfs, but by far the greatest portion

consisted of freemen who had forfeited their liberty

by their crimes. "A culprit who could not dis-

charge the penalty or wite, became a wite theow.

He might be redeemed by his knismen; but if he was abandoned by them, -- if, in the words of the

law, he chasped his hands, and knew not who

should make amends for him, then slavery was his doom." 1 During one year he might be re-

There is much discrepancy and confusion among

writers on the subject of the territorial divisions of

the Auglo-Saxons. What is tolerably certain is,

that the division of the country into countres, hundreds, and titlings, goes back to the first age of

the settlement of the Saxons in England. Over

each of these territorial divisions there presided a

magistrate: over the county a count, earl, or alderman: over the hundred a centenary, or

The Theowes, the Servi of Domesday, were

from time to time aggregated and introduced." †

rank among the people.

deemed, but not afterwards.

It has been doubted whether the ceorls were

of society;"-the former, the landed nobility, being called Twelfimendmen; the latter, forming the third caste, Twilmendmen. This third caste was composed of the remainder

tween the highest and lowest law-worthy classes

of the people, and consisted of the ceorls, or villams, already mentioned. The distinctions between the corl and the coorl were numerous and strongly murked. The declaration of one corl was equal to that of six coorls; the life of one coil was equal in value to the lives of six coords; and so for other matters in proportion. \* The coorls were known by various other names, of which Sir Francis Palgrave quotes several. "But," he continues, "the cool or villam, however named, may be defined as a temant ascribed to the glebe; one who, performing prædial or agricultural services, was anable to depart from the land which he held; and who, either by law or by long established custom equivalent to law, had acquired a definite and recognised estate in the soil. So long as the villain performed his services he was not to be removed from his land, nor was a higher tent or a greater proportion of labour to be exacted from

him than what was due and of right accustomed "t And yet the coorl was in some sense free. Nevertheless, "a coorl thus encumstanced—a freeman could, according to the legal language of the Anglo-Saxons, be given and bequeathed, bought and sold. These expressions, which sound so harsh, and seem so raconsistent with any degree of personal liberty, bore, however, a meaning differing essentially from that which we should now assign to them. In no instance can we find the ceorl separated from his land, -he was always a rillain appurtenant; and, notwithstanding the language which was employed, it must be understood that the gift, the bequest, or the sale, was in effect the disposition of the land and of the ceorl, and of the services which the ceorl performed for the land; all of which passed by virtue of the will or the charter,—a transaction widely differing from the transfer of a slave, whose person is the subject of the purchase. The assertion, therefore, not unficquently made, that a great proportion of the population of England was in a state of absolute servitude, cannot be warranted; and the most convincing proof that the rights of the lord over the ccorl and his goods and chattels, however burdensome, were limited and certain, is founded in the fact that the coorl, even when in actual vassalage, could purchase his own freedom and the freedom

hundreden: over the tithing a decamus, or tithing-There prevailed at one time pretty generally an opinion \ that the tithing consisted of ten families, and consequently the hundred of a hundred fami-

This opinion Professor Millar has, we think,

succeeded in showing to be erroneous. Each of these officers held a court, in which jnstice was administered, and all the affairs of the district discussed. In these courts the military assemblies to provide for defence against a foreign enemy were held. There also took place sales and many other transactions in which publicity was of

importance. These courts were subordinate one to another; so that from the decision of that of the tithing there lay an appeal to that of the hundred, and from that of the hundred to that of the shire.

These courts were at first held frequently, and by all the allodial proprictors of each district.\*\* Rise and Progress of the English Commonwealth, vol. 1. part 1.

India settlements had the same privilege; yet it will scarcely be thence inferred that the rights of

VOL. I.

HISTORY OF ENGLAND.

the damage.\*

the case in England as soon as feuds were introducted there. The power of the court belonged to the assembly, not to the magistrate. The function of the magistrate was limited to convoking the

On the continent the vassals of the king or of the

assembly and presiding in it. "It is now," observes M. Guizot, " a fact agreed upon among the writers the most versed in the antiquities of the modern nations, that the free men, ahrimanni, rachimburgi, bont homines (Anglice, 'good men and true') present in the assembly of the hundred or the county, alone judged the causes, in point of law as well as in point of fact; that the count or centenary had no other function but to convoke the meeting, to preside in it, and cause its judgments to be put in execution."; We see, then, that the institution of tithings, of lundreds, and of counties or shires, was not confined to England, but had place in most, if not all

of the fendal countries. To this we would add a

remark of M. Guizot,—that the graduated organi-

zation of the local courts above described is no more than the application to their new situation of

the old principles, according to which the Ger-

mans governed themselves in Germany. We shall

see by and by the great importance of the knowledge of the above fact towards the solution of the

question, how it happened that principles of liberty

and popular institutions were found in England at a time when they were utterly unknown in almost

every other European country.

There is one regulation connected with the administration of justice among the Anglo-Saxons that has excited a good deal of attention. " The members of every fithing," says Professor Millar, " are said to have been responsible for the conduct of one another; and the society, or its leader, might be compelled to make reparation for an injury committed by any individual. If we look upon a

tithing as regularly composed of ten families, this branch of its police will appear in the bighest degree artificial and singular; but if we consider that society as of the same extent with a town or village, we shall find that such a regulation is conformable to the general usage of barbarous nations, and is founded upon their common notions of justice "† Professor Millar then shows that a similar custom prevailed among the Jews, among the Scottish Highlanders, among the ancient Irish, among the ancient inhabitants of Hindostan, and among various other tribes of human beings in a similar stage of civilization; and he arrives

at the conclusion that this noted regulation con-

cerning the Saxon tithings is to be regarded as

the remains of extreme simplicity and barbarism,

rather than the effect of uncommon refinement

or policy. The Professor supports this view by

observing, that as civilization advanced somewhat,

He thinks there is not a complete analogy between any of the cases cited by the Professor and that of the Anglo-Saxons. He emmerates, by reference to the Anglo-Saxon laws, the gradual stages through which the system of frank-pledges seems to have passed; and he comes to the conclusion that "the obligation of the fithing was merely that of permanent bail, responsible only indirectly for the good behaviour of their members." † There is no very great difference between this conclusion and the view of Mr. Millar, as stated above, made apparent to our perception. Protessor Millar, however, it must be admitted, in the portion of his work devoted to the Anglo-Saxons, deals far too much in

eonjecture; not above one-fourth of his volume

devoted to that subject rests upon unexceptionable

the first being the seignorial or personal hability of

responsibility of the villainage, as included in their tithings; -- "associations," adds Sir Francis, "which, in the Saxon cra, were of unequal extent, according to the custom of the country, ten being the smallest number of which a tithing could be composed, and from whence it derived its name." I The carl or alderman of the shire had a deputy, called in Latin rice comes, and in English the sheriff, shrieve, or shire-reeve. In some counties there was an intermediate division between the shire and the hundred,—as lathes in Kent, and rapes in Sussey. These had their lathe-reeves and

rape-reeves. When a county was divided into

three of these intermediate jurisdictions they were

called trithings. These still subsist in the county of

York, corrupted into ridings; the north, the east,

The subject of the constitution of the Anglo-

Saxon legislature is involved in great obscurity.

and the west riding.

<sup>.</sup> Guizot, ib Lex Alam, tit, xxxvi. cap. 4, 5, † Ginzot, ib. p. 259, note, ‡ Historical View, vol. i. p. 189.

the function of legislation existed among the Saxons and the other northern nations, they were, in their first conception, merely courts of justice, or at least had been established and had originally met chiefly for the administration of the laws. The institution of a legislative or law-making body is an idea so far from being obvious or natural to an early state of society, that it is opposed to the whole political system and notions of national government which then prevail. Every people has received its first laws either from what it has believed to be the authority of heaven itself, or from some other

authority which it has felt nearly as little disposition to disobey or question. For a long period the laws thus received are held to be something sacred, and nobody thinks of abolishing or altering them, any more than he would think of attempting the amendment of the laws of nature. Even when currentstances at length force on innovations, the change of the law is the last change that takes place. It does not precede and prescribe the new practice, but only, reluctantly as it were, follows and sanctions it. In this way is slowly produced in the general mind the first notion of the possilighty of mending the old laws or making new ones —the first conception of legislation. And even after the first exercise of the power has been thus brought about, the act of legislation is for a long time only timidly and sparingly indulged in; there is still something of a superstitious aversion to it, as if it were a proceeding interdicted by religion or by patine; only the most pressing necessity is held, and searcely held, to justify it; the form of the old law is often retained after its spirit has been departed from; even a new law is made to wear as much as possible the appearance of an old law revived. In short, in every way the bearing of the legislation is towards the conservation rather than the improvement of the law; it affects to be not law-making but only law-declaring. This character is traceable nearly throughout the

cchoing the sentiments, if not the words, of the Barons of Merton, scarcely ever intended to introduce a new law, to enact a new statute." \* There can be little doubt that the Saxon Witenageniot was the root from which has spring our

whole course of English legislation, and in the

earlier periods especially is very strongly marked. "The legislative power of the Court of Parliament,"

says a writer who has investigated this subject with

great learning and ability, "was exercised unconsciously, because it resulted from the remedial power.

Complaints arose of violations of the law, of neglect of the law. The monarch promised to forbid the

abuse; and further remedies were provided in

defence of the existing law. It was strengthened and declared. Its principles of justice and equity

received a new and more solemn sanction. Reme-

dial and declaratory statutes thus succeeded to older remedial and declaratory statutes. Yet Parliament,

Article on Courts of the Ancient English Common Law, in the Edinburgh Review, vol. xxxvi, p. 335.

moned twice within that period. The indwellers of the hundred, who owed suit real to the leet, appeared in the most by their judicial representatives. These were the tithuig-men, the headhoroughs, the chief pledges, who were respectively accompanied by four good law-worthymen, belonging to the Fribergs which deputed them. Saxon Custumal of Henry I. also notices the presence of the parish priest; and it seems to intimate that the lord or his steward might supply the place of the reeve. As all crimes were committed against the peace of the people, the offender who was untrue to his Frihorg was impeached or accused by his pledges or the delegates of the little community which answered for his default. To use the technical term of the law, the offence was presented to the leet jury, or legislative and judicial branch of the assembly "\* From this account a general notion may be formed of the original constitution and probable made of procedure of the other moots or assemblies; the Witenagemot, or supreme national assembly, amongst the number. The most learned investigation of the constitution of the Witenagemot is that which it has received from Sir Francis Palgrave. "In the smaller kingdoms," he observes, "such as Kent. the Witchagemot did not probably differ materially in composition from the Shiremoot, which assembled on Penenden Heath in subsequent times. The prelates appear as the first order in the community. The seniors, earls or aldermen, are convened, not only in the character of chieftams, but also by virtue of the bond of 'trust' which connected them with their sovereign. The thanes gave suit and service, as principal landlords. And the ecorls, attending for the townships, listen to the promulgation of the decree, declare their grievances, and present the trespasses committed

that the Witenagemot was in its original conception

and institution rather a court of law than a legis-

lative body. The Parliament indeed still retains

this its original character in part, and is accord-

ingly styled the High Court of Parhament, although

it is no longer a tribunal for the trial of ordinary

causes, now that other courts have been established

exclusively for that purpose. The Witeingemot

seems to have been for the whole kingdom what

the Shire-moot, afterwards called the Shenff's Leet

or Tourn, was for each shire, and what the leets of

the lumdred and the town (or manor) were for

these subordinate divisions. It is to be observed

that these were all to a certain extent representative

matter of hypothesis, but of evidence; the document hes before us in which they address then sovereign; and, with respect to the functions exercised by the cools, the testimony of the Angle-Saxon laws receives the fullest corroboration from the universal usage of subsequent times." \* "In the earlier periods," he proceeds, "a dependent or vassal knigdom retained ats own legislature. sitting and acting distinct from the legislature of the paramount kingdom. But the Witenagemot convened by the Basileus was the General Diet or Placitum of the empire. Here the King of Albion appeared, wearing his crown, and surrounded by his great officers of state. The prelates concurred on the enactments. The vassal kings, the rulers of the Cymric and Celtic tribes, testified their obedience. The earls, and caldormen, and thanes, whether of Anglo-Saxon race, or the Northmen settled in the Danclagh, completed the assembly, which comprehended all the councillors and sages, redesiren and witan, both clerks and laymen, whose advice and assistance the sovereign was entitled to demand."† The great point of doubt and dispute has been the character in which the folk or people appeared, who are repeatedly mentioned both by the old historians and in the laws themselves, as present at the Witenagemot. There has been much controversy both as to who the persons were that are thus designated, and as to whether they formed a constituent part of the assembly, or were only spectators of the proceedings. Taking all the circumstances into consideration, Sir Francis Palgrave thinks that "we may be led to the suppo-" sition that the elected or virtual representatives of townships or hundreds constituted the multitude, noticed as the people, in the narratives describing the

great councils and other similar assemblies; for the sbare taken by the folk in the proceedings forbids the conjecture that the bystanders were a mere disorderly crowd, brought together only as speciators, and destitute of any constitutional character." "Admitting," he adds, however, "the great probability that the laughs did constitute a branch of the Witemagemot, or Mycel-getheacht, it must be recollected that the members, by whom they appeared, would scarcely attend in the character of mere deputies. Popular election, in our modern sense of the term, rarely (if ever) existed. The functionaries who ruled the burgh became the proper and natural representatives of the commimity in the legislative assembly or in the congress; and if the imperial Witenagemot was intended in any wise to protect the privileges of the nation, the heads of the burgh would be the most efficient advocates and defenders of their community."; As it was hardly possible, however, that all the magistrates could, generally, or on any occasion, give their attendance, thus leaving the burgh without any government, he thinks it probable that some one of them would usually be deputed by the rest to undertake the duty. It might even in particular contingencies be inconvenient for any of the magistrates to leave their station. "In such a case," proceeds Sir Francis, "the expedient of authorising a person, not bearing office, to appear as a deputy, in the name and on the behalf of the magistracy, would be easily suggested, and a representation approximating to the modern system would be formed." ! Still, it must be remembered, there was here an election by the magistracy only, and not by the people. The people, there-

presentation. Reform Bill, many burghs were only represented as they had been in the Saxon times; and even now the Commons enjoying the right of election and everywhere only a class, however important a class, of the people. The supreme government of the state resided in the witenagemot and the king, who presided over the assembly while it sat, and who appears to have

had the right of calling it together, and also probably of dissolving it at his pleasure. It seems to have been wont to meet several times in the course of the year, usually at the great festivals of Christmas, Easter, and Whitsuntide; and its sessions were no doubt very short. It is impossible, from the imperiect accounts that remain, to discover what were understood to be the limits of the royal authority and of that of the parhament; but in all the more amportant acts of the executive, the con-

emrence of the legislative body seems to have been Alfred and his successors promulgate their laws as enacted by themselves with the advice of their witan. The king, as the first magistrate and head of the state, was held in high honour and invested with many prerogatives, such as the right of commanding the forces, of appointing and displacing all the chief administrative functionaries throughout the kingdom, of dispensing justice in the last resort, and of pardoning ollenders or mitigating and remitting penalties. The independent power of action, as one of the estates of the realm, however, seems to have been confined by the theory of the constitution within rather narrow limits. But in such a state of society the real power of the sovereign would depend much more upon his personal character and the accidents of his reign, than upon any understood principles of the constitution. On the whole, the royal authority had, from the first foundation of the Anglo-Saxon kingdoms, been gaining ground upon that of the witenagemet, in which had originally resided the supreme and sole government of the nation; the king being merely its elected president or deputy. The large and constantly increasing territorial possessions of the crown no doubt greatly contributed to seenre for it a position of elevation and power far beyond that which it had originally occupied. After the union, especially, of the several states of the old Heptarchy into one kingdom, the lands in all parts of England

which were held by the king must have formed a

ment of the nation for the support of the government; but the two descriptions of property had in course of time naturally become mixed up together, and the crown retained the uncontrolled management of the whole. In return, the exown, from the revenues of these estates, from the annual payments by the burghs in them of services, and from certain other profits to which it was by law entitled, defrayed all the ordinary expenses of the supreme civil government. The additional revenue chiefly arose from customs at the sea-ports, tolls in the markets, and other taxes paid on sales, and from the wites or public penaltics exacted from persons convicted of delinquencies, over and above the were-gold or damages paid by them There is in satisfaction of the private injury. reason to believe, also, that in later times at least much of the land throughout the kingdon, became subject to certain occasional payments to the crown, similar to those which were afterwards made universal under the more systema-

tized feudahsm of the Norman government; but

their exact nature cannot now be ascertained. The

only hurdens to which it is quite certain that

all landed estates were subject are those called by

later writers the Trinoda Necessitas,—among the

Saxons themselves the three common labours, or

universal necessities—of the Bryeg-bote, the tax for

the maintenance of bridges and highways; the Burh-

bote, that for the repairs of walls and fortnesses;

and the Fyrd, or military service. It is conjectured, from the notices in Domesday Book, that in

most parts of the kingdom-one soldier was required

to be provided in time of war for every five hides

of land,—a hide being, according to Bede, as much

have already intimated, appear to have been ori-

ginally in part the private domains of the kings, in

part the public lands reserved on the first settle-

land as could maintain a single-family-throughout the year. It appears that all England was divided into about 274,950 hides of land.\* The Dancgeld, also, or tribute to the Danes, first collected in 991, in the reign of Ethelred, was a tax upon each Inde of land; and although for some time it was only imposed on particular occasions, it eventually became permanent, and formed an important portion of the ordinary revenue of the crown. At the original rate of a shilling for each hide of land, it produced 12,180%, equal in weight of silver to nearly three times the same amount in modern money, and in efficiency to a much greater sum. It is said, however, to have been raised by Camite, in 1018, to six shillings on the hide; and four shillings was in later times the common rate. Much controversy has taken place on the question of whether the fendal system of the tenure of lands is to be considered as having been introduced into England in the Saxon times. That the system, in all its regularity and extent, was not fully established till after the Conquest, is generally

admitted; but it appears to be equally clear, not

· Brady's History of England, i. 270.

only that, in the reign of the Confessor, a very considerable advance was made towards its perfect consolidation after the continental model, but also that in a ruder shape and looser coherency it had subsisted among the Anglo-Saxons from their first

254

settlement in the country. We have given an account of the division of the proprietors of the soil into hlafords and men, which terms are merely the lords, or superiors, and vassals of the feudal phrascology. And in the earliest Saxon times the vassal seems to have held his land (which might have been, though it was not, called his fief) from his lord, on condition of rendering services precisely similar to those which, in after times, were rendered by a vassal to his fendal superior. Upon this subject it has been well observed by a writer

whose prejudices are by no means always a mutch for his learning and acateness, that there are two divisions of the history of the feudal system, the former of which "extends, from the earliest account of time, through the early history of Greece and Rome, till the progress of society changed the manners of these nations; and through the early Instory of the Goths and Germans, who overturned that Roman empire, down to the eleventh century. At this period commences the corrupted fendal system, and lasts till the fifteenth century, when the feudal system began, after its corruption, to dissolve quite away. The feudal system was that of the Persians, who were, and are, Seythæ or Goths, as ancient authors and their own speech testify. Xenophon tells us that when the younger Cyrus came to Cilicia, he was met by Epyaxa, the beau-

tiful wife of the Satrap, who, according to the

custom of the East, presented her acknowledged hege lord and superior with gold, silver, and other precious gifts. Indeed, the feudal system, about which so much noise is made, is the natural finit of conquest, and is as old in the world as conquest.  $\Lambda$  territory is acquired, and the state or the general bestows it on the leaders and soldiers, on condition of military scryice, and of tokens acknowledging gratifule to the donors. It was known in the Greck heroic ages. It was known to Lycurgus; for all the lands of Sparta were held on military tenure. It was known to Ronnilus, when he regulated Rome. It was known to Augustus, when he gave lands to his veterans, on condition that their sons should, at fifteen years of age, do nulitary service. The reason it did not preponderate and corrupt in Greece and Rome was, that it was stifled by the necessary effects of cities. In Persia, where there were no cities of any power or privilege, it preponderated and corrupted at an early period."\*

their modes of judicial procedure. It is remarked by M. Guizot that there is one material point of difference between the Salie laws and the capitularies of the Carlovingian Frank

We now proceed to consider the general charac-

ter of the laws of the Anglo-Saxons, and to describe

Pickerton's Dissertation on the Scythians, p, 140. (Edit. of

1814.)

The former do not contain moral and religious texts in the way of advice; they only contain texts formally prohibitive or imperative. "But in the passage," we quote the words of M. Guizot, "from primitive barbarism to civilization, legislation assumes another character; morals introduce themselves into it, and become, for a certain time, matter of law.\* The able legislators, the founders or reformers of communities, became aware of the empire exercised over men by the idea of duty; the instinct of genius informs them that, without its support, without the free concurrence of the human will, the society cannot maintain and develop itself in peace; and they apply themselves to introduce this idea into the minds of men by all sorts of ways, and they make of legislation a sort of preaching, a means of instruction. Consult the history of all nations, of the Hebrews, the Greeks, &c.; you will everywhere encounter this fact: you will everywhere find, between the cpoch of parmitive laws, which are purely penal, probibitive, intended to repress the abuses of violence, and the epoch of civilised laws, which have confidence in the morality, in the reason of individuals, and Icave all that is purely moral in the domain of liberty; between these two epochs, I say, you will always find one in which morals are the object of legislation, in which legislation formally writes and teaches them. Franco-Gambsh society was at this point when Charlemagne governed it, and that was one of the causes of his strict alliance with the church, the only power then capable of teaching and preaching morality."+

Something similar to what M. Guizot has here described is observable in the Anglo-Saxon laws; the laws of the earlier kings partaking more of the character of the Salic law above specified, those of the later partaking more of that of the capitularies of Charlemagne. Of the eighty-nine laws, of which the collection bearing the name of King Ethelbert, of Kent, the

earliest Saxon laws that are extant, consists, a majority (upwards of fifty) have reference to the punishment of acts of violence against the person. The next most immerous class is occupied with penalties for illicit intercourse with, and acts of aggression towards, women. The next has reference to theft. There are not more than three or four-at the most five-laws in the collection that are not of a penal character, but descriptive merely of certain rights. There is not a single paragraph of the nature merely of a moral or religious test, We may thus tabularise the result :—

Adultery ..... 2 

Total Number of Laws..... 89

Ethelbert's reign was about the end of the sixth

The meaning must be, aftirmations of moral truths, or supposed truths, come to be promulgated and received as laws

the state of slavery.

time preserved the right of choosing between the composition and war, -of rejecting the "wehrgeld"

and having recourse to vengeance. The chromeles

and documents of every kind leave scarcely a doubt I incline to think that in the eighth cen-

tury the composition was decidedly obligatory, and

that the refusal to be satisfied with it was regarded

as a violence, not as a right; but assuredly it was

not always thus, and the composition was an at-

tempt, sufficiently inefficacious, to put an end to the disorderly struggle of individual forces, a sort of

From the apparently deep feeling of morality and liberty, in the solemn reminciation of vengeance on

the part of the injured party, and as regards the

offender in the respect displayed for his person and

liberty, exhibited to so much greater a degree in

these early laws, particularly in the composition, than in more civilised systems of legislation, some

late German writers have conceived an erroneously

high notion of the state of civilisation of the nations among which it is found. M. Guizot has very ably

exposed the fallacy of these writers. Admitting

that at that epoch individual liberty is really great,

we must be on our guard against confounding such

liberty with what in the present day is understood by that term. It is a liberty possessed by a man

of doing what scemeth good in his own eyes, it

being at the same time always carefully borne in

mind that every other man has exactly the same

liberty of doing what seemeth good in his eyes; so that whenever that which sceneth good to one man

doth not comport with that which seemeth good to

another, a clash takes place, and in such a state such clashes are almost as frequent as those in the

elemental war of primæval chaos. Such a state of

society has been most justly and forcibly described by Hobbes in the following passage: "Whatso-

ever is consequent to a time of war, where every man is enemy to every mani, the same is conse-

quent to the time wherein men live without other security than what their own strength and then

own invention shall furnish them withall. In such

condition there is no place for industry, because the

fruit thereof is nucertain; and consequently no

culture of the earth; no navigation; no use of the

legal effer from the offender to the offended."\*

piate his offence and buy another wife, and take her to the other man." About a century after, in the laws of Wilhtred, a change of tone is observable; the legislator uses the style of exhortation rather than of prohibition or command:-" Let adulterers be brought to repent and lead a virtuous life, or be excommunicated from the assembly of laws of Canute, we find, together with the moral and religious test, the penalty much increased in severity. It is remarkable that, in the last-mentioned collection, in one of the articles there is more attempt than usual at precise definition:—"Adultery is bad which a married man commits with an unmarried woman, and much worse with another men's wife, or with a woman who has taken upon In this collection of the laws of Ethelbert there are thirty-nine laws specifying different wounds, and inflicting various penalties accordingly. In all this we see legislation in a very rude state. But there are other points of view in which these early laws are objects of extreme interest. of these is the nature of the penalties they decree. Here there appears a singular regard for the person and the liberty of the subject. There is little or no corporal punishment, no imprisonment, no death pumsliment, at least which may not be compounded for; for as we have seen in the last section, even the life of the king bad its price. The chief, or rather only, punishment in the Anglo-Saxon as in the Salie law, is the composition, the " webrgeld," that is, a certain sum which the de-Imquent was bound to pay to the injured party or to his family. To this was added, in many cases,those which may be called, in the language of the English law, "pleas of the crown,"—a sum paid to the king or the magistrate as a compensation for the violation of the public peace. The not unusual alternative, as we have already had occasion to remark, where the offending party was unable to make good the "wehrgeld," was to reduce him to "The composition," observes M. Guizot, "is the first step of criminal legislation out of the cus-

CONSTITUTION, GOVERNMENT, AND LAWS.

under that punishment, the right which exists at the bottom of the Salie law, and of all barbarons laws, is the right of every man to do himself justice, and to avenge himself by force: it is the war between the offender and the offended. The composition is an attempt to substitute a legal system for war; it is the means given to the offender of securing himself, by the payment of a certain sum, from the vengeance of the party offended; it imposes upon the injured party the obligation to renonnce the use of violence. "We must not imagine, however, that from the

tom of personal vengeance. The right concealed

commodities that may be imported by sea; no commodions building; no instruments of moving and removing such things as require much force; no knowledge of the face of the earth; no account of time; no arts; no letters; no society; and, which is worst of all, continual fear, and danger of violent death; and the life of man, solitary, poor, nasty, brutish, and short."† For this state of chaos, which cannot be called society, two remedies arise:—1. Inequality of condition shows itself among men; some become rich, others poor; some become noble, others obscure;

some masters, others slaves: 2. A central public power develops itself, a force which in the name of \* Histoire de la Civilisation en France, tome i, p. 343.3

j Leviathan, c. xiii.

HISTORY OF ENGLAND. the community proclaims and enforces certain Thus arise on one side aristocraey, on the

other, government,—two different modes of repressing the excess of individual liberty. But, in their turn, the remedies become evils: the aristocracy and the government both oppress,

producing a disorder, different from the former, but deep and intoferable. In the mean time, however, by their influence, and by the natural action of social life, individuals are improved and enlightened; their understanding becomes stronger, and their will

better regulated. They begin to see that they can live very well in peace without so much mequality or conditions, and so much central power, in other words, that society can exist without costing liberty so much. This "if liberty," to borrow he language of M. Guizot, " perished at the commencement of the social career, it was because man was incapable of advancing while he retained it; to regain it and enjoy it more and more is the end, the perfection of society; but this is by no means the primitive state, the condition of barbarians. . . . Instead, then, of ascribing to the plan of composition so much moral value, we must only regard it as a first step out\_of the state of war." \* Let us now turn from these early Anglo-Saxon laws to those of a later period; and, as the best means of affording to the reader a general idea of

the character of these, we shall give an analytical table of those of the kings of the Hepturchy after the accession of Alfred, which have been collected by Wilkins.1 Procedure

† The oblest of the Anglo Syron laws may extant are those of King Ethelbest, of Kent, who requed from 561 to 616. The next rocations of Holohaire and Eadine, and of Wiktraed-Kings of Kent. Next are those of Ina, long of the West Soxons. After the Heptarchy we have the Laws of Alfred, Ldward the Eider, Athelstane, Edmund, Edgar, Ethelbed, and Coonte. There are, besides, canons and constitutions, decrees of councils, and other acts of a public nature. All these are in the Soxon language; of some of them a collection was made in one volume folio, by Mr. Lambarde, and published, in 1568, under the title of "Acyzonogani, site," de prises Anglorini legibus." An enlarged edition of Lambarde's book was published under the superintendence of Abraham Wheloc in 1644. To that many additions have stuce been made by Dr. Wikins, in his Leges Auglo-Saxonica, fol. Lon. 1722. The laws in Latin, which have gone under the name of Edward the Confessor, have been rejected by antiquarians as spurious. They are supposed to have been written or collected about the end of the region of William Rufus.—
Reevee's Hist, of the English Law, i. 27; Wilkans's Leges Angl. Sax. Reeves's Hist, of the English Law, i. 27; Wilkins's Leges Angl. Sax,

we have arranged these Anglo-Saxon laws. I. Declaratory Legislation. In this column of the table we have placed, as well as we have been able to interpret their meaning, those capitula or

classes.

laws which have appeared to us merely expository of rights and duties. It will be observed that the figures do not present much apparent increase in the number of this class, at least till the time of Cannte. II. Penal Legislation, Under this head we

have classed those commands or prolabitions having

a definite sanction or penalty annexed to them. We have also, however, included certain laws of

to one another in different reigns, as well as in

explanation of the classes themselves into which

[Book II.

Alfred's, respecting which it may be doubted whether they do not rather belong to the rebgious or the moral column; for at the beginning of the collection of Alfred's laws stand about lifty capitula or articles, all taken from the laws of Moses, with the exception of one or two from the canons of the first apostolic council. Now, though many of these Mosaic laws appear metely in the shape of religious or moral precepts, others have distinct penaltics attached to them; and, therefore, as we see no evidence that Alfred did not mean these penalties to he enforced, we have placed them in the class of

penal legislation, while those without such penal-

ties we have placed in the religious and moral

111. Legislation of Procedure. Under this

head we have classed those capitula that appear to refer exclusively to the ninelimery for executing the rest. Although of great importance in a riide state of society, this branch does not appear from the table to have borne, at least till the time of Canute, any considerable proportion to the others; the reason probably being, that originally the excention of the laws being vested in the same hands that had the making of them, it would be some time before those who were thus at once magistrates and legislators would become aware of the necessity of guiding their proceedings in their former capacity by certain fixed rules. We are told of Alfred's zeal for the proper administration of the laws; but we do not find many enactments,

among those laws of his that have come down to us, relating to that subject. We may assume, therefore, that the praise to which he was entitled

was not so much that of having improved the old

modes of procedure as that of having exerted himself successfully in seeing the laws strictly and im-

partially executed. 1V. Religious Legislation. Under this head we place the enactments regarding the people at large in their relation with the church or the clergy. In reigns where the clergy possessed great power arising from influence over the king, it will be seen that this branch of legislation was a very large one, sometimes the largest of any,

V. Canonical Legislation. The same remark applies to this head, under which we class the enactments regarding the duties and functions of

From the influence which churchmen, from their superior education, possessed for many centuries in the European governments of the middle ages, we might expect this and the preceding columns of the table to be large ones. Accordingly such they are, forming together more

than half the total number of laws. VI. Moral Legislation. Under this head are classed those articles which, having no sanction annexed to them, are to be viewed merely as moral precepts, and not as laws at all. The column appropriated to these in the table will be seen not to be a large one, and more than two-thirds of its articles belong to Alfred. We may add, that several of these articles being of the number of those taken by Alfred from the Old Testament, may be, under another point of view, considered as belonging to the religious column.

It appears to have been not till a late period

that judges were appointed among the Anglo-

Saxons expressly for presiding over the trial of

the community

According to Ingulphus, it was Alfred who introduced this immovation. He is stated to have divided the office of the governor of the province or slare into the two offices of viscount (or sheriff) and justiciary. But the system of the Saxon prisprudence was such as usually, whether the case would be called, in modern phrascology, a civil or a criminal case, to leave very little to be done by the presiding functionary, except perhaps to pronounce the sentence. Everything was regulated by certain rigid forms, which of themselves determined the issue, without the discretion or judgment of the persons before whom the trial was held being at all called into exercise. The trial took place in one or other of the public assembles, the fole-mot, the lect of the hundred, the share-mot, or the witinagemot, according probably to the residence and rank of the parties, and the importance of the question, or, perhaps, according as it was a first trial or an appeal. The cluef ordinary business of all these courts seems to have consisted in the hearing of causes, which it was obviously necessary should at least be carried on and concluded before some public or recognised tribunal. But the trial itself was rather of the nature of an arithmetical calculation, or a chemical experiment, than what we now understand by the

In the first place, in all cases, whether in disputes about property or in the pursuit of alleged offenders, the claimant or the person who conceived himself to be injured appears to have retained

trials at law.

VOL. I.

trud of a cause. A certain form was gone through,

and according to its result, which was always palpable and decisive in the one way or in the other,

the accused person was found guilty or acquitted,—

the verdict, to use the modern language, was for the plaintiff or the defendant. This view of the

subject, as far as we are aware, has not before been stated; but its correctness will be apparent from a

short account of the mode of procedure in Saxon

under the Saxon law, so much of the rights of a state of nature as to be entitled to begin the process at his own hands, and by an act of force;—he made forcible entry upon the land, or he seized without any writ the person of the accused. It was only after this that the law interfered, or rather that application was made to its authority. The cause might be brought into court in various ways. A person accused of an ollence, for example, might be arranged either by the presentment of the thanes (or heads) of the hundred, or by that of the coorls inhabiting the township, or upon the appeal of the mjured party, swearing that he was not actuated by hatred or animosity, and having his oath confirmed by that of seven compurgators.\* The following is the account of the sequel of the proceeding given by Sir Francis Palgrave:-" The culprit being thus charged with the crime, either by the voice of the country or by the testimony of the appellant, he was put upon his deliverance; but, at this stage of the trial, if he belonged to the Sithcund class, or to the Villainage, he was required to obtain the testimony of his superior. The blaford, or his gerefa on his behalf, came forth and swore that the man had not been convicted of theft within the period of limitation, which appears to have been usually fixed from the last great council, and had never paid the theft-fine. This declaration was confirmed by the oaths of two other true men, or thanes; and the culprit had then the privilege of clearing homself, either by simple compurgation or by the simple ordeal. If he asserted the liberty of appealing to that testimony of character which was termed compurgation, he himself swore to his impocence, and a certain number of his neighbours, whose 'worth,' according to the legal arithmetic of the Anglo-Saxons, was considered as equivalent to one pound, were assigned as his compargators. If they confirmed his oath by their own, he was acquitted of the charge; but if he was unable to procure this testimony, and dared to abide the 'judgment of God,' he plunged his arm into the boiling cauldron up to the wrist, or he bore the red-hot from in his naked hand for the distance of nine paces; and if, after the lapse of three days, no marks of migry appeared, he was declared innocent of the crime. Such was the proceeding when the testimony of the lord or superior was in favour of the accused. But if he refused to afford the testimony which diminished the suspicions of the law, then the culprit was bound to undergo the threefold ordeal; he plunged his arm into the boiling water up to his elbow, the iron was of treble weight, and his compargation, if he preferred that mode of trial, consisted of five compurgators, he being the sixth hand." † A civil suit

\* Palgrave's English Commonwealth, p. 213.

was decided by a mode of procedure precisely similar in principle, though differing in some of the

forms. In either case, everything depended upon

the number and the legal "worth" or estimated

value of the witnesses which each party was enabled

† Ibid. p. 215, 2 L

HISTORY OF ENGLAND.

to draw from mider a cover either of two pieces of wood, on one of which the figure of the cross had been cut, if he drew that, he was acquitted; if

the other, by was condemned. Another ordeal

was that called the corsned; thus was a small piece of bread (supposed to have been, originally, though it was not latterly, the sacramental wafer), which was given to the culprat to cat, and, if it appeared to stick in his throat, or if he shook or turned pale m the attempt to swallow it, his guilt was held to be proved. It appears most probable also that the wager of battle, although rommonly supposed to have been of Norman introduction, was in use among the Saxons before the Conquest.\* This was merely another species of ordeal, or appeal to Heaven. By this mode of trial, after the requisite, averments had been made on oath by the two parties and their witnesses, each party denying word for word what the other had asserted, the two would be brought together and set to fight out

then quarrel with arms in the presence of the court, which here again, as in all other cases, had nothing more to do except to see that the prescribed regulations were observed, and to watch the result. The result of itself ilectared the verdict. In everything, therefore, we see the trial was reduced to the performance of an operation every step of which was regulated by certain established rules, and about the result of which, that result deciding the case, there could be no inistake or dispute. This view of the subject at once explains another pecuharity which has been noticed as marking the legal procedure of the Anglo-Saxons. In their trials circumstantial evidence was wholly disregarded. Witnesses were only allowed to swear that the fact in dispute was or was not as represented by either of the contending parties.† It is plain that it was only such direct evidence as this that admitted of being counted and simmed up according to the simple rule of tale which we have supposed to govern the whole proceeding. weighing of encimistantial evidence would have demanded the exercise of discretion and judgment, and consequently the apparatus of a court m the modern sense, that is, either a single judge, or (what would have been more conformable to the spirit of the Gothic polity, and what it eventually produced) a bench or box of judges, consisting, it might be, of one to preside and direct, and a number of others to deliberate,—our present judge and mary. There has been much controversy as to whether the institution of the jury existed among the Saxons, and it is a question upon which legal antiquaries are still divided. But if the view that has been taken of the principle of the whole Saxon . This is the opinion of Sir F. Palgrave. See English Commonwealth pp 223-225.

the thing itself, like the name, is undoubtedly not Saxon but Norman, that is to say, it dul not come into use until the Norman times. We will here only observe that it was not, properly speaking, the increased complication of the relations of society, and of the matters giving rise to legal trials, that led to the abrogation of that ancient system, and the substitution of the system of the jury. The fact is, that the jury and the ordeal could not practically exist together. The principle of the one mode of trial was altogether opposed to that of the other. If the ordeal could have maintained itself against the adverse forces of another kind with which it necessarily had to contend as society advanced, and which eventually brought about its ilowidall, the increased complication of the aflairs of the community would not have overthrown it, or introluced the substitute of the jury. If it could have retained the support of public opinion, it would have been sufficient for any state of society, however complex, and the jury never would have supplanted it. The ordeal was the soul of the original Auglo-Saxon system of law; and this has probably been among all nations the first resort in the attempt to substitute any other law for the law of mere force. And although it is really not at all more equitable than the law of force, it still has certain decided advantages in other respects over the rule of mere physical strength. It is the substitution of policy for violence, and that is necessarily in itself a humanizing and productive change. The ordeal, also, it is to be remembered, though in reality, if fairly conducted, only a throwing of the dice, and leaving of the decision to chance, if collusively managed, capable of being made an instrument of great nijustice and cruelty,-was beheved, so long as it was in use, to be nothing less than an appeal to Heaven, and to be always effective in securing the fairest and wisest of all possible decisions. It was the decay of this belief, and nothing else, that occasioned the abolition of

the ordeal. But even while it was still legally

recognised, and in constant application as the final

mode of determining a cause, an apprehension

was naturally cutertained that Heaven might be

offended by such an appeal being lightly or too frequently made to it; and there was accord-

ingly a shrinking from the ordeal on the part

legal system be correct, it is evident that what

we now inderstand by a jury could have found no

part in that system, so long at least as it retained

its original and proper character mumpaired.

A jury could have been of no use, and would

have had no duties to discharge. The finding

of the verdict was not an affair of deliberation;

it was an affair of observation merely, and was

sufficiently performed by the general body of the

persons present at the trial, among whom there

never could have been any doubt or dispute on the

subject. We shall afterwards have occasion to

show how the modern jury in all probability arose ont of the ancient mode of conducting trials; but

CHAP. III.]

balance the testimony against him, he was not allowed his appeal to the "judgment of God". This was a great step gamed in the progress towards the decision of the case solely upon the evidence, and the weighing of the evidence in the scales, not of the calculating faculty, but of the judgment, So that there may be said to be four, or, more accurately, five distinct stages in the ascent up to om present method of judicial practice, which is the last of the five. Of those preceding, the first is that in which all disputes are decided by mere brute force, emancipated from all check or regulation. The second is that in which disputes are decided by such a proceeding as the wager of battle, in which physical force is still left the umpire, but is constrained to act under certain forms; and some contrivances in reference to the weapons and mode of the encounter are also usually introduced, which 20 m some degree to reduce any natural inequality that may chance to exist between the combatants. The third stage is that of the ordeal, or imaginary appeal to Heaven; by which the law of force is first wholly put down, being supplanted by the law of chance, taking, however, the appearance of a criterion of a very different kind, and being beheyed to be the actual adjudication of Heaven. And the fourth is that in which evidence first makes its appearance, though as yet only in subordination to the ordeal, which is still maintained in its position of the supreme and finally determining

that now prevails. We are apt to assume that the bearing of evidence is the natural mode of trying a cause, and the earliest that would be adopted. But the science of cydenee, both in law and in all other departments of inquiry where we have to do with mere probabilities, is late in springing up, and long in being brought to perfection. The science of mathematical demonstration, where there is little complexity and no uncertainty, may be early cultivated and perfected; but not so that of the evidence either of human testimony or of any description of what we may call merely indicative facts. The ancient Greeks and Romans, with all their cultivation, seem to have had no distinct notions on the subject of evidence in any department either of

It would be very easy to show how each of these modes of procedure is naturally evolved out

of the one munchately preceding it, as well as

how the last-mentioned leads in like manner to the introduction of its proper successor,-the mode

new to the world little more than two centuries ago. The science of evidence is a study as foreign to the whole mental dispositions and liabits of men in an early state of society as it is to those of children. Both equally demand certainty in all their conclusions, and cannot endure either to act or to behave merely upon a favourable balance upon probabilities. All their methods of investigation, therefore, aim at attaining this certainty. A method which promises less is despised and rejected. Hence anything else is preferred to the patient and impartial examination of facts;—anything that will produce an instant and complete conviction, -- a supposed sign from Heaven of any kmd, -some circumstance impressive enough to occupy the imagination and exclude every other view of the subject,-or even, when nothing better is to be had, more authority and confident assertion. This is the time of mexperience and of ready and ubundant faith. science of evidence is the offspring of doubt, as well as the parent of rational belief and of truth. To prevent objection or misapprehension, it may

be proper just to remark further, that very possibly, in point of fact, one mode of procedure may have sometimes been partially introduced before another was quite abandoned; and it is probable, indeed, that the changes were mostly brought about in this But what is intended to be affirmed is, that no two of the forms which we have distinguished could ever be mixed up together in the trial of the same cause; for instance, the prry, as we have said, could never be thus employed in association with the ordeal. It was, as is well known, not till within the last twenty years that the old mode of trial by judicial combat, or wager

2 + 2

"there were many irregularities arising from the

breaking down of the Saxon jurisprindence; parts

and portions of the ancient forms continued in use,

though no longer guided by their ancient and con-

sistent principles . . . In all personal actions,

wager of law was the regular mode of trial, until

new proceedings were instituted, which enabled

the indges to introduce the pary trial in its stead. But this silent legislation has not destroyed the

Auglo-Saxon trial; it is out of use, but not out of

force; and it may perhaps continue as a part of

the theory of the law until some adventurous undi-

vidual shall again astonish the court by obtaining

his privilege; and, by thus informing the legisla-

ture of its existence, ensure its abolition.''†

of battle, was abolished;\* and Sir Francis Palgrave seems to think that the right to the trial by wager of law derived from the Anglo-Saxon compurgation, still subsists. "At later periods," he observes, speaking of the times after the Conquest,

HISTORY OF ENGLAND.

of putting an end to differences, and keeping men

under subjection to the law, at least as well as a

more equitable and more rational mode of judicial

decision could have done. There is reason to

believe, also, that on the whole its inherent injus-

tice was rather initigated than otherwise by the art

[Book II.

and management with which the process was no doubt usually conducted. The principle that has been pointed out as that of the legal procedure of the Anglo-Saxons, it may be observed in conclusion, ran through the whole course of the law and its administration. the first step that could be taken for the trial of a case down to its final disposal, everything was regulated upon this principle, and arranged with a view to its application; no room was lett for any exercise of discretion on the part of the court; the human judgment was never appealed to or its exercise permitted; nothing was trusted to the fallibility of that arbiter; the element of mere probability was excluded as rigorously as it is from the demon-

ness to the particular social condition of the Anglo-Saxons, certain recommendations not only over the still ruder system which it supplanted, but even as compared with the more refined and intelligent method to which, in due time, it was in its turn to give way. That improved method would have made demands which the age and the country were altogether madequate to meet. Neither juries nor judges could then have been found to administer justice throughout England according to that plan. Even in our own day the experience of some of the most enlightened countries in the world has proved how difficult a thing it is to get the system of trial by jury to work well among a people to whom it is new. Among the Auglo-Saxons of the minth or tenth century there certainly was not a sufficiently general diffusion of intelligence either to supply competent judges and juries, or to make their decisions be respected if they could have been found. In the state of society that then existed, it would not have answered for the

popular faith in it subsisted, answered the purpose "The general law of the land," said Lord Ellenberough, in the case of Ashtord against Thomton, argued before the Court of King's Bench, in April, 1818, which led to the abolition, "is in favour of the wager of battle, and it is our duty to pronounce the law as its, and not as we may with it to be. Whatever prejudices, therefore, may justly exist against this mode of trial, still, as it is the law of the land, the court must pronounce judgment for it."—Barnewall and Alderson's Reports, i. 469. † English Commonwealth, p. 263.

Absurd as the ordeal was, it had, in its sintablestrations of the mathematics. That this system might be carried fully out, not only was a certain value put by the law upon every individual, which determined the amount at which his testimony was to be rated when he appeared as a witness, and the damages he could claim as a plaintiff, and those he could be called upon to pay as a defendant; every distinct limb and part of the body had also its were, or legal worth. Thus, in the oldest laws, a leg was valued at fifty shillings, the little linger at eleven, the great toe at ten, a front tooth at six, an eye tooth at four, a back tooth at one, and a nail of the finger at the same price. In this way every personal injury that could be received had its fixed compensation. After the trial had been gone through, therefore, the sentence or the assessment of damages was as much a matter of course as all the rest of the procedure had been: here, also, the law night be said to go upon its own feet, and to do all but execute itself. Besides the fines, however, either to the injured law to profess to give its decisions on anything like individual or to the state, with which most delindoubtful presumptions. The simple understandquencies were punished, capital punishments were ings of the men of that time were to be satisfied also in use among the Anglo-Saxons in certain cases. Among the "botcles" crimes, as they were with nothing less than absolute certainty in such matters. It would have been strange if they had called, or those for which the life of the convict been satisfied with less, so long as they believed was always taken, were treason, military descrtion, open theft, house-breaking, and premeditated that there was such a ready and effective mode as murder. \* Summary punishment night also be the ordeal of securing that certainty. While they returned their faith in the ordeal, the establishment inflicted by any private hand upon crimmals taken of any fair plan of deciding causes by evidence m open delict. "When a capital offence," says Sir Francis Palgrave, "was flagrant, committed in submitted to the unshackled judgment of a jury open day, and under such circumstances as to was impossible. But the ordeal, so long as the render the act capable of instant and indisputable proof, no further trial was required; no evidence was discussed, and no defence was allowed. Mercy

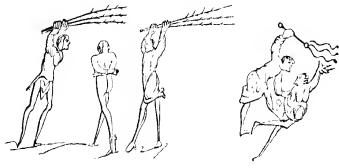

> was never extended to the outlaw; he was said to bear a wolf's head, and, like the wild beast to whom he was compared, he was slain whenever he approached the haunts of human-kind; -every Palgrave's English Commonwealth, pp. 204, 205.

hand might be raised to strike him, -- none to revenge his fall. If a thief was apprehended 'hond-habend' and 'back-barend,' or m actual possession of the spoil, he was hanged or decapitated by his pursuers without respite or delay. Similar proceedings took place with respect to the murderer. If he was found standing near the corpse with the bloody weapon in his grasp, no witnesses could be heard for the purpose of explaining away a token, which, according to the average of human probability, was necessarily the accompaniment of the transgression. . . . A stranger hirking in the woods, who did not blow his horn or otherwise proclaim that he was in distress and anxiety, was to be judged as a thief, though no other indication of crime could be alleged against him." \* It is scarcely necessary to observe that, notwithstanding some of the expressions made use of in this statement, there was really no procedure

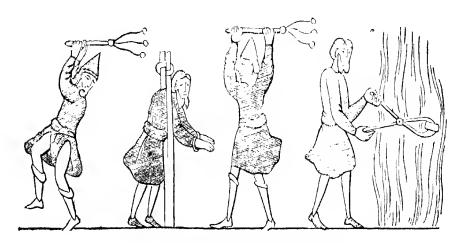

\* Turner's Anglo-Saxons, n. 510.

here upon mere suspicion or probability. For a man to endeavour to conceal lumself in the woods, for instance, was, probably for very good reasons, denounced by the law as in itself a cume; and m the case of the man found beside the newly-murdered body with the deadly weapon in his hand, the presumption of his guilt, though really only a probability, was considered to amount to absolute certainty. Rigidly speaking, indeed, the utmost attainable certainty in such matters is only a strong probability. Even the most direct evidence does not afford anything more.

Among the legal punishments inflicted by the Anglo-Saxon laws, besides fines and death, are found imprisonment, outlawry, bandshment, slavery transportation, whipping, braiding, the pillory, amputation of limb, mutilation of the nose, cars, and lips, phicking out of the eyes, and tearing off the hair. Their common capital punishment seems to have been hanging, and in some instances storing.

SAXON WHIPPING AND BRANDING. From the Cotton MS. Claud. B. iv.

## CHAPTER IV.

## HISTORY OF THE NATIONAL INDUSTRY.

RITAIN, as an island, and one of the largest in the world, as well as from its nearness to the continent of Europe, would seem to have been intended by nature for the residence of a navigating and commercial people, and it might be supposed that any people who had obtained the occupation

of it would be speechly finned to navigation and commerce by the natural temptations and advantages of their position. The political state of a country, however, and its social circumstances generally, as well as the condition of the rest of the would and the spirit of the time, may all be so unfavourable as long effectually to counteract these advantages of geographical position, and even the genius and the old habits of the people themselves.

Of the successive nations that obtained possession of the south of Britain within the period of antheutic Instory, the Gallic colonists of the time of Cæsar were in too early a stage of civilization to hold any considerable intercourse with the rest of the world; and the Romans who succeeded them, although they necessarily maintained a certain connexum both with the central and other parts of the extended empire to which they belonged, were of a stock that had always shown itself anti-commercial m genins and policy. But the Saxons, although they had not been in circumstances to turn their skill in navigation to commercial purposes, had long before their conquest of our island been accustorned to roam the seas, and were famous for then naval enterprises. We read of predatory warfare carried on by the different Germanic nations in small and light vessels on rivers, and even along the adjacent parts of the sea-coast, so early as before the middle of the first century. In the year 47, as we learn from Tacitus, the Chauci, dwelling along the Batayran coast, rayaged in this manner the neighbouring coast of Gaul, under the conduct of their countryman Gannascus, who had long served in the Roman armies.\* It is probable that, it was in the imperial service Gamasens acquired his knowledge of naval warfare, or at least the general military education which fitted him to train and command the Chanci in this expedition. In

little more than twenty years after this we find the Roman fleet on the Rhme partly manned by Batayrans,\* and even a Batavian flect under the command of Paulus Civilis, another individual of that nation who had been educated in the Roman armies, giving battle to the naval forces of the empire ? In the course of the next two hundred years the German nations generally appear to have improved upon the instruction and experience thus gained; and both the Saxons and others became distinguished for their familiarity with the sea and for their naval exploits. About the year 240 the union under the name of Franks, or freemen, of the various tribes of the Lower Rhine and the Weser, land the foundation for those more extensive predatory mentsions upon the neighbouring countries, both by sea and land, by which the barbarians of the northwest first assisted those of the north-east in harassing and enterbling the Roman empire, and afterwards seemed their share in its division. remarkable incident has generally been noted as having given a great impulse to these expeditions, what Gibbon has called "the successful fashness" of a party of Franks that had been removed by the Emperor Probus from their native settlements to the banks of the Euxine. "A fleet," to give the story as he tells it, "stationed in one of the harbours of the Enxine, fell into the hands of the Franks; and they resolved, through unknown seas, to explore their way from the month of the Phasis to that of the Rhine. They easily escaped through the Bosphorus and the Hellespont, and, cruising along the Mediterranean, indulged their appetite for acvenge. and plunder, by frequent descents on the unsusperting shores of Asia, Grerce, and Africa. The opulent city of Syraense, in whose port the navies of Athens and Carthage had formerly been smik, was sacked by a handful of barbarums, who massacred the greatest part of the trembling inhabitants. From the island of Sicily the Franks proceeded to the Columns of Herenles, trusted themselves to the ocean, coasted round Spam and Gaul, and steering their trium plant course through the British Channel, at length hinshed their surprising voyage by landing in safety on the Batavian or Frisian shores. The example of their success, instructing their comptrymen to conceive the advantages and to despise the dangers of the sea, pointed out to their enterprising spirit a new road to wealth and glory,"

This event happened about the year 280. Immediately after this time we read of the commencement of rayages on the coasts of Gaul, of Belgium,

They appear to have been a mixture of Franks and

NATIONAL INDUSTRY.

Saxons, which latter name ere long began to be also distinguished as that of another inditary confederacy of the Germanic nations not less powerful than the Franks. In maritime affairs, indeed, the Saxons soon took the lead; and while the Franks

pushed their conquests by land, the Saxon name became a terror to all the neighbouring sea-coasts. Yet then marine was still of the rudest description "It the fact," says Gibbon, "were not established by the most unquestionable evidence, we should appear to abuse the credulity of our readers by the description of the vessels in which the Saxon pirates verdured to sport in the waves of the German Ocean, the British Channel, and the Bay of Bugay.

The keel of their large flat-bottomed boats was framed of light tumber, but the sides and upper works consisted only of wicker, with a covering of strong ludes . . But the daring spirit of the priates braved the perals both of the sea and of the shore: then skill was confirmed by the habits of enterprise; the meanest of then marmers was alike capable of handling an oar, of rearing a sail, or of conducting a vessel; and the Saxons rejoiced in the appearance of a tempest, which concealed their degign, and dispersed the fleets of the enemy." The Rongins now found it necessary to fit out and maintain a fleet expressly for the protection of the coasts of Britain and Gaul. The command of this ammunest, which was stationed in the harbour of Boulogue, was given, as has been related in the preceding Book, to Caransins.\* This revolt soon after, and his establishment of an empire for himself in Britain, where he endeavoured to maintain his power by alliances with those very nations of the north whom he had been appointed to repress, and by enlisting the barbarians both among his land and sea forces, was another event in the highest degree favourable to the progress of the Saxons in navigation and naval warfare. It was a new lesson to them both in slip-building and in tactics, which must have made then boldness and hardthood much more formidable than ever. empire of Carausius had lasted for seven years, when it was overthrown by his death in 294 In the next century we find the Saxons almost

the acknowledged masters of the northern seas, and so constantly infesting Britam that the east coast of the island had come to be known by the name of the Saxon coast, and was strongly fortified, and put under the charge of a warden, whose especial duty it was to repel their assaults. defeat by Theodosins, in the neighbourhood of the Orkney Islands, in 368, for which he obtained the surname of Saxonicus, was not accomplished till the barbarians had sustained several encounters with the Roman fleet; and although it seems to have deterred them for a long time after from repeating their descents upon Britain, and although, after the example of the Franks, they were now also \* See ante, p. 53.

The keels of Hengist and Horsa were cruising in the British Channel when they received the invitation of Vortigern in 449; and it was then command of the seas that, by enabling them to maintam all along a free communication with the continent, and also to make their deseguts upon the island at the most advantageous points, chiefly contributed to gain for the Saxons, Angles, and Jutes, the possession of Britain. These new scitters, therefore, the fathers of the

future population of the country, and the founders

of its political institutions and its social state, were

beginning to employ their strength more than for-

merly in military operations by land, they certainly did not abandon the field of their elder renown.

263

by long use a thoroughly navigating race, and, having obtained their island stronghold, they would naturally, it might be thought, proceed both to fortify it by securing the dominion of the surroundmg seas, and to make it the centre of a great commercial empire. But although all this was to come to pass in process of time, nothing of the kind happened in the first instance; and the Saxons, after their settlement in Britain, completely neglected the sea, now more truly their proper element than ever, for so long a period, that when they did at last apply themselves again to maintime affairs, their ancient skill and renown in that field of enterprise must have been a mere tradition, it it was so much as remembered among them at all, and could have lent no aid in directing or even in exciting then new efforts. It was not till the reign of Alfred, towards the end of the minth century, that the Saxons of England appear even to have thought of building a ship, at least for war; and it may be doubted if before that time they had even any trading vessels of their own Ever since their settlement in Britain they seem to have wholly ahandoned the sea to then kindred who remained in their native seats in the north of Germany and around the Baltic,~ –the Northmen or Danes, by whom they were destined to be succeeded in their career of rapine and conquest.

This latter race of sea-rovers had adopted a policy different from that which had been followed both by the Franks and the Saxons. These two nations, or rather great confederacies of various untions, although they had both first made themselves formidable at sea, had, as we have seen, successively abandoned that field of adventure as soon as they had entered upon the course of land conquest, or at least as soon as they had becured the possession the first of Gaul, the second of Britam, and had established then Gothic sovereignties in these fair provinces of the former western empire. But the Danes, who were also a great confederacy, the several Scandinavian nations of the Danes, the Swedes, and the Norwegians, being all comprehended under that name, - continued to seek plunder

and glory on the waters long after they had founded

a multitude of kingdoms on shore. These, how-

ever, were not kingdoms carved, like the posses-

sions of the Franks and Saxons, out of the rich and

Denmark, Sweden, and Norway were each parcelled out into numerous independent principalities, the chiefs of all of which were at the same time also either sea-kings themselves, or more usually were the fathers or elder brothers of the bold piratical captams, who rejoiced in that designation; the enstom being for the younger sons of the royal house to be sent to seek their fortune on the ocean, while the eldest was kept at home to inherit his ancestral throne But the class of sue-konungen, or sea-kings, otherwise called vikingr, which is supposed to mean kings of the bays, where they had their head stations, was very numerous, and comprehended many individuals who were not of royal extraction. Piracy was the common resource of the younger sons of all the best families among these Scandmavian nations; and the sea was regarded as a field whereon a bold adventurer might rear for linnself a fabric both of wealth and domimion almost as stable as could be founded on the In the course of the math century in all the three countries central sovereigntics had arisen, and absorbed or reduced to dependence the rest of the chreftainships; but this change did not for some time affect the free movements of the vikingr. They continued as heretofore to maintain their independence on their own element. The new state of things in the north only had the effect of giving a new direction to their enterprises. Formerly the natural prey of the sea-kings of the Baltic had been the territories of the petty land-sovereigns along the coasts of that sea; for their common origin formed no general or permanent bond between the two classes, in circumstances so nearly resembling those under which the various descriptions of wild beasts are thrown together in a forest. But now that something of the strength of union and consohdation had been acquired by the northern kingdoms, they had become less easily assailable; and the captains of the piratical armaments began to look out for adventures and plunder farther from The coasts of England, of Scotland, of Ircland, and of France, became henceforth the chief scenes of their ravages. Nor had civilization yet advanced so far in any of the Scardmavian countries as to discountenance these expeditions. On the contrary, the Danish, Norwegian, and Swedish kungs were no doubt well pleased to see their natural enemies and the most turbulent spirits among their subjects thus finding occupation elsewhere; and as for the popular feeling on the subject, the old national custom of roaming the seas was still universally held to be among the most honourable of employments. Navigation can be cherished and promoted only by commerce or by war; it never has flourished in the absence of the former except under the nourishment and support afforded by the latter. It was the want of both war and commerce that brought about its decay

and extinction among the Franks and Saxons, after their conquests of Gaul and Britain; it was preserved among the Danes through the habits and necessities of that predatory life upon which they were thrown for some centuries by the peculiar circumstances in which they were placed. The power of this third northern confederacy grew up during a period when the spirit of foreign conquest and settlement, generated among the barbarons nations by the dismemberment of the Roman empire, was still in full vigour, but when the means of satisfying it had been taken away in consequence of the previous occupation of Gaul, of Britain, of Spain, and of all the other Roman provinces, by those whose fortune it had been to be earlier in the movement. The Danes were in this way left to the piratical maritime warfare in which they soon became so distinguished; it was the natural result of the ambition of foreign conquest checked by the want of any territory lying open for them to invade and overrim. Still this was in its nature only an intermediate and temporary resource. The instruct of aggression, which it could only imperfectly gratify, it yet fostered, and was constantly strengthening and arming with new power for the full attainment of what it sought. The Danes, under this discipline, were becoming every day more warlake and formidable, and more capable of achieving foreign conquests, whenever they should make the attempt. On the other hand, the Franks and Saxons, whom they would have to drive before them, were, in the unassailed scennty of their rich and ample settlements, gradually losing the use of war and the power of defending the possessions they had gained. This was the state of circumstances when the Danes commenced, in the latter part of the eighth century, their descents upon the coasts of France, England, Scotland, and Ircland. These Northmen were now merely repeating what had been done by their kindred, the Frank's and Saxons, three or four centuries before. They also, from mere phindering mentsions, with which they had intherto satisfied themselves, were about to rise in their turn to the grander operations of invasion, conquest, and colomization, now that occasion presented itself, and called them to that career. was the proper consummation of their system of sea-kingship; the true end and development of their long course of priacy and desultory warfare. That was but the impatient restlessness of the animating passion repelled, baffled, and in some sort imprisoned; this was its free and natural The new path of enterprise, accordingly, immediately attracted to itself all the disposable courage, activity, and resources of the North. was not left to the sea-kings alone; the most potent of those of the land joined the great national movement, which promised to add new realms to those they already possessed, or to enable them to exchange their niggardly ancestral islets and strips of sea-

coast for broader domains in a summier clime. By

means of these expeditions the pressure and un-

casiness occasioned by the opposition between the

[Book IV.

old piratical system and the new order of things Saxons and Dancs, the great lords of the sea, that was now growing up in the Scandinavian kingplanters of nations, and diffusers of civilization in doms, were at once relieved; and while occupation the modern world.

and settlements were found for the more active and adventurous who chose to abandon their native country, more room was also made, and more quiet secured, for those that remained behind.

CHAP. IV.]

By these bold sen-captains and their crews was a great part of England taken possession of and occupied; and thus, a second time, did the country receive an accession of the kind of population most appropriate to it as an island,—a race of a navigating spirit and habits. The Normans also, we may anticipate so far as just to remark, were, before

they won their settlements here and in France, printes as well as the Danes and the Saxons; in fact they were merely a division of the Danish vikingr and their companies. So that of the several races that were eventually mingled together to form the Eaglish people, no one had to be gradually turned towards maritime affairs by the force of the new circumstances in the midst of which it was placed; all brought along with them an old familiarity with the sea, on which they had in fact hyed, and conquered, and maintained dominion, before they had ever made good any footing for themselves upon land.

Notwithstanding all this, however, we find each tace, as soon as it has established itself in the country, almost wholly abandoning the former theatre of its exploits, and attaching itself to the land as exclusively as if the sea bad been left a thousand miles behind. We cannot discover that either the previous navigating habits of the Saxons and Danes who successively settled in Britain, or the natural advantages of their new position, prompted them to any considerable efforts of commercial enterprise, after they had lost the motive which had originally impelled them to the sea. Nay, as we have already observed, the ships in which, and through which, they had made their conquests, were abandoned by them even as instruments of protection; they had served their turn in aggressive warfare, but in the defensive warfare that followed their employment was not thought of, till after long and disastrous experience of the insufficiency of other military means. Such being the case, we need not wonder that commercial navigation was neglected. The navigating spirit, in fact, will not of itself create commerce; it appears to have been usually rather the commercial spirit that has taught a people navigation, where it has not been taught by war; and even war does not teach it in the effective manner that commerce does, as we may see at once by comparing the Saxons or the Danes with the Phenicians. The latter had no doubt been a commercial long before

they became a navigating, a discovering, a colo-

manner it is their commercial habits, growing out

of their permanent geographical position, and not

their use and wont of maritime warfare, that has

rally, or throughout a large portion of it. commercial empire of the ancient Phenicians was reared during the most flourishing period of the early civilization of the east; the commercial empire of modern Britain has in like manner arisen in the midst of the later civilization of the west. In the rude and turbulent ages that followed the overthrow of the Roman power in Enrope, the existence of an extensive commerce in any hands was impos-Almost continual wars everywhere, either between one people and another, or between two factions of the same people, or where there was any temporary relaxation of war, the still more brutifying effects of misgovernment and oppression, left no time, no inclination, and no means for carrying on any considerable commerce. great mass of the people were in all countries sunk m ignorance and in poverty; their miserable condition hardly permitted them to aspire after the enjoyment of anything beyond the absolute necessaries of existence; they were untaught in those arts and processes of industry by which commerce is fed; there had been little or no accumulation of capital, without which there can be no extensive commerce, nor any other species of undertaking that looks much beyond the passing day. It was only by slow degrees that Europe emerged out of this condition, and that the beginmings of modern commerce were nurtured into strength and stability. We shall now notice the most interesting of the few facts that have been preserved relating to the foreign trade carried on by the Anglo-Saxons, m their chronological order. The first distinct notice

But a power like this can only grow up under a

favourable state of circumstances in the world gene-

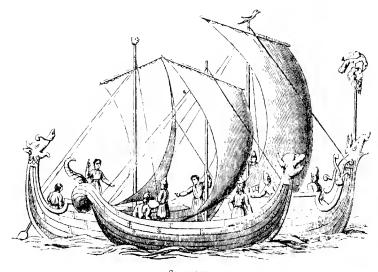

which we have upon the subject is not of earlier date than the close of the eighth century. At this time, it appears that some English commodities were carried abroad, and probably some of those of the continent brought to this country, by the devotees who went on palgrimage to Rome, or by persons who found it convenient to make profession of being so engaged. It is not to be supposed that these pilgrimages opened the first commercial intercourse between England and the continent; but they undoubtedly made the communication much more frequent than it had been before. The practice established by the Romans, of exacting certain payments at each seaport, on the embarkation and landing of goods, appears to have been retained in all the new kingdoms formed out of the western empire; and their amount probably long remained nearly the same that had been paid under the im-

perial régime. Hence the name of customs, or some equivalent term, by which they were called,

as if they had been dues universally and name-

morially demanded. There is a letter still extant,

from the French Emperor Charlemagne to Offa,

SAXON SHIPS,

From an Engraving in Strutt's Chronicle of England, in ide up from various Saxon dluminations

have been the result of a negotiation between the two sovereigns, respecting the exaction of these duties in the case of the English pilgrims travelling to Rome. The document must be assigned to the year 795, in which Offa ched, at the latest; and it may be regarded as the earliest commercial treaty on record, or perhaps that ever was entered into, between England and any other country. It runs as follows: "Charles, by the grace of God, king of the Franks and Lombards, and patrician of the Romans, to our venerable and most dear brother, Offa, king of the Mercians, greeting. First, we give thanks to Almighty God, for the sincere Catholic faith which we see so laudably expressed in your letters. Concerning the strangers, who, for the love of God and the salvation of their souls, wish to repair to the thresholds of the blessed apostles, let them travel in peace without any trouble; nevertheless, if any are found among them not in the service of religion, but in the pursuit of gain, let them pay the established duties at the proper places. We also will that merchants shall have lawful protection in our kingdom according to our command; and if they are in any place unjustly aggrieved, let them apply to us or our judges, and we shall take care that ample justice be done to them " There is more of the letter, which it is unnecessary to quote. We gather from it that the profession of pilgrimage had already been taken advantage of as a cloak for smuggling; and, no doubt, in this way the practice gave an impulse to trade. Even the smuggler is sometimes of use; he may be the means of planting a traffic which would not have grown up without his assistance, and which, of however objectionable a character originally, may eventually assume a legitimate form, and attain to great value and importance. It is conjectured that articles in gold and silver were

probably the principal commodities in which these traders from England dealt, who thus put on the guise of pilgrims, with the view of cheating the custom-house of its dies. Such articles, being of small bulk, would be easily concealed in a traveller's baggage; and it appears that even at this early age the English works in gold and silver were famous over the continent.\* Already, it may be poted, there seem to have been Jews resident in England and even in the northern kingdom of Northumberland; for among the Excerpts of Archbishop Egbert of York—which must have been compiled between the years 735 and 766—we find a transcript of a foreign canon, prolubiting Christians from imitating the manners of that people, or partaking of their feasts. The Jews have been the introducers or chief encouragers of foreign commerce, especially in jewellery, infieles made of the precious metals, and other such luxuries, in most of the countries of modern Europe.

From this date the history of Anglo-Saxon commerce is again nearly a blank till we come down to the reign of Alfred. Of this illustrious prince, it is recorded in relation to the present subject, that he cultivated an intercourse with distant countries, in which he seems to have had in view the extension of commerce as well as other objects. appears to have kept up a frequent communication with Rome; and his biographer Asser states, that he also corresponded with Abel, the patriarch of Jerusalem, who sent lnm several valuable presents of oriental commodities. His embassy to the Christians in India is mentioned, not only by Malmesbury and other authorities of the next age, but by the contemporary compiler of the Saxon Chronicle, who says that Bishop Swithelm made his way to St. Thomas, and returned in safety.

. Macpherson's Annals of Commerce, i. 248.

Malmesbury gives Sighelm as the name of the adventurous bishop of Shireburn, and relates that he brought back from India aromatic liquors and splendid jewels; some of the latter, Malmesbury says, were still remaining in the treasury of his church when he wrote, in the twelfth century. Sighelm is stated to have left England in the year 883, and to bave gone in the first instance to Rome, from which he probably sailed up the Mediterranean to Alexandria, and then made his way by Bassora to the Malabar coast, where it is certain that a colony of Syrian Christians, who regarded St. Thomas as their apostle, were settled from a very early period. Asser relates that he received, on one occasion, as a present from Alfred, a robe of silk, and as much meense as a strong man could carry: these precious commodities must have been obtained from the East But the interest which Alfred took in hearing of remote parts of the earth as most distinctly shown

in the accounts he has himself given us of the two

voyages of Ohthere and Wulfstan; the first to the North Seas, the second towards the east of the These voyages were related to Alfred by the payigators themselves; and be has inserted what they told him in his Saxon translation of the Latin geography of Orosius. It has been observed that Alfred "obtained from Ohthere and Wulfstan such information of the Baltic sea with the adjacent countries, as far exceeded that of professed geographers, either before or after his time, till the route of Ohthere was retraced in the year 1553 by the English pavigator Chancellor, who was supposed the original discoverer of the northern passage to Russia." Ohthere rounded the North Cape, and peuctrated into the Wlute Sca, from which he ascended a great river, which must have been the Dwina, on which Archangel now stands. Wulfstan navigated the Baltic as far as to the land of the Estum, the present Prussia. " This Eastland," says his narrative, "is very large, and there be a great many towns, and un every town there is a king; and there is a great quantity of honey and fish. The king and the richest men drink mare's milk, and the poor and the slaves drink mead. There be very many battles between There is no ale brewed amid the Ustum, but there is mead enough." Pytheas had remarked the same abundance of honey and use of mead, among the people of this coast, twelve cen-

It is one of Alfred's many great merits and titles to perpetual and grateful remembrance, that he first called into action, and gave proof of what could be achieved by the natural right arm of England—her maritime strength. The year 887, the sixth of his reign, while he was engaged in that first struggle with the northern invaders which ended so disastrously, is marked as the year in Twenty which he fitted out his first few ships. years later, in his days of prosperity and power, he built a much larger fleet, and introduced certain

turies before.

used in the Mediterranem, of which he had obtained models, he showed at least his usual active and inquisitive spirit in searching after, and his •good sense in adopting − The Saxon Chromeler says that Alfred's ships were neither, like those of the Danes nor those of the Frisians, but were made in a fashion which he himself thought would be more serviceable than that of either. They were twice as long as the acseas, as they were called, of the Northmen, and also higher than theirs; in sailing, they were swifter and less imsteady. Some of them had sixty oars, some more. Yet, notwithstanding the statements of some later writers, we have no authentic account of any attempt by Alfred to create an English mercantile marine. One of his laws only shows that merchant ships sometimes arrived in England in those days; and even this regulation regards not the cargoos of these foreign vessels, but the passengers. The only notice that has been found of the export of any English commodity in the time of Alfred, is the mention of some of the famous native breed of dogs having been sent as a present to Folk, archbishop of Rheims, in France.\* By far the most remarkable and significant event in the whole lastory of Anglo-Saxon commerce, is the law passed in the reign of King Athelstan, in the second quarter of the tenth centmy, by which it was enacted that every merchant who should have made three voyages over the sea with a ship and cargo of his own, should have the rank of a thane or nobleman. The liberality of this low has usually been ascribed exclusively to the enlightened judgment of Athelstan; but we are entitled to presume that it must have been also m some degree m accordance with the general feeling of the country; for, not to mention that it must have been passed with the consent of the Witenagemot, it is mulkely that so able and prudent as well as popular a monarch as Athelstan would have attempted in regard to such a matter to do violence to public opinion, without the ac-

sels, which, whether suggested by his own mycn-

tive sagacity, or borrowed, as it has been conjec-

tured they might have been, from the galleys then

quesecnce and support of which the measure could have had little efficacy or success. We may take this decree conferring the honours of nobihty upon commerce, therefore, as testifying not only to the liberality and wisdom of Athelstan, but also to the estimation in which commerce had aheady come to be held among the English people. It may be regarded as a proof that the Anglo-Saxons had never entertained much of that prejudice against the pursuits of trade, which we find so strongly manifested during the middle ages, wherever the political and social institutions were moulded upon, and fully animated by the spirit of the feudal system. But it is especially interesting in reference to our present subject, as an indication of the growing importance of English commerce · Macpherson, i. 265.

HISTORY OF ENGLAND.

the Emperor Otho, by sending a flect to the coast of Flanders, to ravage the emperor's territories in that quarter. This was done in conformity with a treaty of mutual defence, which is memorable as the first of the kind ever entered into between

a treaty of mutual defence, which is increable as the first of the kind ever entered into between the two kingdoms. Edgar's navy, and also that which Ethelied fitted out by a tax upon all the lands in the kingdom to repel the Dares, make a great figure in the history of the next half Some accounts make Edgar's fleet to have amounted to between three and four thousand ships—a statement resembling in its style of evident hyperbole the whole history the old monkish chrometers bave given us of this king, whose lavish benefactions to the church have secured him an extraordinary return of their gratitude and Ethelred's is recorded to have been the most numerous naval armament that had yet been seen in England; so that it must have surpassed

coasting and foreign. In certain laws enacted by Ethelred and his Witan, at Wantage, in Berkshire, it is flechared, that every smaller boat arriving at Billingsgate (so old are that landing-place and that name) should puy for told or costonione halfpenny; a larger boat with suls, one penny; a keel, or what we should now call a hulk, four pennies; a vessel with wood, one piece of wood; a boat with fish coming to the bridge, one half-

Even in the disastrons reign of Ethelred, we find indications of the continued progress of trade, both

that of Edgar.

penny, or one penny, according to her size. And from other passages of these laws, it appears that vessels were then wont to come to England from Ronch, with wine and large fish; from Flanders, Ponthen, Normandy, France, Hegge (an unknown place), Lacge, and Nivell. Certain German merchants, called the Emperor's men, when they came with their ships, are declared to be worthy of good laws—that is, of being treated with favour; but they were to pay their dues, and were not to forestall the market to the prejudice of the citizens, The ducs to be paid by the Emperor's men, who were probably the representatives of some trading company, were two grey cloths and one brown one, ten pounds of pepper, five pairs of men's gloves, and two vessels or measures (called cabillmi colemn, the meaning of which is nuknown) of vinegar, at Christmas, and the same again at Easter. These were probably the articles of which their cargoes usually consisted. It is also worth notice, that a meeting was held in this reign of the wise men of England and Wales for regulating the intercourse, commercial and general, between the two kingdoms; at which rates of compensation were fixed for slaves, cattle, &c., that might be stolen or injured, and it was agreed to appoint a standing tribunal, consisting of six English and six

Welsh lawmen, or persons skilled in the law, to

pation and way of life: "I say that I am useful to the king, and to ealdermen, and to the rich, and to all people. I ascend my ship with my merchandize, and sail over the sealike places, and sell my things, and buy dear things which are not produced in this land, and I bring them to you here with great danger over the sea; and sometimes I suffer shipwreck, with the loss of all my things, scarcely escaping myself." He is then asked, "What do you bring to us?" to which he answers, "Skins, silks, costly gems, and gold; various garments, pigment, wine, oil, ivory, and orichalcus (perhaps brass); copper and tm, silver, glass, and such like '' The principle of all commercial dealings is distractly enough stated in the answer to the next question,-" Will you sell your things here as you bought them there?" "I will not; because what would my labour benefit me? I will sell them here

dearer than I bought them there, that I may get some profit to feed me, my wife, and children?" The

silks and other Oriental commodities here mentioned

were usually, in all probability, obtained from Italy,

exchange of other commodities produced at home.

Foreign commodities can only be obtained by the

lowing passage, in which the Merchant, as one of the

characters introduced, gives an account of his occu-

[Book II.

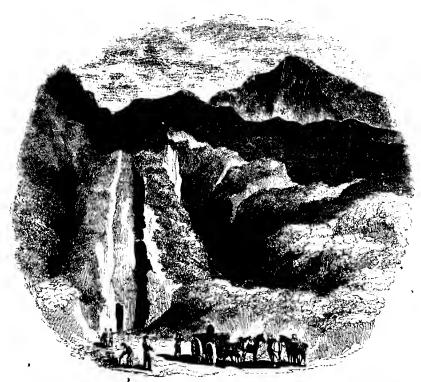

But the Anglo-Saxons had not much to export—Notwithstanding the flourishing state to which British agriculture had been raised by the Romans, there is no evidence or reason for believing that a single cargo of corn was ever exported from England during the whole of the period now under review. Although, however, there is no positive anthority to establish the fact, Mr. Macpherson thinks there can be little doubt that the Flemings, the great manufac units of fine woollen goods for the whole of Europe, carried away great quantities of English wool in this period, as we know for certain they did in the following ages. That there was an export trade in wool would seem to be indicated by the disproportionate price the fleece appears to have borne compared with the whole sheep, and also by the high price of wool. + Probably also the mines of the different metals yielded something for exportation. The Abbé Raynal has mentioned, but without quoting his authority, that among the traders of different nations who resorted to the fairs established in France by King Dagobert in the seventh century, were the Saxons with the tin and lead of England; and Mr. Macpherson is of opinion that, as we know from Domesday Book, that in the neighbourhood of Gloucester there were iron-works in the time of Edward the Confessor, which had probably been kept up since before the invasion of • Cotton. MS. Tib. A iu. † Macpherson, i 288. ‡ Hist. des Indes, u. 4.

the Romans, iron, too, as well as lead and tin, may perhaps have been one of the few British exports during the Anglo-Saxon period. This writer thinks it also not impossible that mines of the precious metals may have been wrought at this time in England, and part of their produce exported, although the existence of such mines in the island is unnoticed by any historian since the beginning of the Roman dominion, with the exception of Bede.\* certain that large sums in gold and silver were raised in the country on different occasions, and much com or bullion repeatedly carried out of it; and it appears difficult to comprehend whence all this wealth could be obtained with so few mamifactures and so bttle exportable produce of any kind. The early emmence of the Anglo-Saxons in the art of working gold and silver may be taken as affording another presumption that, whencesoever procured, there was no want of these metals in the "We have indoubted proof," says Mr. Mucpherson, "that the English jewellers and workers of gold and silver were emment in their professions, and that probably as early as the beginning of the seventh century. . . . So great was the demand for highly-finished trinkets of gold and silver, that the most capital artists of Germany resorted to England; and, moreover, the most pre-Macpherson, p. 291.

cious specimens of foreign workmanship were im ported by the merchants."\* On the other hand, articles in gold and silver seem to have been the chief description of manufactured goods exported from England in this period.

Among the exports from Britain during part of this period are supposed to have been horses, because one of King Athelstan's laws prohibits their being carried out of the kingdom unless they were to be given as presents. Another part of the export trade, which was probably carried on to a much greater extent, was the trade in slaves. The mission of Augustine, which effected the conversion of the Anglo-Saxons to Christianity, was, it will be recollected, the memorable result of the attention of Augustine's patron, Gregory, having been attracted by the appearance of a group of young Angles exposed for sale as slaves in the marketplace of Rome. Afterwards several laws and ecclesiastical canons were passed prohibiting the sale of Christian slaves to Jews or Pagans. Finally it was enacted that no Christians, and no persons who had not committed some crime, should be sold out of the country. But Wilham of Malmesbury, who wrote nearly a century after the Conquest, affirms that the practice of selling even their nearest relations had not been alto-Macpherson, i. 290.

ENTRANCE OF THE MINS OF ODIN, an ancient Lead-Mine in Derbyshire : the Hill called Mam Tor, in the distance.

HISTORY OF ENGLAND. exacted upon the arrival and departure of ships and goods, both by the king and by the lord, ge-

gether abandoned by the people of Northum berland in his own memory. And in the contemporary biography of Wulfstan, who was Bishop of

Worcester at the time of the Conquest, the following curious account is given:-"There is a sea-port town called Bristol, apposite to Ireland, into which its inhabitants make frequent voyages on account of Wallstan cured the people of this town of a most odioris and inveterate custom, which they derived from their ancestors, of buying men and women in all parts of England, and exporting them to Ireland for the sake of gam. The young women they commonly got with child, and carried them to market in their pregnancy, that they might bring a better price. You might have seen with sorrow long ranks of young persons of both sexes, and of the greatest beauty, fied together with ropes, and daily exposed to sale; nor were these men ashamed,

O horrid wickedness! to give up their nearest relations, nay, their own children, to slavery - Wulfstan, knowing the obstinacy of these people, sometimes stayed two months among them, preaching every Lord's Day, by which, in process of time, he made so great an impression upon their ininds that they abandoned that wicked trade, and set an example to all the rest of England to do the same "\* But for this remarkable passage it would scarcely bave been suspected that there ever was a time when the natives of England were regularly exported to be sold as slaves to the Irish. Them principal parchasers were probably the Danes, or Ostmen (that is, Eastern men), as they were called, who were at this time the dominant, people an Ireland, and especially were masters of nearly the whole line of the coast opposite to Britain. They appear to have carried on a considerable commerce both with England and other countries Chester, as well as Bristol, is particularly mentioned as one of the ports to which Irish slips were accustomed to resort about the time of the Norman Conquest William of Malmsbury describes the inhabitants of Chester as depending in his day upon Ireland for a supply of the necessaries of life; and, in another place, he speaks of the great distress the Irish would suffer if they were deprived of their trade with England. Marten skins are mentioned in Domesday Book among the commodities brought by sea to Chester; and this appears, from other authorities, to have been one of the exports in ancient times from Ireland. Notices are also found of merchants from Ireland landing at Cambridge with cloths, and exposing their merchandise to sale † Other English ports which are noticed as possessed of slups at the time of the Conquest, or immediately before that event, are Pevensey, Rmnney, Hythe, Folkstone, Dover, Sandwich, Southwark, and London. Bede speaks of merchants'

vessels sometimes joined together, and went out

cargo were forfeited to the king. Ships that came in with the king's permission might sell quetly what they brought, paying at their departure to the king and the carl four pennies for every last, or Those that brought marten skins, however, were bound to allow the king the pre-emption of them, and, for that purpose, to show them to an officer before any were disposed of, under a penalty of forty shillings. It is possible, however, that some of these oppressive regulations may have been first imposed by the Conqueror. At the time when the account in Domesday Book was drawn up, the port of Chester yielded to the crown a revenue of forty-five pounds, and three timbres (whatever quantity that may have been) of marten skins. Of the internal trade of England during this period we know very little. That it was on a very dimmative scale might be inferred from the single fact, that no person was allowed to buy anything above the value of twenty pennies, except within a town, and in the presence of the clief magistrate, or of two or more witnesses. Such at least is the regulation found in the laws of King Hlothacie of Kent, who reigned in the seventh century. Another enactment in the same collection is, that " if any of the people of Kent buy anything in the city of London, he must have two or three bonest men, or the king's port-reve (who was the chief magistrate of the city), present at the bargain." And a third of Hlothaere's laws is,-"Let none exchange one thing for another except in the presence of the

nerally called the earl or comes, whose property or under whose protection the town was; and trade

was besides fettered by many restrictive regulations, At Chester, for instance, if a ship arrived or sailed

without the king's leave, she was subject to a fine

of forty shillings to the king and the earl for every

one of her crew. If they came against the king's

express prohibition, the slop, the men, and the

[Book II.

These regulations were probably intended in part to prevent fraud and disputes, and they might perhaps be in some measure serviceable for that purpose in an age when writing was not in common use; but there can be no doubt that they had principally in view the protection of the revenue of the king and the lord of the manor; to each of whom, it appears from Domesday Book, a certain proportion of the price of everything sold for more than twenty pennics, was paid, the one-half by the buyer, and the other by the seller. The amount ships sailing to Rome; and it appears that trading-, here specified would prevent the rule from affecting the ordinary purchases of the people in shops, to which it must be supposed they were permitted to resort for the necessaries of life without any of these amoving formalities. The transactions to which it applied would chiefly take place at the

sheriff, the mass-priest, the lord of the manor, or

some other person of undoubted veracity. If they

do otherwise they shall pay a fine of thuty shil-

public markets or fairs, which appear to have

NATIONAL INDUSTRY.

been established in various parts of the country, and which in all the greater towns were probably held every week. Originally the Sunday seems to have been the usual market-day; but the repeated

CHAP. IV.]

efforts of the church at length effected the general substitution of Saturday. Besides the weekly markets, however, there were probably others of a more important kind held at greater intervals. many of the markets, besides the duties exacted upon all sales, a toll appears to have been demanded either from every individual frequenting the market, or at least from all who brought goods to dispose of Most of these commercial usages of the Auglo-Saxons were inherited from their predecessors the Romans They had also, to a certain extent, the advantage of the facilities of communication between the different parts of the country, which had been created while it was in the occupation of that great

people. The four great highways appear to have

received Saxon names, and they were undoubtedly maintained in use during the whole of the Saxon

period, as were also, it may be presumed, most of the other roads, or streets, as they were called, with which the country was antersected in all directions. And besides the maxigable rivers, it has been supposed that artificial canals were ent in some places, A canal in Huntingdonshire, in particular, ralled Kingsdell, is mentioned in the Saxon Chromele under the year 963; and several of the boundary ramparts, erected pranually for the purposes of defence, appear to have had wide ditches, along which boots might be dragged. The subject of the Money of the Anglo-Saxons is at some parts extremely perplexed and obscure, The different denominations of money of which mention is found, are, the pound, the mark, the manens, the ora, the shilling, the thrimsa, the secatta, the penny, the triens, the halfling, or halfjenny, the fearthling, or farthing, and the styca, or half-farthing. Of some of these, however, we know with certainty little more than the names.

The first difficulty that occurs is in regard to which of these kinds of money were actual coms, and which were merely nominal, or money of account. Upon this part of the subject, Mr. Ruding, from whom it has received the latest as well as the most claborate investigation, comes, though not without hesitation, to the following conclusion: " That the penny, halfpenny, farthing, and halffaithing were actual coins; as was probably the triens, which divided the penny into three equal parts; and that the mancus, the mark, the ora, the shilling, and the thrimsa, were only money of account; or, that if the maneus was ever current among the Anglo-Saxons, it was a foreign coin, certain that mention is repeatedly made of payments in gold. It is agreed that the penny, the halfpenny, the farthing, and the theus (if that was a com) were all of silver; and that the styca was of copper, or of that metal with an alloy

no Saxon coms have yet been discovered except

some of those last mentioned. Of pennies and stycas some large hoards have been found within

these few years. In April, 1817, a wooden box

was turned up by a plongliman in a field near

denomination either of a coin or of a particular

sum. Others, however, have held that the scentra,

the mancus, the shilling, the thrimsa, and perhaps

of which each coin was made. Mr Ruding is of

opinion, "that no evidence has yet been addised to prove that the Anglo-Saxons struck any gold

money; but that the balance of probability appa-

rently inclines to the determination that no such money was issued from their mints " By others

the manens is supposed to have been of gold; and

Mr. Turner thinks that both gold and silver were

used in exchanges in an incomed state. It is

The next question that arises relates to the metal

also the ora, were all coms.

Dorking, in Surrey, which contained bearly seven hundred Saxon pennies, principally of the comages of Ethelwulf, the son and successor of Egbert, and of Ethelbert, the father of Alfred, but partly also of those of preceding kings of Wessex, of Mercia, and of East-Augha. Eighty-three silver coms of King Ethelred, and two of his father, King Edgar, were found in 1820, by a peasant while digging a woody field in Bolstads Socked, in Sweden, and are now deposited in the Royal Cabinet of Antiquities at Stockholm § And in 1832, a brass vessel containing about eight thousand styeas, prancipally of the kings of Northumberland, was found at Hexham in that county. About five thousand of them were recovered from the persons into whose hands they had fallen; and a selection of about three hundred of them is now in the British Museum |

But the most important, and unfortunately also the darkest question of all, is that of the determination of the value of these several coms or denominations of money. There has been the greatest doubt and difference of opinion both as to the absolute value or weight, and as to the relative value, of nearly every one of them. Almost the only thing which is perfectly certain is, that the pound was always understood to be a full pound of silver. It appears, however, to have been not the common troy pound, but another measure, long known in Germany by the name of the Cologue pound, and used in this country as the Tower or Mint weight down to the reign of Henry VII was three quarters of an onnce less than the pound \* Annals of the Comage, 1 316 (Edit of 1819)

and was never initiated in their mints "\* There

18 no doubt that the pound was merely money of account. The scenta seems to have been rather a general expression for a piece of money, than the

HISTORY OF ENGLAND. troy, and was equal, therefore, to only eleven onnees

means a pound of silver of any denomination; but

the old relation between the pound and the penny,

it will be remarked, is still preserved—the value

of the pound is still 240 pence. A few passages

in old writers and documents have inclined some

antiquaries to suspect that the Saxons had two

kinds of pennies, a greater and a less; but, on the

whole, this notion does not seem to be tenable.

weigh about 111 of our grains, and the fcorthling,

or farthing, about 5\frac{1}{8}. But no Saxon farthings

272

and a quarter troy weight, that is, to 5400 grams.

Out of this amount of silver, throughout the whole Saxon period, the rule seems to have been to coin 240 silver pennies, each of which would

therefore weigh 221 of our grains. Accordingly,

this is about the average weight of the Saxon pennes that have been found. Our present pound no longer

another only four pennics; if there were not indeed two sorts of slullings circulating together of these different values. \* When the shilling contained

five pennies its value was the forty-eighth part of the pound, or  $112\frac{1}{2}$  grains troy of silver; when it contained four pennies only, it was the sixtieth part of the pound, and its value was only 80 grams troy of silver. The principal evidence for there ever having been a shilling containing only four pennics is a law of Athelstan, in which 7200 shillings are distinctly stated to be equal to 120 pounds; in which ease there must have been sixty shillings in

each pound. But there is equally good evidence

conclusion that the shilling was not a coin, but only

a denomination of money of accompt. At one

time it appears to have contained five, and at

that five pennies was the value of the shilling both before and after the time of Athelstan; and it has therefore been supposed that the shilling was depreciated by that king, and afterwards restored

[Book II.

to its ancient value. In the laws of Canute the shilling appears clearly to be reckoned the fortyeighth part of the pound; and Elfric, the grammarian, who wrote in this age, expressly states that there were five pennics in the shilling.

If the mancus ever was a coin, Mr. Ruding is

of opinion that it became latterly merely a deno-

mination of money of accompt. The commonly received etymology of the word, from the Latin manu cusum, struck with the hand (though this ctymology may be doubted), would seem to favour the notion that it had been a corn at one time; but as we find the maneus of silver mentioned as well as the manens of gold, it must be concluded that the name came to be afterwards used as that simply of a certain sum, for it is improbable that any comwas in use of so large a size as a silver mancus would have been. The value of the manches is stated by Elfric to have been thirty pennies, in the same passage in which he states five pennies to

have made a shilling. The mancus, therefore, conon the whole, to be tolerably well made out, and at tained six Saxon shillings, or was of the value of 675 grains troy of silver, being rather more than is contained in seven of our present shillings. It is observable that a gold coin, sometimes called a mancus, in other cases known by other names, circulated during the middle ages in many countries both of Europe and the East, the weight of which was 56 grains troy, which would be just about the weight of gold equivalent to thirty Saxon pennies, on the supposition, which other considerations render probable, that the relative value of gold and silver was then as twelve to one. Of this weight were the maneuses or ducats of Italy, Germany, France, Spain, and Holland, the sultani of Constantinople, the sequins of Barbary, and the sheriffs of Egypt. The mark used to be supposed the same with the mancus, but this opinion is now quite exploded.

The mark appears to have been a Danish denomination of money, and to have been introduced into this country by the Danish settlers, the first men-\* Mr. Ruding is inclined to think that this was the case. See his Annals of the Coinage, i. 310.

The name of the penny in Saxon is variously written,-peneg, penig, peninc, pening, penincg, penning, and pending. Supposing the value of the penny to have been thus ascertained, we have obtained that also of each of the inferior coms. The halfpenny, which, as existing specimens show, was also of silver, would

have been discovered, and we do not know whether the com was of silver or copper. The styca was of copper much alloyed, in other words, of bronze; but, as it was the half of the farthing, its precise value would be estimated at  $2\frac{1}{16}$  grains of silver. All the stycas that have yet been found are from the mints of the Northumbrian kings and the Archbishop of York; but the circulation of the coin appears to have been general throughout England. If there were such coins as the thrimsa and the triens, the former at least was probably of silver The value of the thrimsa seems to have been three pennies, or 67½ grams of silver; that of the triens, the third of a penuy, or 7½ grains of silver. These conclusions, as we have intimated, are not unattended with some difficulties; but they seem,

any rate it would only embarrass the statement, without adding any information of the least interest or value for our present purpose, to enter upon a discussion of the doubts or objections that have been raised upon certain points One of the main linges on which the investigation of the subject of the Saxon money turns is

the question of the nature and value of the shilling. The Norman shilling, like that of the present day, was the twentieth part of the pound, and consisted of twelve pence; and this is the scale according to which the payments in Domesday Book are commonly stated. The seill or seilling of the Saxons is the denomination of money most frequently mentioned in their laws and writings, and it appears to have been that in which sums were usually reckoned; yet no Saxon shilling has ever been found, and the different ancient accounts and computations in which it is mentioned seem to be only reconcilcable upon the supposition that it was of fluctuating value. Both these facts go to support the

tion of it being found in the articles of agreement between Alfred and Guthrun. Some of the notices would seem to imply that, at first, the mark was accounted equivalent in value to only a hundred Saxon pennies; but it certainly came eventually to

NATIONAL INDUSTRY.

CHAP. IV.]

be estimated at one hundred and sixty pennics, that is, at two-thirds of the pound. Two-thirds of a pound is still the legal value of a mark. The mark, therefore, may be set down as of the value of 3600 grams troy of silver. The mark has never been supposed to be a real com, except by those who have taken it for the same with the mancus. The Styca, . . . . Copper Coin, . . . . equivalent to about The Saxon coins are generally sufficiently rude in workmanship; and this circumstance has been used as an argument to prove that the Saxons brought the art of coining with them to Britain from Germany, and did not acquire it by imitation of the Roman models. The earliest Saxon com that has been appropriated is one misilver (a penny apparently, though commonly called a sceatta) of Ethelbert, king of Kent, who reigned from 561 to 616, the patron of St. Augustine, As the comdoes not exhibit the usual Christian symbol of the cross, it may be presumed to have been struck before the year 597, in which Etbelbert was bap-According to Mr. Ruding's description, "it hears on the obverse the name of the monarch, and on the reverse a rude figure, which occurs on many of the secattre, and which is supposed to be intended to represent a bird." But other coms that exist without names, or with names that cannot be deciphered, may be older than this. Besides the kings of the different states of the Heptarchy, and afterwards of all England, the Archbishops of Canterbury and York had muits and issued money in the Anglo-Saxon times. In addition to the name of the king or the archbishop, the coins usually contain that of the moneyer by whom they were struck,

and from the time of Athelstan also that of the

town where the mint was situated. The later kings

appear to have usually had numerous moneyers,

of the relative values of gold and silver) nine shillings and fourpence-halfpermy of our present money. Thus St. Donstan is recorded to have purchased the estate of Hindon (now Hendon), in Middlesex, from King Edgar, for 200 gold byzantmes, and then to have presented it to the monks of St. Peter in Westminster.\* There were also silver byzantines, which, according to Camden, were valued at two

shillings each. At an early period even some of the Roman imperial money might remain in use.

"That gold and silver," Mr. Turner remarks,

" had abounded in the island while it was pos-

sessed by the Romans and Britons, the coins that

HISTORY OF ENGLAND.

properties.

coms have the figures of cattle stamped on them; and in some languages money was actually called

Thus pecus, cattle, is the origin of the Latin pecuria, money, and of our English pecuriously. The same thing is very curiously shown by the history of another still existing term, the word mutet, meaning a fine or pecuniary penalty. Mulet is a translation of the Latin muleta, or, as it is more properly written, multa, which was an ancient Roman law-term for a fine, but which the Roman lawyers and antiquaries themselves, as we learn from Aulus Gellius, admitted to have originally meant a sheep, or rather a ram. Varro asserted that it was a Samnite word, and that the Sammtes, the descendants of the old Sabmes, had used it in that sense within his own recollection. It is remarkable that the original word still survives, in its original signification, in the Celtic dialects of 1re-

land and Scotland, in the former of which a wether is to this day molt, and in the latter mult.\* Hence, in fact, come the French mouton, and our English mutton. The Anglo-Saxons, it would appear, although they had metallic money, had not completely passed out of the state of only commencing civilization in which cattle serve the purposes of money. A certain value seems to have been affixed by the law to horses, cows, sheep, and slaves, at which they might be seized by a creditor in payment of a debt due to him; and it is supposed that all kinds of fines, or pecunoary penances, unposed either by the state or the church, might be discharged either in dead or living money. church, however, which to its honour from the first opposed itself to slavery, and greatly contributed by its systematic discouragement, and resistance to put down that evil, early refused to accept of slaves instead of money in the payment of penances. the parts of Britain not occupied by the Saxons, it may be doubted if during the present period any metallic money was comed. No coins either of Scotland or of Wales of this antiquity have ever been found. Considering the intercourse, however, that in the later part of the period subsisted between both of these countries and England, it is impossible to suppose that, although they may not have minted any money themselves, they could be unacquainted with its use. A few of the Saxon coins probably found their way both to the Welsh and Scotch, and supplied them with a scanty, circulation. Welsh laws indeed show that the denominations, at least of money, were familiarly known to that people; but they seem to show, also, by the anxious minuteness with which they fix the price of almost every article that could become the subject of commerce, that a common representative of value and medium of exchange was not yet in common use. These Welsh laws, for instance, in one section, lay down the prices of cats, of all different ages, and

Grant's Origin and Descent of the Gael, 145.

thus settled by the law, it may be presumed that the prices assigned are those generally borne by the commodities at the time; and in this point of view the law becomes of historic value as a record of ancient prices. Thus, from one of the Saxon laws of King Ethelied we learn that in England the common prices of certain articles, about the end of the tenth century, were as follows:equivalent to 2 16 3 sterl. Mare or calt Twenty shalings, 0.14 1 Ass or mule Ov . . . Sox shillings Cow . . . Five shilling 04 1 10± Same Sherp Two pennies We are not to suppose, however, that these legal rates were always adhered to m actual sales and purchases. The prices of all commodities among the Saxons, no doubt rose and fell us they do at present, and with much more suddenness and vio-

[Book II.

This may be regarded as a rude

attempt to provide a substitute for batter without a

coinage; but the system which it would aim at

establishing is in reality anything rather than an

real price, or exchangeable value, of a commodity,

depending as it does upon a variety of circumstance s

which are constantly in a state of fluctuation, is

essentially a variable quantity, and we can no more

fix it by a law than we can fix the wind. A law,

therefore, attempting to fix it would only do injustice

and mischief; it would, in so far as it was operative,

merely substitute a false and unfair price of com-

improvement of simple, unregulated barter.

lence than now; for, in that rude period, from the scarcity of capital, and the comparatively little communication between one place and another, supplies of all kinds were necessarily much more imperfectly distributed than they now are over both time and space; and any deficiency that might, from any cause, occur, was left to press with its whole severity upon the particular moment and the local market, without the greater abundance of other places or other seasons being admitted to relieve it. Comparative, though not absolute steadiness of prices, or at any rate a steady and calculable, in hen of an irregular and jolting movement of prices, especially of those of the great necessaries of subsistence, is, on the whole, the accompaniment of an advanced civilization, the general character and result of which, indeed, may be said to be to repress irregularities of all kinds, and to bring all social processes nearer and nearer to the equability of those of mechanics. Several of the articles enumerated in the above list, we find mentioned elsewhere, as bearing a variety of other In one case, for instance, we find a slave purchased for half a pound; in another, for an yre of gold (the amount of which is not known); in another, for three maneuses, or about a guinea; in another, for five shillings and some pence.\* with a most elaborate discrimination of species and

· See these instances collected by Mr. Turner, from Hickes and

other authorities, in Hist. Ang. Sax. in. 90.

sides the price, the toll was paid. "The tolls mentioned in some of the contracts for slaves," observes Mr. Turner, "may be illustrated out of Domesday Book. In the burgh of Lewis, it says, that at every purchase and sale, money was paid to the gerefa: for an ox, a farthing was collected; for a man, four pennies." Slaves, of course, differed very considerably from one another in real value. On the other hand, the same sum at which a sheep is here rated at the end of the tenth century, appears to have been also its legal price three hunthed years before. At least, in the laws of Ina, king of the West Saxous, who reigned at the close of the seventh century, a sheep with its lamb is valued at a shilling. In another of lua's laws, the fleece alone is valued at two pennies, that is, at two-fifths of the price of the entire sheep and lamb. This high price of wool, as has been mentioned above, is accounted for on the supposition that there was some foreign trade in that commodity in the Anglo-Saxon times. By a law of Edgar, in the latter balf of the tenth century, the highest price which could be taken for a weigh of wool was fixed at half a pound of silver; "being," observes Mr.

Macpherson, "if the weigh contained then, as now, 182 pounds of wool, near three-fourths of a (Saxon)

penny (equivalent to nearly twopence in modern

money) for a pound; a price which, as far as we

are enabled to compare it with the prices of other

Of the prices of other articles, however, in the

articles, may be thought high."\*

Anglo-Saxon times, with the exception of articles of agricultural produce, we scarcely know anything. Money being then comparatively scarce, the prices of most commodities were of course much lower than they now are—that is to say, they might be purchased for a much smaller amount of money. But there is no umform proportion between the prices of that period and those of the present day, some things being nominally dearer than they now are, as well as many others nominally cheaper. Books, for instance, were still scarcer than money; and accordingly their prices were then vastly higher than at present. We shall have occasion in the next chapter to mention some of the prices that were given by the Anglo-Saxons for books. It follows, that no correct estimate can be formed of the proportion generally between the value of money in those times and its value at present; for the calculation that might be true of some articles, would not hold in regard to others. Some conclusions, indeed, may be deduced from the comparison of the prices both of the same article at different periods, and of different articles during the same period; but these will be most conveniently adverted to in speaking, as we shall now proceed to do, of the several arts or processes of industry of which the commodities in question are the products.

In giving some account of the useful arts during the Auglo-Saxon period, it is searcely possible to Annals of Commerce, i. 288.

exhibit a sketch of their progressive state from its commencement to its close; and yet, during the lapse of six centuries, external circumstances, varying in their character and in the influence which they exercised, must, no doubt, at certain times, have given an impulse to industry, while at others the arts were repressed or continued in an unimproving and langual state. But of may safely be concluded that, on the whole, the various arts which contribute to the comfort or embellishment of life were in a state of greater advancement during the reigns of the last Anglo-Saxon monarchs than they could possibly be under the fierce domination of their restless and warbke ancestors who overran the island in the fifth cen-Still the extent of that improvement which undoubtedly took place, was small considered with reference to so long a period, though it was as considerable as could be expected under the circumstances of the times. The last fifty years have produced in our own day greater changes, as compared with the period of similar length by which it was immediately preceded, than all the social changes which occurred during the Anglo-Saxon age, even when the extreme points, which offer the most striking contrasts, are compared with each other. The influence of order and the laws may be supposed in ordinary circumstances to have gradually mereased in efficacy; and inder this protection men would pursue their avocations with augmented security both of life and property; but there was nothing which could act with sudden and electric power on the nation, or quicken into fuller life and activity the germs of civilization which were advancing with such slow development. In all the means by which a people can be sus-

tained in a state above want, and supplied with food, shelter, and clothing, the Saxon invaders were inferior to their immediate predecessors in the occupation of the island, the Britons, who had derived their knowledge of the arts by which this is accomplished from the practices of their Roman conquerors. The produce they raised from the soil was sufficient not only for the communition of the inhabitants of Britain, including a considerable non-agricultural population, but a surplus remained which was exported to Rome. Agriculture had been benefited by the improved methods of cultivation employed by the Romans ; and when they left the island, it was capable of diffusing considerable wealth. But the incursions of the northern barbarians and the rayages which they commutted in the better cultivated districts of the south, were calculated to act with most fatal effect on agricultural industry, and to weaken the stimulus to exertion by frequent and often successful attempts to rob the cultivator of the fruits of his labour. The advancement of agriculture as an art it would be hopeless to anticipate under such discouragements, and, judging only by the known operation of human motives, its decline would be inevitable, as all the best allurements to industry would be taken away, and it was verging to that point when the land would be tilled

a narrow subsistence. Such was the state of agriculture when the Britons invited over the Saxons;

and from them they could derive no improvements in this useful art, even if their protection had enabled it to recover from the depressed condition in which it was placed by the ravages of the Picts previous to their arrival. But the subsequent proceedings of the Saxons, by engendering acts of rapine and warfare, still further oppressed industry. When, however, the Saxon invaders had become dominant, they applied themselves to the cultivation of the soil, and the Britons in all probability were to a great extent their servants as well as their agricultural teachers. From this point agriculture began to emerge into that state in which we find it during the Anglo-Saxon period. Leaving these general views we proceed to notice the few facts relative to the state and practice of agriculture,

and the other useful arts which have been handed

down to us on good authority.

The great bulk of the Anglo-Saxon population were engaged in producing food. A considerable portion of each estate was woodland, which furnished a supply of fuel and timber for building; and farms generally, though varying in size, were divided as at present, though in different proportions to those which now prevail, into meadow, pasture, arable, and woodland. Though the last-mentioned description of land was everywhere in the greatest abundance, the laws carefully protected both timber and growing trees, a wite, or penalty to the state, of thirty shillings being incurred by each offence, besides a payment of five shillings for each large tree that was cut down, and five pennies for every other; these two latter sums being probably an approximative estimate of the damage committed. The value of a tree appears to have been determined by the number of swine which could be gathered under its branches. The boundaries of property were accurately defined, and were indicated by a ditch, a brook, a hedge, a wooden mark, or some other prominent object. are mentioned, so that the inclosures were protected from the devastations of cattle. This was only necessary in the case of their arable land and that from which they obtained their crops of hay. There are many regulations concerning the pasturing of cattle in the Anglo-Saxon laws. In Wales, as appears from the Welsh laws,—and the case was probably the same in England,—the common lands were pastured by the cattle belonging to several owners under the direction of a neatherd and his assistants. Pasturage, indeed, is the most important department of rural economy when agriculture is in a rude state. "The English people," says Stow, referring to this period, "might have been said to be graziers rather than ploughmen, for almost three parts of the kingdom were set apart for cattle." This must necessarily be the case when cattle run on the uncultivated lands, and require merely the superintendence of a neatherd or shepherd. A very trifling amount of labour is

demanded compared with that which arable land requires. It is not profitable under these circumstances to fatten cattle at a great cost with the produce of cultivated land, and hence cattle generally form the chief wealth of a people who have not unade much progress in agriculture. This was the case of the inhabitants of Britain under the Roman domination, and it had not become altered in the Angle-Saxon times. But though eattle formed a large proportion of the property of an Anglo-Saxon landed proprietor, an erroneous idea is aut to be formed of the degree of wealth which the possession of this description of agricultural stock implies, They were abundant because land was exceedingly cheap. An acre of land appears to have been frequently sold for the price of four slicep. Those annuals which could feed on waste and common lands were cheap, while such as it was necessary partly to support by the produce of kind-cultivated for the purpose were disproportionately dear. A cow, as we have seen, was of six times less value than a horse, and an assor buile was double the price of an ox. The value derived from neat stock must have been small, and the system of managing them very imperfect, when ewes were milked for the sake of the cheese which was made from their nulk. The month of May was, however, denominated Trundchi, because they commenced milking their cattle three times a-day. To keep hie stock during a long winter is sometimes a difficult task in the present day, with all the natural and artificial aids obtained from grasses of a more valuable kind, better and larger crops of hay, green food m winter, and various modes of preparing artificial food; but when none of these improvements existed, it may easily be conceived that cattic, although in large herds, would not be so productive of wealth as their numbers might lead us at first to suppose. The practice in the Hebrides within the last half century probably resembled in many points this department of Anglo-Saxon husbandry. It was as follows, and the results would doubtless be somewhat similar in the case of the Anglo-Saxons:-"With the exception of the milch-cows, but not even of the calves, they were all wintered in the If they were scantily fed with hay, it was coarse and withered, and bulf rotten; or if they got a little straw, they were thought to be well taken One-fifth of the cattle, on an average, used to perish every winter from starvation. When the cold had been unusually severe, and the snow had been long on the ground, one-half of the stock has been lost, and the remainder have afterwards been thinned by the diseases which poverty had engendered."\* Dr. Walker + adduces a fact which shows that there may be a large amount of live stock existing at the same time with an unproductive and poor system of husbandry:-"A farm in Kintail was found to have on it 40 mileh cows, which, with their young stock, from a calf to a four-year old, made about 120 head of cattle; besides 80 Cattle; Lib. of Useful Knowledge, p. 67.

BOOK II.

<sup>†</sup> Agricultural Survey of the Hebrides.

ewes and 40 goats, which, with their young, were about 250; and 10 horses. Yet this farm, with arable land sufficient to supply all the family, was rented at 201, a-year." This was about the year The Saxon Chronicle mentions several years in which there was an extraordinary mortality among cattle. The year 897 and the two previous years were thus remarkable, The year 986 is noted for the great nurrain of cattle; and in 1041 it is stated that more cattle died, either owing to various diseases or the severity of the weather, than any man ever remembered. In 1054, the writer of the Chronicle states, "was so great loss of cattle as was not remembered for many winters before." There can be little doubt that the Anglo-Saxon system of cattle husbandry was exceedingly imperfect, that every year probably some loss was sustained in consequence, and that on the whole it bore considerable rescriblance to that which up to a recent period existed in the Hebrides. Cattle were, however, fattened for slaughter. Two fatted cows are mentioned, in an existing Anglo Saxon manuscript, as forming a portion of the annual rent paid for the occupation of land.\* The possessions of the Anglo-Saxons in swine

were, there is reason to believe, as available, or at least nearly so, as their herds of neat cattle, in furmshing them with supplies of flesh-meat. The sheep, it has already appeared, was prized chiefly on account of its fleece, which was valued at two-fifths of the price of the whole sheep. There are several additional facts which denote that it was less on account of their flesh than for the materials for clothing which the fleece afforded, that sheep were bred and reared. The average price of a slicep was about four shillings; but the value which it would bring varied of course according to the season, and until a fortinght after Easter it was not considered worth more than a shilling. The fleece was not to be shorn until Midsummer, and from Easter until this period it was gradually increasing in value, owing to the increase of the wool, until it reached its highest price, just before the time of shearing. On the other hand, swine were of no value except as food, and yet they were kept in great numbers during the whole of the Anglo-Saxon times, and none of the common occupations of husbandry are more frequently mentioned than that of the swineherd. They could be driven into the woods and on the waste lands equally well with neat cattle; and the food which they picked up there-the oak and beech-mast-was much superior for its fattening effects to that which was the spontaneous growth of the pastures in which eattle were fed. Swine could therefore be fattened on what may be regarded as the surplus bounty of nature, while cattle could only be rendered fit for slanghter by a more expensive process—the consumption of cultivated produce, the fruits of much

Turner's Anglo-Saxons, ii. 547 (5th edit.).
† The word bacon is said to have been applied to the flesh of the swine, from this custom of feeding the animal on beech mast, the ancient name of which was bacon.—Verstegan's Restriction of Decayed Intelligence, p. 331.

BIATING ACORNS FOR SWIEL. Cotton MS.

Great numbers of swine thereprevious labour. fore were naturally kept, as they were a stock casily provided for, and supplying nutritions food at a small expense. In Domesday Book pannage (swine's food) is returned for 16,535 hogs in Middlesex; in Hertfordshire for 30,705; and in Essex, which was one continued forest, for 92,991. In the will of a nobleman two thousand swine are left to his two daughters; another nobleman gives to his relations a hide of land with one hundred swine, and he directs two hundred swine to be given to two priests an equal proportions for the good of his soul. An individual gives land to a church on condition that two lumdred swine are fed for the use of his wife. Besides the live stack already mentioned, they had goats, geese, and fowls.

The nrable portion of an estate was generally situated nearest to the dwelling-house as a matter of convenience. It produced but a small portion of what it was capable of doing under a better system of cultivation, but still sufficient to supply corn for bread; and after this article of primary mecessity had been provided for, there remained grain for the purpose of making their favourite drmk. Their bread was made of barley as well as

The use of mail as a manure had been known in Britain under the Romans, and a marl-pit is alluded to in an old Anglo-Saxon conveyance; but the successful application of mannes is only of modern introduction in British agriculture. The state of cultivation in some parts of Scotland before the Union may, perhaps, be taken as an illustration of its condition in England before the Con-The lands which were kept manned quest. did not amount to a third or a fourth part of the whole farm, and sometimes did not equal

a fifth or a sixth.

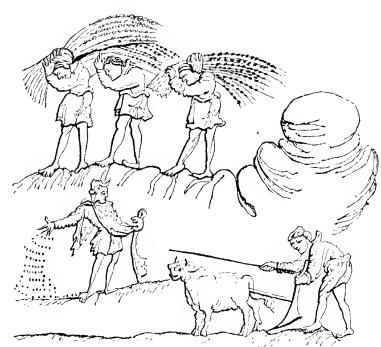

vated when that part of the farm which had been for some time arable was exhausted of its natural fertility.\* A great breadth of land was required to supply the wants of a small number of consumers, as the relative quantity of produce was small, though at the same time the labour and cost of cultivation were proportionably low. Famines, were frequent; but these were a consequence of imperfect social relations, the want of intercourse which prevented men from being mutually acquainted with each other's wants, the non-existence of a class of individuals who busied themselves in attending to the means for obviating these events,

\* Smith's Wealth of Nations, book i, chap, ii.

The remainder was culti-

The Saxon Chronicle mentions several of these periodical visitations. In 793 a great famine took place. In 975, to use the expressive words of the Chronicler, "famine scoured the hills." In 976 it is briefly stated that "this year was the great famine in England; so severe that no man ere remembered such." In 1040 "rose the sester of wheat to fifty-five pence, and even farther." In 1044 the following notice occurs:—"This year there was very great hunger all over England, and corn so dear as no man ever remembered before; so that the sester of wheat rose to sixty pence, and even further."

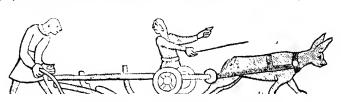

In the Anglo-Saxon times, as in every country

PLOUGHING, SOWING, AND CARRYING CORN. Haileian MS., 603.

in which agriculture is not in an advanced condition, seed-time and harvest were almost the only seasons of exertion. There was not room for that continuous labour which is required when a great number of intermediate operations are practised; but the division of employments existed to some extent,

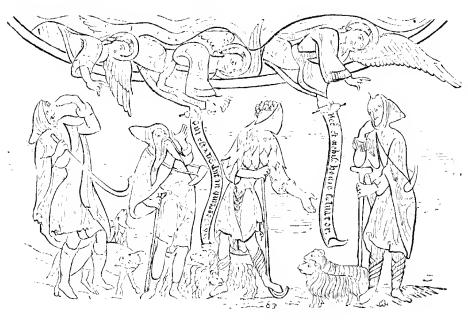

and on a considerable estate the services of the hinds were carried on under the eye of a steward or bailiff. The duties of the cowherd were distinct from those of the ploughman. The latter went out to his labours at day-break, attended by a boy to drive the oxen. Four oxen usually, but sometimes fewer,

WHEEL-PLOUGH. From the Bayeax Tapestry.

were yoked to the plough. When the cattle were not turned out, as was the case in the winter, the plonghman attended to the feeding and watering of the oxen in the stable; but in the summer season they were committed to the care of the cowherd at the close of the day's labour, and were driven by

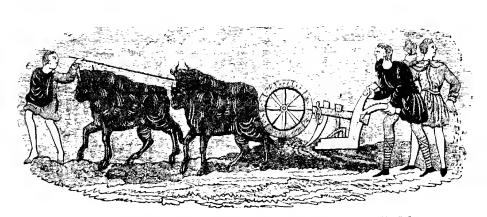

him to the meadows, and, for fear of thieves, he attended them during the night, and in the morning drove them to the plough. Horses were not employed in field labour, but only oxen, the use of horses being prohibited. We have some account, also, of the occupation of the shepheid.

COSTUME OF SHEPHLEDS Cetton MS. Nero, C. 1.

Lest his flock should be attacked by wolves, he watched over its safety, attended by his dogs. The sheep were folded, and the folds were at times changed. Twice a-day the ewes were milked, and the cheese and butter were prepared by the shepherd. The swincherd was an occupation as necessary as any of the above. An Anglo-Saxon

manuscript\* contains a series of sketches representing the operations of husbandry during each month in the year. In January the ploughman is pursuing his labours. The plough, drawn by four oxen, which are attended by a driver, is provided with an iron coulter and share, and has

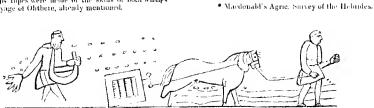

Two-Handed Wheel Plough, Drawn by Four Oxen. Saxon Calendar, Cotton MS. Tib. B. 5.

[Book II.

a wheel attached to the end of the beam. The ropes by which the oxen are attached were made of twisted willows, and sometimes, it appears, of the skins of whales;\* and thus is certainly better than the practice prevailing in the Hebrides not longer ago than 1811, which dispensed with harness Bayeux tapestry, however, shows that, in Normandy harrows were used; and there can be little

doubt that, at the same period, they were employed in England, though in the ninth century agriculture may have been practised in so loose and slovenly a manner as to unit their use altogether. The plough-beetle, in the hand of the ploughman above represented, used tor breaking clods of earth, is mentioned in the list of 'busbandry furniture' by Tusser. It had not wholly gone out of use in some parts of the country so early as twenty-five years ago—the February the husbandmen are engaged in trumining plants, some of which rescrible vines, and in loosening the earth around their roots.—In March, one

man is digging, another is sowing, and a third is using a pickaxe. Their labours seem to relate to the garden rather than the field. In April, the labours of seed-time being over, the landowner or occupier is regaling his friends, two of whom, who are seated beside him, are engaged in thriking out of horns. In May he goes into the fields to examine his flock previous to the time of shearing. In June the reapers are cutting down the coru.\*

large baskets to the granary; an overseer or steward taking an account of the quantity by notehes cut on a tally.

From these potices some idea may be obtained of the general nature of their field labours. The lands belonging to the church were generally in the best state of cultivation, and exhibited the application of a more intelligent system than those belonging to other landowners. On the church property the woods were better cleared, and the qua\_\_\_ of waste land was smaller. The monks themselves engaged in the labours of the field. Bede, in his late of the Abbots of Wearmouth, tells us that one of these ceclesiastics, "being a

strong man, and of a humble disposition, used to assist his monks in their several labours, sometimes guiding the plough by its stilt or handle, and sometimes forging instruments of husbandry with a hammer upon an anvil." One of the customs of modern tenancy—the principle of which is now carried out still further—existed at this period, viz., that the land should be left in a proper combition on its being given up. Thus, the holder of twenty hides of land was required to leave twelve hides of it sown for the advantage of the succeeding occupant. The implements of husbandry were ploughs, seythes, stekles, spades, axes, pruning-hooks, forks, and flads; and they had also carts and waggons.

PRUNING TRIES. Cotton MS. Julius, A. 6.

The gardens and orchards attached to the mornasteries are mentioned at an early period of Anglo-Saxon history. They produced figs, grapes, nuts, almonds, pears, and apples. The monks did not neglect ornamental planting, and planted herbs and shrubs around the monasteries as well as fruit-

trees. The cultivation of the vine had been introduced by the Romans; and the county of Gloucester, according to William of Malniesbury, was famous for the excellence of its grapes. The management of bees must also have been an object of considerable importance. HISTORY OF ENGLAND.

An account of the productions taised from the soil by the agriculturist necessarily alfords consi-

RAISING WATER FROM A WELL WITH A LOADED LEVER, Cotton MS. Neto, C. 4.

meat was a common article of food. They also reared poultry; and ten geese and twenty hen fowls are mentioned among the articles to be supplied to the lord of the manor by the occupier of a certam quantity of land. Molk, cheese, and eggs were allowed on fast-days. Broth and soups were mode, flavoured and seasoned with herbs. Barleybread, being cheaper, was consumed by a greater number of persons than that made from wheaten flour. The peasant baked his own bread, sometimes probably in an oven, sometimes by toasting, sometimes on a heated plate of oron, placed over the fire. The baker carried on his art in the towns, and in the monasteries it was the business of a particular individual. At the commencement of the Anglo-Saxon period hand-mills were common, but the establishment of water-mills and windfinlls had become general towards its close. occur in which several hundred loaves are paul as a portion of the rent of land. We find an instance of a poor menastery in which the monks could not afford to eat wheaten bread, but were obliged to confine themselves to that made from barley. The monastic establishments were sometimes so poor, at an early period, that even a cheaper food was resorted to than barley-bread. Land is mentioned as being given to one monastery, in order to furnish The latter article was salt, beans, and honey. held in much esteem, and continued to be so until the discovery of the tropical regions of the west afforded sugar from vegetable productions. Herbs, eggs, fish, cheese, butter, and beans, with meat,

constituted the diet of children. The spaces of eastern countries found their way overland, and small quantities were offered as acceptable presents from one person of distinction to another. The want of green food in winter rendered it necessary to provide a supply of salt meat sufficient to last until the pastures again firmshed the cattle with nutritive grasses. The manufacture of salt was conducted by a separate class of men; and in grants and conveyances, vessels for the boiling of salt, wood sufficient to boil salt, and the utensils used, are mentioned. Horse-flesh, which had been eaten by the ancient Saxons, was not rejected by those of Britani until some time after their con-

version to Christianity; but in the eighth century this practice was discouraged, and as it had been declining since the time of Egbert, there can be no doubt but that it soon entirely ceased. Of fish, cels, being caught with the greatest case, were more common as food than other descriptions. They were received in payment of rent, and also offered as presents to the monasteries. Two portions of land, purchased for twenty-one pounds, bring a rent of 16,000 fish annually, Salt-water fish could only have been conveyed far from the coast at a disproportionate cost; and the country being umbrained, the meres, brooks, and ditches offered a receptacle for those which reside in fresh water: and thus the proportion of the latter which would be eaten as food, would probably exceed the conderable insight into the diet in general use. Cattle, sumption of salt-water fish. The fitting out a sheep, and swme were numerous; and, therefore, boat, and providing materials for sea-fishing involved in expense which the limited extent of the market might not justify, except in the vicinity of the most populous places. Fish were taken both by the rod and manets; and amongst those which were an object of pursuit were cels, ecl-pouts, lamprevs, skates, floonders, plaice, haddocks, herrings, salmon, sturgeon, mnmows, porpoises, oysters, cockles, crabs, lobsters, massels, and wmkles. The serfs who were employed as fishermen were conveyed to a purchaser along with the fishery, when the latter was sold. They formed a separate class. The people on the coast of Sussex, who are now the most expert lishermen in the British Channel, were, as we have already had occasion to notice, unable to avail themselves of the riches by which they were surrounded until after the middle of the seventh century. Henry of Huntingdon relates that the Anglo-Saxon knigs were "so generous and bountiful, that they commanded four royal banquets to be served up every day to all their courtiers; choosing rather to have puch superfluity at their tables than the

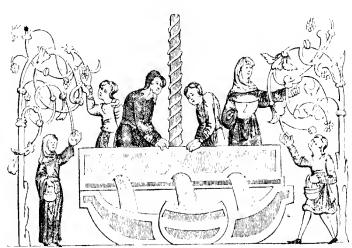

Воок И.

least deficiency." They were, in common with other northern nations, as much devoted to drinking as to the substantial bounties of the table. Their most common drink was ale, prepared as now, from malted barley; and allusions are made in old mamiscripts to three descriptions or qualities, viz., mild ale clear ale, and Welsh ale. Alehouses seem to have been established, as priests were forbidden to frequent the "wine-tuns;" and

DRIBNING FROM COWS HORRS. Cotton MS. Claud. B. 4. other liquors as well as ale were perhaps sold at these places. Mead was, if not more highly prized, at least more costly than ale; and it was the fa-

vourite beverage of the Welsh. Honey, which is the elucf ingredient, generally formed a portion of the rent paid in kind; and in some cases the liquor itself already prepared was required. In case this part of the agreement could not be fulfilled to the letter, the payment was commuted, and two casks of spiced alc, or four casks of common ale, were A lamor received in Ben of one cask of mead. called morat was made of honey, flavoured with the inice of mulberries. Pigment was a sweet liquor, or perhaps cordial composed of lioney, wine and spices. Wine was expressed from the grape by means of a wmc-press, but it does not seem to have been a common drink, and it is not mentioned in the laws of Wales. None but the wealthy, we may suppose, could indulge in these

Wixe Press Cotton MS Claud B.

The comfort even of the best furnished dwellinghouses would have been very incomplete without an abundant supply of fuel, which was obtained from a portion of each estate set apart for the growth of wood for burning and building. also appears to have been in use, and probably coal. In a lease examined by Mr. Turner, the conditions on which it was granted are, the yearly payment of sixty fother of wood, six fother of turf, and twelve fother of græfan, wluch he is of opinion may mean coal. In another lease, amongst the articles mentioned are, five waggons full of good twigs, and every year an oak for building, and others for necessary fires, and sufficient wood for burning; and in one grant is included also wood sufficient to boil salt. Candles made of wax were used in the palace of Alfred, as appears from the story we have related in a preceding chapter, of the contrivance by which he made them serve the purpose of marking the lapse of time, as well as giving light. If this story be correct, we must attribute to Alfred the invention of lanterns; and they

SAXON LANTERN. Engraved in Strutt's Chronicle of England.

286 HISTORY OF ENGLAND. female domestics were employed in spinning and

seem afterwards to have come into common use, and, from the representations of them found in the illuminated manuscripts, to have been sometimes highly ornamented. Candlesticks of bone were used; but we also find that silver candelabra were m use.

The materials used for clothing were, to a great extent, the produce of household industry. The !

was purple, and, within black circles, were worked figures of the peacock. A love of gandy colours is a natural characteristic of a comparatively rude age, and several recorded facts show that the Anglo-

sewing, and there were under each landowner serfs

who were trained to the practice of the most neces-

were attached to the monasteries, and there also

were to be found those who were proficients in the superior departments of art; such as architects, illummators, and workers in gold and silver, as well as carpenters, smiths, shoemakers, millers, bakers, and farming-servants. Females of the highest rank did not disdain the labours of the distaff, the loom, and the needle. The daughters of Edward the Elder were taught to occupy themselves in this manner; and Alfred, in his will, terms the female part of his family the spindle side. The word spinster, applied in the present day to unmarried females, had its origin in an age when the distaff really occupied a large portion of their time. At the same time the art of weaving was sufficiently advanced to give variety to the fabric, whether of linen or woollen, by the introduction of different colours. A robe belonging to Aldhelm

Digated and Spinking. From Cotton MS. Nere, C. 4.

In the first compatiment of this Picture, an Angel is represented in the act of giving a Spade to Adam, and a Distaff to Eve; and the second exhibits the Instruments in use

Saxon mind was deeply imbued with this taste. Bede states that, in St. Cuthbert's monastery, the clothing of the monks was made of the natural wool, and not dyed; but this monastic rule may be regarded only as an instance of what was conceived an act of mortification; and Aldhelm, in a simile in one of his homilies, gives us more information on this point, and also on the art of weaving, than we derive from any treatise professedly on these The virtue which he is panegyrising subjects. does not, he observes, alone constitute a perfect character; and he sustains his argument by stating

the eye and appears beautiful, but one that is woven by shuttles, filled with threads of purple, and many other colours, flying from side to side, and forming a variety of figures and images, in different compartments, with admirable art." This was written towards the close of the seventh cen-

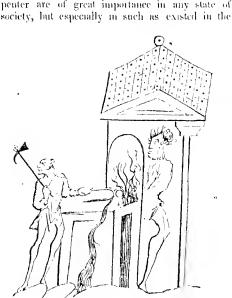

texture, without any variety of figures, that pleaseth

tmy. In an illuminated manuscripts the robes of the four Evangelists exhibit the following colours :--vellow, green, pea-green, purple, blue, red, hlac. The art of dyeing was doubtless in great request, but we possess no accounts concerning the substances which were used. The art of obtaining a scarlet dye from an insect of the cochineal species was discovered about the close of the tenth century.\* Silk was worn only by the most wealthy. The common materials of wearing apparel were linen and woollen. Several articles of dress were derived from the art of the tanner, who seems to have afterwards worked up the leather he had tanned into shoes, ankle leathers, and leathern hose, and to have also made a variety of things which are now obtained from the hands of the saddler and harnessmaker, such as bridle thougs, trappings, halters, and leather neck-pieces; as well as bottles, wallets, ponches, flasks, and boiling-vessels The variety of articles which one class of men were required to make illustrates the imperfect division of employments which existed. The art of taming skins with

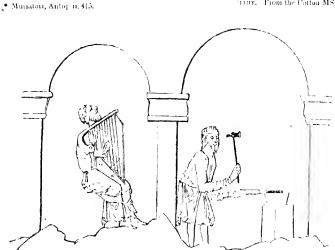

the wool or hair on was also practised. The skins

that "it is not a web of one uniform colour and | of martens, as we have seen, were imported, but a bishop is mentioned who never made use of other for in lining his garments than lambs' skins. Cats' skins were also used.

The handicrafts of the blacksmith and the carpenter are of great importance in any state of

11119. From the Cotton MS B 4.

skill, and are therefore among the first to become separated from other occupations. The implements of the blacksmith were the bellows, anvil, hammer, in and tongs. The number of smiths' forges in the city of Gloucester, in the time of, Edward the Confessor, was six. Iron ore was obtained in several counties, and there were furnaces for smelting.

They demand considerable

Anglo-Sayon times.

The mines of Gloncestershire in particular are alluded to by Giraldus Cambrensis as producing an abundance of this valuable metal; \* and there is every reason for supposing that these mines were wrought by the Saxons, as indeed they had most probably been by their predecessors the Romans. The leadmines of Derbyshire, which had been worked by the

\* Itm, Cambrise, lib. i. c. 5.

Romans, furnished the Anglo-Saxons with a supply

of ore; but the most important use of this metal in the Anglo-Saxon period—that of covering the roofs of churches—was not introduced before the close of the seventh century.\* The ecclesiastics were the most skilful workers in metal, but none were more famous than Dunstan. Edgar had commanded the ..... priest, "to increase knowledge, should diligently leafn some handicraft;" and the wants of the age rendered a compliance with his directions a matter of convenience to the priests themselves, for there did not exist a class of native artificers enpable of executing in a superior manner the ornaments for the churches Bells, images, and crucifixes are among the articles on which their skill was exercised. No vessel made of horn or wood was used in the various offices of the church Precions stones were inserted in their works of silver and gold, to add to their value and beauty. Gold and silver cups, gold dishes, silver basons gilt, gold ruigs, silver mirrors, and bracelets, are among the articles of this description, the manufacture of The art of gilding was

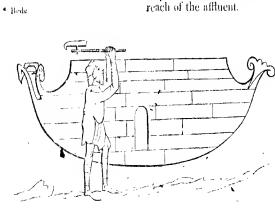

known, and gold and silver thread was made. The art of the coppersmith was also called into requisition. The carpenter was called the treow-wirhta, that is, the tree or wood-worker. Carts, waggons, ploughs, and other implements of agriculture, were constructed by his art, as well as articles of household furniture. The machinery for then corn-mills, though rude, would call into exercise the abilities of the most skilful of this class of artificers. services appear also to have been required in making other four-wheeled carriages besides those required for agricultural purposes. These were doubtless constructed with as much elegance as the workman was capable of giving to his work. The

which is mentioned.

who must have reclined as in a palanquin. Shipbuilding, after the incursions of the Danes directed attention to its revival, was also a most important department of the useful arts. The head of a royal vessel was wrought with gold; the deck was gilded, and the sails were purple. That the useful arts were held in much esteem at a time when they were practised by a comparatively small number of individuals may be readily imagined, as the advantages which they conferred would be the more obvious and striking on this account. The office of king's chief smith was one of considerable dignity. In the court of the kings of Wales his place at table was next to that of the king's chaplain. There were, however, two classes of smiths, those who forged arms and weapons for mulitary purposes, and others who were employed in fabricating the more humble implements of agriculture and articles required for the daily purposes of life; and unhappily the former would enjoy the honours which were due to their more useful bretbren. The above arts may all be considered as of native

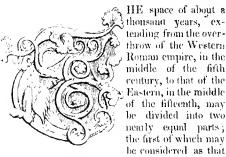

could not apparently contain more than one person,

origin, since they were practised, in however rude a state, from the earliest period. But the art of making glass was not indigenous. In the seventh century the Anglo-Saxons are described by Bede as being "ignorant and helpless" in the manufacture of glass. At that period, however, persons acquainted with the art were brought over from France by Benedict Biscop, the founder of the Abbey of Wemmouth, for the purpose of glazing the windows of his monastery. Our ancestors were initiated into the process by these artificers, and windows and drinking vessels of glass, though they did not become common, were still within

m an Plummation of

## THE HISTORY OF LITERATURE, SCIENCE, AND THE FINE ARTS.

of the gradual decline, the second as that of the gradual revival of letters. The first of these periods, coming down to the close of the tenth century, nearly corresponds with that of the Saxon domination in England. In Europe generally throughout this long space of time we perceive the intellectual darkness, notwithstanding some brief and partial revivals, deepening more and more on the whole, as in the natural day the grev of evening passes into the gloom of midnight. The Latin learning, properly so called, may be regarded as terminating with Boethins, who wrote in the early part of the sixth century. The Latin language, however, continued for some time longer to be used in literary compositions, both in our own country and in the other parts of Europe that

had composed the old empire of Rome.

Of the early British and Irish authors, some of whose works still remain, we have already made mention of the two famous heretics, Pelagius and a his disciple Celestins, who flourished in the fourth century. To the next century belong the great Apostle of the Irish, St. Patrick, from whose pen we have the composition styled his Confession; his friend and fellow-labourer the Irish Bishop, Secundanus, by whom there is extant a Latin poem in praise of St Patrick; and the poet Sedulius, or Shiel, who, although an Irishman by birth, appears to have resided on the continent, and whose various works have been repeatedly printed.\* All these wrote only in Latin, although St. Patrick, in his Confession, apologizes for the rudeness of phrase with which be expressed lumself in that language, owing to his long habit of speaking Irish.

Gildas, our carliest historian, also wrote in Latin. St. Gildas the Wise, as he is styled, was a son of Caw, Prince of Strathelyde, in the capital of which kingdom, the town of Algluvd, now Dunbarton, he was born, about the end of the fifth.

or beginning of the sixth century. Caw was also the father of the famous bard Ancuru. youth, Gildas is recorded to have gone over to Ireland, and to have studied in the schools of the old national learning that still flourished there; and like his brother Ancurm, he also commenced his career as a bard, or composer of poetry in his native tongue. He afterwards, however, was converted to Christianity, and became a zealous preacher of his new religion. The greater part of his life he appears to have spent in his native island; but he at last retired to Armonica, or Little Britain, on the continent, and alied there. He is said to be buried in the cathedral of Vannes \* He is the author of two declamatory efficients: the one entitled a 'History of the Britons,' the other an 'Epistle to the Tyrants of Britain,' which have been often printed. They consist principally of violent invectives, directed both against the Saxons and the author's own countrymen; but they also contain a few historical notices respecting the obscure period to which they relate that are of some

The immediate successor of Gildas among our historians is Nennins, said to have been one of the monks of Bangor, from the massacre of whom in 613 he escaped, and to have written his History of the Britons a few years afterwards. His native name is supposed to have been Ninian, and he was, like Gildas, of Welsh or Cumbrian origin. But there is much obscurity and confusion in the accounts we have of Nennius; and it appears to be most probable that there were at least two carly historical writers of that name. The author of 'Britannia after the Romans,' who has bestowed considerable pains in investigating the subject, supposes that the true work of the ancient Nemnus only came down to the invasion of Julius Cæsar, and is now lost, although we probably have an abridgment of it in the work published under the name of Nemnius, by Gale, in the first volume of the 'Historiæ 'Britannicæ, Saxonica, Anglo-Daniere Scriptores Quandecim' (fol. Oxon. 1691), and commonly referred to as his British History. That performance is stated in the preface by the anthor himself to have been written in the year 858.+

Contemporary with the original Nemius was the Irish Saint Columbanus, distinguished for his missionary lahours among the Gauls and Germans. Columbanus died in 615, at the monastery of

Britannia after the Romans, pp. xiv —xx., and 175-180.
 Ibid. pp. 21, 22.

and then a long poem, Both these performances have been printed. Aldhelm long enjoyed the highest reputation for learning; but his writings are chiefly remarkable for their elaborately unna-

of which he wrote first a copious treatise in prose,

tural and fantastic rhetoric. His Latin style bears a

strong resemblance to the pedantic English, full of

alliteration and all sorts of barbarous quaintness,

that was fashionable among our English theological

in literature is that of Beda, or Bede, upon whom the epithet of the "Venerable" has been justly

bestowed by the respect and gratitude of postersty. All that Bede has written, like the other works

already mentioned, is in Latin. He was born

some time between the years 672 and 677, at

Jarrow, a village near the mouth of the Tyne, in

But the Auglo-Saxon name most distinguished

writers in the reigns of Elizabeth and James 1.

[Book II.

From a passage in his letter to Boniface, it appears that he was acquainted both with the Greek and Hebrew languages; and when it is recollected that he did not leave Ireland till he was

HISTORY OF ENGLAND.

nearly fifty years of age, and that his life afterwards was one of constant netryity and adventure, the conclusion is obvious, that all this knowledge

of elegant literature must have been acquired in the schools of his own country. Such a result from a purely Insh education, in the middle of the sixth century, is, it must be owned, not a little remarkable. Among his extant works are some Latin poems, which, though not admissible of course to the honours of comparison with any of the writings of a classic age, shane out in this twilight period of Latin Interatine with no ordinary distinction." \* Another learned Irashman of this age was St. Cummean, the author of an epistle, still extant, addressed to Segienus, abbot of Iona, in defence of the Roman mode of computing Easter, in which he shows a very extensive acquaintance both with the subject of chronology and with the works of the fathers, Greek as well as Latin. "The various learning, indeed," says the writer we have just quoted, "which this curious tract displays, implies such a facility and range of access to books, as proves the libraries of the Irish students, at that period, to have been, for the times in which they hyed, extraordinarily well turnshed." † To the Irish scholarship of this age may also be regarded as belonging the two Latin lives of Columba; the first by Cummus, who succeeded him as abbot of Iona in 657; the second, which is of much greater length, by Adomnan, who succeeded Cummus in the same office in 679. Both these productions, the second of which in particular is highly carious, have been printed. Their authors, although they resided in one of the North British

islands, were probably Irishmen by birth. school of Iona was at least an Irish foundation. Of the Latin writers among the Anglo-Saxons the most ancient is Aldhehn, abbot of Mahnesbury, and afterwards bishop of Sherborn, who died in 709, and has left various writings both in prose and verse. Aldhelm received his education in part from an Italian monk named Adrian, who had come over to England with Archbishop Theodore, but chiefly from Mailduff, an Irishman, the founder of the monastery of Mahnesbury, by whom he tells us he was thoroughly instructed both in Latin and Greek. Among the studies of his afterlife, he mentions the Roman law, the rules of Latin prosody, arithmetic, astronomy, and astrology. He also wrote a tract on the great scientific question of the age—the proper method of com-

\* History of Ireland, i. 267.

the county of Durham, and was educated in the neighbouring monastery of Wearmouth, nuder its successive abbots Benedict and Ceolfrid sided here, as he tells us himself, from the age of seven to that of twelve, during which time he apphed himself with all diligence, he says, to the meditation of the Scriptures, the observance of regular discipline, and the daily practice of singing in the church. "It was always sweet to me," he adds, "to learn, to teach, and to write." In his nineteenth year he took deacon's orders, and in his thirtieth he was ordained priest. From this

date till his death, in 735, he remained in his mo-

mastery, giving up his whole time to study and writing. His chief task was the composition of

his celebrated Ecclesiastical History of England,

which he brought to a close in his fifty-mith year. It is our chief original authority for the earlier

portion even of the civil history of the Auglo-

Saxons. But Bede also wrote many other works, among which he has himself enumerated, in the

brief account he gives of his life, at the end of has

Ecclesiastical History, which has just been quoted, Commentaries on most of the books of the Old and New Testaments and the Apocrypha, two books of Honnies, a Martyrology, a chronological treatise entitled 'On the Six Ages,' a book on orthography, a book on the metrical art, and various other theological and biographical treatises. He also composed a book of hynns and another of epigrams. Most of these writings have been preserved, and have been repeatedly printed. The first edition of the Ecclesiastical History appeared at Esling, in Germany, in 1474; and there are three continental editions of the entire works of Bede, each in eight volumes folio, the latest of which was published at Cologne, in 1688. Some additional pieces were published at London in a

quarto volume, by Mr. Wharton, in 1693. It ap-

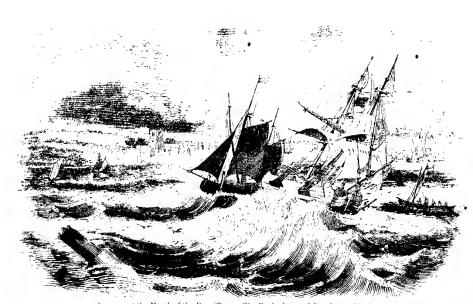

pears also, from an interesting account of Bede's last hours, by his pupil, St. Cuthbert, that he was

engaged at the time of his death in trustating St.

John's Gospel into his native tongue. Among his

last utterances to his affectionate disciples watching around his bed, were some recitations in the

puting Easter. But Aldhelm's favourite subject seems to have been the virtue of virginity, in praise

LARR (w. at the Mow'h of the River Tyne, The Birth place and Residence of Bede.

English language: "For," says the account, " he ! was very learned in our songs; and putting his thoughts into English verse, he spoke it with compunction "

Another celebrated Anglo-Saxon churchman of this age was St. Bomface, originally named Winfuth, who was born in Devoushine about the year Boniface is acknowledged as the Apostle of Germany, in which country he founded various monasteries, and was greatly instrumental in the diffusion both of Christianity and of civilization. He eventually became archbishop of Mentz, and was killed in East Friesland by a band of heathers in 755. Many of his letters to the popes, to the English bishops, to the kings of France, and to the various Anglo-Saxon kings, still remain, and are printed in the Magna Bibliotheca Patrum. may here also meution another contemporary of Bede's—Eddms, surnamed Stephanus, the author of the Latin life of Bishop Wilfrid. Bede mentions him as the first person who taught singing in the churches of Northumberland.

But at this time, and down to a considerably later date, as we have already had occasion to observe, the chief seat of learning in Europe was Ireland; and the most distinguished scholars who appeared in other countries were either Irishmen, or had received their education in Irish schools. are informed by Bede, that it was customary for the English of all ranks, from the highest to the lowest, to retire for study and devotion to Ireland, where, he adds, they were all hospitably received,

and supplied gratnitously with food, with books, and with instruction.\* His contemporary, Aldhelm, in a passage in which he labours to exalt the credit of the English scholars, and especially of his patrons, Theodore and Adrean, yet admits that those of Ireland enjoyed the Ingher reputation, and bears distinct, though reluctant testimony to the crowded attendance of her schools. "Why should Ireland," he exclaims, " winther troops of students are daily transported, boast of such unspeakable excellence, as if in the rich soil of England Greek and Roman masters were not to be had to unlock the treasures of divine knowledge? Though Ireland, rich and blooming in scholars, is adorned like the poles of the world with immune;able bright stars, it is Britam has her radiant sun, her sovereign pontiff Theodore "t - It was during the eighth and the early part of the unith century that the Irish scholars made the most distinguished figure in foreign countries. Vargdius, the bishop of Saltzburgh, famous for his assertion of the existence of autipodes, for which he was denounced as a heretic by his British contemporary Boniface, but was not, as is commonly said, deposed by Pope Zachary, his elevation to the bishopric having, on the contrary, taken place some years afterwards, was an Irishman, his native name having been probably Feargal, or Feargal. He died in 784. Of the learned persons who were attached to the court of France in this age by the munificent pa-

introduction into the theology and metaphysics of

Enrope of the later Platonism of the Alexandrian

school. It is remarkable, as Mr. Moore has

observed, that the learned Mosheim had previously

to have been, the oldest accounts designating limit a Scot, although he has himself told us that he received his education at York. Alemn was appointed by Charlemagne to preside over the semimary established by that emperor out of which the University of Paris is regarded as having grown. At the same time, his friend and fellow-countryman, Clement, was set over a similar institution in Italy. Somewhat later, we find another eminent Irishman, named Dungal, selected by the Emperor Lothaire 1., the grandson of Charlemagne, to superintend the whole system of the Italian universities or public schools. He governed that of Pavia in person; but he is stated to have founded and exercised a general control also over those of I vrea, of Torino, of Ferno, of Verona, of Vicenza, and of Cividad del Frmh, Dungal has left various works, which bear honourable testimony both to his scientific and his literary acquirements. A second Irish Sedulios, the author of a prose Commentary on the Epistles of St. Paul, also appears to have flourished in the early part of the ninth century. He became bishop of Oreto in Spain; and besides his Commentary, is the author of a treatise cutifled 'The Concordance of Spain and Hiberma;' in which he not only mainus the Fish to be Spaniards by origin, but asserts then right to be still considered as merely a division of the Spanish nation. Donatus, who was about the same time bishop of Fiesole, in Italy, was also an Irishman. The only piece of his that remains is a short Latin poem in praise of his native country.\* But the glory of this age of Irish scholarship and genans is the celebrated Johnnes Scotus, or

appellative equally proclaiming his true birth-place. He is supposed to bave first made his appearance in France about the year 845, and to have remained in that country till his death, which appears to have taken place before 875. Erigena is the author of a translation from the Greek of certain mystical works ascribed to Dionysius the Areopagite, which he executed at the command of his pation, the French king, Charles the Baid, and also of several original treatises on metaphysics His productions may be taken and theology. as furnishing clear and conclusive evidence that the Greek language was taught at this time in the Mr. Turner has given a short Irish schools account of his principal work, his Dialogue de Divisione Nature (On the Division of Nature), which he characterises as "distinguished for its Aristotelian acuteness and extensive information." by one place "he takes occasion," it is observed, "to give concise and able definitions of the seven

shown the sindy of the scholastic or Aristotelian philosophy to have been also of Irish origin. "That the Hibermans," says that writer, "wbo were called Scots in this (the eighth) century, were lovers of learning, and distinguished themselves in these times of ignorance by the culture of the sciences beyond all the other European nations, travelling through the most distant lands, both with a view to improve and to comminicate their knowledge, is a fact with which I have been long acquanted; as we see them in the most authentic records of antiquity discharging, with the highest Erigena, as he is as frequently designated,—either reputation and applause, the function of doctor in France, Germany, and Italy, both during this and the following century. But that these Thbermans were the first teachers of the scholastic theology in Europe, and so early as the eighth century illustrated the doctrines of religion by the principles of philosophy, I learned but lately." † And then he adduces the proofs that establish his position. We now proceed to give some account of the Anglo-Saxon language and literature. The Anglo-Saxon language is one of the dialects of the ancient Gothic, which prevailed over all the countries of Europe designated as barbarous by the Greeks and Romans, except those in which the Celtic and Sclavoman were spoken. The three immediate descendant languages from the Gothic were the Anglo-Saxon, the Franco-Theotise, and the old Icelandic. From the Anglo-Saxon the English, and probably also the Lowland Scotch, are descended; from the Francic, the German, and the Dutch; from the old Icclandic, the Swedish, the Danish, the Norwegian, and the modern Icelandic. Of the Gothic itself but a single monument remains, an imperfect copy of \* Turner, Anglo-Sax. iii, 393. † Moore's Ireland, i. 302.

liberal arts, and to express his opinion on the composition of things. In another part he inserts a very claborate discussion on authmetic, which he says he had learnt from his infancy. He also details a

and the German Tenneman agrees with the French Cousin and Guizot in attributing to them a very extraordinary influence on the philosophy of bis own and of succeeding times. To his writings and translations it is thought may be traced the

impossible to discover,

The Saxons were evidently at that time a people without learning, and there is every probability that they were without an alphabet. Till after the arrival of St. Austin we have no monument of their literature. A passage in Bede, which is copied in the Saxon Chronicle, under the year just named, points out the tribes

who in the two centuries which followed Hengist's and Horsa's invasion were called in to complete the Saxon domination. "Then came the men from three powers of Germany; the Old Saxons, the Angles, and the Jutes. From the Jutes are descended the inhabitants of Kent and the Wightware, that is, the race that now dwells in Wight, and that tribe among the West Saxons which is still called the Jute tribe. From the Old Saxons came the East Saxons, the South Saxons, and the West Saxons. From the Angles' land,

which has ever since stood waste between the Jutes

The Song of the elder Caedmon, "On the Origin of Things," preserved in Alfred's Translation of Bede's Ecclesiastical History is one of very few specimens now remaining of the Saxon of the earliest Heofon-rices weard.

bishop of Lindusfarme, about the year 700: there is little in it that is unmitelligible to an English reader. It is preserved in the ancient copy of the Gospels called the Durham Book : +-Fader uren thu arth in heofnum sie gehalgud noma thin; to cymeth ric thin; sie willo thin suchs inheofne & in cortho; hlaf usenne ofer wistlic sel us todaeg; & forgef us scylda usna suæ uæ forgefon scyldgum usum; & ne inlæd usih in costunge uh gefrig usich from yfle.

dialcets: the first, that in use from the arrival of the Saxous till the irruption of the Danes—a period of 330 years—this they term the Anglo-Saxon; the second, which prevailed from the Danish to the Norman invasion, they call the Dano-Saxon;

and the third, which was in fact beyond the limits of the tongue (which was then in a state of transition to the English), they call Normanno-Saxon, and extend it as low as the time of Henry 11.

But these were, in fact, merely successive stages of the language, not dialects. That a mixture of

Danish might be found in the Northumbrian part of England is probable, as the Danes landed so frequently and in such numbers in that country, that they had mixed with the inhabitants; but we agree generally with Raske, that, at least in the Anglo-Saxon works littherto printed, no clear traces are to be met with of anything that can properly be called a variation of dialect.

It follows, with a literal translation in the opposite column — Nit we secolar herran. Now must we praise The guardian of heaven's kingdom, Metodes milite. The Creator's might,

The three, in their thoughts, Praised the Lord, Prayed him to bless The children of Israel, All the land-creation, The Lord eternal, Ruler of nations. Thus they three spake With minds sagacious

Alfred, king, was translator of this book, and

turned it from book Latin into English, as it now is

done. Sometimes he set word by word, sometimes meaning of meaning, as he the most plainly and

most clearly could render it, for the various and

prainfold worldly occupations which often busied him both in mind and body. The occupations are to us

very difficult to be numbered, which in his days came upon the kingdoms which he had undertaken; and

Through the Lord's might,

In help to the holy ones. The hot flame was

Scattered and quenched.

There those bold of deed

Went through the oven, And the angel with them,

There those, bold of mind,

Through common voice.\*

more rightly understand it than he could; for every man must, according to the measure of his understanding, and according to his leisure, speak that which he speaks, and do that which he does, It happened formerly that there was an harper in the country called Thrace, which was in Greece. The harper was inconcervably good. His name was Orphens. He had a very excellent wife, who was called Eurydice. Then began men to say, concerning the harper, that he could harp so that the wood moved, and the stones stured themselves at the sound, and wild beasts would run thereto and stand as if they were tame; so still, that though men or hounds pursued them, they shunned them not. Then said they, that the harper's wife should die, and her soul should be led to hell. Then should the harper become so sorrowful that he could not remain among other men, but frequented the wood, and sat on the mountains, both day and night, weeping and

harping, so that the woods shook and the rivers

stood still, and no hart shunned any lion, nor hare

any hound, nor did cattle know any hatred or any

fear of others, for the sweetness of the sound. it seemed to the harper, that he desired nothing in this world. Then thought he, that he would seek the gods of hell, and endeavour to soften them with his harp, and pray that they would give him back his wife. When he came thither, then should there come towards him the dog of hell, whose name was Cerberus (he should have three heads), and began to wag his tail and play with him for his harping. Then was there also a very dreadful gate-keeper, whose name should be Charon. He had also three heads, and he was very old. Then began the harper to beseech him, that he would protect him whilst he was there, and bring him thence again safe. Then did he promise that to him, because he was captivated with the unaccustomed sound. Then went he further, till be met the grim goddesses, whom the common people called Parca, of whom they say that they know no respect for any man, but punish every man according to his deserts, and of whom they say that they control every man's fortune. Then began he to implore their morey. Then began they to weep with him. Then went he farther, and all the inhabitants of hell ran towards him, and led him to their king, and began all to speak with him, and to pray that which he prayed. And the unstill wheel, which Ixion the king of the Lapithæ was bound to for his guilt; that stood still for his harping. And Tantahis the king, who in this world was immoderately greedy, and whom that same vice of greediness followed there; he became quiet. And the Vulture should cease, so that he tore not the liver of Tityus the king, which before therewith termented him. And all the pumshments of the mhabitants of hell were suspended while he harped before the king. When he long and long had harped, then spoke the king of the inhabitants of hell, and said: Let us give the man his wife, for he' has earned her by his harping. He then commanded him that he should well observe that he never looked backwards after he departed thence, and said that if he looked backwards he should fose the wife. But men can with great difficulty, if at all, restram love. Wellaway! What! Orphens then led his wife with hun, till he came to the boundary of light and darkness. Then went the wife after him. When he came forth into the light, then looked he backwards towards the wife. Then was she immediately lost to him. This fable teaches every man who desires to fly the darkness of hell, and to come to the light of the true good, that he regard not his old vices, so that he practise them again as fully as he before did. For whosoever with full will turns his mind to the vices which he had before forsaken, and practises them, and they then fully please him, and he never thinks of for-

probably written some time in the reign of Canute:— Ic Ælfric munuc & mæsse preest swa theah

Having given specimens of the language from its earliest to its latest use, we shall now take a rapid survey of what is still remaining of the native literature of the Anglo-Saxons, beginning with their poetry as its oldest branch. With the exact laws of their metres we are unacquainted. Their poetical compositions, however,

with those of the Roman alphabet.

strongly rescinble the Rume Odes so admirably imitated by Grav; they are generally more or less marked by alliteration, by a mixture of regular and irregular cadence, by abript transitious, by a frequent omission of the particles, and by an artificial inversion of words and phrases. At a late period, and in a few instances, we have an approach to rhyme. The most remarkable poem in the language is

the Narrative of the attempt of Beowulf to wreck the fighthe or deadly feud on Hrothgar; supposed to be founded upon certain mythic legends of the Angles, and to be far older than the writing of the manuscript which contains the story. eony of this poem, which forms one of the Cottoman volumes (Vitellius, A. xv.), is unique. Wanley first noticed it in 1705; Mr. Sharon Turner made some copious extracts from it in his History of

Æthelmar the thain, whose noble birth and goodness is everywhere known. Then ran it in my nind, I trust through the grace of God, that I ought to translate this book out of the Latin tongue into the English speech, not upon presumption of great learning, but because I saw and heard much error in many English books, which ignorant men, through their simplicity, esteemed great wisdom, and because it grieved me, that they neither knew, nor had the gospel learning in their writings, excopt from those men that understood Latin, and those books which are to be had of King Alfred's, which he skilfully translated from Latin into English. For this reason I took courage, trusting in God, to enter upon this task, and because men have now most need of sound doctrine, especially at this time, which is so near the end of the world, and vexations will torment mankind, before the end is come, as our Lord in his gospel said to his disciples. The reader will remark that the term English is more than once used in this extract to designate the Saxon language; but the same name had been applied to it by Bezle, himself an Angle, three centuries It is impossible also not to be struck with the close resemblance in phrase and style which the earliest and latest specimens of Saxon bear to each other, throughout our selections. The Anglo-Saxon in all these specimens has been given in Roman, not in Saxon characters. With the exception of the

I Ælfric, monk and mass-priest, although a man

of less abilities than are requisite for one in such

orders, was sent in the days of King Æthelred from

Alphege the bishop, the successor of Æthelwold, to a

monastery which is called Cernel, at the desire of

bardment of Copenhagen. Another edition of Beowulf has since appeared, more acceptable to the English reader, in two small volumes, one contaming the text, 12mo. Lond. 1833; the other, a translation by John Mitchell Kemble, Esq., 12mo. Lond. 1837, with a copious glossary, preface, and philological notes. Of similar character to Beowulf is the Fragment on the Battle of Emsborough, first printed by

cation, however, of the entire work-appeared in

4to, at Copenhagen in 1815, with a Latin transla-

tion nearly literal, a preface and indices, from the

was the second time he had translated it, his first version having been burnt in 1807, in the bour-

pen of the late Granm Johnson Thorkelm.

Hickes, subsequently in Conybeare's Illustrations, and lastly with the Traveller's Song, as appendages to Beowulf, by Mr. Mitchell Kemble.

Of the metrical Paraphrase of different parts of Scripture, ascribed to a second Caedmon, we have already spoken. It was first published by Junius, in 1655; and lately, with an English translation, under the auspices of the Society of Antiquaries, by Mr. Thorpe, 8vo. Lond. 1832.

A manuscript volume of Saxon poetry given by the Anglo-Saxons; and an elaborate memoir upon Bishop Leofric to the cathedral of Exeter, about its composition, accompanied by some criticisms the time of the Norman conquest, preserves some and some beautiful translations, was presented to invaluable relies, among which the Song of the the literary world by the late Rev. John Josias Traveller, already mentioned, stands conspicuous. Convbeare, in his Illustrations of Anglo-Saxon This volume, which contains a number of Hymns Poetry, 8vo. London, 1826. CHAP. V.]

MS., Otho A. xii., at the end of John of Glaston's Chronicle; a short Menology, or poetical Calendar, first printed by Hickes, in the Thesaurus, and since separately, with an English translation and notes, by the Rev. Samuel Fox, 8vo. Lond. 1830;

Alfred's Boethian Metres; and some Odes and Elegies in the Saxon Chronicle, in part already referred to, and all translated by Dr. Jugram; form the other chief remains of Saxon poetry. In scriptural learning, we have the Heptatench, with the Story of Job, and the Pseudo-Gospel of

Nicodemus, to which the fragment of Judith,

already mentioned, is added, published at Oxford, in Svo. 1698; the Gospels of the four Evangelists, with the English in parallel columns, edited by John Fove, in 1571, under the auspices of Archibishop Parker; the Gothic and Saxon Gospels, by F. Junius and Marshall, published at Dordt, in 1665, and ugain at Amsterdam in 1684; a Latin and Saxon interlineary version of the Psalms, published from a manuscript in his father's fibrary, by Sir John Spelman, 4to, Loud. 1640; and a Saxon and English Psalter, published from another manuscript, by Mr. Thorpe, two years ago. No other portions of the Saxon Scriptures now remain except a scattered Gloss upon the Proverbs and some excerpts from Ecclesiasticus, preserved among the Cottoman manuscripts. Humphry Wanley,

Saxon and English Psalter, published from another other portions of the Saxon Scriptures now remain except a scattered Gloss upon the Proverbs and some excerpts from Ecclesiasticus, prescryed among the Cottoman manuscripts. Humphry Wanley, Lord Oxford's librarian, selected numerous passages of various parts of Scripture, as quoted in the Saxon Homilies, which still remain in manuscript. Either to enumerate, or enter into the history of the various Saxon Homilies which remain, would occupy a larger space than we can allow. Many of them are not now assignable to any particular author; but the greater part arc known to have issued from the pens of Ælfric and Lupus, the latter of whom was the same person with Wulfstan, archbishop of York, and bishop of Worcester. Orm, or Ormin, is the name of another writer whose hamilies are preserved among the manuscripts of Junius, at Oxford; and Æthelwold, who became bishop of Winchester in 961, occurs as a fourth Homilist, previous, in point of time, From these homilies alone can to the former. the faith and doctrines of the Saxon church be recovered and explained. Celibacy, it appears, though encouraged among the clergy, was not enjoined: the people as well as the priests were allowed the use of the Scriptures in the native tongue; nor had the Saxon church embraced the

doctrine of Transubstantiation. Ælfric's Homilies were principally written at the abbey of Ceruc, in

Dorsetshire. They were compiled from the

writings of St. Augustine of Hippo, St. Jeroni,

Connected with the Homilies are the Injunctions to the clergy, which go by the name of Ælfric's Canons, drawn up for the use of Wulfsm, bishop of Sherburn. As the Homilies contained the form for the clergy to instruct the laity, these supplied the form for the bishops to instruct their clergy, and they afford the most complete view of

the discipline and ceremonies of the Saxon church

sive of those in the Homilies, translated from the

Latin, may be here mentioned, which are still preserved in our manuscript libraries, particularly that

of St. Guthlac, in the Cottonian collection, originally

written about the year 730, by Felix, a monk of

manor of Sudburn, in Suffolk, from King Edgar,

on condition of translating from the Latin the mo-

version formed afterwards the basis of the Concord of Rules promulgated by Dunstan, of which a fine and contemporary manuscript is preserved in the Cottonian Collection. † Previous to that time the Saxon monks lived principally under the rule which had been brought from Ireland.

Among works connected with theology which remain in manuscript only, are versions of Gregory "De Cura Pastorali," of the "Flores ex D. Augustim Soluloquioum Libro," and of the "Libri Dialogorum Gregori Magni et Petri Diaconi ejus." The two first are by King Alfred, who also made the selection of the "Flores:" but the Dialogues of Gregory and Peter Diaconus were

translated by Werefrid, bishop of Worcester, one of the learned men who aided Alfred's studies, by

whom a short introduction was prefixed. Of these

last a beautiful manuscript was all but destroyed in the Cottoman fire of 1731; though other ancient

manuscripts of the Dialogues remain in the Bod-

leian and among Sir William Dugdale's manu-

scripts at Oxford, and in the hbrary of Corpus Christi College, Cambridge. The Bodleian MS. is of the age of Caunte, that in Corpus Christi College a little later than the time of the Conquest.

In Moral Philosophy we have Alfred's version of Boethius "De Consolatione," of which specimens have been already given, but which displays the

\* MS. Lansd. No. 370-374.

version.

1828.

Manuscript, Otho, A. vi., evidently of the ninth century, ascribes it in the procm to Alfred. It was made, we are told, at Woodstock, in Oxfordshire, and so addressed to the passions, as frequently, in the Saxon times, to draw tears from those who read

it. Alfred named it Hand-boc, or the manual. The Saxon was first published in 1698 at Oxford, by Christopher Rawhuson, of Carke Hall in Lancashire, from Junius' transcript of a manuscript in the Bodleian, collated with a Cottoman manuscript. It was again published with an English translation and notes, 8vo. 1829, by J. S. Cardale, who has also given a revised copy of the text. In Civil History we have only one work of pri-

mary importance, the Saxon Chronicle; which is, in fact, a collection of chronicles, rather than one uniform work, continued from time to time, to the year 1154 - A portion of it was first edited under the name of Chronologia Saxonica, at the end of Wheloc's Bede, fol. Camb. 1644; and an enlarged and improved, though still not a complete edition of the work, was published by Edmind Gibson, then a scholar of Queen's College, Oxford, afterwards bishop of London, 4to. Oxford, 1692, accompanied by an elegant Latin version. An English translation from Gibson's edition, by Miss Gurney, of Keswick, in Norfolk, was printed for private distribution in 1819. Lastly appeared the Saxon Chronicle, with an English translation, and notes, critical and explanatory, by the Rev. J. Ingram, B.D. 4to, Lond. 1823—a work of superior value. A synoptical view of the 'different mannscripts of the Chronicle which remain is prefixed, with a short grammar of the Anglo-Saxon language.\* Fox, in his Acts and Monuments of the Church, speaks of having seen a manuscript in Saxon entitled the Story of Alfred, written by Alfred

Bede, formed another of King Alfred's translations. It was first edited by Abraham Wheloc, fol. Cambr. 1644, and again by Dr. John Smith at Cambridge in 1722. A third edition is intended to appear, with an English translation, in the great collection of our historians preparing by Mr. Petric. We have but one specimen of what may be termed the Saxon knowledge of other countries; and for that, too, we are indebted to King Alfred, who epitomised Orosius, the best abridgment of

himself; but no such work is at present known to

of Minister. But the most valuable remains of this period of Irish literature that have come down to us are the various historical records in prose, called the Annals of Tigernach, of the Four Musters

of Ulster, and many others. The most important of

HISTORY OF ENGLAND.

these have been published in the original, and accompanied with Latin translations, in Dr. O'Conor's 'Rerum Hibernicarum Scriptores Veteres,' 4 vols 4to. Buckingham, 1814-1826; a splendid monument of the mumificence of his grace the present Duke of Buckingham, at whose expense the work was prepared and printed, and from the treasures of whose library its contents were principally derived. Tigernach, the oldest of these Irish annalists whose works we have in the original form, lived in the latter part of the eleventh century; but both his and the other Annals profess, and me believed, to have been compiled from authentic records of much greater antiquity. They form undoubtedly a collection of materials in the highest degree precions for the information they supply with regard to the history both of Ireland and of the other early British kingdoms. These Annals differ wholly in character from the metrical legends of Irish history found in the book of Cashel and in the other later compositions of the Bards. They consist of accounts of events related for the most part both with sobriety and precision, and with the careful nota-

temporary and official recorder. They are in all probability, indeed, copies of, or compilations from, public records. Not of such historic importance, but still more curious and interesting in another point of view, are the remains we still possess of the early Welsh literature. The Welsh have no annuls to be compared in value with those of the Irish; but some of their Bruts, or chronicles, fabrilous as they evidently in great part are, are imdoubtedly of considerable antiquity. There can be little doubt that Geoffrey of Monmouth's Latin history is really a translation from a much older Welsh original. The Chromele of Tyssilio, who flourished in the seventh century, still survives, and has been pubhshed in the original (in the Welsh Archaeology), as well as in an English translation, by the Rev. Peter Roberts, 8vo. Lond. 1810. The Laws of Howel Dha, who reigned in South Wales in the carly part of the tenth century, have been printed with a Latin translation, by Wotton, in his Leges Wallice, fol. 1730. They develope a state of society in which many primitive features are strangely mixed up with a general aspect of considerable civilization, and all the order of a wellestablished political system. Then there are the singular compositions called the Triads, which are enumerations of events or other particulars, bound

together in khots of three, by means of some title

or general observation—sometimes it must be con-

fessed forced and far-fetched enough—under which

it is conceived they may all be included. Of the

Triads, some are moral, and others historical. The historical are certainly not all ancient; for

tion of dates that might be expected from a con-

ology of Wales,' 3 vols. 8vo. Lond. 1801. of this carly Welsh poetry is in a strangely mystical style, and its general spirit is evidently much more Drundical than Christian. The author of 'Britannia after the Romans' has endeavoured to show that a revival of Druidism was effected in Wales in the sixth century, principally through the efforts of the Bards, whose order had formerly composed so distinguished a part of that system; and certainly the whole character of this ancient poetry seems strongly to confirm that supposition, which does not, however, rest upon this evidence alone. No existing manuscript of these poems, we may observe, nor any other Welsh manuscript, appears to be much older than the twelfth century. As the forms of the Saxon alphabetical characters are the same with those of the Irish, it is probable that it was from Ireland the Saxons derived their first knowledge of letters. There was cer-

ratively modern character of some of them does

not disprove the antiquity of others. A late writer,

who considers them to be a compilation of the thirteenth century, admits that they "reflect, in a

small and moderately faithful mirror, various pas-

The

sixth century. Augustin is supposed to have established schools at Canterbury; and about a quarter of a century afterwards, Sigebert, king of the East Angles, who had spent part of his carly life in France, is stated by Bede to have, upon his coming to the throne, founded an institution for the instruction of the youth of his dominions similar to those he had seen abroad. The schools planted by Augustin at Canterbury were afterwards greatly extended and improved by his successor, Archbishop Theodore, who obtained the see in 668. Theodore and his learned friend Adrian, Bede informs us, delivered instructions to crowds of pupils, not only in divinity, but also in astronomy, medi-

guages. Bede states, that some of the scholars of

CHAP. V.]

har as their mother tongue. Schools now began to multiply in other parts, and were generally to be found in all the monasteries and at the bishops' seats. Of these episcopal and monastic schools, that founded by Bishop Benedict, in his abbey at Wearmouth, where Bede was educated, and that which Archbishop Egbert established at York, where Alemn studied, were among the most famous, Others of great reputation were superintended by learned teachers from Ireland. We have already mentioned that of Maildulf at Malmesbury, to which Aldhelm repaired after having studied for some time under Adrian. At Glastonbury also, it is related in the life of St. Dunstan, some Irish ecclesiastics had settled, the books belonging to whom Dunstan is recorded to have diligently stir-The northern parts of the kingdom were indebted for the first light of learning as well as of

religion to the missionaries from Jona. It should not seem to be altogether correct to attribute the decline and extinction of this earliest hterary civilization of the Anglo-Saxons wholly to the Danish invasions. The Northmen did not make their appearance tell towards the close of the eighth century, nor did their ravages occasion any considerable public alarm till long after the commencement of the minth; but for a whole century preceding this date, learning in England appears to have been falling into decay. Bede, who died in 735, exactly innety-seven years before that landing of the Danes in the Isle of Sheppey, in the reign of Egbert,\* which was followed by incessant attacks of a simular kmd, until the ficree marauders at last won for themselves a settlement in the country, is the last name emment for scholarship that occurs in this portion of the English annals. The lastorian Malmesbury, indeed, affirms that the death of Bede was fatal to learning in England, and especially to history; " insomuch that it may be said," he adds, writing in the early part of the twelfth century, "that almost all knowledge of past events was buried in the same grave with him, and hath continued in that condition even to our times," "There was not so much as one Englishman," Malmesbury declares, "left behind Bede, who emulated the glory which he had acquired by his studies, imitated his example, or pursued the path to knowledge which he had pointed out. A few, indeed, of his successors were good men, and not unlearned, but they generally spent their lives in an infglorious silence; while

quiet before the spirit of a new and superior activity had been sufficiently diffused among them. Nearly all the monasteries and the schools connected with them throughout the kingdom were either actually laid in ashes by the northern invaders, or were descrited in the general terror and distraction occasioned by their attacks. Alfred was a young man, about the middle of the eighth century, he could find no masters to instruct him in any of the higher branches of learning; there were at that time, according to his biographer Asser, few or none among the West Saxons who had any scholarship, or could so much as read with propriety and case. The reading of the Latin language is probably what is here alluded to. Alfred has himself stated, in the preface to his translation of Gregory's Pastoralia, that though many of the English at his accession could read their native language well enough, the knowledge of the Latin tongue was so much decayed, that there were very few to the south of the Humber who understood the common prayers of the climch, or were capable of translating a single sentence of Latin into English; and to the south of the Thames he could not recollect that there was one possessed of this very moderate amount of learning. Contrasting this lamentable state of things with the better days that had gone before, he exclaims, "I wish thee to know that it comes very often into my mind, what wise men there were in England, both laymen and ecclesiastics, and how happy those times were to The sacred profession was diligent both to teach and to learn. Men from abroad sought wisdom and learning in this country, though we must now go out of it to obtain knowledge if we should wish to have it." It was not till he was nearly forty years of age, that Alfred himself commenced his study of the Before this, however, and as Latin language. soon as he had rescued his dominions from the hands of the Danes, and reduced these foreign dis-

among a race long habituated to a stirring and ad-

venturous life, and now left in indisturbed case and

305

turbers to subjection, he had exerted himself with his characteristic activity in bringing about the restoration of letters as well as of peace and order. He had invited to his court all the most learned men he could discover anywhere in his native land, and had even brought over instructors for himself and his people from other countries. Werfrith, the bishop of Worcester; Ethelstan and Werwulf, two Mercian priests; and Plegmund, also a Mereian, who afterwards became archhishon of Canterbury, were some of the English of whose superior acquirements he thus took advantage. Asser he brought from the western extremity of Wales. Grimbald he obtained from France, having sent an embassy of bishops, presbyters, deacons, and religious laymen, bearing valuable presents to his ecclesiastical superior Fulco, the archbishop of

Rheims, to ask permission for the great scholar to be allowed to come to reside in England.

the far greater number sunk into sloth and igno-

rance, until by degrees the love of learning was

quite extinguished in this island for a long time."

had probably been begun by the confusion of the

internal dissensions that attended the breaking up

· The devastations of the Danes completed what

in other instances, like the bee, looking everywhere for honey, to quote the similitude of his biographer, this admirable prince sought abroad in all directions for the treasure which his own kingdom did not afford.

The works which he is known to have translated from the Latin, after he had acquired that language, have been enumerated in a preceding These labours, so interesting and valuable to posterity, he seems himself to have been half mclined to regard as to be justified only by the low state into which all learning had fallen among his countrymen in his time, and as likely perhaps to be rather of disservice than otherwise to the cause of real scholarship. Reflecting on the crudition which had existed in the country at a former period, and which had made those volumes in the learned languages useful that now lay unopened, "I wondered greatly," he says, "that of those good wise men who were formerly in our nation, and who had all learned fully these books, none would translate any part into their own language; but I soon answered myself, and said, they never thought that men would be so reckless, and that learning would be so fallen. They intentionally omitted it, and wished that there should be more wisdom in the land, by many languages being known." He then called to recollection, however, what benefit had been derived by all nations from the translation of the Greek and Hebrew Scriptures, first into Latin, and then into the various modern tongues; and, "therefore," he concludes, "I think it better, if you think so (he is addressing Wulfsig, the bishop of London), that we also translate some books, the most necessary for all men to know, that we all may know them; and we may do this, with God's help, very easily, if we have peace; so that all the youth that are now in England, who are freemen, and possess sufficient wealth, may for a time apply to no other task till they first well know to read English. Let those learn Latin afterwards, who will know more, and advance to a higher condition " In this wise and benevolent spirit he acted. The old writers seem to state that, besides the translations that have come down to us, he executed many others that are now lost.

It is probable, though there is no sufficient authority for the statement, that Alfred re-established many of the old monastic and episcopal schools in the various parts of the kingdom. Asser expressly mentions that he founded a seminary for the sons of the nobility, to the support of which he devoted no less than an eighth part of his whole revenue. Hither even some noblemen repaired who had far outgrown their youth, but nevertheless had scarcely or not at all begun their acquaintance with books In another place Asser speaks of this school to which Alfred is stated to have sent his own son Aethelweard, as being attended not only by the sons of almost all the nobility of the realm, bu also by many of the inferior classes. It was provided with several masters. The common opinion is, that this seminary, instituted by Alfred, is to be considered as the foundation of the illustrious Uniersity of Oxford.

Up to this time absolute illiteracy seems to have been common even among the highest classes of the We have just seen that, when Anglo-Saxons. Alfred established his schools, they were as much needed for the nobility who had reached an advanced r a mature age as for their children; and indeed he scheme of instruction seems to have been inended from the first to embrace the former as well us the latter, for, according to Asser's account, very person of rank or substance who, either from ige or want of capacity, was imable to learn to read rimself, was compelled to send to school either his son or a kinsman, or, if he had neither, a servant, that he might at least be read to by some one. Anglo-Saxou charters exist, which, instead of the names of the kings, exhibit their marks, used, as t is frankly explained, in consequence of their gnorance of letters.

The measures begun by Alfred for effecting the iterary civilization of his subjects were probably pursued under his successors; but the period of he next three quarters of a century, notwithstanding some short intervals of repose, was on the whole too troubled to admit of much attention being given to the carrying out of his plans, or even, it may be apprehended, the maintenance of what he had set up. Dunstan, indeed, during his administration, appears to have exerted himself with zeal in enforcing a higher standard of learning as well as of morals, or of asceticism, among the clergy. But the renewal of the Danish wars, after the accession of Ethelred, and the state of misery and confusion in which the country was kept from this cause till its conquest by Canute, nearly forty years after, must have again laid in ruins the greater part of its literary as well as ceelesiastical establish-The concluding portion of the tenth century was thus, probably, a time of as deep intellectnal darkness in England as it was throughout most of the rest of Europe. Under Canute, however, who was a wise as well as a powerful sovereign, the schools no doubt rose again and flourished. We have the testimony of the historian Ingulphus, who wrote immediately after the Norman conquest, but whose boyhood coincided with the early part of the reign of the Confessor, that at that time seminaries of the higher as well as elementary learning existed in England. He tells us that, having been born in the city of London, he was first sent to school at Westminster; and that from Westminster he proceeded to Oxford, where he studied the Aristotelian philosophy and the rhetorical writings of Cicero. This is, we believe, the earliest express mention of the University of Oxford.

The studies that were cultivated in those ages were few in number and of very limited scope. Alcuin, in a letter to his patron Charlemagne, has enumerated, in the fantastic rhetoric of the period, the subjects in which he instructed his pupils in the school of St. Martin. "To some," says he, "I administer the honey of the sacred writings;

LITERATURE, SCIENCE, AND THE FINE ARTS.

others I try to incbriate with the wine of the ancient classics. I begin the nothrishment of some with the apples of grammatical subtlety. to illuminate many by the arrangement of the stars, as from the painted roof of a lofty palace." In plain language, his instructions embraced grammar, the Greek and Latin languages, astronomy, and theology. In the noem in which he gives an account of his own education at York, the same writer informs us that the studies there pursued comprehended, besides grummar, rhetoric, and poetry, "the harmony of the sky, the labour of the sun and moon, the five zones, the seven wandering planets; the laws, risings, and settings of the stars, and the aeral motions of the sea; earthquakes; the nature of man, cattle, birds, and wild beasts, with their various kind and forms; and the sacred Scriptures." This poem of Alcuin's is especially interesting

for the account it gives us of the contents of the

library collected by Archbishop Egbert at York,

CHAP. V.]

the benefit of which Alcuin had enjoyed in his early years, and which he seems to speak of in his letter to Charlemagne, already quoted, as far superior to any collection then existing in France. He proposes that some of his pupils should be sent to York to make copies of the manuscripts there for the imperial library at Tours. Among them, he says, were the works of Jerome, Hilary, Ambrose, Austin, Athanasius, Orosius, the Popes Gregory and Leo, Basil, Fulgentius, Cassiodorus, John Chrysostom, Athelmus, Bede, Victorinus, Boethius; the ancient Instorical writers, as he calls them, Pompeius (most probably Justin, the epitomizer of the lost Trogus Pompeius), and Plmy; Aristotle, Cicero; the later poets Sedulius and Juvencus; Alcum himself, Clement, Prosper, Paulinus, Arator, Fortunatus, and Lactantius (writers of various kinds evidently thus jumbled together to suit the exigencies of the verse); Virgil, Statius, Lucan; the author of the Ars Grammaticæ; the grammarians and scholiasts, Probus, Phocas, Donatus, Priscian, and Servins; Entychius; Pompeius (prohably Festus) and Commenianus; besides, he adds, many more whom it would be tedious to enumerate. This was certainly a very extraordinary amount of literary treasure to be amassed in one place, and by one man, at a period when books were everywhere so scarce and necessarily bore so high a price. "Towards the close of the seventh century," says Warton, in his Dissertation on the Introduction of

had collected an hundred volumes on theological and fifty on profane subjects, imagined he had formed a splendid library. About the year 790 Charlemagne granted an unlimited right of hunting to the Abbot and monks of Sithiu, for making their gloves and girdles of the skins of the deer they killed, and covers for their books. We may imagine that these religionists were more fond of hunting than of reading. It is certain that they were obliged to hunt before they could read; and, at least, it is probable that under these circumstances, and of such materials, they did not manufacture many volumes. At the beginning of the tenth century books were so scarce in Spain, that one and the same copy of the Bible, St. Jerome's Epistles, and some volumes of ecclesiastical offices and martyrologies, often served several different monasteries." To these instances we may add what Bede relates in his History of the Abbots of Wearmonth, in which monastery, as already mentioned, Benedict Biscopt, the founder, had about the ond of the seventh century collected a considerable hbrary, at the cost not only of much money, but also of no little personal exertion, having made five journeys to Rome for the purchase of books, relics, and other furniture and decorations for the establishment. Bede records that Benedict sold one of his volumes, a work on eosmography, to his sovereign, Alfred of Northumberland, for eight hides of land. The account which has been given of the exist ing remains of the Saxon literature, and of the

who with incredible labour and immense expense

science that were chiefly cultivated. We shall. therefore, merely add a short account of the state of the fine arts of architecture, sculpture, painting, and music among the Anglo-Saxons. It will be proper to introduce our notice of the Angle-Saxon architecture by a short inquiry into its origin, especially as we shall find that the Nor-

other works of the period under review, has suffi-

ciently indicated the branches of lcarning and

man style, and perhaps in some particulars that of the middle ages in general, may be traced to the same source. The pure style of classical architecture perfected by the Grecks, underwent several modifications in the hands of the Romans, which materially changed its character, and finally led to its debasement. Even the Roman temples, which are direct imitations of those of the Grecks, have not the same

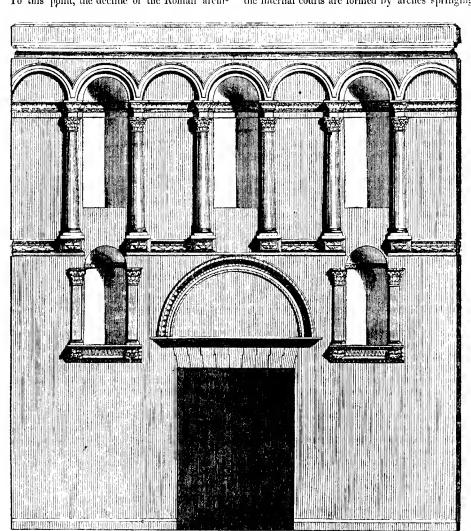

Learning into England, "even in the Papal library at Rome, the number of books was so inconsiderpurity of style, though superior to them in magniable that Pope St. Martin requested Sanctamand, ficence; and in their more extensive works, the Bishop of Maestricht, if possible, to supply this use of the arch draws a strong line between the architecture of the Romans and that of the Greeks, defect from the remotest parts of Germany. In the the distinctive characteristic of the latter being the year 855, Lupus, Abbot of Ferrières in France, horizontal architrave supported on columns. sent two of his monks to Pope Benedict the Third, to beg a copy of Cicero de Oratore, and Quinthough the Romans adopted the arch in their constructions, they did not therefore abandon the architilian's Institutes, and some other books: 'for,' says the Abbot, 'although we have part of these tectural details of the Grecks; when, from the introduction of vaulted coverings and arched forms books, yet there is no whole or complete copy of generally, columns ceased to be used as supports, them in all France.' Albert, Abbot of Gemblours, 2 R 2

with columns and horizontal architraves, to which, by the gradual addition of other corruptions, we owe the style of architecture which at length became universal throughout the extent of the Roman empire, and to which has been given the name of Romanesque.

To this point, the decline of the Roman architecture with the state of the Roman architecture with the sta

they were retained as ornaments; and it is this combination of incongruous members, of vanits

tecture was rapidly advancing as early as the reign of Diocletian. In the baths of Diocletian at Rome, vast groined vaultings are supported on columns, and their outward thrust counterpoised by external piers, performing the same office as the buttresses so extensively introduced into the constructions of later ages. In the palace of Spalatro, built by the same emperor, the porticoes of the internal courts are formed by arches springing

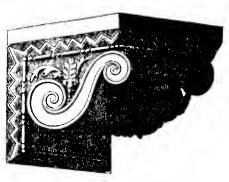

COLDEN GARE OF SUR PALACE OF DIOCINETAN AS SUALACE

directly from single columns; and over the principal entrance, or golden gate of the palace, small arches springing from columns—the columns resting on consoles projecting from the wall—are introduced merely as a decoration; and it is a curious coincidence with reference to the purpose for which

this example is cited, that we find in the consoles

two forms which make a most important figure in the decorations of the 11th century, viz., the zigzag ornament and the corbel head.

To what state of decay the arts had fallen when Constantine removed the seat of empire to Byzantium, may be seen by such parts of his triumphal arch at Rome, as were the work of that period.

CONSOLE FROM THE PALACE AT SPALATRO.

The empire and the arts decayed together, and the

general decline of prosperity finally led to the ruinous custom of demolshing ancient buildings, in order to furnish materials for erecting new ones, and especially such as were required by the spread and supremacy of the Christian religion. The ancient temples were incapable of being converted to the purposes of Christian worship; but the Basilicas were so well calculated to receive large assemblies of people, that their form was adopted and retained in the construction of churches, their name became diverted from its original meaning, and the Christian Basilicas, erected with the spoils of ancient Rome, remain the most striking monuments of the barbarous magnificence of the lower ages.

There seems to be no foundation for attributing to the Goths and other northern nations who over-

ran the Roman provinces, any influence upon the state of art, further than that of precipitating its On the contrary, these conquerors, with the wealth of the Roman empire, carried back with them a taste for the arts of civilization; and the conversion of the northern nations to Christianity, which established an intimate connexion with Rome and with the Latin clergy, introduced among them as much of the arts and sciences as survived in the western world. With some modifications, the Roman architecture of the fifth and sixth centuries will be found to have prevailed wherever the Christian religion was established; and as regards the Goths, so far from having any distinct architecture of their own, there is positive proof that the buildings erected by Theodorie, who reigned in Italy from 493 to 526, and was a great builder, were in the Roman style, and built by Roman architects. The celebrated Boethius is named by Cassiodorus as one of the architects of that conqueror. Nor is there any proof that the Lombards carried with them into Italy any innovations in architecture, or that during the existence of their kingdom, which lasted for above two ccnturies, they introduced any deviations from the style they found established there. Whatever modifications architecture may have received in Italy, are probably to be attributed to the Byzantines,

who long took the lead in all matters connected with the arts.

Admitting this view of the state of the arts subsequently to the time of Constantine the Great, we shall not expect to find any original traces of art among a people in so rude a state as the Saxons at the time of their settlement in England. They came as invaders and destroyers; they entered an abandoned and despoiled province, and neither brought nor inherited the arts. Most of the edifices, either pubbe or private, which the Romans, in accordance with their universal practice in their

perished during the devastating wars in which the country was involved with Scots, Picts, and Saxons; and the final supremacy of the latter obliterated the arts, till they were restored from without.

provinces, had crected in Britain, appear to have

That the Saxons erected temples of some kind for their pagan worship there can be no doubt, but of their form or materials nothing is known with ecrtainty. It has, indeed, been inferred, that they were not altogether deficient in show or solidity, from the fact that some of them were converted into churches at the first establishment of Christianity; and it is certain that Pope Gregory writes to St. Augustin, advising him not to demolish the temples, but to cast out and destroy the idols, and consecrate them to the service of God. however, throws no light upon the nature or extent of the Saxon temples. Gregory's impression of temples was a Roman one, and in any case we can hardly suppose that the buildings of a people so uncultivated as the Saxons before their conversion, ever possessed any distinct architectural character.

The conversion of the Saxons led immediately to the erection of churches. Some few churches left by the Romans appear to have escaped the general devastation. Bede records two in the city of Canterbury, one of which was repaired and given to St. Augustin, by King Ethelbert, on his conversion, dedicated to our Saviour, and established as the episcopal see. Two other churches were also founded by Ethelbert—that of the monastery of St. Peter and St. Paul at Canterbury, and that of St. Andrew, at Rochester, which also became an episcopal see. About the same time the see of London was founded, and a church built, by Sebert, king of the East Saxons. So httle is upon record concerning these churches, that it has been a subject of controversy among antiquarians, whether they were of stone or timber, and even whether the Anglo-Saxons were sufficiently advanced in the arts to erect stone buildings for a That many timber considerable time afterwards. buildings were erected about this period, there is no doubt. The first chapel or oratory creeted by Edwin, king of Northumberland, at York, in 627, was of timber. A wooden church is mentioned by William of Malmesbury, at Dutlinge, in Somersetshire; and the cathedral of Lindisfame was built in 652 entirely of sawn oak, and even covered with thatch, till Eadbert, the seventh bishop of Lindishis baptism, was undoubtedly a stone building,

and it marks the progress of the arts in this cen-

tury, that in 669 Bishop Wilfrid glazed the win-

dows. The glass for this purpose seems to have been imported from abroad, since, as we have

already mentioned, the famous Benedict Biscop, abbot of Wearmouth, is recorded as the first who

brought artificers skilled in the art of making glass into this country from France (about 676). These

artificers not only glazed the windows of Biscop's

times by linen blinds.

church at Wearmouth, but taught their art to the day, appear like so many turrets and fortified places. native workmen: before this period, windows even of churches were enclosed by lattice-work, or some-These two prelates, Wilfrid and Benedict Biscop, were the most munificent patrons of architecture in the seventh century. The monastery of Wearmouth was begun by the latter in the year 675, when he went over to France, in order to

The same historian mentions three other churches remaining at Hexham, all of which he attributes to the munificence of Wilfrid. One of these, dedicated to the Blessed Virgin, is particularly worthy of notice. It is described as being in the form of a tower, almost circular, having four porticoes at the four principal points. We may here see the rndiments of a crucaform church with a tower at the intersection, a form which subsequently became nniversal in large churches, and of which the adoption was accompanied by important changes of style in the architecture of the tenth and eleventh centuries.

nobility, enriched the church, and obtained the funds necessary to carry his designs into effect. According to his biographer Eddius, be was himself eminent for his skill in architecture, and principal director of his own works, with the assistance of many eminent artists, whom he invited from Rome, and retained in his service by his liberality. Eddius was engaged by him, in conjunction with Eona, to instruct his choir in the Roman manner of singing. In the beginning of the eighth century the arts

had begun to penetrate into the northern parts of our island. In the year 710, Naiton, king of the Picts, wrote to Ceolfrid, Abbot of Jarrow, of his intention to build a church of stone, and desired him to send some artificers to build it after the Roman manner. In 716, Ethelbald, king of Mercia, erected the

Abbey of Croyland, in Lincolnshire, the foundations of which are described as being laid upon large wooden piles driven into the ground, solid earth, brought in boats from a distance of nine miles, being laid upon them. In the year 767, the church of St. Peter, at

York, having been damaged by fire, was taken down and rebuilt by Albert, then archbishop of Albert was a learned, accomplished, and munificent prelate. He had visited Rome and other scats of learning abroad, and brought home with him a fine collection of books and relies, and various objects of art. In the re-edification of his

engage artificers to execute his church "in the Roman manner," as it is expressly termed by Bede. In the same style must have been the buildings of Wilfrid, enumerated in his life by Eddins, of which the most important, and indeed one of the most important buildings of the age, if we may believe the biographer, was the church of St. Andrew, at Hexham, of which Wilfrid laid the foundation in 674. Eddius expatiates at some length upon the glories of this edifice, of which, he says, the like is not to be seen on this take the Alps. But it will be more to the purpose to quote the description of Richard, Prior of Hexham, who wrote toward the end of the 12th century, when it was still in existence; and as he might compare this church with those by which the Normans had then attested their magnificence and skill in architecture, there can be no doubt that it really merited his praises, from which we cannot but conceive a somewhat high idea of the state of architecture among the Anglo-Saxons at this period. Richard's description is as follows. "The foundations of this church St. Wilfrid Iaid deep in the earth for the crypts and oratories, and the passages leading to them, which were then with great exactness contrived and built under ground. The walls, which were of great length, and raised to an immense height, and divided into three several stories or tiers, he supported by square and various other kinds of well-polished

columns. · Also, the walls, the capitals of the

columns which supported them, and the arch of

the sanctuary, he decorated with historical repre-

sentations, imagery, and various figures in relief,

carved in stone, and painted with a most agreeable

variety of colours. The body of the church he

compassed about with pentices and porticees, which,

both above and below, he divided with great and

inexpressible art, by partition walls and winding

caused flights of steps and galleries of stone, and

several passages leading from them both ascending

Within the staircases, and above them, he

church he was assisted by his pupils, Embald, who succeeded him in the sec, and the famous Alenin. The latter, in the account he has left of the church be contributed to build, describes it as a lofty pile, supported by arches on solid columns, with admirable vaultings and windows, surrounded by porticoes and galleries, and containing thirty altars variously ornamented.

We have few notices or indications of the progress of the arts during the wars which desolated the country, with little intermission, during the ninth and tenth centuries, shortly after which the Anglo-Saxon architecture merged into that modification of the Romanesque, which, regarding the source from whence we immediately derived it, we properly term the Norman style. As the introduction of this style forms a second period of Anglo-Saxon architecture, it will be well here to take a short view of the few facts which have been collected concerning the first.

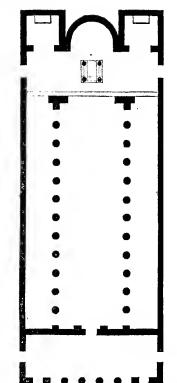

Of the buildings of the period we have gone through, not one stone remains upon another to inform us either of their character or extent, and it is only from the scanty notices of them in the chronicles and records of the time that we are enabled to judge of either. From what has been

cited of this sort, we may safely infer that the architecture of the Auglo-Saxons was identical with that of the Continent, as far as the Christian religion had spread a taste for Roman art—an inference confirmed by the analogy of later styles, even down to the fourteenth century. That the larger Anglo-Saxon churches were in form as well as in name the same as the Roman Basilicas, may be inferred from the fact that they are frequently spoken of by historians as being in the Roman manner, as well as from their quadrangular form and internal porticoes, which are clearly described by Bede in more than one passage. Add to these considerations the absence of any allusion to transepts or large towers, and they are identified with the churches of the same age, of which so many remain in Italy, and some in Germany. Basilica of St. Paul without the walls of Rome, founded by Constantine, is in its general features as close a copy of the ancient Basilica as the use for which it was designed would allow, and the degenerate age in which it was creeted could pro-The interior of this magnificent church, until the year 1823, when it was nearly destroyed by fire, remained much as it was left by Theodosius the Great, who was a great benefactor to it, with

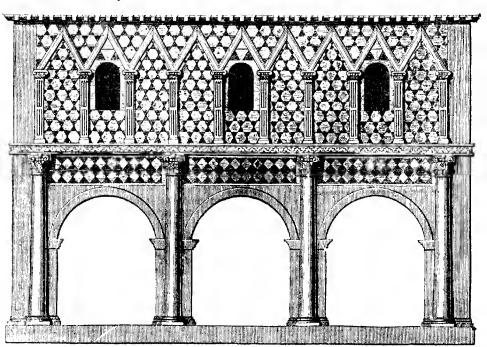

he exception of the extraneous decorations of all ages, laid upon it by the piety of succeeding emperors and pontiffs; and its style of architecture contrasted strangely with the precious materials and beautiful workmanship of the hundred columns which supported it, the plunder of many a classical edifice, and especially of the sumptuous mausoleum of Hadrian. The view even of the rums of this church will give a perfect idea of the form and arrangement of the Basiliea in general, which consisted of a nave and two lateral internal porticoes, sometimes double, sometimes single (or, as we should now say, of five or three aisles), leading to the upper end of the building, which in the ancient Basilica was occupied by the public tribunal, and in the Christian church by the high altar. it is not to be supposed that the Anglo-Saxons ever produced, or were eapable of producing, anything upon this scale, the plan of the church of St. Grisogono, at Rome, beheved also to have been founded by Constantine, will probably give a perfeetly correct idea of their more important eeclesiastical structures during the period we have been considering; and that the Roman architecture had not undergone any material change upon the continent by the latter part of the eighth century, will be evident from a view of the portico to the Atrium of the church at Lorsch, near Manhenn, founded in 764, and consecrated in the presence of Charlemagne in 774. This portice is undoubtedly part

of the original building.

By referring to the Roman Basilica, the description which has been quoted of the church at

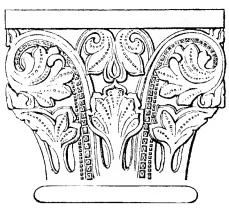

OUND PLAN OF THE CHURCH OF GRISOGONO, ROME.

Hexham becomes perfectly intelligible. evidently a Basilica, with an upper internal portico over the side aisles,—an arrangement described by Vitruvius in his Chapter on the Ancient Basilica, and actually existing in the Christian Basiliea of St. Agnese at Rome.

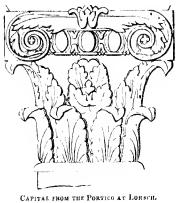

In the tenth century we find a very evident change of style prevailing on the continent. doorway of the eathedral at Mentz, founded about 978, though it exhibits the old Roman detail, some of the capitals of the columns being strictly of the Corinthian order, presents the same general form that prevailed in all gateways of the middle ages through successive changes of style, -namely, a series of recessed arches reducing the real aperture to a much smaller size than the external archway; and in the Cathedral of Worms, a little later in date, there is not only a change of plan by the distinct marking of the cross, but the style altogether approaches that of the Normans, in which, as we have already observed, the architecture of the Angle-Saxons finally merged. The origin of this style, which speedily became

universal, may perhaps be traced to the Byzantine school. This at least is certain, that the Byzantine style of sculpture accompanies it to a great extent both in Germany and France, though rare in A comparison of two capitals, from works already noticed, the portice at Lorsch, and the doorway at Mentz, may serve to illustrate this hypothesis. The Roman and Greek styles of orna-

CAPITAL FROM THE DOORWAY OF MENTZ CATHEDRAL.

mental sculpture cannot be more strikingly marked or more vividly contrasted; and it may be further remarked that the cruciform plan had been shadowed out in the religious edifices of Constantinople as early as the sixth century. The subject is very obscure, and this is not the place to examine it; but it may be observed that the settlement of the Western Empire by the Franks, and the munificence of Charlemagne, had brought the arts from VOL. I.

Constantinople, and even from Arabia, and that they continued to flourish under his successors, at a period when the Anglo-Saxons were struggling for their existence as a nation with their Danish invaders, and had neither means nor leisure to hestow upon the arts. During this period, when all the resources of the church and government must have been cut off or diverted to more exigent purposes, there could have been no temptation to foreign artists to settle in the country. Alfred the Great, in the interval of quiet he had won by his arms and policy, applied himself to architecture; but though he did not neglect the restoration of the ruined monasteries and churches, yet his chief earc, and that of his two immediate successors, was directed chiefly to military works, and to walling His monastery at and fortifying the towns. Athelney seems to have been an insignificant building, and probably only of timber.

From this period scarcely a fact that throws any light upon architecture as an art is to be met with until the reign of Edgar, surnamed the Peaceable; in whose time, under the influence of St. Dunstan and his coadjutors, monastic establishments were multiplied, and their riches increased in an enormous degree, and numerous ecclesiastical edifices appear to have been the result.

Among these we have a description of the Abbey of Ramsey, in Huntingdonshire, founded by Ailwin, styled in history the Alderman of all England, with the assistance of St. Oswald, Bishop of Worcester. This church was completed in 974, and is described in the history of the abbey as having two towers raised above the roof,—one at the west end, and the other, which was larger, supported by four pillars in the middle of the building, where it divided into four parts, being connected together by arches with other adjoining arches, which prevented their giving way. This is a clear description of a church with transepts and a tower at the intersection. How far this change of plan was accompanied by the introduction of the characteristic details of the new style, we have no means of judging, The date is too early to suppose the alteration complete in all particulars, and a state of

HISTORY OF ENGLAND. [Book II. transition has been found invariably to precede and being reminded that he ought rather to rejoice every radical change at subsequent periods; but that architecture at this time was at a very low cbb,

WINDOWS FROM THE PALACE OF WESTMINSTER, doubtedly what the historians mean by the "new manuer" in which Edward the Confessor rebuilt the Abbey of Westminster. Of this style the particular description must be reserved for the next period, to which it properly belongs. The Palace of Edward the Contessor, at Westminster, was built in the same style, and its remains show it to have been a spacious and solid structure. Painted Chamber, or, as it was called as late as the fifteenth century, St. Edward's Chamber, though its architectural character was changed by

and had grievously fallen off from its former

flourishing condition, may be inferred by a remark

made by Wulstan, Bishop of Worcester, in 1084, upon a work of this very St. Oswald. Wulstan,

who founded a new church at Worcester in that

year, is said to have wept at the abandonment and

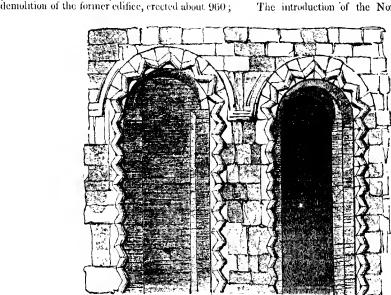

314

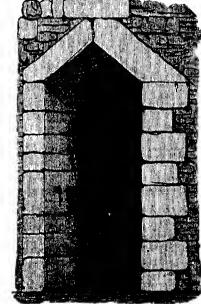

by the character of the arches and triangular doorway in the vaults underneath. The apartment to which belong the ancient windows, still extant toward Palace-yard, is supposed, with good reason, to have been the great hall of the palace previously to the erection of that by William Rufus. In this view of the architecture of the Anglo-Saxon period, our remarks have been chiefly confined to ecclesiastical edifices, since little remains that can be described, and the only information to be gathered on the subject is principally from his-

torians who have written upon ecclesiastical affairs,

Henry III., possesses strong claims to be consideted a part of the original structure, together with other apartments which have disappeared only within a few years; and this claim is corroborated

at the superior extent and magnificence of the new foundation, answered,-" We destroy the works of our holy forefathers that we may obtain praise. These pious men knew not how to construct pompous edifices, but under any roof devoted themselves to God, and excited others by their example. We, on the contrary, heap up stones, and neglect the care of souls." The introduction of the Norman style is un-

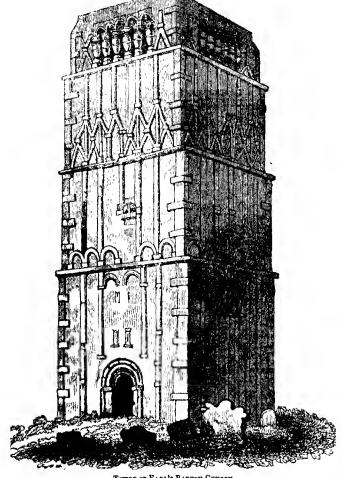

DOORWAY FROM THE PALACE OF WESTMINSTE

and whose attention has consequently been confined to ecclesiastical structures. Parish churches had become frequent early in the ninth century, since a particular canon, relating to their consecration, was enacted in the Council of Ceal-Hythe in Their most general form was probably that of the smaller parish churches of later date, consisting of a simple nave and chancel, without side aisles; but that some of the smaller Anglo-Saxon churches were built with side aisles is proved by that still existing at Brixham, near Northampton. This church has been considered a Roman work, from the nature of the bricks with which the arches But that the Anglo-Saxons were acquainted with the use of bricks,-whether the art of making them had remained in the island from the time of its occupation by the Romans, or was restored with the other arts for which the Anglo-Saxons were afterwards indebted to the Latins, --- is clear from a passage in Bede, who says of St.

Cuthbert's hermitage, that he did not build it with squared stones, nor with tiles and cement, but with such materials as he could collect on the spot. The church of Brixham, however, is undoubtedly considerably older than the time of the Norman conquest. It has a square tower at the west end, with a circular staircase attached in a most inartificial manner.

• The diligence of antiquarians has distinguished a class of bell-towers, which, from their peculiar character, are reasonably presumed to be of a date carber than that at which the Norman style was established in England. Of these towers, that of Earl's Barton, in Northamptonshite, is the most remarkable, and displays most conspicuously their peculiarities of style. Of the triangular arch we have seen a specimen in the degraded Roman style, and it is common on the sarcophagi of the lower ages; both this form, and the sort of balustiade which appears in the belfry-windows, are also to be seen in the architecture represented in Anglo-Saxon manu-

Tower or Earl's Barton Church,

scripts. It is to be supposed that this tower was finished by a modillion cornice and low roof; at present it terminates with a modern battlement, which is omitted in the view. The construction of these towers is extremely massive, with rubble-work, and stone quoins and dressings, the walls being equal in some instances to the whole space inside; but they betray a low state of the art and ignorance of its principles.

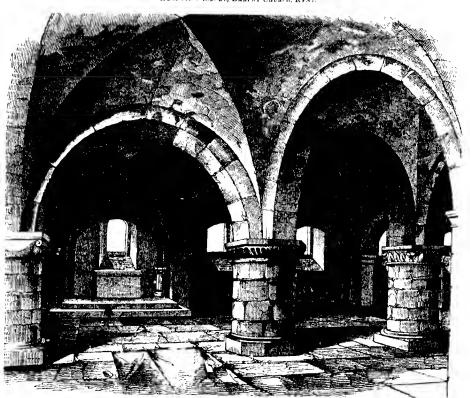

The first introduction of bells among the Anglo-Saxons is involved in obscurity. Large ones were certainly rare as late as the middle of the tenth century, since William of Malmesbury reckons them among the wonderful and strange things

which St. Dunstan gave to the Abbey. Bell towers are therefore probably not more than a century older than the Norman conquest. It might be possible to enumerate a few insignificant buildings, which, from something analogous in their construction, may be presumed to approach an equal antiquity, but they possess no architectural interest. The little church of Darent, in Kent, from some peculiarities of detail, may be selected as a specimen. It consists of a nave without aisles, and a chancel with a plain groined vault, destitute of any ornament, twelve feet two inches long, and thirteen feet four inches wide: the height to the springing of the arch is only seven feet.

Mransov Wase m. Danasa Com. V.

EDWARD THE CONFESSOR'S CHAPEL, WESTMINSTER ABBEY, -- now used as the Pix Office,

The extreme rarity of any well-authenticated work older than the Conquest, is to be attributed to the demolition of the churches of any importance by the Normans, for the sake of replacing them by more magnificent structures; and though it can scarcely be doubted that they may have incorporated some of the old work with their own, yet such work can have belonged only to the latest Anglo-Saxon period, since the most critical exammation has failed satisfactorily to detect the difference between the two constructions. A portion of Edward the Confessor's work at Westminster Abbey, forming vaults to the College buildings, and now used as the Pix Oflice, is the only part of the building that can be satisfactorily identified as a specimen of the latter Anglo-Saxon architecture.

On the domestic architecture of the Anglo-Saxons there is but little information to be obtained. That edifices of this class were generally of timber may be inferred from the circumstance that all the monastic buildings (which properly come under this head) of which we have any description were so constructed. Such was the Abbey of Croyland, with its infirmary and chapel, baths, hall, strangers' apartments, brewhouse, bakehouse, granaries, and stables; all of which we learn from Ingulphins, were constructed of beams of wood, and boards most exactly joined, and most beautifully worked, by the admirable art of the carpenter, and covered will lead. The prevalent use of timber in monastic buildings may also be inferred from the

often-quoted passage in King Edward's charter to Malmesbury Abbey, in which he says, "All the monasteries of my realm are to the sight nothing but worm-eaten and rotten timbers and boards." But this use of timber by no means necessarily implies a low state of art. We shall have occasion to see, in treating of later periods, that the use of timber in domestic architecture prevailed in England throughout the middle ages: that timber buildings were susceptible of a very high degree of architectural character; that they were thought worthy of being carried to a considerable extent, and of being executed with all the luxury of art as late at least as the fifteenth century; and that the general discontinuance of timber constructions is comparatively of a modern It is therefore not unreasonable to suppose, that during the period when ecclesiastical architecture was in a flourishing condition, the domestic style would not be neglected, though exemplified King Alfred, we are in more humble materials. told, displayed a superior taste in the construction and decoration of his palaces. It must, however, be admitted, that at the period of the Conquest, the dwellings of the Anglo-Saxons must have presented an unfavourable contrast with those introduced by the Normans; since William of Mahnesbury observes, that the houses of the former were low and mean, though their way of hving was hixumous and extravagant; whereas the Normans, though moderate, and even abstentions in their diet, were fond of stately and sumptuous houses,

RESIDENCE OF A SAXON NOBLEMAN.

The Proprietor, seated at the entrance of the Great Hall, is engaged in alms-giving; on his right appear a number of armed Servants, and on his left a Chapel, at the door of which, as is common in most illuminations, a lamp as suspended. Harleian MS. No. 603.

and affected magnificence in their buildings both public and private.

On the MILITARY ARCHITECTURE of this period, there is as httle to be collected. That the Anglo-Saxons walled and fortified their towns, has already appeared; and that they had the skill to do so with effect, is evident from the sieges some of them were able to sustain against the Normans. Exeter could resist the Conqueror for eighteen days, and then, says the Saxon Chronicle, "the citizens surrendered because their chiefs deceived them." Oxford, Warwick, Leicester, Derby, Nottingham, and York, were all fortified places, and made sufficient resistance to provoke the utmost vengeance of the conquering army. At Leicester there appears to have been a citadel. In the absence of any authority affording a description of the Anglo-Saxon fortresses, we may venture to suppose that such of them as might possess any architectural character or solidity of structure, bore a resemblance to those of the continent, though prohably on an inferior scale. But it is useless to waste conjectures on a subject which will form an important branch of the architecture of the Norman period

ture in Wales during this period, is not much calculated to excite either our interest or our curiosity to know more, since the art appears not to have advanced beyond the most primitive modes of construction. The chief palace of the kings. and place of assembly for the great council of the nation, appears to have been no better than an edifice of wattles, and was called the Winte Palace, from the osiers with which it was woven being pecled. This we learn incidentally from the Leges Walhere, in which it is enacted, that a fine of one pound and eighty pence shall be paid by whoever shall burn the king's hall or palace. Eight buildings or dependencies upon the palace are also cnumerated, the destruction of each of which is valued at one hundred and twenty pence. These buildings are, the dormitory, the kitchen, the chapel, the granary, the bakehouse, the storehonse, the stable, and the dog-house.

The little that is known of the state of architec-

It will be sufficient to notice very briefly the state of Sculpture and Painting during the Anglo-Saxon period. The former was necessarily practised by the idolatrons Saxons; descriptions of the forms and attributes of their detics have been handed down to us, but their efforts to represent them were undoubtedly of the lowest grade of barbarism.

The art of sculpture, such as it was in the seventh century, accompanied the introduction of Roman architecture into England, and probably underwent similar vicissitudes, flourishing and decaying from the same causes. Nothing remains which may mark its progress or exemplify its merits, except a few of the smaller works of art, among which the Horn of Ulphus, preserved at York, may be cited for its undoubted anthenticity. But there must have been a demand for the images

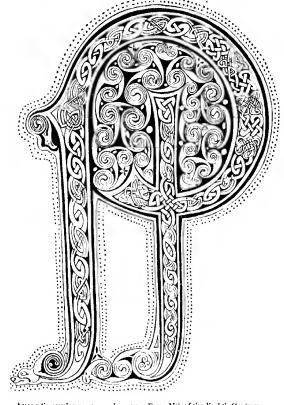

Horn or Unerrus.

of saints for the churches, and monumental sculpture was not uncommon. In an episcopal tomb of the eighth century (that of Acca, Bishop of Hexham), two crosses elegantly decorated with ornaments of sculpture are described as being set up, one at the head, the other at the foot of the tomb; on one of which,—namely, that at the head,—were letters declaring who was buried there.

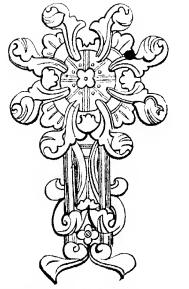

Stone coffins became common among the richer classes as early as the middle of the seventh century, and were frequently charged with decorative carvings and sometimes even with an effigy of the deceased. If we may trust Leland, the figure of Eschwine, an Anglo-Saxon Bushop of Dorchester, was in his time still extant on his tomb in the church there. Such effigies, however, were probably rather returns than statues, and perhaps in no worse taste than those of other nations, if we may judge by analogy from the state of the sister art, upon which we are fortunately possessed of better information.

One of the earliest notices on the art of painting is the record of the munificence of Benedict Biscop, who imported a vast number of pictures in the several voyages he made to Rome, principally for the purpose of collecting books, relies, and ornaments for the churches he had founded at Wearmouth and Jarrow. These pictures, which were not merely effigies of the saints and apostles, but, as Bede informs us, comprehended the whole Gospel history, with the concord of the Old and New Testaments, must have been of the Byzantine school, to which, at this period, and long after, artists of all countries looked for instruction.

But whatever improvement the Anglo-Saxons may have derived from an acquaintance with Greek art or the instructions of foreign artists, an independent school for the illumination of manuscripts appears to have existed in Ireland as carly as the sixth century; and the perfection to which the Anglo-Saxons had arrived in this branch of painting at the beginning of the eighth is sufficiently proved by many existing manuscripts, particularly that celebrated by the name of the "Durham Book." or "St. Cuthbert's Gospels," the work of Eadfrid, Bishop of Lindisfarne, who came to that see in 698, and died in 721. In this splendid example of Anglo-Saxon art the figures certainly bear strong marks of the Byzantine style of drawing, but the \*design and execution of the illuminated capitals are original, and such as are not to be found in the works of any continental school. The chief features of this species of illumination arc described by Sir F. Madden to be, extreme intricacy of pattern,

Anglo-Saxon Ornament. From MS. of the Tenth Century.

interlacings of knots in a diagonal or square form, sometimes interwoven with annuals, and terminating in heads of serpents or birds. Though we cannot distinctly trace the progress of this art, we may conclude that it continued in a flourishing and improving state in the interval from the eighth to the tenth and cleventh centuries, which were so prolifie in Anglo-Saxon works of calligraphy and illumination, that perhaps, says a competent authority speaking of this period, our public libraries and the collections abroad contain more specimens executed in this country than any other can produce during the same space of time.

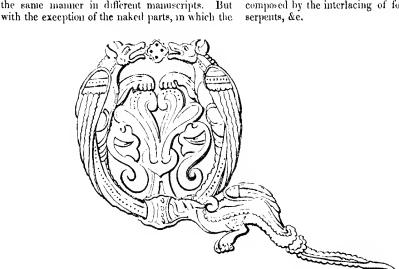

This art, like all others, flourished in the cloister. The greatest dignitaries of the church not only encouraged but practised it, and a specimen is extant in the Bodleian Library by the hand of no less a personage than St. Dunstan. St. Ethelwold, Bishop of Winchester, was a great patron, and perhaps also a professor of the art; and the names of Ethric and Wulfrie, monks of Hyde Abbey, are recorded with the additional designation of "painters," in a manner which shows such artists to have been persons held in the highest respect and estimation. New Minster, or Hyde Abbey, at Winchester, appears to have been one of the principal schools

320 HISTORY OF ENGLAND.

of illumination, and many of the finest manuscripts of the period are known to have been produced The magnificent Benedictional of St. Ethelwold, the execution of which is attributed to the monk Godewin, may be especially referred to, and is the more remarkable and honourable to our native talent, as being the work of an age when the arts were generally, and particularly in Italy, in the most debased condition. The paintings exhibit

much of the Greek character, which may arise from the use of a standard set of designs originally emanating from that school, particularly as the scriptural subjects represented are treated in nearly ignorance of the period is most conspicuous, the drawing displays no little proficiency: the draperics especially are full of grace and intelligenee; and the decorations, which are in a style altogether peculiar to the Anglo-Saxon school, exhibit bold and rich masses of foliage not to be surpassed either in composition or execution by any contemporary productions of the same class. The wellknown manuscript of the sacred poem of Cædmon is also supposed to have issued from the New Minster school about the year 1000. The drawings are curious, rather than of any value as works of art; but it contains some very remarkable initials, composed by the interlacing of foliage with birds,

[Book II.

Anglo-Saxon Liluminated Letter. From MS. of the Tenth Century.

tensive branches of the art. Stubbs, in the Actus Pontificum Eboracensium, speaks of a magnificent "heaven" executed in gold and colours under Archbishop Aldred shortly before the Conquest. This may have been mere decoration painting,stars on a blue ground, &c.; though the term gencrally implies something more.

There is little on record concerning the more ex-

In the arts of design it will be proper to include embroidery, in which the Anglo-Saxon ladies were reputed enumently skilful. The four daughters of Edward the Elder excelled in spinning, weaving, and needle-work; and St. Dunstan himself condescended to draw a pattern for a sacerdotal vestment which a religious lady of the tenth century exccuted in threads of gold. In the same century a drapery on which were represented the actions of Brithnod, Duke of Northumberland, was presented by his widow Edelfleda to the church of Ely; and at an earlier period Witlaf, king of Mereia, in a charter to the Abbey of Croyland, gives, among other things, a golden veil embroidered with the

siege of Troy, to be hung up in the church on his

birth-day.

tury, and the other improvements introduced about the same epoch or soon after, may seem to be scarcely entitled to the name of a science, if compared with what it is in its present state. Yet, although confined to melody merely, music was certainly cultivated with much ardour in this country from a somewhat early date in the Anglo-Saxon The Anglo-Saxon music of which the period. fullest and most distinct notices have come down to us is the church music. St. Ambrose, in the fourth century, has the credit of having first introduced singing into the Christian services of the West; and his method (of the peculiarities of which, however, nothing appears to be known) continued in general use till the latter part of the sixth century, when it was reformed by Pope Gregory the Great. The Gregorian chant may be presumed to have been brought over to this country along with the Christian religion, by St. Augustine and his companions, and it was this mode of singing most probably of which they gave a specimen at the first audience granted them by King Ethelbert, and on

Music, before the invention of the present mode

of notation by Guido of Arezzo in the eleventh cen-

however, seems to have been confined to the metropolitan church, or at least to the district of Kent, fill the time of Archbishop Theodore, in the latter part of the seventh century. Some are disposed to attribute to Theodore and his friend Adrian the first introduction into England of the Gregorian chant: it is admitted on all hands that it was to their exertions that the general diffusion of a knowledge of the improved chant was owing. Bede relates

the city of Canterbury \* The innereal service,

that, in 678, one John was sent from Rome by the Pope to teach music to the English clergy, and that he both gave instructions in the art during his stay and left behind him written directions for its study. Accordingly, to quote the account as it stands in Holmshed, "whereas, before time, there was an manner no suiging in the English churches, except if were in Kent, now they began in every clarch to use singing of divine service after the rite of the clanch of Rome." "The Archbishop Theodore," the chromeler proceeds, "finding the church of Rochester void by the death of the last bisbop, named Damian, ordansed one Putta, a simple mair in worldly matters, but well in fracted in cocle-iastical discipline, and namely (especially) well seen in song and music to be used in the church after the manner as he had learned of Pope Gregory's disciples" Putta indeed would appear, from the sequel of his story, to have been intended by nature rather for a singing-master than a bishop. His church of Rochester having been spoiled and defaced a few years after in a hostile memsion made into Kent by the Mercian King Eth. Red, he went, we are told, " to Servill, Bishop of Mercia, ie d there obtaining of him a small cure and a portion of ground, remained in that country, not once labouring to restore his climrch of Rochester to the former state, but went about in Mercia to teach rong, and

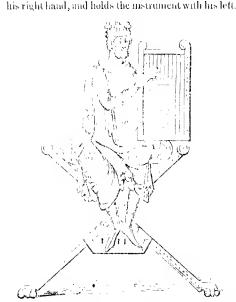

instruct such as would learn music, wheresoever he

TROMBONES, OR PRUIES. From the Cotton MS: Cleopatra, C % See oule, p. 232.

† Holmshed's England, b, v. ch. 35

blished at Canterbury, and other permanent schools also in the other monasteries. Nor were the Saxons by any means without in-

strumental music. Among their musical instruments, besides bells, we find mention made of the horn, the trumpet, the flute, the drum, the cymbal, the rota, or viol, the lyre, and the harp. Represcutations of most of these are found among the illuminations of their manuscripts. . They also seem to have been acquainted with the organ. Mr. Turner has produced a passage from Aldhelm's Latin poem in praise of virginity, and another from a work of Bede's, in both of which the organ is mentioned; and William of Malmesbury describes an organ as existing in los own church, which bore an inscription stating that it had been presented by St. Dinistan, who, the historian elsewhere tells us, gave many great bells and organs to the churches of the West. These Saxon organs, according to Malmesbury, had brass pipes and bellows. The drum is described by Bede as formed of tense The Saxon lyic is represented in the alhummations with four strings, struck by a plectrum. The harp is depicted in some instances of the modern trangular form, in others square or ablongshaped. In one manuscript the Psalmist David is represented playing on one of the latter fashion, which has ten strings; he plays with the lingers of

From the Cotton MS Tab. C 6.

In another instance, the royal psalmist has a triangular harp of cleven strings; and he is accompamed by three other musicians, one with a straight trumpet, supported in the middle by a pole; another with a curved horn; and the third with a sort of violin, on which he plays with a bow. Bede tells us, in his History, that the harp was m

The Half accounted by other Instruments. From the Cotton MS. Tab. (\* 6.

common use among his countrymen on all festive

occasions; when the custom was for it to be handed tound the company, that all might sing and perform in turn. The art of playing on this instrument appears to have been practised professionally by wandering ministrels or gleemen, and to have been also a fashionable accomplishment of the highest and best educated classes. The reader will remember the story that is told of Alfred on one occasion disguising himself as a ministrel, and in that cha-

racter finding ready admission to the camp of the Danes, with his harp in his hand.\* A similar story is related of a visit paid by Anlaff, the Danish king or earl of Northumberland, to the camp of the Saxon Athelstane, on the eve of their famous encounter at Brunanburgh. Danstan also, it will be remembered, was celebrated, among hus other accomplishments, for his skill as a harper.

The harp, and the popular music generally, of the Saxons, were in all probability borrowed from the Irish, among whom the art appears to have flourished from the remotest antiquity, and to have been carried, at an early period, to a perfection elsewhere unknown. Some of the most learned of the Welsh antiquaries have admitted that their national music is of Irish origin; and there can be httle doubt, from the character of the Scottish melodies, that they also have been derived from the same source. Even to the Italian music an Irish extraction has been assigned, and by Italians themselves. The harp, called in Celtic the cruit, is noted in the oldest records, as well as in the traditions of the people of Ireland, as the favorite nistrument of their baids from the carliest times. The most remarkable foreign testimony, however, to the musical skill of the Irish is that of Ghaldus Cambrensis in the twelfth century Their enguence m instrumental music he describes as beyond comparison superior to that of any nation he had known Their modulation, he adds, "is not slow and solemn, as in the instruments of Britain, to which we are accustomed, but the sounds are rapid and precipitate, yet at the same time sweet and pleasing. It is wonderful how, in such precipitate rapidity of the fingers, the musical proportions are preserved; and how, by their art, faultless throughout, in the midst of their complicated modulations, and most intricate arrangement of notes, by a rapidity so sweet, a regularity so irregular, a concord so discordant, the melody is rendered harmonious and perfect." So famous, also, was the church music of the Irish at an early period, that the daughter of Pepin of France, in the seventh century, is recorded to have sent to Ireland for persons qualified to instruct the mins of the Abbey of Nivelle in psalmody.†

## CHAPTER VI.

## THE HISTORY OF MANNERS AND CUSTOMS.

UR knowledge of the miscellaneous particulars coming under this head in the present period is much more extensive, as well as more distinct and certain, than that which we possess of the manners and customs of the ancient Britons, but it is still far from being perfectly satis-

We have indeed many Anglo-Saxon writings, from which a good deal of anthentic information may be glaned respecting tarious parts of the subject; but the information thus preserved consists, after all, only of incidental notices, which are often so brief or so allusive as to admit only of a conjectural interpretation, and which leave many things which it would be important for us to know altogether untold and untouched upon. No work professing to present a view of their domestic and social usages, their popular pastimes and superstitions, the accommodations of their dwellinghouses, their dress, and their mode of hying in general, has been bequeathed to us by our Saxon ancestors. We are left to gather what hints we can respecting all these matters from records drawn up with no view of affording us any such instruction,--from their chronicles of transactions in church and state, from their laws, from their works of science and learning, from their homilies, from their almanaes, from 'their wills, their grants of land, their leases, and other charters and legal docu-But perhaps the richest of all our now remaining sources of information respecting all the minor details of the social condition of the Anglo-Saxons has been furnished us by what we may call their national art of illumination. The drawings on their manuscripts, originally intended merely for embellishment, and still in a high degree interesting and estimable as works of art, have now acquired a new value, as preserving distinct representations of many things of which no intelligible verbal description has come down to us, and of some of which perhaps the very memory would otherwise have been lost. Of the industrious arts, as well as of the popular cutstoms of this period, the fullest and clearest record that has been transmitted to us is literally a pictorial history. In the present chapter, as in that upon the National Industry, we shall

draw liberally from this source, both in the illustrations and in the text\*

Having already given an account of the houses of the Anglo-Saxons, in so far as regards their architecture, we shall now proceed to describe their furniture as far as our materials enable n. The dwellings of the higher classes appear to have been completely and sometimes splendidly furnished: their walls were hung with silk rachly embroidered with gold or colours. The needle-work, for which the English ladies were so famous, was herein displayed to great advantage. Ingulphus mentions some hangings orianneuted with golden birds in needlework, and a veil or curtain on which was represented in embroulery the destruction of Troy In the Anglo-Saxon poem of Beowulf we read that, in "the great wine-chamber"—

"There, shone variegated with gold.
The web on the walls,
Many winders to the sight.
Of each of the warrier.
That would gaze on it became viable."

The Saxon term for a cintain or hanging was wahrift; and, in the will of Wynfleda, we find the bequest of a long healt wahrift and a short one. The same lady also bequeaths three coverings for benches or settles (sett-hrægt). Pedaha, or footstools, are mentioned by Ingulphus, the larger ones covered with woven hous, and the smaller sprinkled with flowers. A common form of the Saxon chair

CHAIRS From Cotton MS, Claud, B 4

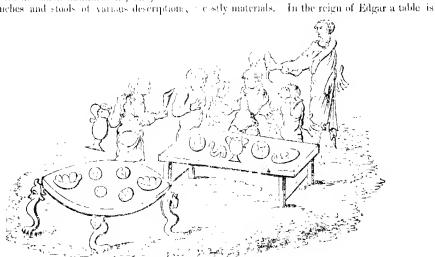

<sup>•</sup> It is proper to state, that although some of the ancient drawnings, section in the present work have been helder engaged Cyman, Regal and Loriesustical Autoprites, Chromelic of England, &c., and in other expensive public thous, the representations here given have, with twe exceptions, been theseld of otherwise copied from the mignishs, and with semipidous ladelity.

or beach, as may be seen from several cuts already given, appears to have somewhat resembled that of our modern camp-stool, consisting of a seat held in tension by two or more crossing bars. Chars, however, or seats with backs to them, are occasionally met with in Saxon illuminations, and, is well as the benches and stools of various descriptions,

are generally ornamented at their extremities with the heads and feet of hons, engles, guiffing, &c. These were commonly formed of wood, and carved, but occasionally of gold and silver, or were at least bughly ornamented with those precious metals. Their tables were cometimes made of the same cestly materials. In the reign of Edgar a table is

SANON TAPLES From Harleson Mr. No. 600

said to have been made of silver, by an artist named Æthelwold, which was of the value of 300%. In the illuminated MSS, we perceive tables, both oblong and oval, covered with table-cloths, and furnished with knives, spoons, drinking-borns and cups, bowls and dishes, but no focks. That they had gold and silver plate in alamdance, and of the most costly description, we have ample evidence in the wills of Wynflerda, Wulfur, and Brithme, and similar documents. Walfin bequeaths four cup, two of which are described as of 4/, value. A lady on one occasion makes a guft of a goblen cup weighing four marks and a half; and the King of Kent sent to Bomface, the Anglo-Sexon missionary in Germany, a solver bason, gift within, weighing three pounds and a half § Two silver cups, weighing twelve marks, are mestioned asused by the monks in a refectory to serve their drink | A king in the mirth centify is recorded to have unde a present of his jult cop, cacrived on the outside with vine-dressers fighting diagons, which he called his ero; -bowl, because it had a cross marked within it, and four angles the jecting like a similar figure; \mathbb{q} and in other place: we read of golden and silver disher, and a dish ad aned with Green workmanship.\*\* Those of the commonalty were of brass, of world, of horn,

and of hone. Cups and dishes of horn were for-

bidden to be used in the sacred offices, † But drunking-horns were much used at table, and some

of them were rightly carved and originated,

Withit, King of Mercia, gave the horn of his table

to Croyland monastery, "that the elder monks

might drink thereout on fertivals, and in their be-

nedictions remember sometimes the said of the

CHAP. VI.]

doma." [] The delivery of a drinking-horn, at least under the Danish kings, was a mode of conveying landed property. The estate of Pasey, in Berkshire, is still held by the possession of a horn, by the delivery of which it was granted by Canute to an officer of his army, who, according to tradition, had made his way in disguise into the camp of the Saxon enemy, and there obtained information of a plot laid to surprise the Danes. The Pusey horn was most probably the drinking-born of Camite. It is an ox horn, of a dark-brown colour, about two feet in length, and a foot in circumference at the ram. At the small end is a hound's head of silver gilt, made to screw in as a stopper; and, by taking out this, it might be made to serve as a huntingborn, a use of it which appears to be indicated by two rings, one at the mouth and another at the middle, with which it is furnished, as if for a strap

# Ingulph, p. 9.

or lieft to go through. Upon a luoad silver ring, encompassing the moddle of the horn, and by which it is supported on a stand, is the following inscripfrom, which, however, is comparatively modern.—

6 Kyng I'mayde geve Wyllynn Pe This house to hold by the b

Class vessels were rautice or the early periods, but became more common towards the Norman Conquest. A disciple of Bede inquired of Luibs, in France, if there were any man in his parish who could make glass vessels well; and desired in such case that he might be per-naded to go to England, as its people were "ignorant and helpless in the art " † Bede, however, mentions glass lamps and vessels for many uses.

They had silver candelabra and candlesticks of various descriptions. \ Lanterus of horn, as already mentioned, were also used. A silver mayor is mentioned in Digdale, and hand-bells. were used to summon the attendants ||

In an illummated MS, we have a representation of an Anglo-Saxon bedstead. It has a roof like that of a house to it, and is furnished with curtains, pillow, &c. In the Anglo-Saxon poem of Judith the bed of Holofernes is described as lung with a "golden fly-net." In various wills we read of beds, pillows of straw, bed-clothes, curtains, sheep, &c. 9 Skins of animals were sometimes used as coverlids A goatzskin bed-covering is mentioned as presented to an Anglo-Saxon abbot.\*\* terms sweking (sacking) and lang bolster also occur in Saxon works. In the paem of Beowulf we are told that when the evening came on, the tables were taken away, and the place was spread with beds and bolsters, by which it would appear that the warriors slept in the same balls in which

Not to enter a warm-bath or a soft bed was enjoined by what they called their deep-like or severe penance.\* For culinary purposes they possessed boiling vessels,+ and ovens for baking meat and bread. In one of the manuscripts is an illumination, representing men killing and dressing meat. One of them has put a stick, with a hook at the end, into a cauldron which stands upon a four-legged trivet, within which the fire is made. In the same MS., also, we perceive that the roast meats are brought up to table by the servants upon the spits,

+ Those were of leather, and made by the sees wyrtha or shoemaker. Saxon Dialogues in Cutton MS, Tib. A 3,

<sup>·</sup> Leges Edgari, Wilkins, p. 91,

the guests cutting off such portions as pleased them. This continued to be a custom amongst the Normans, as we find by the Bayeux Tapestry. Not one of the least important parts of the his-

Not one of the least important parts of the history of manners and of civilization is the history of costume. The dress of a people is always in some degree an indication of the progress they have made in wealth as well as in taste, and in the useful as well as in the merely elegant arts. Nor can we call up in magnitude any lively picture of a past age without a knowledge of its prevailing forms of attne, and of the distinctions in this respect that

marked the different classes of the community. An ignorance of this subject will prevent us from entering perfectly into a feeling of the spirit of the period and of the condition of society in regard to matters in themselves of much more consequence; and false notions here may falsify our conceptions as to many other things.

The history of British costume properly com-

many other things.

The history of British costume properly commences with the Anglo-Saxon period. We have no pictorial authority for the costume of the Anglo-Saxons earlier than the eighth century; but Paulus Diaconus, who wrote during the latter half of that

Royan Costum. Frum a Picture of Barold and the Wagi in the Cotton MS. Nero, C.4

ROYAL COSTUME, AND THE HARNESS AND EQUIPMENT OF HORSES. From a Picture of the Magi, having the Court of Harold, in the Colton MS. Nero, C 4.

century a history of the Lombards, describes a painting of the eaxth century which he had seen in the palace of Theodelanda, queen of the Lombard, in Italy, said to be painted by her command, and representing some of the explorts of her countrymen, whose diess the historian expres ly states to have been the same as that of the Air fo-Saxons. "Then garment," he tells us, "were loose and flowing, and which made of buen, adorated with broad borders, woven or embroidered with verious colours." His description perfortly agrees with Eginhart's elaborate account of the costume of Charlemagne, and also with the diesec dejacted in the illuminated MSS of the eighth and math centuries; and that they continued to wear some ancient habits at that period is tolerably evident from the reproach addressed to them by the comed of Cealchyth in A.D. 787; "You put on your garments in the manner of pagares, whom your fathers expelled from the world; an a torrshme thing that you must be those whose life you

tiny we have, however, abundant authority for the civil, military, and ecclesisetial costonic of the Anglo-Saxons, both in the notices of the writers of the time, and especially in the influences immating with which the MSS, are organicated. From their concurring evidence we find that the maderimo, t part of the male attire consisted of a lunch shart, above which they wore a tunic of linen or woollen, according to the season, descending to the knee, and plant or ornamented tound the coller and border., according to the rank of the wenter. It was open at the neek, and sometimes at the side, and had long sleeves reaching to the varistic concernies tight, at others, set in close rath or veralles from the wrist to the elbox. It was reach lly confined by a guidle or belt round the ward. Its Saxon name was row or room. Over the was wern a short cloak (mental), fastened sometimes on the breast

ORNAMI NITED TENDS - Urom Colton MS, Claud, B 1

and sometimes on the shoulder, with brooches or fibrilia. Linen drawers, and stockings (called breck-love) of Imen or woollen, the latter frequently bandinged from the ankle to the knee with strips of cloth, linen, or leather, were worn by the better orders, and shoes of some description by all, as even the common labourers, who are gene-

he Suxon shoe (sieo or seah) is gene-

down the intep, seemed by two thongs to They also were a sort of short best or bucker; and a hal staking or sock (mobilely what they called socia) is comembres seen worn over the hose instead

<sup>\*</sup> To be bareholded was a pendentiary injunction. If pointly handing of one of the grace Dairch armore, a general position of three day, as code of, undervote a narro amounted to go "burehold to charch, without gold and unaments." MS CCC Canada apput

Warmey, p. 1. a. 4. In the Life of St. Nord, he is sold to have and to live occur a loy having the "Thy mag Cotton We, Ve post in D Syy p. 111. I Sore a and hostinate modern of the St. R. A. A. or we note a covering storill."

The practice of bandaging or cross-gattering the hose was followed by the Franks, whose costume, as well as that of the Lombards, was very similar to that of the Saxons. The Monk of St. Gall says, that "over their stockings or drawers they wore tillets bound crosswise in such a manner as to keep them properly upon the legs." Such bandaged hose were worn as late as the sixteenth century by the butchers in France, and called les lingettes. \* The Saxon name appears to have been scancbeorg, hterally shank or leg guard. A similar fashion still exists amongst the people of the Abruzzi and the Apenuncs, and in some parts of Russia and Spain. The bandages are sometimes depicted as gift of the legs of regal personages, as are also the shoes and buskins of princes or high ecclesiastical Thegamus, in his life of Louis le degrataries. Debonnaire, son of Charlemagne, describes his buckins as being of gold stuff or gilt (occeas aureus). The hose are commonly represented either red or blue. Coverings for the head are rarchy seen except upon the figures of warriors, The cap, therefore, seems to have been the helmet, and its shape is either conical or of the ancient Phrygian description. Indeed, the whole of the Auglo-Saxon costume, whether civil or unhtary, currously resembles the Phrygian. Silk, which was known as early as the eighth century, and purple cloth, formed the mantles of sovereigns and proces; and golden tissues, and embroideries in gold, salver, and silks of various colours, were also worn from the eighth to the tepth century by persons of high rank.† Furs were also used for the luning and ornamenting of garments. Those of salle, beaver, and fox, by the richer classes, and the skius of cats and lambs by the poorer or more

silver, and ivory; chains, crosses, and rings of gold and silver, sometimes beautifully enamelled; belts of gold and silver studded with jewels, and headbands or diadems of the same magnificence. The hair, when worn long, was parted on the forehead, and suffered to fall naturally down the shoulders. The beard was ample, and generally forked. The full inations of the elergy against long hair may be supposed occasionally to have produced some effect for a short period, as we find in some illiminations the hair cropped and the face shaven. \* The old Teutonic passion for long, flowing ringlets, however, was never totally eradicated. The barbaric custom of titoonig, or puncturing the skin, was practised by the Anglo-Saxons as well as by the Britons, and a law was passed against it A.D. 785; but it was nevertheless continued during the whole of the Anglo-Saxon period, and is amongst the English vices reprobated by William of Malmesbury after the Norman Conquest.

CHITTIENG THE I NOFE AND LIPTE SELECTO AND HOOD - From Hardenin MS, No. 2908. DINIC, THE MANTER, AND HOOD

The female costume of this period appears to have consisted generally of a long and ample garment with loose sleeves (probably that called the quina or gown), t worn over a closer-fitting one (either the tume or the kertle), which had tight sleeves reaching to the wrist, shoes similar to those worn by the male sex, and a head-dress formed of a veil or long piece of linen or sitk wrapped round the head and neck, called in Saxon heafodes raiget (head rail), or wæfles, derived from wæfan, "to cover." The mantle also formed part of the dress of the superior classes, and in some of the illuminations it resembles the ecclesiastical vestment called a chasuble. We may presume that the socca or some other sort of hose was worn by the women as well as by the men; but the length of

mar, p. 22.

<sup>\*</sup> In the fourth century, we are told they cut their han so close that the head appeared diminished and the face charged. Sid. Apollinarius.

Vinle Preface to Hickers Anglo-Saxon Gran-

the tunic prevents our observing them in the allu-Notwithstanding the universal appearance of the head-rail, we find that the Anglo-Saxon ladies paid great attention to the dressing and ornamenting of their bair. Adhelm describes the twisted locks of a lady as being delicately cirrled by the fron of those adoming her; and Judith, in the Anglo-Saxon poem so called, is apostroplused as the "maid of the Creator, with twisted locks." Adhelm also describes the wife as loving to paint her cheeks with the red colour of stibium

CANUL AND HIS QUEEN. From the Register of Hyde Abbey Engraved in Strings Horda Angel Cynan,

Cuffs and ribands (cuffian and bindan) are mentioned in the will of an Anglo-Saxon lady, and an engraved beah or bracelet. In other Anglo-Saxon documents mention is made of a golden fly beautifully adorned with genis, of golden vermiculated necklaces, of a bulla that had belonged to the grandmather of the lady spoken of, golden head-Lands, ear-rangs, a neck cross, and of golden ornaments called sylas.

Gloves appear to have been very rare amongst the Anglo-Saxons. In one illumination only have we seen the hand covered except by the sleeve of the gown or tunic, and in that instance it is by a species of muffler, having a thumb, but no separate fingers. Amongst the representations of male figures they are never met with; but from a law of Ethelred the Unready, quoted in a precedling chapter, it may be inferred that, at the close of the tenth or beginning of the eleventh century they were great rarities—five pair forming a considerable part of the duty paid by a society of German merchants for the protection of their trade.

Of the royal costume among the Anglo-Saxons perhaps the most distinct representation to be found is that furnished by the drawing in one of the manuscripts, of King Edgar scated on his throne.

To this we may add some representations of the costume and ornaments of the ceele-as-real order.

BUSINE AND PRIEST. From Cotton MS. Claud. B 4.

STATUE OF Sr. CUTHBERY. From one of the external Canopies of the Middle Tower of Durham Cathedral.

DEN CROSS. Weam by St. Cathbert, and found on his body at the opening of his Tomb in 1827 The military costume of the Anglo-Saxons on

their first appearance in Butam is exceedingly incertain. The Welsh bard Ancurin, who flourished in the sixth century, and fought in person against the invaders, describes them as being armed with " daggers, white-cheathed piercers, spears, and shields, the latter being made of split wood, and four-pointed or square behinets?' He says "their leader was armed in scaly mail, carrying a projecting shield, a slaughtering pake, and wore (as a mantle perhaps) the skin of a beast." His mention of the square or four-pointed belinet is a circumstance which goes to confirm the circlit of his narration, as that singular head-piece is to be seen both in Frankish and Anglo Saxon illuminations.\* The Saxons who invaded Thirmgia in the same century are described by Wittichind as leaning on small shields, bearing long lances, and wearing

COSTUME OF A SOLDIER From Cotton MS, Tab. C 6.

 The regal diadem of the Franks and Auglo Saxons 1, also occa somally depicted quadrangular Vide Plates in Stratt and Montlaucon, Mon. Franc.

great knives or crooked swords by their sides. But Wittichind wrote at the close of the tenth century, and Mr. Sharon Turner, who quotes this passage, remarks, in another part of his work, that Wittichind, though a Saxon himself, appears to have been completely ignorant of Saxon anti-

quities.\* Alcuin and Adhelm, both writers of the eighth century, are the first who afford us any authority on which we may rely for the unlitary diess of the Anglo-Saxons. The former tells us that the short linen tunic was preferred to all other vestments as the one in which they could most freely wield then weapons; and from the composition by the latter, entitled his Æmgma, we find that some description of metal armour, if not the qehringed byrne, or tunic of iron rings, derived from the East, and Latinised (indiscriminately with other armoin) lorica, was known at the same period. "I was produced," runs the Ænigma, " in the cold bowels of the dewy earth, and not made from the rough fleeces of wool: no woofs drew me, nor at my birth did the tremulous threads resound: the vellow down of the silkworms formed me not: I passed not through the shuttle, neither was I stricken with the woolcomb; yet, strange to say, in common discourse, I am called a garment. I fear not the darts taken from the long quivers." This testimony is in favour of the descriptions of Ancurin, who speaks of "loricated bands" and "scaly mail" The latter, the *lorica squamata*, which the Romans derived from the Sarmatians, and which was known to and worn by so many nations of the East, may very probably be supposed to have been worm by the leaders of the Saxon host. The scales or rings were sewn in rows upon an under garment of linen or leather. Phrygian warriors are often depicted so arranged; and Pansamas describes a Sarmatian lorica, with the scales made of thin slices of horses' hoofs, which he saw and inspected in the Temple of Esculapius at Athens. † The improvement of connecting the rings one with the other, so as to make a timic of them, independent of their leather or linen foundation, is ascribed by most antiquaries to a period as late as the reign of Edward 1. There are some expressions, however, that occur in an Anglo-Saxon poem of the tenth century, which seem to prove that such defences were then in use; and the "lorica" of Adhelm being called a garment at the same time that he expressly demes the assistance of wool, linen, or silk in its composition, would lead to the inference that it was a vestment complete in itself, which could only arise from its being formed of linked rings, or scales or plates of metal riveted one to the other. The expressions alluded to are such as

Then battle-mail shone By hard hands well locked. The shining from rings Sung against their weapons When they to the palace In their formidable apparel were delighted to go,"

Hist, Anglo Saxons, vol. i. p. 236. Lib. i. p. 50, Edit, Kuhn, The Sarmatians are also represented Lib i. p. 50, Edit. Kuhu. with such coats of mail on the Trajan Column.

It had sometimes a

9 Brownif addressed him: The mail shone upon him, The heavy net was linked By the sunth's care "\*

The "locking and linking of iron rings" by "hard hands," or "the smith's care," and the mail forming "a heavy net," are phrases which may authorise us to believe that the gehringed byrne of the Saxon was occasionally, and at least as early as the tenth century, nearly the same as the hawberk of single-chain mail of the thirteenth.

Be this, however, as it may, the chiefs only

em of Beowulf. Tomen's Trans. Hist Angle Saxons, in.

BATTEL STEAR. From the Cotton MS. Claud, B 4

The Anglo-Saxon shield appears to have been eval and convex, with an iron umbo or boss. The slucids appear in the illuminations painted with red and blue borders, but the ground and centre generally white. Arcurm describes them as being made of split wood; and in the Anglo-Saxon poem of Beownlf they are called

" The shields of Hidda, The boards of bright wood," They were sometimes covered with leather, but,

according to one of the Saxon laws, no shieldmaker was allowed to put a sheep-skin over a The rim and the boss were of iron, cither painted or gilt. They were held at arm's length in action, like those of the Britons, and were sometimes large enough to cover nearly the whole body; but their sizes are various in the illuminations; and we also read of "little shields," "lesser shields," and of "the targan," or "target."+

The offensive weapons were all formed of Their swords were long, broad, and doubleedged, their javelins and spears sometimes barbed, sometimes leaf-shaped. They fought also with axes fixed to long handles, called bills, and the double axe or bipennis, called twy-byl. some authorities add the alle-barde or cleave-all. The specimens of Anglo-Saxon weapons here engraved are in the collection of Sir S. Meyrick, at

tumuli called Chapel Timps, near Pengethley, No. 1 is the head of a county of Hereford. Nos. 2 and 3 arc spear-heads. No. 4, javelm. the blade of a bill or alle-barde. No. 5, Sir S. Asara Sy on Weston

name, and with which the famous massacre of the Butons is said to have been perpetrated. the scax was not a curved sword or dagger, however, is pretty evident from the testimony of Bede, who, in his relation of the attempted assassination of Edwin by an emissary of Cwichelm, king of We sex, a.n. 625, tells us that the twi-cood (double-edged) scax of the militan passed through the body of Lilla, the king's thegu, who had flung limiself before Edwin, and slightly wounded the king himself.\* Such a blow could never surely be struck by a curved weapon. It was evidently a thrust; and if the weapon here engraved be indeed the band-seax of the Saxons, it will be observed that it can scarcely be called curved, the hilt only taking an inclination like the but-end of a justol. Wittichind is the only authority who speaks of a crooked sword; and if he is to be relied upon, the Saxons must certainly have abandoned it very shortly after their arrival in Britain, if not before, as the swords discovered in Saxon turnih are long, broad, and straight, corresponding exactly with those depicted in all the illuminations from the eighth to the eleventh century. And as to the term seax meaning a weapon of any particular shape, the proofs are all to the contrary. The word is used to express any sharp instrument, whether a sword, a dauger, a knife, or a lancet, the latter being called *æder-sear*, or vem-knife.

The spin worn by the Anglo-Saxon horsemen appears to have been the goad, or pryck-spir, and to have been fastened with leathers nearly as at present.

Beide, lib. ii, e. 9.7. If the entired of stooled sword is, in our opinion, the weapon of the third great stream of population which flowed westward—namely, the Schayapu, and not of the second of Tentour race, from whence the Saxons were derived. Thus we find the schie in the bands of the Pole, the Hungarium, the Bolo man, and all the Schayapu nations, and the still mape recent Turk presents is wight the cumiter.

The costume of the Danes during the ninth and teuth centuries appears, from the few authorities we possess, to have generally resembled that of the Saxms of the same period. A few national peculiarities alone distinguished them from their Anglian brettren.

Arnold of Lubeck describes the whole Danish nation as originally wearing the garments of sailors, as befitted men who lived by piracy and inhabited the sea; but in process of time, he says, they became wearers of scarlet, purple, and fine linen. On their establishment in England, we find them described as effeminately gay in their dress, combing their hair once a day, bathing once a week, and often changing their attire; by which means they pleased the eyes of the women, and frequently seduced the wives and daughters of the nobility.\*

Long hair with them, as with the Saxons, was considered amongst their greatest ornaments Harold Harfagre, t. e., Fair Locks, received that appellation from the length and beauty of his hair, which is said to have flowed in thick runglets to his girdle, and to have been like golden or silken The Knyghtlinga Saga describes Camite's hair as profuse. The portrait of this monarch, which has been given in a preceding page, from the MS, register of Hyde Abbey, written during his reign, exhibits him in the customary regal Saxon costume. The only novelty observable is, the fastening the mentle by cords and tassels in her of a fibula or a ring. The Danes wore the same description of ornaments, but were particularly partial to their massive golden bracelets, which were always buried with them †

The military dress of the Danes of the tenth and eleventh centuries was apparently the same as that of the Normans. Both were more heavily armed than the Anglo-Saxons. But the latter speedily adopted the superior defences of their invaders and conquerors; and at the commencement of the eleventh century, the conical helmet of iron with its masal, or nose-guard, called net biorg, and the long time covered with iron rings or maseles, and furnished with a hood, as an additional protection to the head and neck, are found worn in common by the three nations.

The Danish shields were generally painted red; and one of a lunated form, like the Amazonian pelta, was used by those who fought with the Danish axe—a weapon for the use of which they had acquired a terrible celebrity. The Danes were taught "to shoot well with the bow;" a weapon which the Angla-Saxons are said to have neglected.

The task of investigating the social usages of the Anglo-Saxons cannot be completed in a very satisfactory manner. But though it may be impossible to give a distinct picture of every department of Anglo-Saxon life, a tolerably correct delineation may be made of some of its principal

J. Wallingford, apud Gale.
 Bartholmus.—Johannes Tinmuth.

features. The labours of the husbandman varied only with the seasons, and the state of the useful

arts admitted but of few subdivisions, so that there

would be a great degree of uniformity in all the active and industrial operations of the community.

in a much less economical manner than in a period of greater civilization, and there being a small amount of free men practising the various handi-

MANNERS AND CUSTOMS.

similar relaxation.\*

erafts and most necessary employments, the number of servants and artificers required by each occupier of a large landed property could not have been otherwise than great.\* From whence could the various articles of daily necessity have been obtamed but from the serfs whom their lord had tranced up for the purpose? It is stated in Bede that there were 250 slaves on some land which was given to Wilfrid by the king. The isolating tendency of this state of society was, however, gradually counteracted by the practice of manimiting slaves, chiefly from religious motives. Men of landed property often rewarded their serfs with grants of land when they had been particularly tartiful, or had excelled in the arts to which they had been brought up. From these elements arose a free population, whose existence rendered the services of a population in a state of slavery gradually less advantageous. The ligher classes were called upon to perform

which they were called upon to take an active part in public life. The clergy had a variety of duties to perform. They were the best practical agriculturists, the most skilful architects, and were, besides, acquainted with many of the common handicrafts. The accounts which we possess of domestic usages at this period are few and brief. The hours of rising amongst a country population are invariably early. The ploughman, the shepherd, the swmeherd, would be at their labours by the earliest dawn. It is not improbable that a short time was devoted during the middle of the day to a siesta. In the monasteries this was the case, and indeed was rendered almost necessary by the services performed "before-day," and again at the dawn of At mid-day the monks took a meal and slept,

and again rose and went through the remaining

services. In the sixteenth century, as we learn

a number of duties which the Auglo-Saxon institu-

tions attached to their station. The great festivals

of the church, the royal counts, which were held at

Christmas, Easter, and Whitsunfide, the county

comts, the hundred courts, were all occasions on

Anglo-Saxon missionary complains that the priests rejected animal food, which he considers as some thing like ingratitude towards God. We have a strong proof of the extensive use of animal food in a law of Wihtræd, which declares that a man who gave meat to his servants on fast days was hable to be pumished in the pillory. If the servant ate it of his own accord, he was either fined or bound " to

suffer in his hide," † It appears, therefore, that so

much cheaper was animal food than any other, that

a master was restrained from giving it to his ser-

vants, just as in many places near the sea it is still

not musual for servants to bargain with their cinployers not to have fish oftener than a certain mini-

ber of days in each week. The food allowed on fasts

days consisted of milk, cheese, and eggs. As to the

inferior quality of butchers' meat in the Auglo-Saxon

times, there can be no question, as it is only within

the last century that it has been much improved, and the Anglo-Saxons consumed their annual food

one of the manuscripts<sup>‡</sup> there is a drawing repre-

senting the killing of animals, and the method of preparing their flesh for the table. A slicep is

killed by a stroke on the neck with an axe, while

it is held by the horns. Another man severs

entirely the head of an annual with the axe. These

are both rude modes of butchering. The meat is

cooked in a cauldron which tests upon a trivet, and

underneath is the fire. One of the attendants has a

use of iron rendered the process much superior to that which was once the practice of the Scottish

Highlanders, who sometimes boiled their ment in wooden vessels, and effected their object by re-

perhaps the most common. The Anglo-Saxons used herbs of various kinds to season their food, but their principal vegetable ingredient was colewort, which there is reason for presuming was eaten with animal food. The month of February was called "spront-kele," from the plant beginning to grow at this season \$ There was a cook in all the monasteries, but in other households the duties were performed by females in a scryde state. opulent lady is mentioned who bequeathed her cook to one of her friends. The ancient Saxons had been addicted to eating raw flesh; but amongst their descendants in this • Charlemagne commanded his judges to provide for each of his castles or royal abodes "good citizens," viz., "workmen in non, gold and silver, stone-cutters, turners, caupenters, amounters, engagers, washers blowers skilled in making good mead, cider, nod peny, and all other lupnors fit to be drunk; babers, who likewise have the art of preparing miller for our use; and all other tradesmen whom it would be 100 long to enumerate."—Sismond's Fall of the Roman Empire, vol. p. 239. island, one of the canons of the church directed Tasser's Five Hundred Points of Good Husbandry, p. 457. that "if a person ate anything half dressed, ignorantly, be should fast three days; if knowingly, four days." The following ecclesiastical regulations have also the same tendency as the one just given:—"For eating or drunking what a cat or dog has spoiled, he (the offending person) shall sing a hundred psalms, or fast a day. For giving another any liquor in which a mouse or a weasel shall be found dead, a layman shall do penance for four days; a monk shall sing three hundred psalms."

Some of the drawings in the MSS, exhibit the customs of the Anglo-Saxons at table. The most important fact to be noticed is, that both sexes were assembled on these social occasions, and this alone indicates many important points relative to the state of manners and civilization. Knives,

\* Spelmon's Conedia, p. 287.

each of them covered with a cloth; and in some instances the cloth appears to extend over the knees of the guests, as if it was intended also to serve as a substitute for napkins. At one table two attendants, in a kneeling attitude, offer the meat on spits. But with however keen a relish the Anglo-Saxons indulged in the pleasures of eating, they were still more addicted to the love of

drinking. William of Malmsbury, who wrote his history little more than a century after the Conquest, and was well acquainted with Anglo-Saxon manners, states that "excessive drinking was the common vice of all ranks of people, in which they spent whole nights and days without intermission." Even the festival days of the church were disgraced by intemperance; and it may be recollected that it was on the festival of St. Augustin, m 946, that Edmand I. was murdered,—a catastrophe which inight have been prevented but for the incbriated state of the king's attendants and of the nobles who were present.\* A few years after this, Edgar the Peaceable endeavoured to check the national vice, and to put an end to the disputes and quarrels which arose from a practice which prevailed of handing round the company a common drinking vessel, which the guests were expected to vie with each other in trying who should drain to the greatest depth. He ordered that these vessels should be made with knobs of brass at a certain distance from each other, so that no one was compelled to drink more at a draught than from one of the knobs to another. † In the poem of Beowniff, Hiothgar, one of the heroes is invited to "a feast in the half of mend," Benches are spread in "the beer-hall;" the cup-bearer, "laden with ale," distributes it to those assembled, and the scop or poet is introduced. At another banquet described in the same poem, "there was then a number of men and women who the wine-chamber of the

See p. 170.
 William of Malmsbury, lib. n.jc. 8

great mansion prepared." The description then proceeds as follows :- "Then were song and music nunted; the lay was oft narrated; the hall-games followed." The harp, as has been already noticed, as well as the drinking-cup, was handed round at festive meetings, and each individual was expected to sing and play on the instrument in turn. Bede relates that the religious poet Caedinon used always to rise from table before it came to his turn to perform, that he might avoid taking part in what he considered too worldly a kind of hilarity. Even at their ordinary social entertainments the evenings uniformly concluded with drinking. That there might be no mistake as to the exact point against which the prohibitions of the church on drunkenness were directed, one of the canons declared-"This is drunkerness, when the state of the mind is changed, the tongue stammers, the eyes are disturbed, the head is giddy, the belly is swelled, and pain follows." The general love of unrefined pleasures characterized the clergy as well as the laity. In Edgar's time the monasteries are described as presenting seems of gambling, dancing, and singing, "even to the very middle of the night." The monks were prohibited by the Council of Cloveshoe from admitting poets, misicians, or buffoons into the monasteries; and a previous Council had endeayoured to repress the love of convival pleasures which characterized the inmates of the closter.

CONVINIAL PARTY .— the Forms of the Harp, Latte, Pape, and Trumpet, deserve attention - Harleran MS No 603

The mode of salutation among the Angle-Savons appears to have been that which several of the continental nations still observe; for during penauce a man was forbidden to kiss another.\(^\*\) When a stranger entered a honse it was enstomary to bring him water to wash his hands, and warm water for his feet. Their habits of personal cleanliness deserve to be noted. The use of warm baths appears to have been general. They were held in such estimation, that the deprivation of the use of them was inflicted by the church as a penance. Sometimes the deprivation of the warm bath was joined with the prohibition of a soft bed. Cold bathing, on the other hand, was imposed as a mortification; and, at the same time, the penitent was

to pay so little attention to his personal ornament or comfort, that "the iron should not come to his hair or mails." These penances, inflicted by the church, would alone prove that the warlike spirit of the ancient Saxons had greatly degenerated among their descendants, and that a long course of tranquility and prosperity had effected important changes in their character.

The treatment of children offers an important illustration of national manners. The desertion of children sometimes occurred among the Anglo-Savons. The practice was common among their pagan ancestors; but the influence of Christianity on one of the most natural feelings of the heart soon occasioned it to be regarded as a crime, and a law was passed which, though not well calcu-

VOL. I.

lated for its repression, shows the kindly affections which were aroused in behalf of deserted children.

HISTORY OF ENGLAND.

stances, were in use among the Anglo-Saxons, though they were apparently by no means common.\*

A father, if very poor, was allowed to give up his son to slavery for seven years, if the child's consent were given. Even this restricting provision had not always existed, but was introduced

through the intervention of the clergy in 668,

though it probably would not go far towards initi-

gating the evil. We have seen, in a preceding

[Воок И.

For the fostering of a foundling six shillings were to be allowed for the first year; twelve shillings for the second year; that'v shillings for the third year; and afterwards the foster-parent was to receive a sum varying according to the appearance which the child exhibited of having been properly treated." On children being bereft of their father, they remained under the mother's care; but, until the eldest child became of age, were subject to the their birth, until after the period of childhood, rewarded with lands the wife of an calderman who had nursed and brought him up in his childhood; and such instances of grateful feeling were not Cradles were used, and women Children were baptized by unmersion, within thuty days after their birth, The holy oil, however, was also used, as in the present ecremonial of

the Catholic church; and the canons of Edgar direct that priests should always keep oil ready for baptism. The comexion established between the child and those who undertook the responsibility of sponsorship was much respected. The name by which each sponsor was known to the other and to the child was "godsib," implying that they were religiously allied; the word "sib" meaning kindred § Names were given to children while yet infants, and they therefore indicate supposed qualities, and not those which the bearer actually possessed. Verstegan, in his admiration of our Anglo-Saxon forefathers, adverts with much satisfaction to the fact, that " nobleness, honour, hone: ty, valour, peace, amity, quictness, charity, truth, loyalty, and all other yn tues were in their name-giving reconnicaded ∦ Some of their names, indeed a large proportion, wire, however, expressive rather of admiration of those rough qualities which are esteemed by a rude people. Thus we have Athelwulf, the noble wolf; Belintwalf, the illustrious wolf; Himdbert, the illustrions bound; Eadwulf, the wolf of the province; Sigwuli, the wolf of victory. There are, however, others which imply more regard for the peaceful and civic virtues: - Edgar, a keeper of his oath; Egbert, advised unto equity; Earnulph, the help of defence of honour: Oswine, beloved of his house and family. Some of their female names are gentle and expressive: -- Adeleve, the noble wife; Wynfieda, the peace of man; Deorwyn, dear to man; Deorswythe, very dear; Winnefride, a winner or gamer of peace. Mr. Turner gives instances, showing that surnames derived from the appearance of an individual, from his dwelling-place, office, colling, or other circum-

guardianship of the husband's relations.

children were under the care of females

generally nursed their own children.

uncommon.\*

chapter, that in some parts of the country the custom of peasants selling their children for slaves was common down nearly to the Norman Conquest. A child of ten years old could give evidence. Until a daughter was fifteen years old, her father could marry her to whomsoever he pleased; but after this age he no longer possessed such power. A boy of fitteen might enter upon the monastic life, if he were so disposed; and a girl at a somewhat later period. Many of the youth were received in the monasteries, where they obtained the means of instruction. The canons of Edgar directed the clergy to "teach youth with care, and to draw them to some craft." Schoolboys appear to have been kept in order, and urged to their tasks by the dread of personal chastisement, as m modern days. The youth of superior rank, after they had passed through their limited course of instruction, were immated and rendered proficients in the manly sports of the times. It was only at a later period, however, that it became customary for the children of the higher classes to receive any school education. The brothers of Alfred the Great did not learn to read. The respect paid to women, and the influence which they enjoyed, appear to have been greater among our Anglo-Saxon ancestors than some of the general characteristics of theo state of society might have led us to expect. Before their arrival in this country the Saxons, in common with other German nations, punished unchastity in temales with extreme rigour. None regard a crime of this

nature with greater detestation than women themselves; and the severity of its punishment among the Saxons may be conceived when we find that to their hands was frequently committed the female who had disgraced her sex.  $\Lambda$  unmber of them pursued her from one place to another, and nowhere did she obtain refuge or pity, but found fresh persecutors wherever she went. Her body was pierced with their knives, till, under this cruel and vindictive treatment, she expired. In some cases the woman was compelled to hang herself; after which her body was burnt, and her partner in ernne was put to death over her ashes.! This savage mode of protecting the honour, and promoting the virtue of women, was quite consistent with the spirit of a rude and barbarous people, who were as yet untouched by the more kindly influences of Christianity. It had, however, the effect Anglo-Saxons, vol. in, p. 11. Hickes's Dis. Epist. 22-25.

MANNERS AND CUSTOMS.

CHAP. VI.]

the chief basis of female excellence. Other desimble qualities had thus the opportunity of taking root; and the acquisition, by women, of a considerable degree of social influence, was the natural Another of the causes which contributed to

of giving additional support to a virtue which is

the elevation of women amongst the ancient tribes of the Germanic stock is probably to be found in the fortunate circumstance of their mental and bodily faculties making their progress towards maturity at something like an equal rate. When a female was fitted to become a wife, her skilfulness in household matters, and her general experience and knowledge, gave her an anthority which she could not have possessed if her bodily development had been more precocious than that of her intellect and understanding. Instead of being the slaves of their pleasures, women, even in a barbarous age, excreised a permanent influence over men, and oc-

cupied the position of their associates and equals.

Very seldom, if ever, in the alluminated manuscripts which relate to this period do we find women

represented as taking a part in the labours of the held, but even in those which are of the lightest kind men only are employed. In our account of rural occupations at has already been stated that the shepherd who tended his flock also hidked the ewes and made cheese; and if this were the general practice, women were more exclusively occupied within doors than at the present day, when, owing to improved practices in agriculture, there are many means of employing both them and children m field work. Women were therefore placed within the sphere which is most favourable to their influence. In the East, the most liberal Mushlmans, who allow a future state and future felicity to women, maintain that they will not be admitted into the same Paradise as men; \* but instead of having to describe a state of society m which notions so degrading were prevalent, we find women among the Anglo-Saxons invested both in their faumlies, in the eye of law, and by political circomstances, with their fair share of influence. They do not appear to have attained this condition because they embellished life by their graces, for the remains of Anglo-Saxon literature do not contain any notices which can lead us to infer that the charms of female society were highly prized; but their substantial value consisted rather in the due performance of their duties as mothers and as honsewives. Women were the possessors of land, of slaves, and other property. They made wills bequeathing their possessions. They appeared before the shire-gemot in disputes respecting their property; and in a case mentioned by Mr. Turner, there were present an abbot, a priest, an etheling, eight men, two abbesses, six other ladics, and many other good thegas and women. The woman obtuined her suit ! Another case is mentioned in

\* Chardin, iv. p. 26, † By the Canons of Edgar, women were not allowed to come near the altar at mass. It does not seem easy to account hot such a regula-tion, unless its object was to prevent those engaged in the offices

from being disturbed by their presence.

Tarner's History, vol. ii p. 575. 5th Ed.

Ely a case is mentioned of a lady refusing to marry a man because his possessions were not large enough to entitle him to sit in the witenagemet.\* In the earliest of the Saxon laws that remain, those of Ethelbert, female chastity is protected by penames, varying according to the rank or condition of the injured party. The mund, or protecting fine, for a widow of the bighest rank was fifty shillings; for one of the second class, twenty shillings; of the third, twelve slullings; and of the fourth, six shillings. Even the violation of the domestic happiness of the serf was visited by a proportionate fine. The fine paid by the man who forcibly violated a female was increased if she were betrothed, and was still higher if she were preguant at the time. These regulations underwent some alteration in Alfred's time, but the laws on the subject were still framed on the same principle. Concubrage was expressly forbidden, and also the marrying within certain degrees of kindred. On the father's death, the children remained under the mother's care, subject to some provisions already alluded to. It appears clear, from all this, that women were surrounded with a number of those privileges and advantages which generally accompany a better state of society than existed in the Anglo-Saxon

tunes. The same thing will be further apparent from a notice of some of a few particulars relative to their marriage contracts and ceremonies. The laws of Ethelbert and Edmund, the former made in the sixth or seventh, the latter in the tenth century, supply the best information on this subject. Etbelbert's law provided, that if a wife who bad borne children was left a widow, she was to have one half of her husband's property; but if he died without having bad children by her, the property reverted to his own kindied. The morgen-gilt, which the man paid on his in rriage to the wife's relations, was also to be returned. The laws of Edmund indicate more fully what was the course pursued. Nothing appears to have been taken on triist, and every step was accompanied by certain stipulations, which, however uncomantic they may appear, conferred real and substantial influence on women at a period when their claims to regard would not have been so certainly acknowledged if they had rested more exclusively on moral considerations. Alfred's Boethius contains a passage in which he has embodied some offectionate feelings on the love of a wife for her husband. We give it, though it is of a higher tone than we may suppose to have generally prevailed. He says:-"Liveth not thy wife also? She is exceedingly prindent and very

modest. She has excelled all other women in

alone. Hence she loves nought else but thee. She

has enough of every good in this present life; but

She lives now for thee; thee

There are also instances in which they took a part in concerns which demanded sterner qualities, Ethelburgs, the queen of Ina, put herself at the head of an army to repress an insurrection which

liminaries of a marriage consisted in obtaining, first, the consent of the lady; next, of her trands, one of whom was appointed to act on her behalf, and who required not only the pledges of the bridegroom expectant, that he would keep his wife in circumstances suitable to her condition, but also the surcties of his friends, who thus bound themselves to see that he duly fulfilled his engagements. the precautions taken did not terminate here; the next subject for consideration was the means of supporting the children who might be the issue of the marriage; and the friends of the bridegroom were here again called upon to become responsible for the proposals which he made. The amount of the morgen-gift, a bridal offering or jointure (generally a piece of land), which was given the day after the marriage; and of the property to be settled upon the wife in case of the husband's death, were next determined upon; and pledges having been mutually given that in case of removal from one jurisdiction to another no injury should arise to the wife, and, on the other hand, that if she committed any offence, the proper compensation would be made, the scal was put to all these negotiatious by the performance of the marriage. This ceremony was of a religious nature, and was attended by a priest, who implored a blessing on the imion. It was followed by festivities, which often continued many days.—Alfred was attacked with the disorder which never left him, during the protracted banquets in honour of his miptials. Hardccannte died with the cup in his hand at the marriage festivities of a noble Daue - The marriage of Gunihlda, Hardecanute's half-sister, who was married to the Emperor Henry III., was performed with unusual splendour. The chroniclers state that never had there been so great a display in England of gold and silver, genus, garments of rich workmanship, and horses. Songs were composed in honour of the lady, to perpetuate the recollection of her beauty, and were sung by the people for a long period afterwards. A widow might not marry until twelve months of her widowhood had expired. If she neglected this observance, she lost all claim to the property which she had obtained by her previous

marriage. In addition to the influence derived by women from the possession of property which they could freely dispose of by will, those of the highest rank not unfrequently had some share in the management of political affairs, and sometimes displayed an activity and energy which led to important They were, in early times, frequently instrumental in the conversion of their husbands to Christianity, and the mission of Augustin was rendered much more successful through their in-

fluence than it might otherwise have been.

had taken place in her husband's absence, and a fortiess which she attacked was taken and levelled with the ground. About fifty years before, an able and spirited woman, Seaxburgha, the widow of King Cenwealth, had reigned for a short time, in conformity with her deceased husband's nomination, over the powerful kingdom of Wessex, in spite of the hostility of the neighbouring princes, which she counteracted by her prindence and activity. Notwithstanding this instance, however, a female sovereignty was altogether abhorrent to the notions and customs of the Saxons and the other Germanic nations. Even the right of being crowned was for some time taken from the wives of the Anglo-Saxon kings in consequence of the crimes of Eadburgha, the oneen of Brilitric of Wessex, who poisoned her husband; but they afterwards recovered this honour. The queen is frequently mentioned assitting in the witenagemot; and her position was no doubt altogether one of great milnence as well as diginty. Suit seems to have been not minimally made to her, and her interest sought, when a favour was solicited from the crown. Thus, Alfwin, Abbot of Ramsay, in order to procure the favour of Edward the Confessor to his monastery, gave the king twenty marks of gold; but he did not neglect at the same time to propitiate his queen, Editha, to whom he presented five marks. Ties of political amity were often cemented by marriages; and this would also be the means of

became abbesses could not have been unimportant

throughout the whole of the Anglo-Saxon period.

[Book II.

conferring importance and distinction upon the lughest rank of females, and of elevating the general standard and tone of manners with regard to women. Four of Athelstan's sisters were married to powerful princes; one of whom was Hugo, Count of Paris, the founder of the dynasty of Capet. I high neged his suit by an embassy loaded with splendid presents, which appear to have been intended partly for the lady, and partly for her brother, who had the disposal of her hand. Among them were the sword of Constantine the Great, the spear of Charlemagne, besides horses, perfumes, jewels, and relies. Another of Athelstan's sisters was married to Otho the Great, Emperor of Ger-Various instances might be quoted of marriages entered into by the Anglo-Saxon kings for political objects, and of the effect of such connexions in promoting peace and intercourse between

different states. But it was not only in politics that the influence of women of the higher classes was often beneficially exerted. Their mental endowments and acquisitions were also occasionally entployed with the happiest effect in domestic life. It was Osburgha, the mother of Alfred, it will be remembered, who first awakened the literary taste of her illustrious son.\* Ethelfreda, Alfred's eldest daughter, was the inheritor of her father's intellect and accomplishments, as well as of his patriotic spirit, and even of his martial ardour and talent.† She is spoken of by the old chroniclers as the wisest lady in England. The character of Athelstan was formed by Ethelfleda; and her judicions superintendence of his education rendered this monarch only inferior to Alfred the Great. Editha, the queen of Edward the Confessor, we have also seen, graced her high rank by high mental cultivation.

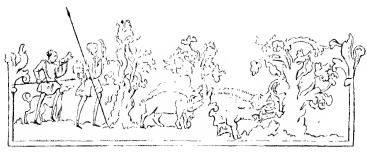

The conclusions to which we may fairly come from a consideration of the facts which have been brought forward in relation to the condition and influence of women, are, upon the whole, highly favourable both to them and to the general state of society in the Anglo-Saxon period. Women then occupied a position which has enabled them ever since to move forward with every social improvement; and their present condition is not the result

of any sudden revolution in public feeling, but the

consequence of a gradual advancement which has operated with hearly equal effect upon the various parts of society.

There has never yet existed a people without

There has never yet existed a people without their peculiar sports and pastimes. The popular diversions of a nation are a part of its civilization, and they change with the various phases of its social condition. For example, lamting and fishing, which, in one stage of a people's progress, are pursued as a means of subsistence, become in a subsequent period a principal source of recreation and amusement. It is related by Asser in his life of Alfred, that the young nobles, after having received some instruction at school in the Latin tongue, applied themselves to the "arts adapted to manly strength, such as hunting." Many of the Anglo-Saxon kings were great lovers of the chase. One of them, the first Harold, received the surname of "Harefoot," from the flectness with which he pursued the game on foot. The huntsman, bowever, was usually mounted. Boars and wild deer were the principal objects of pursuit, and hounds were trained for the purpose of hunting them down. Hares, and sometimes goats, were

BOAR HUNTING. From Cotton MS, Julius, A

also hunted. Nets were frequently used, into which the hunter endeavoured to drive these animals. The chase was enhyened with the sounds of the horn. The laws respecting game were mild and liberal compared with those which were afterwards enacted by the Norman princes. When the

king went to hunt in any place no one was allowed to interfere with his pastine; but at other times every man might pursue the animals which were found upon his own land. Until the reign of Canute it was enstomary to hunt on Sundays.

. Wilkins, Leg. Sax, 146,

MAWKING PARTY. Harleian MS. No. 603.

Hawking always ranked next in consideration to hunting, and in latter times became a sport of still higher distinction. Alfred wrote a book on the

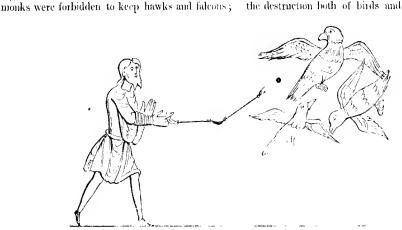

HAWKING From Cotton MS Julius, A 6.

Mons, a native of England, sending a hawk and two falcons to Ethelbert, king of Kent, at the commencement of the seventh century. The birds bred in England were not held in much esteem; and a king of the Mercians requests the same archbishop to send him two falcons that had been trained to attack cranes, not being able to procure such as were sufficiently skilful and courageous at home. Such presents, between persons of consequence, were frequently made. Hawking, at a later period, became so common that regulations were made for the purpose of restraining some of the abuses to which it gave rise. The

bited by a king of the Mercians from trespassing upon the lands belonging to the monks of Abingdon. Both hawks and hounds were frequently bequeathed by will. The falconer seems to have taken his birds in harvest, and after training them for use, kept them out the spring, when he let them fly to the woods; and again, in harvest, provided biniself with others. By some, however, they were kept through the whole year. Birds of various kinds were also taken in snares, traps, and with bird-line, and wild-ducks by decoys. The bow and arrow, and also the sling, were used for the destruction both of birds and beasts. In the

and, in 821, persons carrying hawks were probi-

KILLING BIRDS WITH A SLING Cotton MS, Claud, B 4.

Cotton MS, of the paraphrase of Caedmon there is a representation of Esan going to seek venison, and of Ishmael in the desert. Both are provided with a bow and arrows, and Esan is accompanied by a dog. The bow is ornamented so as to resemble a serpent, the head being carved at one end, and the tail at the other. The string is not fixed at the extremity of the bow, but within a short distance of it. The birds which Ishmael has killed are always by the wide to his helt.

are slung by the neck on his belt.

We have no account of any horse-racing among

the Anglo-Saxons; but Bede, in one passage, speaks of a party of young men trying the speed of their horses on an open piece of ground to which they happened to come.

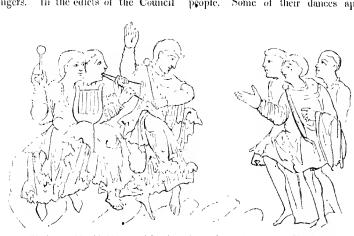

they happened to come.

The m-door sports were various, and suitable to different ranks. The games of chess and backgammon were both known, or at least games very similar to them. Cannte is mentioned on one occasion as being found engaged in a game of tesserae or seacci. Backgammon is said to have been invented in the tenth century, and some ety-

mologists have assigned the name a Suxon or a Welsh derivation. In the canons of Edgar games of chance are forbidden to the clergy.

The gleemen were the most important characters in the Anglo-Saxon festivals. Some of them seem to have performed tricks, gambols, and feats of all kinds, while others were harpers or bards, and ballad-singers. In the edicts of the Council

of Cloveshoe, among those who practised the sportive arts, are classed poets, harpers, musicians, and buffoons. The first-mentioned class of gleemen were in fact minutes, dancers, tumblers, and performers of slight of hand tricks; and the rudiments of the drama are to be traced in some of the performances with which they amused the people. Some of their dances appear to have

DANCE. The Lyre and Double Plute are of the Classic form and proportions. Cotton MS, Cleopitra, CS.

demanded great exertion and skill. One of these was a sort of war-dance by two men in martial diesses. They were armed with a sword and shield, and went through a mock combat to the sound of music,—the musicains, a man playing on a horn, and a female, dancing round the two combatants.

An illuminated MS, which is intended to exhibit

Herodias dancing before Herod, represents her as tumbling; and it may therefore be concluded that their dancing consisted to some extent of this kind of posture-making. But exercises of strength and agility were practised by others as well as by these professional performers. St. Cuthbert is recorded by Bede to have excelled in running, wrestling, and other athletic exercises. Another of the feats of the gleemen consisted in throwing up three balls and three knives alternately into the air, and catching them in their fall. This performance is represented in one of the drawings given in the preceding chapter. Animals also were taught to dance and put themselves into various attitudes for the popular amusement. Bear-baiting, and doubtless many other unrefined amusements, afforded pleasure during an age in which education included

very little to exercise the intellect.

We may here notice some of the popular superstitions of the Anglo-Saxons, the remains of their old paganism which Christianity had not succeeded in uprooting. The change from one system to the other would for a great length of time be imperfect, and, until the work was completed, we may conceive that the old superstitions would still continue to exercise an almost undiminished influence

yet been put to flight. The Christianized Saxons accordingly retained unimpaired that belief in witches, charms, and prognosties, which had formed the greater part of their former religion. male or female dealer with the powers of darkness was all but universally supposed to have the power of inflicting sickness, of menting to love or batted, controlling the elements, or rendering the fields fertile. Every day in the year was distinguished by its aptitude or unfitness for one or other of the concerns of life. From the occurrence of some trivial circumstance at a certain time unfavourable omens were drawn; while some other equally natural and unimportant incident was regarded as the harbinger of every blessing. The diminution in the amount of individual happiness among a people hable every hour of the day to be filled with the apprehensions of approaching calamity must have been incalculable. Dreams, in like manner, operated upon the Anglo-Saxon mind with more than the force of actual events. The law, however, endeavoured to repress certain of the forms of the national superstition, which evinced in a more palpable manner the imperfect conversion of the people to Christianity. The following is one of the earher laws which were passed with this object:-"We teach that every priest shall extinguish all heathendom, and forbid wilwearthinga (fountain worship), and licwiglunga (incantations of the dead), and hwata (omens), and galdra (magic), and man worship, and the abominations that men exercise in various sorts of witcheraft, and in frithsplottum, and with elms and other trees, and with

over the popular mind: some of them have scarcely

stones, and with many other phantonis." \* Even so late as in the time of Cannte the practices here prohibited were still rife, for in one of his laws the people are ordered not to worship the sun or the moon, fire or floods, wells or stones, or any sort of tree; not to love witchcraft, or frame death-spells, either by lot or by touch; nor to effect anything by phantoms. +

We shall close our sketch of the domestic and social usages of our Anglo-Saxon ancestors with a notice of their mode of disposing of the dead and their funeral ceremonies. The burning of the dead, as practised by the Britons, after the Roman example, had at one time also been prevalent amongst the ancient Germans. The Germans were accustomed to divide their history into two periods; the first, in which the bodies of the dead were burnt, termed the age of burning; the second, termed the age of hillocks, in which the dead were buried, and a cairn or mound of earth raised over their remains, I But the Germans, in the time of the Anglo-Saxons, burned the bodies of crimmals; and it may therefore be presumed that this was not their usual mode of disposing of their dead. There is abundance of proof that in England the custom of interment had then become general. The body of Edward the Martyr, indeed, who was murdered in 978, was burnt by his friends, and the ashes were deposited at Wareham; but this is the only instance we meet with of a body being burnt among the Anglo-Saxons. The interment of a corpse in a pit or grave succeeded to the custom of covering it only with a mound or a heap of stones. The use of

Wilk, Leg. Anglo Sax p 53, quoted by Mr. Turner in Hist, of the Anglo Saxons, vol in p 136 – 5th edit, † Wilkins, p 134, in Turner, in, 137, ‡ Bartholm, lib (i.e. 8)

coffins would not perhaps at first be general, but it subsequently became so. For persons of distinction or wealth they were of stone, and for others of wood. The corpse was sometimes covered with a sheet of lead, and was then placed in a wooden Linen shrouds were used, and the clergy were buried in the habits of their office. burnal-places at first were not in the midst of the population; but Archbishop Cuthbert, about the middle of the eighth century, obtained permission to bury the dead within cities. The churches in consequence at length became crowded with graves, so that in the course of time it was found necessary to restrain the practice; and none were allowed to be buried in the churches but ecclesiastics and persons whose lives had been distinguished by piety and good works. The body was often conveyed a considerable distance for burial. Wilfrid, Archbishop of York, died at Oundle, in Northamptonshire, in 708, and was buried at Ripon. manner in which the funeral was conducted is thus described by the bishop's biographer, Eddins: "Upon a certain day many abbots and clergy met those who conducted the corpse of the holy bishop in a hearse, and earnestly begged that they might be allowed to wash the sacred body, and dress it honourably, according to its dignity; and they obtained permission. Then one of the abbots, named Bacula, spreading his surplice on the ground, the brethren deposited the holy body upon it, washed it with their own hands, dressed it in the pontifical habits, and then taking it up, carried it towards the appointed place, singing psalms and hymnis in the fear of God. Having advanced a little, they again deposited the corpse, pitched a tent over it, bathed the sacred body in pure water, dressed it in

THE COFFIN AND GRAVE-CLOTHES. From a Picture of the Raising of Lazarus in Cotton MS. Nero, C 4.7

garment.

robes of fine linen, placed it in the hearse, and proceeded, singing psalms, towards the monastery of Ripon. When they approached that monastery the whole family of it came out to meet them, bearing the holy relies. Of all this numerous company there was hardly one who abstained from tears; and all raising their voices, and joining in hymns and songs, they conducted the body into the church which the holy bishop had built and dedicated to St. Peter, and there deposited it in the most solemn and honourable manner." honours, it will be recollected, were paid to a persomege of importance and of great sanctity. It is mentioned\* that a nobleman having died during his attendance at the King's Easter Court, the king directed that the body should be attended to the place where it was to be deposited by several bishops, carls, and other noblemen. The custom of ringing the passing-bell when a

carls, and other noblemen.

The custom of ringing the pa sing-bell when a person's death occurred originated in the Anglo-Saxon period. The intention was, that those within reach of the sound might put up a prayer for the dead. Bede relates that at the death of the Abbess of St. Hilda, one of the sisters of a distant monastery thought she heard the well-known sound of that bell which called them to prayers when any of them had deputed this life; and the superior of the monastery was no sooner informed of this than she raised all the sisters, and called them into the chinch to pray fervently and sing a requiem for

Gale, Script, in, 395,

the deceased abbess.\* A payment called the "soulsceat" was made to the clergy on a person's death. The anxiety of persons to procure the prayers of the clergy for the good of their souls was one of the most productive sources of ecclesiastical wealth, One of the objects of the associations among artisans, called gilds, was to provide for the honourable interment of a member according to his last wishes. A fine, paid in honey, was inflicted upon any brother for non attendance at the funeral; and the gild was to provide half of the provisions for the funeral entertainment, at which all who were present gave twopence for alms. If a member died, or fell sick, out of his own district, the rest were to fetch him back, according to his wish, under the same penalty. The period which elapsed between the death of a person and the interment of his remains was usually short, except where it was necessary to convey them to some distant burnal-place. The body of Edward the Confessor was interred the day after his death. The head and shoulders of the corpse remained nucovered until the time of burnal. It would appear from the defineations in some of their MSS., that the bodies of the dead were sometimes conveyed to the grave on a bier, and that no coffin was used. One person taking hold at the head, and another at the feet, deposited the deceased in the grave, the priest throwing incense over it. Besides the shroud, the body was enveloped in a coloured

Brande's Popular Antiquaties.

## CHAPTER VII.

## HISTORY OF THE CONDITION OF THE PEOPLE.

URING the period

of which we are now about to close the sur-

vey, the population

of the British Islands

was more diversified in respect of lineage,

language, and laws, - the three great constituents of nationality, than at any other time either In Ircland, even if we suppose the Scots and other earlier Gothic colonists, or conquerors, to have been already completely melted down into the mass of the native Celtic population, we have still two perfectly distinct races dividing the land between them, and contending for its sovereignty,-namely, the old Irish, and their recent invaders, the Northmen or Danes. The latter had established themselves, by the middle of the ninth century, along the whole line of the east coast, from Belfast to Cork, and occunied Dublin and nearly all the other towns of any importance throughout the island; the proper Irish were driven beyond what might be called the pale as completely as they were some centuries afterwards by their Anglo-Norman invaders. In Scotland also a large Danish or Norwegian population was settled not only in the Shetland, Orkney, and Western Islands, but also in the northern part of the mainland: these foreigners had maintained a long and fierce struggle with the Scottish ruler for his crown; and even after their failure in that object (for the Danes never succeeded in Scotland in acquiring the supreme dominion of the country, as they did for a season both in England and in Ireland), it may be doubted if the allegiance of the Danish chieftains of Sutherland and Ross to the Celtic monarch was for a considerable period so much as nominal. The Scottish Celts themselves, though they had obtained the sovereignty of the country, and it came eventually to be called by their name, were intruders upon an older population of a different race. The Picts, the representatives of the ancient Caledonians, who had held the whole of North Britain up to the beginning of the sixth century, subsisted as an independent state till the middle of the ninth; and, although from that date united under one sceptre with the Scots, continued to be recognised as a distinct people for a long time

after. A Welsh kingdom maintained its existence

in the south-west of Scotland till the latter part of

the tenth century. In South Britain, finally, the Welsh occupied, and retained at least the nominal sovereignty of, the whole western side of the island; and, even if we include Cumbria in the northern Strathelyde, not fewer than three separate kingdoms that were not Saxon survived there throughout the Saxon period. Nor was the rest of South Britain —that part of the island which was properly called England-all in the occupation of one race of people. The Saxons themselves were divided into at least three several great tribes; some of them were Saxons proper, some were Angles, some were Jutes; and they appear to have come from different parts of the continent-some from a point so far north as the present duchy of Sleswig in Denmark, others from a quarter so much farther to the south as the modern Friesland in Holland, and the country of the ancient Belgæ, which extended to the This mixed population continued down to the ninth century to be distributed into seven or eight distinct states or kingdoms, all, except when any of them happened to be reduced for a true to subjection by force, substantially independent of each other. But the different tribes of the Anglo-Saxons only possessed a part even of England Here also, as in Ireland and in Scotland. there was settled, in full occupation and possession of a large portion of the country, a population of Danes or Northmen, who had made good their footing by their swords, and had wrested the soil from the Saxons exactly in the same manner as the Saxons had before wrested it from the Britons. These Danes at length actually acquired the sovereignty of England, and retained it for a considerable time; nor after the Saxon line of kings was restored did the kingdom itself cease to be still to a full half of its extent in the hands of the Danes.

In the latter years of the Anglo-Saxon period England appears to have been divided into thirtytwo shires, of which nine constituted what was called West-Seaxnalaye or Sexenalaya (the province, or, as the word perhaps properly signifies, the law of the West Saxons); eight, Myrcentage or Merchenelaga (the district over which the Mercian law prevailed); and the remaining fifteen, Danelage or Denelaga (the Danish territory). The nine West Saxon shires were-Kent, Surrey, Sussex, Berks, Hants, Wilts, Somerset, Dorset, and Devon; the eight Mercian-Chester, Shropshire, Hereford, Stafford, Worcester, Gloucester, Warwick, and Oxford; and the fifteen Danish-Norfolk, Suffolk, Essex, Cambridge, Hertford, Middlesex, Huntingdon, Bedford, Leicester, North-

ampton (including Rutland), Buckingham, Lincoln, Nottingham, Derby, and York (which in those times appears to have comprehended Durham and Lancashire, and also perhaps the whole or part of Westmoreland). Northumberland and Cumberland seem as yet to have been usually considered as rather belonging to Scotland than to England; nor was either Cornwall or Wales (in which Monmouth was meluded) reckoned as part of England proper.\* Although, therefore, the whole country was subject to one sovereign, it may be considered as having been composed of three territories, which were probably nearly as distinct from each other as if they had been three separate states, both in regard to the races by which they were chiefly inhabited, and the laws and customs by which they were governed. The southern counties only courposed the original dominion of the state which had acquired the general sovereignty; the district extending from the heart of the country to the borders of Wales was still regarded, in everything except its subjection to the anthority of the common sovereign, as the distinct state of Mercia, of which kingdom it had anciently formed a part; and what might properly be called a foreign people held possession of all the east and north, a space certainly not less than that occupied by the English in the south and west. The distinction of the West Saxon, the Mercian, and the Danish laws, as severally prevalent in these three territories, appears to have subsisted for a considerable period atter the Norman conquest; but in what it consisted is very imperfectly known. The account usually given is, that what is called the common law of England was originally composed of a selection from all these different codes, and received its usine of the common law from that circumstance. But it may be reasonably doubted if this was really the origin of the name; the common law would rather seem never to have existed in the shape of any regularly compiled or promulgated collection of enactments, but to have been always a body of mawritten rules and usages, which were lesignated common, as being beheved to have been observed throughout the whole course of the national history. It is probable enough, however, that the efforts of the later Anglo-Saxon kings may have been directed to the removal, as far as possible, of such diversities of legal usage as distinguished one part of the kingdom from another,an object which the natural tendency of events would itself assist in promoting. The chief part of this task of assimilating the laws of the West Saxons, Mercians, and Danes, is generally ascribed to Edward the Confessor; but it was begun, according to some authorities, nearly a century before his time, by Edgar. Still the work does not seem. to have ever been completed during the Saxon period. The West Saxons, the Mercians, and the Danes, all along appear to have had their distinct \* See Camden's Brit. ccxxvii., Blackstone's Com. Introd. § 3., and Palgrave's English Com. i. 48.

"an uniformity in substance, differing rather in their mulcts than in their canon; that is to say, in the quantity of fines and amerciaments, than in the course and frame of justice." . . "In those districts," says Sir Francis Palgrave, "which were conquered and colonized by the Danes, the settlement of the invaders was probably accompanied by a partial introduction of their peculiar It must be recollected that these strangers made the country entirely their own. Halfdane divided Northambria amongst his followers, who tilled and sowed the land which they had won. The portion of ancient Mercia constituting the commonwealth of the five burghs, Lancaster, Lincoln, Nottingham, Stamford, and Derby, became a Danish state in the following year; and the division of East Anglia amongst the mmy of Guthrun completed the colonization of Danelage. Within the limits of these acquisitions, and which, so far as East Anglia and its dependencies extended, were settled and confirmed by the treaty between Alfred and Guthrun, the conquest of the Anglo-Saxous by the Danes appears to have been as complete as that which was effected at a subsequent period by William of Normandy." "Yet," he concludes, "the influence of the more civilized community was not unfelt, and the laws which Edgar recommended to the Danes, perhaps without immediate effect, were adopted after his decease, when both Danes and Augles, in the midland and eastern parts of the island, were gradually uniting into one people. Beyond the Trent the process was more tardy; and it was not until the close of the reign of the Confessor that the laws of Cannte were promulgated by the Confessor in the carldom of The chief peculiarities of the Northumbria. Danclage are to be sought rather in forms of policy and administration than in the doctrines of the law

laws, though they had all, as Spelman has observed,

itself."\* Of the old states of the heptarchy, the West Saxon province comprehended the kingdoms of Wessex, Sassex, and Kent; the province of Mercia consisted of part of the former kingdom of the same name; and the remainder of the kingdom of Mercia, with the whole of those of Essex, East Auglia, and Northumberland, constituted the Da-According to the account in Bede nish province. and the Saxon Chronicle of the races by which these several kingdoms were founded, and the territorics composing them originally occupied, + the subjects of the West Saxon law would be partly Saxons, and partly Jutes; those of the Mercian law, Angles; and those of the Danish law, in so far as they were not Danes, partly Angles, and partly Saxons.

The Britons, as we have seen in the preceding book, although they had strongholds in the woods, had no towns properly so called. These were first founded by the Romans. Gildas, writing in the sixth century, says, that there were then twentyeight cities in Britain. Lists of these twenty-† See ante, p. 293, \* English Com. p. 51. 2 x 2

eight cities under their British names are given in

the History bearing the name of the Neumius of the ninth century, and in their British and in some instances also in their modern names, by Henry of Huntingdon, who, although he hyed in the twelfth century, evidently compiled many parts of his work from records or documents of a much carlier period. In regard to about twenty of the names, the two lists may be considered to correspond, although both are obviously much corrapted; the remaining places seem not to be the same in the one as in the other. The lists, however, defective and in part unintelligible as they are, are still highly curious, as furnishing the oldest notice we have of the topography of Britain after the time of the Romans, and the earliest that can be regarded as appertaining to the Saxon period. The towns which are found in both lists appear to be the following :--- Verulam, or the ancient St. Alban's (called Cair-Mumeip by Nonnus, Kair-Mercipit by Huntingdon); Carlisle, Meivod in Montgomeryshire, Colchester, York, Cambridge, or rather Grantchester in the neighbourhood of that place; London, Cunterbury, Worcester, Porchester, Warwick, Caer-Scient near Carnaryon, Caerleon, Leicester, Draiton in Shropshite, Wroxeter, Luncoln; and three unknown towns, of which the British names are, in Nemnus, Cair-Caratauc, Cair-Manchguid, and Can-Gnorthighn; in Himtingdon, Kan-Cuserat, Kair-Megnard, and Kair-Guortigern. The last would seem to mean the City of Vortigers. The following are enumerated by Nemius, and not by Huntingdon: Carr-Guntnig, supposed to be Winwik, in Lancashere; Cuir-Custeint, literally Constantine's town, probably Constanton, near Falmouth; Can-Daun, Doucaster; Carr-Legion, Chester; Can-Guent, cuther Winchester, or Cacı-went in Monmonthshine; Cair-Brithon, supposed to be Dunbarton; Cair-Pensavelcoit, Pevensey; and Cair-Celemion, Camalet in Somerset. Those in Huntingdon and not in Nemins arc, Kair-Glou, Gloucester; Kair-Cci, Chichester; Kair-Bristou, Bristol; Kair-Cen, Cuencester; Kair-Danri, Dorchester ; Kair-Dorm, near Walmsford, on the Nen; Kair-Merdin, Cacimarthen; and Kan-Liechd, the modern name or site of which is not known. These, however, were certainly not all the towns left in Britain by the Romans. Our remarkable omission is Bath; but we are inclined to suspect that Cair-Badon, the ancicut name of this city, should be substituted in the list of Nemmis for Cair-Brithon, taken to mean Dunbartou, which never was a Roman town. In another list given by Alfred of Beverley, a writer contemporary with Huntingdon, although it

Shafteshury. Although, however, some of the names, in all the lists as we now have them, may be wrong, or may be misunderstood, we may probably rely upon the correctness of the general statement of Gildas that, in his time, the number of cities, by which

contains only twenty names in all, we find both

Caer-Badon, and Caer-Paladour, supposed to be

[Book II. he may be supposed to mean walled towns, in the island, or rather in that portion of it which had formed the Roman province, was twenty-eight. There were also, he says, some strongly fortified This was, then, the amount, or at least the measure of what may be called, with somewhat more than mere ctymological propriety, the cultization of the country at the time when the Saxons entered upon the possession of it; for, not only is it true, that without towns there can be little or no civilization in any country, but the quantity of civilization in a country may be generally taken as being nearly in proportion to the number of towns These are, at least, the fountains where the light of knowledge is collected and preserved, and from which it is diffused over the population. Many of the Roman towns appear to have been descrited or laid in ruins in the course of the long, fierce, and desolating warfare that preceded the establishment of the several states of the heptarchy; no contest so obstinate and protracted had to be fought by the barbarian invaders in taking possession of any other part of the Roman empire. The Saxous, when they first issued from the seas and woods of the north of Europe for the conquest of Britain, probably held the peace and protection of walled towns and congregated buildings in contempt; and in this fectors they may have recklessly destroyed, or taken no pains to preserve, those of the British cities that fell into their hands, so long as they were actually engaged in contending, sword in hand, for the possession of the conutry. But as they gradually effected a settlement in it, and became transformed from invaders into colonists, and from merc soldiers into occupants and cultivators of the soil, the instinct of their new position and circumstances turned them to new views and another mode of procedure. attention was now awakened to what had been done by their predecessors in the sovereignty of the island; they set themselves to take advantage of, and to improve upon, the foundations which that illustrious people had laid; the Roman cities and other fortified stations were once more ocempied, and became the sites and beginnings of new cities and towns, most of which subsist to the present day. But this was not nearly all that was accomplished by the Anglo-Saxons in the embellishment of the country, and in planting throughout its soil at least the roots of future industry, wealth, and civilization, during the period it was in their They certainly did not work with anything like the high finish of the Romans; they were from the first, and continued all along, a people in a much less advanced state in regard to the arts, and almost every kind of intellectual cultivation, than those inheritors of all the knowledge and philosophy of the ancient world; and what they produced, therefore, was infinitely less perfect. less imposing, and in every way less remarkable in the result actually attained, than were the creations and achievements of the older and more lettered people. But they evinced, nevertheless, in all that

they did, a sufficiently robust and productive genius; and if they did not themselves carry out many things to a very elevated degree of excellence, they at least scattered the seeds of improvement for others to rear over a wide field, and in no Very striking evidence of this strated measure. healthy fertility is afforded by the multiplication of towns and villages, which seems to have taken place in South Britain during their domination, and by a comparison of the state to which the country was eventually brought by them in this respect with the state in which they appear to have found It is a remarkable fact, and one which has scarcely been sufficiently adverted to, that, with very few exceptions indeed, all the towns, and even villages and hamlets, which Eugland yet possesses, appear to have existed from the Saxon times. This is in general sufficiently attested by their mere names, and there is lustorical evidence of the fact in a large proportion of instances. Our towns and villages have become individually larger in most

cases in the course of the last eight or ten centuries; but in all that space of time no very great addition has been made to their number. The augmentation which the population and wealth of the country have undergone, vast as it has been, in the course of so many ages, has nearly all found room to collect and arrange itself around the old centres. This fact does not disprove the magnitude of the increase that has been made to the numbers of the people, for the extension of the circumferences without any multiplication of the ceuties would suffice to absorb any such increase however great, but seeing how thickly covered the country actually is with towns and villages, it is certainly currons to reflect that they were very nearly as numerous over the greater part of it in the time of the Saxons. And if only about twenty-eight of our cities and towns, or even twice that number, can be traced to a Roman original, the number indebted to the Saxons for their first foundation must be very great, for, as we have seen, nearly all that are not Roman are Saxon. As for our villages, the nndoubted fact that the present division of the country into parishes is, almost without alteration, as old at least as the tenth century, would alone prove that the English villages in the Saxon times were nearly as numerous as in our own day. One account, indeed, which has been often quoted as trustworthy, though it seems impossible to believe that it does not involve some great mistake, makes the number of parish churches in England about the time of the Norman Conquest to have been 45,011, and

The number of

that of the villages would probably be overrated if reckoned at half as many more. If, in like manner, instead of the numbers just given, we allow only 10,000 parishes and 15,000 villages to England in the time of the Saxons, we shall be led to form a very high idea of the extent to which the country must already have been reclaimed and Let it be conceded that many of the villages were very small, consisting perhaps only of a dozen or two of cottages; still we apprehend the facts imply a diffusion of population and of cultivation vastly beyond what can be supposed to have taken place in the preceding or Roman period, during which, indeed, the country was traversed in various directions by noble roads, and ornamented with some considerable towns, but does not appear, from any notices that have come down to us, or any monuments or signs that remain, to have been generally covered with villages of any description. Various attempts have been made to extract an

parishes at present is not much above 10,000, and

estimate of the amount of the population of England in the Auglo-Saxon times from the statements in Domesday-Book; but very little dependence can be placed upon any of the inferential calenlations upon this subject (for they are nothing more) that have been founded upon that record. Domesday-Book does not profess to present any census of the population; the object with which the survey was undertaken appears to have been merely to obtain an exact account of the demesnes and profits belonging to the crown, and of the public services due by the several estates in the kingdom; and whatever information respecting other matters may be found in the register must be considered as having been introduced principally if not exclusively with a view to this its primary It is in this way only that we can explain such entries as those which mention an more than forty-two persons as resident in the town of Dover, forty-six in St. Alban's, five in Sudbury, nine in Bedford, ten in Bristol, and many others as manifestly not intended to include the whole population of the places to which they refer. By counting a

parishes had been so much overrated that, to make up the sum, the assessment had eventually to be raised to 57 16s, on each. The number of perishes thereforehad been taken to be about five times as great as it really was - normous specimen of statistical agnorance on the part of a government- and also a striking example of the no the part of a government—and also a striking recorder of that aboutly, and measurement of legislating in the absence of that knowledge of facts which neight to be the bases of every legislation proceeding. So, in a trickise published in 1527 by Simon Fish of Gray's Ion, entitled 'A Supplication of the Beggars in the King,' the number of parishes in England is assumed in be 52000. Yet several article and emissioned speak to have been made before this time. It is affilmed, in a work entitled "The Happy Future State of Lingland, published in 1689, that in MS in the Rodition thany at Oxford makes the parishes in the time of Edward I to have been unity about 5900, exclusive of many characters since arown in some only about 8900, exclusive of many chapelines since grown memor p.cis mages. Stove, in his Annals, states that the pore-less were pars stages. Show, in his Annufs, states, that, the parselus's were actually uniformly or the purposes of the tax had our bid [1,3s dove mentioned, and were bound to amount only to \$600. And Canden tells us (Buttuin), cexxx ) that in non-mineration nucle for Cardinal Wolsey in 1520, there were reckoned in all the commes of England 9407 chareless. He himself gives its another runneration male in the reggio of James 1, which makes its amount of partic bouches to amount to 9234. Although the present mindor of particles, paperly in populady so called, amounts and to dained 10,700 (see Maccalloch's Statistical Account of the British Esquie, i 171), it has been ascertained, in the course of the technique on the the infiministration of the Poor Laws, that the cuttin mathem in places throughout the kingdom separately indexing their on pagers is (or rather was, before the formation of the new unions) 15,635.

that of the villages 62,080.\* This statement is quoted in Spelman's Glossary, roc. Feedum, from Thomas Spiot, a monk of the measitery of St. Augustia, in Cantellony. The rivenstance of the numbers both of parishes and of villages being set down, and that of a critical correspondence being preserved between them, would ather go to negative the supposition that them was any corruption in the text of the manuscript. On the other hand, the particularity of the figures would seem to indicate that they were the result of something like an actual computation. It appears that a similar exaggerated notion of the number of parishes in England was long enterthined. In the year 1371 the parliament granted Edward III, in subsidy of 50,000, which it was calculated would be raised by an assessment in the average rate of alculated would be raised by an assessment at the average rate of 1L 2s, 4d, upon each parish; but it was found that the number of

Anglo-Saxons appear to have in most instances arisen ont of the military stations of their Roman predeces-

sors; as the places they distinguished by the name

of cities had in general, if not always, been Roman

towns or civilates. All cities, however, came in

course of time to be considered as burghs, though

F. Palgrave, "that a Saxon burgh was nothing more

than a hundred, or an assemblage of hundreds,

surrounded by a moat, a stoccade, or a wall; and

the name of the hundred was actually given to

some of the most considerable cities, burghs, and

destroyed by the feeble fortification which protected

the burgesses; and the jurisdiction of the burghmost or portmost differed from that possessed by

the analogous districts in the open country only

in consequence of the police required by a more

condensed population, and the institutions, perhaps of Roman origin, which incorporated the trading

portions of the community." ‡ "We must aban-

don," the learned writer afterwards remarks, "any

conjectures as to the government of the burghs in

the earlier periods. We must rest satisfied with the fact that, in the reign of the Confessor, the

larger burghs had assumed the form of commu-

nities, which, without much impropriety, may be

character of the burgess arose from his possessions; it was a real right arising from the qualification

which he held. The burgess was the owner of a

tenement within the walls, and the possession might descend to his heirs, or be freely ahemated to a

stranger. The lawmen of the burgh were so deno-

minated in respect of the mansi which each held. . . . . Lawmen occur by name only in the Danish

burghs; but a similar territorial magistracy existed

described as territorial corporations.

No right was conferred or

"It must be clearly understood," observes Sir

[Book II.

Mr. Turner makes the total number of persons of all descriptions enumerated in Domesday-Book to

HISTORY OF ENGLAND.

amount to 300,785. He then considers this number of individuals as representing so many families, each of which may be supposed to have consisted of five persons on an average. This would produce

an entire population of about a million and a half, of which about a third part is assigned to the Damsh half of the kingdom.\* But as several towns, especially London and Winchester, are not mentioned at all, while the four northern counties of Cumberland, Durham, Westmorehand, and Northumberland, are likewise altogether omitted; and as, moreover, no account appears to be taken either of the monks or (except in a very few instances) of the parochial clergy, it is conjectured that at least half a million more may be allowed for these deficiencies, and that therefore the entire Anglo-Saxon population, in the reign of the Confessor, must have rather exceeded two millions. † Sir James Mackintosh has drawn up a table which appears to make the entire mumber of persons mentioned in the survey only 258,293. He has omitted, he

says, such of Mr Turner's estimates as seem to

depend upon a supposed proportion of persons to tenements. He adds, that "nothing more than a

very general approximation can be expected till

Domesday Book be much more entically examined

than it has hitherto been." Perhaps it would have

been more correct to say that no satisfactory infor-

mation upon the subject in question is likely ever

tion of the state of the country in the Anglo-Saxon

of cities and burghs (as they are usually designated

In the first place, we obtain evidence at least of the existence in those times of a long list

to be obtained from that source.

in the record), comprising nearly all the considerable towns the kingdom vet contains; a good many of the number, indeed, having apparently been of greater consequence then than they are now. also gain some small insight into the government or political constitution of these burghs; and some light is thrown upon the constitution of society generally by the notices of the different classes or orders of the people, though, for the reasons that have been stated, little or nothing can be inferred from the particular numbers of each class that are registered in different places. The larger towns, as we have just observed, were distinguished among the Saxons by the name

of burghs, the same term with our modern English

† Turner's Hist, Ang.-Sax, iii, 254,

in other places. The soke of the aldermen of Canterbury was transferable, like any other inheritance; and the possession of the land imparted to the lord the right of judicature in the burgh-mote or municipal assembly. Such functionaries were lawmen or aldermen by tenure. Other burghs, however, may possibly have possessed an elective magistracy. . . . Nor is it improbable but that the guilds of traders and handieraftsmen possessed considerable influence; and the aldermen of these cor-

But upon what authority does Mr. Turner exclude from the Danish part of the kingdom the counties of Northampton (with Rutland), Leicester, Notlingham, Buckingham, Cambridge, Herbord, Bedford, Deeby, Huntingdom, and Mudlesex, which the old writers generally enumerate as belonging to the Danelage? Resorming these counties to their proper place in the table, the account will stand thus:—Danish counties, 151,100, other counties, 149,685. Cornwall (with 5606 persons for its share) is included among the latter.

<sup>•</sup> In Scolland the term used is still burgh, which however is there always pronounced as a word of two syllables, and exactly like the English borneyh. Thus the name of the capital is a word not of three, but of four syllables,—as Wordsworth has correctly given it,—"And stately Edinburgh through on crags." But the true old Scottish form of the word, also still in familiar use,

Fut the true oid Scottish form of the word, also still in Rimiliar use, is broph, with the guitteral strongly pronounced.

+ See Jon. Scaliger, Lection. Ausen. ii. 9.—Palgrave's English Commonwealth. p. 353.—The Burgundones, or people of Burgundy, are said to have been so called as being sprung from the soldiers by whom the Roman forts in that country were occupied. moot, and to share in its proceedings." \* Sir Francis proceeds to state that, in the larger and more important cities, the only rights that the king had were to the various payments and services

which were imposed upon the municipal communities, and that, provided these were discharged, he had nothing more to demand, -he could not exact the eath of fealty from the citizens, nor even enter within their walls without their consent. The only fact, however, which is referred to in proof of these positions is the resistance made to the Conqueror by the citizens of Exeter, who, as will appear in the next Book, although they offered to pay to that king the same tribute they had paid to his predecessors, refused to become his men or vassals. But an act of resistance like this to the attack of a foreign invader (for such William might very naturally be considered in a part of the country which he had not yet overrun) would seem to afford no evidence from which we could safely infer what were the privileges possessed or claimed by the burghs under a government which they completely acknowledged. It is difficult also to understand how the Saxon burghs should have acquired this independence of the royal authority, considering the gradual manner in which they appear to have grown up to whatever importance they actually did It is admitted, as we have just seen, that in their origin they were merely certain of the inhabited localities, which either from having heen formerly occupied by the Romans, or from the peculiar natural advantages which they presented, came to be surrounded with walls, ditches, or some other such protection; but this visible line of lemarcation conferred no peculiar character upon the community which it inclosed. It tended no

ment generally of their burgh; but in the absence of any record of so remarkable a revolution, we cannot venture to assume that these walled towns eventually became so many all but independent republics established all over the kingdom, as they would really have been if we can suppose them to have held, in relation to the general government, the position which the men of Exeter took up against William the Conqueror. The word town, it is to be observed, conveyed a different idea, as used by our Saxon ancestors, from what it now does. A town or township (in Saxon tun, from tynan, to inclose) was very nearly the same with what came after the Conquest to be deneminated a manor. Sir Francis Palgrave explains the term thus: - "Denoting, in its primary sense, the inclosure which surrounded the mere homestead or dwelling of the lord, it seems to have been gradually extended to the whole of the land which. constituted the domain."+ "Every Anglo-Saxon township," he afterwards observes, " was subjected, in demesne, to a superior; to the sovereign, whe-

\* English Commonwealth, p. 630.

† Ibid. p. 65.

doubt to produce a state of things favourable to the

acquisition, by the burgesses, of the right of

managing both the police and the internal govern-

ther king or coldorman, who succeeded to the very extensive possessions of the British princes; or to a lord (a hlaford, or landrica). In some few instances the township belonged to small corporations, if such a term may be used, whose members held the township as a joint property. . . . . The right of the lord of the township was accompanied by the sovereignty of the land. I apply the term sovereignty, rather than that of ownership, because the superiority of the township was imquestionably vested in him, although his right of possession does not seem to have extended beyond the demesne or inlands, which he enjoyed in severalty, and which he cultivated as his own. Another portion of the township consisted of the fends which he or his predecessors had granted by landboc (or charter) to the sokemen. Such a benefice, præstarium, or feud, which in Anglo-Saxon was denominated a Lach, was usually created for one, two, or three lives, to be nominated by the grantee, after which it reverted to the lord; and during the existence of those derivative estates, the lord, according to the language of the later law, had only the services and the reversion. Some benefices, however, were granted in perpetuity. Analogous in many respects to the benefices were the lands which were held by the tenants, whether Sokemen or Bondes, by folkright, or customary tenure; but these do not appear to have been generally subject to devise or alienation. every township contained these extensive common fields, or common leasowes, which the law assumed to belong to every town, and of which the insufract

was shared between the lord and the men of the

The whole country, therefore, it will be ob-

served, was divided into towns, or townships, as

community.\*

well as into hundreds and shires. And the township, as well as the hundreds and shires, constituted in every case, for certain purposes, a commumity by itself, having a jurisdiction and legislative powers of its own. The chief government belonged to the lord; but it appears that the court in which it was excreised could not be held without the presence of a certain member of the Sokemen or tenants.† The deputy of the lord, and the functionary through whom he usually exercised his rights, was the Tim-Gerefa, or Town-Reeve-"No township," says Sir Francis Palgrave, " was without a gerefa, who was allowed, in the folkmoots, or judicial assemblies, to speak and act on behalf of the Twelfhindman, who was the lord of the township, and to give such testimony as would have been given by the lord himself; and the right of being so represented was one of the peculiar privileges of the aristocracy. He appears to have been the fiscal officer of the lord; he received the seignorial tolls and dues, and superintended the performance of the agricultural labours of the Yet the gerefa, though thus the villainage."1 officer of the lord, seems to have been usually + Ibid, p. 79.

HISTORY OF ENGLAND.

their masters.

slaves, in modern language. The theowes, as has

been already observed, were probably, for the most

part, persons who had either been convicted of crimes, or captured in war, or their descendants. Some of

them may also have been the descendants of the old British cultivators of the soil; but it is not

likely that these were generally reduced to a state of slavery by their conquerors. The Saxon theowes

spoke the same language, and, according to every

appearance, were in general of the same race with

different classes of the Anglo-Saxon population,

[Book II.

courts of the shire. Each township had also the keeping of its own police: when a crime was committed, the inhabitants were required to raise the hue-and-cry, and were bound to enforce the appearance of the offender to take his trud. These statements, taken in connexion with the notices in a former chapter, of the tithings and the system of frank-pledge,\* will enable the reader to understand the general arrangement of the Anglo-Saxon population, in so far as regards its territorial or local distribution. An account has also been already given of the leading distinctions of rank and political condition by which it was marked. What was properly called the people, was divided into two great classes—the noble, and the ignoble; the corls, and the ceorls; or, as they were designated by a form of expression that denoted the relative estimation in which they were severally held by the law, the Twelfhaendmen and the Twibaendmen—that is, people with a dozen bands each, and people with only a pair each. In this general division, however, we must consider as included in the first class, not only the Eorls, or Eorlandmen, or Thaneborn, who were, strictly speaking, the men

of twelve hands, but also the Enddormen, or per-

sons of the royal blood, upon whom a still higher

value was set, and the inferior nobility or gentry, designated Sithcundmen, or Sixhaendmen + On

the other hand, the Twihaendmen were also of various descriptions, or at least were known by

various names, although among them no distinc-

which properly signifies nothing more than the inhabitants of the villa, that is, of the town-

tion existed in respect of legal estimation. general name by which they were known was that

of Ceorls, the origin of our modern churls. t Latin they were called Villani, translated Villains,

by four good and lawful men by whom he was

attended, the township was represented in the

monthly courts of the hundred and the half-yearly

ship, whether it was a village or merely a farm. The word villagers would convey the nearest idea of what was meant by villam to a modern ear. Another name of the Ceorls was Bonds, or Bondsmen, that is, occupants of the soil. Boors, a name by which they were also called, means the same Other descriptions of Ceorls were the Cotsetan, in Latin, Cotarii, that is, cottiers, or holders of small tenements; and Bordarii, a term of which the exact meaning is not known. Not accounted as at all forming part of the people, but deprived of all rights, both political and personal, and classed rather with the cattle than among human beings, were the Theowes, in Latin, servi, which may be translated serfs, or See ante, p. 250.
 † Secante, p. 248.
 † Scott, in his Introduction to the 'Lay of the Last Minstrel,' has preserved the familiar old thyming distinction of our Saxon ancessaries.

People under the Anglo Saxon Government." 8vo. Lon. 1818.

rous class was that of the Ceorls. They formed the great body of the nation, corresponding very nearly in their social, though not in their political position, to the vast mass that came in aftertimes to be known by the name of the Commons of They are by no means fully represented merely by the class now called the common people. If we may be permatted for the moment to regard the theores as answering to our modern convicts, the Ceorls may be considered as comprehending all the rest of the population except the nobility and the clergy. To this class belonged not only those of the labourers, the peasantry, and the artisans, that were not theowes, but also the traders of all descriptions, the farmers, and all the smaller landholders and owners of tenements, whether in burgh or in the open country. Every lay person, in fact, who was not an corl was a cool. As for the clergy, of all orders, they were substantially ranked with the nobility, if we ought not rather to say that they were considered as occupying a still higher place in the state. While the compurgatory oath of one corl, for instance, was equal to that of only six coorls, a priest in this matter was considered as equivalent to one hundred and twenty coorls; a dencon to sixty; and a monk who was neither priest nor dearon, to thirty. The word of a bishop, again, like that of the king, was conclusive in itself, and did not require to be supported by the oaths of compurgators. lowest priest was considered as a mass-thane, that

Tacitus bears testimony to the lenity with which the uncient Germans treated their slaves, although he states, at the same time, that when a master chanced to kill his slave, as sometimes happened in the heat of passion, he committed the act with impunity. We have no reason to suppose that the Anglo-Saxons differed in this matter from the Their slave population custom of their ancestors, was not so numerous as to keep them in any state of apprehension from that quarter, or to make great severity or strictness of discipline necessary in the way of self-protection. The number of the \* Palgrave's English Com., pp. 164, 165.

is, a nobleman or knight of religion, and had the same degree and honour as the world-thane, with

whom he was ranked in the scale of the com-

CONDITION OF THE PEOPLE.

between twenty and thirty thousand; and it may be fairly assumed that they and their families did not amount to a tenth part of the entire population. We find no trace of any servile insurrection in Angle-Saxon history. The life of a theowe, indeed, was no further protected by law than that of one of

servi reckoned up in Domesday Book is only

the inferior animals; but he was in general worth much more to his master than a cow or an ox, and nearly as much as a horse; and therefore we may suppose the slaves would be on the whole at least as well taken care of as the cattle. It appears, moreover, that this unfortunate class was not deprived of all means and opportunities of acquiring pro-Fines were imposed upon them, as upon others, for offences, by the laws; and frequent mention is made of slaves themselves purchasing The practice, also, of masters then freedom. emancipating their slaves, sometimes by their wills, sometimes in their lifetime, became more and more common as the influence of the church extended itself, and religious feelings spread throughout the It does not appear that any particular kinds of

labour were exclusively assigned to the theowes.

They seem to have been employed in the different

bundicraft arts as well as in the operations of agri-

calture, mdifferently with the bondes. The latter, however, from their greatly superior numbers, must have constituted the chief strength of the national While Domesday Book mentions only about 26,500 servi, it enumerates about 184,000 villani, bondarri, and cottarri. These must have been all, or nearly all, labourers, partly for themselves, perhaps, in the cultivation of their small holdings, but principally for the proprietors on whose estates they resided. Every peasant was obliged by the law, if he had not a domicile of his own, to find a householder who would take him into his service, and allow him to become one of The villains who were householders were called hearth-fastmen; the others, folghers, that is, followers. Any honseholder who allowed a person to pass three nights under his roof became responsible for the conduct of that person, and seems to have been obliged to retain him, at least for a certain term, as an inmate.\*

Besides all these villani, and other inferior classes of the peasantry, Domesday Book notices about 26,000 tenentes, subtenentes, and sockmanni, about the half of whom are distinguished as libera homines, or freemen. These latter, at least, though counted as still belonging to the class of ceorls, must be supposed to have been exempted from that personal control and adscription to the soil under which the villani laboured. Above 17,000 hurgesses and citizens are also enumerated; but this number, as has been already observed, cannot be taken as that of the entire population of the cities. and boroughs throughout the kingdom, nor even as that of the householders. It may be that of the tenants of the crown, or those upon whom the

VOL. I.

went by the name of gilds or gildships, have been already alluded to; they seem to have been common among all classes, and to have been, some of them, of the nature of our modern friendly or benefit societies, while some were mere convivial clubs. Others, however, were associations of the traders or artisans of particular kinds in the cities and burghs; and these appear to have been permanent institutions, which perhaps took their rise from the colleges of operatives in the Roman towns, and may be regarded as perpetuated in the guilds, or incorporated trades, of modern times. burghs gradually acquired more and more of the right of self-government, these fraternities or companies may be supposed to have obtained a share in the appointment of the municipal officers and the general direction of affairs. The feature in the Anglo-Saxon system of so-

cicty that appears the most singular to our modern

notions is, the existence of a large body of the

people in the condition which has been described as that of the villant, or chief cultivators of the soil,—that is to say, not subject to the control of any master who had a right to regard and use them as his absolute property, but yet so completely destitute of what we understand by freedom, that they had not the power of removing from the estate on which they were born, and were transferred with it on every change of proprietors, they and their services together, exactly in the same manner as any other portion of the stock, alive or dead, human or bestral, which happened to be accumulated on its surface. They were bound to the soil, and could no more uproot themselves and withdraw elsewhere, than could the trees that were planted in it. This system seems to have been of great antiquity among the Teutonic nations. kind of prædial slavery which Tacitus describes as existing among the Germans of his time, is plainly nothing more than this villainage of the Anglo-"The rest of their slaves," he says, after having noticed those that were freely sold like any other goods, "have not, like ours, particular emplayments in the family allotted them. Each is the master of a habitation and household of his The lord requires from him a certain quantity of grain, cattle, or cloth, as from a tenant; and so far only the subjection of the slave extends."\* It was natural enough for Tacitus to speak of this as a state of slavery; but it is probable that neither these German villani nor their lords considered the matter in that light. Tacitus, whose acquaintance with the subject was evidently superficial enough, · Germania, c. 25. Aikin's Transi.

354

to look to it from other points. These Anglo-Saxon villani could not, indeed, withdraw themselves from the soil to which they were said to be adscribed, nor could they withhold their services from whoso-

ever night become by inheritance, by gift, by purchase, or m rny other legal way, the lord of the manor. This is, in plain language, the whole amount of the obligation under which they lay. They were under the same obligation under which

every modern tenant or lessee hes during the currency of his lease, with this difference only, that the latter, provided he continue to pay his rent, may withdraw his person to where he pleases. But his reut he is as strictly bound to contimue to pay as the villam of old was to pay his yearly dues, and to render the accustomed That these services were often of services. a menial or otherwise degrading description, or, more correctly, of what would now be considered so, does not affect the principle of the case; they were suited to the erroumstances of the time, and no doubt the persons bound to perform them would not, in general, have agreed to any proposal of commuting them for money-rents This, then, we repeat, was the obligation lying on the villain; he was bound to pay certain dues, and to render certain services to his lord, which there is no reason to suppose were usually felt to be any heavier burden than the payment of rent is felt to be by a tenant of the present day. But had he no rights as well as obligations? The soil, in truth, was as much his as he was the soil's. If he could not leave it, so neither could be be driven from it. was his property to occupy, and cultivate, and reap the produce of, as much as his services and dues were the property of his lord. The master could no more sell, or dispossess, or in any other way (except by divesting humself of the land) get rid of his villain than the villain could get rid of There can be no doubt that even his master. those of this class of persons who possessed the smallest tenements considered themselves better off, with all the services they had to render, than if they had been without both the services and the tenements. With our modern feelings, we think only of the villain as being born to a lifetime of hopeless bondage—he, and his children, and all his descendants after him;—he, we may be sure, looked upon himself and them as born to the inheritance of a property of which no one could deprive them. Of what real advantage would it have been to the villain in that state of society to possess the liberty of transferring his person and his residence from one property or one part of the kingdom to If the law had allowed him such a liberty, the circumstances of the times would have made it, in general, almost impossible for him to exercise it. To whom could be have gone, or who would have received him, if he had left his natural

lord? We have no reason to suppose that the

inclined to outbid another in a competition to obtain them. The case was most probably quite These men were originally the military followers of their lord, who settled them upon his lands because they had a claim upon him for their services, and because, from the relation in which they stood to hun, he was held to be bound to provide for them. The arrangement was, indeed, to a certain extent, a beneficial and necessary one for him as well as for them-since, if they required the land to live upon, the land required them to cultivate it; but the circumstances of the case certamly would not have admitted of their interests being entirely sacraficed to those of their lord; and we may fairly presince that both parties shared, however unequally, in the advantages of the trans-The former inhabitants would, no doubt, have been glad to remain to cultivate the ground; but although we may not suppose them, with some, to have been in every case altogether swept away to make room for their conquerors, it cannot be questioned that they were obliged to give place to the new comers to a very great extent. Had they not,

the conquest of the country would have afforded no means of rewarding those by whom it was achieved.

Nothing has varied more than the notions that

services of the villains were, in general, accounted

more than an equivalent for their holdings, or that, consequently, one lord would have usually been

BOOK II.

have been entertained in different ages and countries respecting what it is that constitutes the freedom of a nation, or of a class of men. It is evident that freedom and slavery are not two conditions essentially and at all points opposed to each other, as they are commonly represented by the rhetoricians, but that the one rather melts by almost imperceptible gradations into the other, and that there is a considerable border space which may be indifferently, or, according to the point of view from which it is regarded, considered as either slavery or freedom. It is like the distinction between high and low, or between great and small, or any other qualities of a similar kind, which, although opposed in a sufficiently marked manner in their higher degrees, yet lie, in fact, as it were, in the same continuous line, of which, notwithstanding the wide separation of the extremities, the middle portion must always be of debateable character, and assignable to either. Rigidly speaking, a nation or a class of persons is not entitled to call itself free, so long as it lies under any restraint whatever from which it might be relieved, or is deprived of any right which it might be allowed to exercise, without prejudice to the common safety and welfare. But even this point does not admit of being determined by any infallible and universal

formula, in so many respects have the actual circum-

stances of one age and country differed from those

of another, and such disagreement will there always

be in the judgments and opinions of men as to these questions. Nor below the point thus fixed upon,

although it may be denied that there is anything

that can properly be called freedom, will it be

perty.

whatever freedom, or so called freedom, has been hitherto enjoyed by men in political society, has probably been for the most part something inferior to what the above definition would consider to be freedom at all. Still it may be quite as properly spoken of under the name of freedom as under that of slavery; for in truth it is a mixture of the two. It will be naturally in each case regarded as slavery or freedom, according as the one or the other of these conditions is conceived to preponderate and if there appear to be any considerable quantity of freedom at all present, it will be described as a state of freedom more or less complete. But yet different ages and countries, not to speak of different individuals, will not always demand the presence of the same elements to constitute freedom of any kind. Sometimes this prized possession will be conceived to consist in political privilege,-

sometimes in exemption from personal restraint,—

sometimes in mere security of person and pro-

dom which was enjoyed by the villains of the Anglo-

It was this last-mentioned and lowest kind of free-

sixon period. They were subjected to many restrictions and burdens which we should now account of the most oppressive character; but still they were not held to be in a state of slavery, because, with all their privations, the law yet threw its full protection around both their persons and their property. It treated them as persons and not as things. They were no man's property to do as be chose with. They were, it is true, inseparable from the soil of the estate on which they lived, and as a matter of necessity, therefore, when the estate received a new owner they received a new lord; a modern tenant in the same manner receives a new landlord whenever the farm which he rents is transferred from one proprietor to another, as it may be at any time, without any more right on his part to object or interfere than had the Saxon villam. But the villain could not himself be sold, as the theowe might be; nor could any of the rights appertaining to his condition, such as they were, be disregarded with impunity, any more than those of the classes of persons that were higher in the social scale. He may have had no political rights, and even his social rights may have been extremely limited; but the slave, properly so called, had no rights of any kind. He was, at least in the original purity

a portion of his goods and chattels. Sir Francis Palgrave has advanced the opinion, that "perhaps the essential distinction between the classes of the nobility and the plebeians, was the entire absence of political power in the coorl."\* Little doubt, we imagine, can be entertained that those of the ceorls who were in a state of villainage were wholly destitute of political power; and this class seems to have constituted by far the largest portion of the population; but the assertion of the learned writer may perhaps be thought not to \* English Com. p. 19.

of the system, a mere item of his master's stock,-

subtenentes, and sockmanni of Domesday Book, who are there marked as freemen (liberi homines). These were coorls who certainly at least were not villains; and it seems to be not unlikely that along with their freedom from adscription to the soil they had acquired some other franchises. The period over which we have now passed, though exhibiting many features of a state of society only yet emerging from barbarism, is a

be so indisputably applicable to those of the tenentes,

most important one, as having been that in which were first brought together the germs of modern European civilization. A foreign writer of our own day, to whose learned and philosophical speculations we have already had more than once occasion to refer, has given a view of it in this light, which is in several respects novel and well deserving of attention.\* Though a chaos, he observes, it was a chaos out of which was to spring all of order, and light, and life, which our present civilization has to boast of. The three elements of that civilization may be regarded as being the Roman world, the Christian world, and the Germanic world. I. The working of the two latter of these ele-

ments, having been more on the surface, has been less overlooked than that of the first. theless, the first has been no less active, no less influential, than the other. M. de Savigny, in his history of the Roman law after the fall of the empire, has proved that the Roman law never perished, but that, though with great modifications undoubtedly, it was perpetnated from the fifth to the fiftcenth century. M. Guizot has gone further. He has, to use his own words, "generalized this result." He has shown that not only in immicipal institutions and civil laws, but in politics, in philosophy, in literature,—in a word, in all departments of social and intellectual life, the Roman civilization has Leen perpetnated beyond the empire; that there is no break in the continuity; in a word, that the modern is throughout still, to a considerable degree, the prolongation of the ancient civilization.

We have already touched upon the subjects of the imperial power and the immedial institutions, - in other words, of what modern civilization derived from ancient in a social point of view; it remains to say a few words of what it received in an intellectual point of view from Greco-Roman

antiquity. M. Guizot considers it as a fact, though far too little attended to, of immense importance, that the principle of liberty of thought, the principle of all philosophy, reason taking itself as a point to start from and as a guide, is an idea essentially the offspring of antiquity, an idea which modern society derives from Greece and Rome. It came neither from Christianity nor from Germany, for it was contained in neither of these elements of our civi-Another intellectual legacy left by the Roman civilization to ours is that of the classical

works of antiquity. Spite of the general ignorance that pervaded the middle ages, spite of the confusion and barbarism attendant upon the corruption of the Latin language, the ancient literature has always been held up to the mind as a worthy object of admiration, of study, of imitation; in a word, as the type of the beautiful. The philosophical spirit and the classical spirit, the principle of freedon of thought and the model of the beautiful, these were what the Roman world handed down to the modern world, what survived it in the intellectual order of things at the end of the tenth century.

356

11. The effects of Christianity under the intellectual point of view are so important, as they have been developed by M. Guizot, that they deserve especial consideration. Most of the philosophers, whether of the most

brilliant cra of Greek antiquity, or of later times, under the Roman empire, pursued their speculations nearly in perfect freedom. The state searcely interfered either to check or control them. They, on their part, meddled little with politics; sought little to excreise a direct, and immediate influence on the society in the midst of which they lived; satisfied with that indirect, remote influence which belongs to every great mind placed in the midst of mankind. With the triumph of Christimity in the Roman world the nitellectual development changed its character: what was philosophy became religion—the form of thought became religion. From that time it aimed at much more power over human affairs. The spiritual order continued, indeed, to be separate from the temporal order. The government of nations was not directly and fully handed over to the elergy. But the spiritual penetrated much further into the temporal order of things than was the ease in the Greek and

As human thought, under the religious form, aspired to more power over the conduct of men and the destiny of nations, it lost its hberty. But when, after a long time, the religious form ceased to have an exclusive dominion in binnan thought, the philosophical development recommenced. What was the consequence? Philosophy made the same pretensions to practical interference that religion had done; or, more accurately

From this, resulted another change, not less im-

Roman antiquity.

assumed under the religious form. Philosophy aspired to do what religion did—with this difference, however—that while it wished to govern mankind, it refused to submit to a legal yoke. "The union," says M. Guizot, "of intellectual liberty, as it existed in antiquity, and of intellectual power, as it displayed itself in Christian communities, is the grand, the original character of modern civilization; and it is undoubtedly in the bosom of the revolution accomplished by Classtrumty in the relations of the spiritual and temporal orders, of thought and the exterior world, that this new revolution had its origin and its first vantage ground.\*\*\*

111. The two principles, or rather the two germs

of principles furnished by Germany, were the

tribe formed of all the heads of families who were

proprietors, and governed by an assembly of free

speaking, thought, having again become philoso-

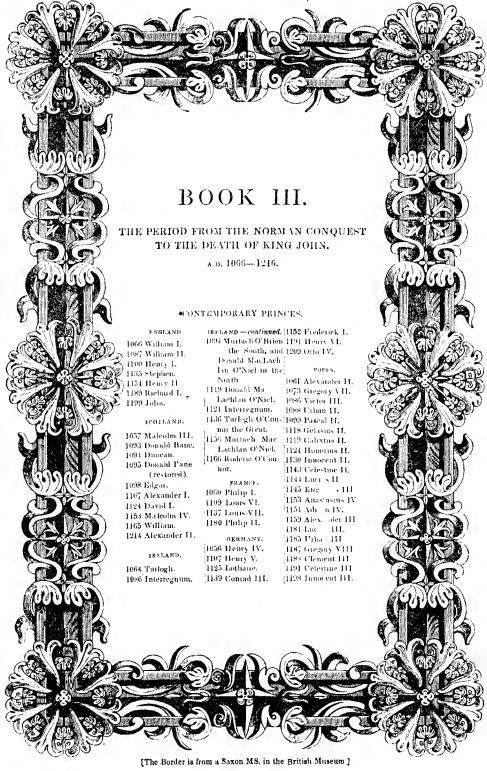

phical, retained the pretensions which it had

men; and the band of warriors, where the individual was still very free, but where the social principle was no longer the equality of free men, and common deliberation, but the patronage of a chief over his companions; and if we consider the system of social organization, it was fitted to produce anstocratic and unlitary subordination. The principle of the common deliberation of freemen may be said to have disappeared in the Roman world. The principle of aristocratic patronage, combined with a strong infusion of liberty, had become equally miknown. Both these cle-

ments of our social and political organization are of Germanie, or, to speak specifically of England, of Saxon origin. The two grand results that specially demand consideration are these: 1. The unbroken contunity, though undoubtedly much weakened and modified, of ancient civilization down into modern. 2. The total want, both in the social and intellectual order of things, from the fifth to the tenth century, of any stability, of anything systematic,

of anything fixed, general, regular. The general fact we meet with is a continual, universal fluctuation. It is, in truth, the work going on of the fermentation and amalgamation of the three great elements of modern civilization.

Hist de la Civiliz, en France, Iom. iii, p. 197.

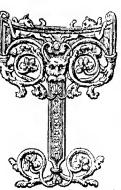

## CHAPTER I.

## NARRATIVE OF CIVIL AND MILITARY TRANSACTIONS.

WILLIAM 1., SPRNAMED THE CONQUEROR.

HE first feelings of the Normans after the battle of Hastings seem to have been sensations of triumph and joy, amounting almost to a delirium. They are represented by a contemporary\* as making their horses to prance and bound over the thickly strewed bodies of the Anglo-Saxons; after which

they proceeded to rifle hem and despoil them of their clothes. By William's orders the space was cleared round the Pope's

\*William of Poictiers This writer asserts, that although Harold's mother othered its weight in gold for the dead body of her son, the term victor was dead to her request, professing indigination at the proposal that he should enjoy the rites of separatine for whose excessive capidity so many men lay unhunted. Harold, it is added, was buried on the beach. Most of the English historiams, however, say that the body was given to his mother without ranson, and interior by her in Waltham Abbey, which had been founded by Harold before he was king. The Cottoman MS, Julius D, 6, which appears to have been written in Waltham Abbey about a century after the event, relates that two monks, who were allowed by William to search for the body, were mable to distinguish it among the heaps of slain, until they sent to Harold's mistress Editha, "the swam-necked," whose eye of affection was not to be chieded or deceived. The improbable story told by Ghaldus Cambretuss (and to more detail in the Harletan MS, 3776) about Harold, after receiving his wound, having escaped from the battle, and living for some years as an anchorite in a cell near St. John's Church, in Chester, though a pretty enough romunce, is palpably undeserving of notice in an historical point of view.

standard, which he had set up; and there his tent was pitched, and he feasted with his followers amongst the dead. The critical circumstances in which he had so recently been placed, and the difficulties which still lay before him, disposed the mind of the Conqueror to serious thoughts. Not less, perhaps, in gratitude for the past than in the hope that such a work would procure him heavenly favour for the future, he solemnly vowed that he would erect a splendid abbey on the scene of this, his first victory; and when, in process of time, this vow was accomplished, the high altar of the abbey church stood on the very spot where the standard of Harold had been planted and thrown down. The exterior walls embraced the whole of the hill,—the centre of their position which the bravest of the English had covered with their bodies,and all the surrounding country where the seenes of the combat had passed, became the property of the holy house, which was called in the Norman or French language, l'Abbaye de la Bataille, and was dedicated to St. Martin, the patron of the soldiers of Gaul. Monks, invited from the great convent of Marmontier, near Tours, took up their residence in the new edifice. They were well endowed with the property of the English who had died in the battle, and prayed alike for the repose of the souls of those victims and for the prosperity and long life of the Normans who had killed them.\*

Thierry.

BATTIS Abary as it appeared about 150 years since,—(In the case of an old building, of which only the runs now remain, the cut will generally represent the building in the most perfect state in which an authentic engraving or drawing of it can be obtained.)

The Abbot of Battle was declared to be independent of the authority of the Archbishop of Canterbury and all other prelates, and was invested with archiepiscopal jurisdiction, and honoured with other peculiar privileges. In the archives of the house was deposited a long roll, on which were inscribed the names of the nobles and gentlemen of mark, who came with the Conqueror and survived the battle of Hastings.\*

The most sanguine of the Normans, in common with the most despondent among the English, expected that immediately after the battle of Hastings the Conqueror would march straight to London and make himself master of that capital. But the first move was a retrograde one; nor did William establish himself in the capital until more than two months had passed. While the army of Harold kept the field at Senlac, or Battle, several new ships, with reinforcements, came over from Normandy to join William. Mistaking the proper place for landing, the commanders of these vessels put in to Romney, where they were at once assaulted and beaten by the people of the coast. learned this unpleasant news the day after his victory, and to save the other recruits, whom he still expected, from a similar disaster, he resolved

• The original roll of Battle Abbey is lost; but some copies have been preserved, from which the document has been repeatedly punted. It is believed, however, that these pretended transcripts are far from faithful, and that, besides other corruptions, many names have been inserted in later times by the monks of the Abbey, to gratify families or Individuals that wished to make it appear they were sprung from followers of the Conqueror.

before proceeding farther to make himself master of all the south-eastern coast. He turned back, therefore, from Battle to Hastings, at which latter place he stayed some days awaiting his transports from beyond sea, and hoping, it is said, that his presence would induce the population of those parts to make voluntary submission. At length, seeing that no one came to ask for peace, William resumed his march with the remnant of his army and the fresh troops which had arrived in the interval from Normandy. The amount of this seasonable reinforcement is nowhere mentioned, but there are good reasons for believing that it must have been considerable. He kept close to the sea-coast, marching from south to north, and spreading devastation on his passage. He took a savage vengeance at Romney for the reverse his troops had sustained there, by massacring the inhabitants and burning their houses. From Romney he advanced to Dover, the strongest place on the coast,-"the lock and key of all England," as Holinshed calls With little or no opposition, he burst into the town, which his troops set fire to; and the strong castle, which the son of Godwin had put into an excellent state of defence, was so speedily surrendered to him that a suspicion of treachery rests on the Saxon commander. The capture of this fortress was most opportune and important, for a dreadful dysentery had broken out in the Norman army, and a safe receptacle for the sick had become indispensable. Dover Castle also commanded the done to the town by his lawless soldiery.

best landing-place for troops from the continent,

while, in order to conciliate the inhabitants, he made them some compensation for the losses and

minities they had sustained; and in the same interval he received more recruits from Normandy.

The historian who would pretend to write a complete

and consecutive account of these obscure times

must have recourse to his imagination, or to some

or did they from that moment place themselves under the command of Godwin and Edmund,

Harold's sons, who certainly re-appeared, with a considerable portion of the English may, a princt William in the course of the following year?

cording to some accounts, William burnt his ships at his first landing in England; the whole story is

doubtful; but at most, he could only have de-

stroyed the rude vessels he had hastily constructed

for the passage. What became of the better class

of ships which were mainly supplied by his great

lords and the foreign princes in alliance with him?

Did these latter return to their own ports as soon as

the English raised the blockade? or did they sail

round the coast and enter the Thames, co-operating

with William in his advance, and making diversions

hitherto undiscovered documents, for the chronicles and original documents we possess will not enable him to accomplish such a task. In the puticular transactions we are relating, the naval forces ought to have had some share, more or less important, but we have no means of telling what steps were taken either by the English or the Norman flect. Just before the battle of Hastings, the former of these blockaded the latter. Did the defeat and death of Harold induce the English scamen to disperse?

HISTORY OF ENGLAND.

in his favour? No positive answer can be given to these queries. When the Conqueror moved from Dover, he ceased to creep cautionsly round the coast, but, penetrating into Kent, marched direct to London. A confused story is told by some of our early historians about a popular resistance orgamised by Archbishop Stigand and the Abbot Egelnoth, in which the men of Kent, advancing like the army of Macduff and Siward against Macbeth, under the cover of cut-down trees and boughs, disputed the passage of the Normans, and, with arms in their hands, exacted from them terms most favourable to themselves and the part of England they occupied. But the plain truth seems to be, that, overawed by the recent catastrophe of Hastings, and the presence of a compact and numerous army, the inhabitants of Kent made no resistance,

During these calamities, the Saxon Witan had assembled in London to deliberate and provide for

and meeting William with offers of submission,

placed hostages in his hands, and so obtained mild

Harold seem never to have been thought of. Many voices would have supported Morear or Edwin, the powerful brothers-in-law of Harold, who had already an almost sovereign authority in Northumbria and Mercia; but the citizens of London, and the men of the south of England generally, preferred young Edgar Atheling, the imbecile son of Eduland Iron-side, who had been previously set aside on account of his little worth; and when Stigand the primate, and Aldred the Archbishop of York, threw their weight into this scale, it outweighed the others, and Edgar was proclaimed It should seem, however, that even at thus stage, many of the bishops and dignified clergymen, who were even then Frenchmen or Normans, raised their voice in favour of William, or let fall limits that were all meant to favour be extensions. The Pope's bull and banner could be without their effect, and, motives of interest and policy apart, some of these ecclesiastics may have conscientiously believed they were performing their duty in promoting the cause of the elect of Rome. Others

there were who were notoriously bought over, either

by money paid beforehand or by promises of future

the future; but evidently, as far as the lay portion of the meeting was concerned, with no intention of

submitting to the Conqueror. The first care that

occupied their thoughts was to elect a successor to

the throne. Either of Harold's brave brothers, at

such a crisis when valour and military skill were the qualities most wanted, might probably have

commanded a unifority of suffrages; but they had

both fought their last fight; and, owing to their youth, their inexperience, their want of popularity,

or to some other circumstance, the two sons of

Book III.

had been consumed; nor could the blood of Cerdic, Alfred, and Edmund, make the king of their choice that rallying point which conflicting factions required, or a hero capable of facing a victorious myader, advancing at the head of a more powerful army than England could hope to raise for some time. In fact, Edgar was a mere cipher; a stripling incapable of government as of war,-with nothing popular about him except his descent, The primate Stigand took his place at the council board, and the military command was given to earls Edwin and Morear. A very few acts of legal authority had been performed in the name of Edgar, when William of Normandy appeared before the southern suburb of London. If the Normans had expected to take the capital by a coup-de-main, and at once, they were disappointed; the Londoners were very warlike; and the population of the city, great even in those days, was much increased by the presence of the thanes and

chiefs of all the neighbouring counties, who had

come in to attend the Witan, and had brought their servants and followers with them. After making

a successful charge with 500 of his best horse

against some citizens who were gathered on that

side of the river, William set fire to Southwark, and marehed away from London with the determination of ravaging the country around it, destroying the property of the thanes who had assenibled at the Witan, and, by interrupting all communication, inducing the well-defended capital to surrender. Detachments of his army were soon spread over a wide tract; and in burning towns and villages, and the massaere of men armed and men unarmed, and in the violation of helpless females, the people of Surrey, Sussex, Hampshire, and Berkshire, were made to feel the full signification of a Norman conquest. William crossed the Thames at Wallingford, near to which place he established an entrenched camp, where a division of his army was left in order to ent off any succours that might be sent towards London from This done, he proceeded across Buckthe west. inghamshire into Hertfordshire, "slaying the people," till he came to Berkhampstead, where he took up a position in order to interrupt all communication with London from the north, The capital, indeed, at this time seems to have been girded round by the enemy, and afflicted by the prospect of absolute famine. Nor were there wanting other causes of discouragement. The earls Edwin and Morcar showed little zeal in the command of a weak, and, a unorganized army, and soon withdrew tow. Humber, taking with them all the soldiers of Northumbria and Mercia, who constituted the best part of King Edgar's forces, but who looked to the earls much more than to the These two sons of Alfgar probably hoped to be able to maintain themselves in independence in the north, where, in reality, they at a later period renewed, and greatly prolonged, the contest with the Normans. Their departure had a baneful effect in London; and while the spirit of the citizens waxed fainter and fainter, the partisans and intrigners for William, encouraged at every move by the prevalent faction among the clergy, raised their hopes and extended their exertions.

After some time, however, earls Morear and Edwin appear to have returned to the capital. On many an intermediate step the chroniclers are provokingly silent: but at last it was determined that a submissive deputation should be sent from London to Berkhampstead; and King Edgar himself, the Primate Stigand, Aldred, arehbishop of York, Wolfstan, hishop of Worcester, with other prelates and lay chiefs, among whom the Saxon chronicler expressly names the two earls of Northumbria and Mereia, and many of the principal citizens, repaired to William, who received them with an ontward show of moderation and kindness. It is related that when the man whom he most hated, as the friend of Harold and the energetic enemy of the Normans,—that when Stigand came into his presence, he saluted him with the endearing epithets of father and bishop. The puppet-king Edgar made a verbal renunciation of the throne, and the rest swore allegiance to the Conqueror; the bishops swearing for the VOL. I.

whole body of the clergy, the chiefs for the nobility, and the citizens for the good city of London.\* During a part of this singular audience, William pretended to have doubts and misgivings as to the propriety of his ascending the vacant throne; but these hypocritic expressions were drowned in the loud acclamations of his Norman barons, who felt that the crown of England was on the point of their swords. Having taken oaths of fidelity and peace, the Saxon deputies left hostages with the Norman, who, on his side, promised to be mild and merciful to all men. On the following morning the foreighers began their march towards London, plundering, murdering, and burning, just as before.† They took their way through St. Alban's. On approaching that place William found his passage stopped by a multitude of great trees which had been felled and laid across the road. The Conqueror sent for the Abbot of St. Alban's, and demanded why these barriers were raised in his jurisdiction? The abbot, Frithrie or Frederick, who descended from noble Saxon blood, as also from King Canute the Dane, answered boldly, "I have done the duty appertaining to my birth and ealling; and if others of my rank and profession had performed the like, as they well could and ought, it had not been in thy power to penetrate into and thus far." ‡ Even now William did not London in person, but sending on part of his rmy to build a fortness for his reception, he encamped with the rest at some distance from the city\ This fortress, which was built on the site, and probably included part of a Roman castle, grew gradually, in after times, into the Tower of Some accounts state that William's vanguard was hostilely engaged by the citizens, but according to officers they met with no resistance, and were permitted to raise their fortifications without any serious mole-tation.

As soon as the Normans had finished his stronghold, William took possession of it, and then they fixed his coronation for a few days after. The Conqueror is said to have objected to the performance of this ceremony while so large a part of the island was independent of his authority; and he certainly hoped, by delaying it, to obtain a more formal consent from the English nation, or something like a Saxon election, which would be a better title in the eyes of the people than the right of conquest. Little, however, was gained by delay; and the coronation, which, for the sake of greater solemnity, took place on Christmas-day, was accompanied by accidents and circumstances highly irritating to the people. It is stated, on one side, that William invited the primate Stigand to perform the rites, and that Stigand refused to crown a man "eovered with the blood of men, and the

it is not mentioned at what hour of the day or night the conflagration ended. The English, who had been at the Abbey, ran to extinguish the fire, —the Normans, it is said, to plunder, and otherwise profit by the disorder; but it appears that some of the latter exerted themselves to stop the progress of the flames, and to put an end to a riot peculiarly unpalatable to their master, whose anxious wish was certainly, at that time, to concihate the two nations. At this, as at several subsequent stages of the conquest, Wilham could not prevent the wrongs done by his disorderly and rapacions soldiery, who gave but slight tokens of that superiority in civilization which has so gene-

Soon after his manspicious coronation William

withdrew from London to Barking, where he established a court which gradually attracted many of the nobles of the south of England. Edric, surnamed the Forester, Coxo, a warrior of high repute, and others, are named; and as William extended his authority, and land aside the harshness of a conqueror, even the thanes and the great earls from the north, where the force of his arms was not yet felt, repaired to do him homage. Turchil, Saward, and Aldred, all northern chief of the highest rank, are mentioned by a control of the highest as among those that present acrees to perform the same painful ceremony which had previously been submitted to by earls Edwin and Morcar, the brothers-in-law of the late king. In return for the homage thus rendered, William granted them the confirmation of their estates and honours which he had not at present the power to seize or invade. It appears that the Conqueror's first seizures and confiscations, after the crown lands, were the domains of Harold and his brothers Gurth and Leofwin, and the lands and property of such of the English chiefs as were either very weak, or unpopular, or indifferent to the nation. But, even ns prodigious in his stead.

rally been challenged for the Normans.

thus limited, the spoils of the south are represented Edgar Atheling, whose moral nullity secured him from suspicion and danger, was an inmate of the new court, and William, knowing he was cherished by many of the English on account of his descent, pretended to treat him with great respect, and left him the carldon of Oxford, which Harold had conferred on him when he ascended the throne From Barking the new king made a progress through the territory, that was rather militurily occupied than securely conquered, displaying as he went as much royal pomp, and treating the English with as much courtesy and consideration, as he could. The extent of this territory cannot be exactly determined, but it appears the Conqueror had not yet advanced, in the north-east, beyond the confines of Norfolk, nor in the south-west beyond Dorsetshire. Both on the eastern and western coast, and in the midland counties, the invasion was gradual and slow, and as yet the city of Oxford had certainly not fallen.

ask this service of one who was lying under the severe displeasure of Rome; and it is said, on the other side, that he refused to be consecrated by Stigand, and conferred that honour on Aldred, Archbishop of York, whom some of the chroniclers describe as a wise and prudent man, who understood the expediency of accommodating himself to circumstances. The new Abbey of Westminster, the last work of Edward the Confest, was chosen as the place for the coronation of our first Norman The suburbs, the streets of London, and all the approaches to the Abbey, were Imed with double rows of soldiers, horse and foot. Conqueror rode through the ranks, and entered the Abbev church, attended by 260 of his warhke chiefs, by many priests and monks, and a considerable number of English, who had been gained over to act a part in the pageantry. At the opening of the ceremony one of William's prelates, Geoffrey, the Bishop of Coutances, asked the Normans, in the French language, if they were of opinion that their chief should take the title of King of England? and then the Archbishop of York asked the English if they would have ham the Norman for their king? The teplor either side was given by acclamation in the affirmative, and the shorts and cheers thus raised were so loud that they startled the foreign cavalry stationed round the Abbey. The troops took the confused noise for a cry of alarm raised by their friends, and, as they had received orders to be on the alert and ready to act in case of any seditious movement, they rushed to the English houses nearest the Abbey, and set fire to them all. A few, thinking to succour their betrayed duke and the nobles they served, ran to the climch, where, at sight of their naked swords, and the smoke and flames that were rising, the tuninh soon became as great as that without its walls. The Normans fancied the whole population of London and its neighbourhood had risen against them ; the English imagined that they had been daped by a vain show, and drawn together imarmed and defenceless, that they might be massacred. Both parties ran out of the Abbey, and the ceremony was interrupted, though William, trembling from head to foot, and left almost alone in the church, or with none but the Archbishop Aldred and some terrified priests of both nations near him at the altar, decidedly refused to postpone the celebration. The service was therefore completed amidst these bad auguries, but in the utmost hurry and confusion, and the Conqueror

took the usual coronation oath of the Anglo-Saxon

kings, making, as an addition of his own, the solemn promise that he would treat the English

people as well as the best of their kings had done.+

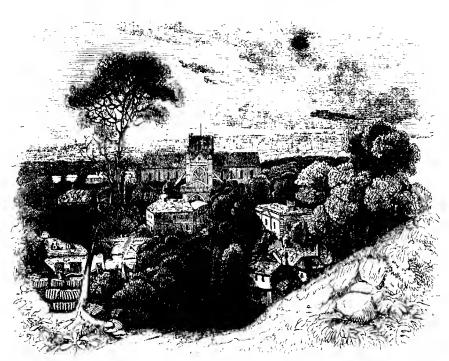

• Will, of Newbury. † Guil, Pictav.—Orderic, Vital.—Chron, Sax. Orderic says, "Tre-pidantes, super regem volumenter trementem, officium via perege-

with wisdom and a laudable anxiety for the good of the country. He respected the old Anglo-Saxon laws, which, indeed, were not much disturbed or changed, at least in the letter, until the accession of Henry II., nearly a century after the Conquest. He established good courts of justice, encouraged agriculture and commerce, and

All William's measures at this time were

mild and conciliating, and some of them marked

(at least nominally) enlarged the privileges of London d some other towns. At the same time, however, the country he held was bristled with eastles and towers, and additional fortresses erected in and around the capital showed his distrust of what was termed, in the language of the Normans, an over-numerons and too proud population. Next to London, the city of Winehester, which had been a favourite residence of the Anglo-Saxon kings

Wischester (This is the city as it now appears. In this and similar cases, the town or other place, about which an interest may be supposed to have been awakened by the nariative, will be represented in its existing state, except where an authentic engraving or drawing of other date may be considered to preserve some features now lost that belonged to it at or near the time to which the instory relates.

excited most suspicion; "for," says William of Poictiers, the Conqueror's chaplain, "it is a noble and powerful city, unhabited by a race of men rich, fearless, and perfidious." A castle was therefore erected at Winchester, and a strong Norman garrison put into it. These fortresses, hastily thrown up in the course of three or four mouths, could not be very large or very solid, but they answered their present end, and they were subsequently in-Such operations creased in size and strength. could not be otherwise than distasteful to the English, who were further irritated by seeing proud foreign lords fixed among them, and married to the widows and heiresses of their old lords who had fallen at Hastings. The rapacious followers of William were hard to satisfy; and, to secure their attachment, he was frequently obliged to go beyond those bounds of moderation he was in clined to set for himself. A most numerous troop of priests and monks had come over from the eon

tinent, and their avidity was scarcely inferior to that of the barous and knights. Nearly every one of them wanted a church, a rich abbey, or some higher promotion; and at a very early period of his occupation the Conqueror began to gratify their wishes. To pass over other wrongs and provocations inseparable from foreign conquest, and, in good part, indeed, inseparable even from a change of dynasty, the people presently saw the coming on of that sad state of things which they soon after suffered, "when England became the habitation of new strangers, in such wise, that there was neither governor, bishop, nor abbot remaining therein of the English nation."\* It was, however, to these foreign churchmen that our country was ehiefly indebted for whatever intellectual improvement or civilization was imported at the Conquest.

high nohility.

There was one of the Norman warriors who neither asked for estates nor a rich English wife, and who would not accept any part of the spoils taken from the conquered. He said he had accompanied

his liege lord the Duke William into England, be-

cause such was his duty as a true and faithful vassal, but that property seized and stolen from

other men did not tempt him,—that he should return to Normandy, there to enjoy his moderate but lawful inheritance, and rest content with his own lot, without covering the portion cothers. The name of this wise man, which ought not to be permitted to perish, was Guilbert, the son of Richard.\* In the month of March, 1067, the English in the north and west being yet untouched, and their countrymen in the south beginning to harbour violent feelings-while the Normans were anxious to provoke an insurrection, and prosecute the war in the land where so many broad acres remained to reward the victors,—William resolved to pass over into Normandy. Many ingenious surmises bave been made as to the motives which induced him to take this journey at this crisis; and historians may still speculate without coming to any positive conclusion borne out by contemporary evidence. though, as he admits, no ancient writer has ascribed such a purpose and plan to the queror, we are disposed to suspect, with Hume, that in this extraordinary step he was guided by a concealed policy, and that though he had thought proper at first to allure the people to submission, he found that he could neither satisfy his followers, nor secure his unstable government, without further exerting the right of conquest, and seizing the remaining possessions of the English,—that in order to have a pretext for this violence, he was auxious they should break out into insurrections which could hardly prove dangerous to bim while he detained all the principal English nobility in Normandy, while his great and victorious army was placed in strongholds in England, and while he himself was so near at hand to crush any in-

surrection. That he made the journey, as some

have thought, out of a vain eagerness to show hanself as the conqueror of England to his subjects

high feast-days they hung up in their churches, where they excited the admiration of all travellers and strangers. The whole of the account given by William's chaplain tends to raise our idea of the "That land," says the wenlth of England. Poictevin, "abounds more than Normandy in the precious metals. If in fertility has be termed the gramary of Cercs, in rich the treasury of Arabia. The women excel in the use of the needle and in embroidering in gold; the men in every species of elegant workmanship. Moreover, the best artists of Germany live amongst them; and merchants, who repair to

distant countries, import the most valuable articles

of foreign manufacture unknown in Normaudy."

The same contemporary informs us, that at the

feast of Easter, which William held with unusual

splendour, a relation of the king of France, named Raonl, came with a numerous retinue to the Con-

queror's court, where he and his Frenchmen, not less than the Normans, considered with a curiosity,

mingled with surprise, the chased vases of gold

and silver, brought from England; and, above all, the drinking-cups of the Saxons, made of large

of countenance and the long flowing hair of the young Englishmen William had hrought over with him as guests or hostages. The chaplain adds, with amusing naïveté, "they remarked all those things, as also many others equally new unto them, in order that they might relate and describe them in their own country. While all thus went on merrily in Normandy, where the presence of the Conqueror, with his foreign court, move where he would, caused the suspension of all labour, and made a general holiday, events of a very different nature were taking Egelnoth, Edgar Atheling, Edwin, carl of Mercia, place on the other side of the Channel. A singular circumstance attended their effort. Eustace, count of Boulogne, the same who had caused such a stir at Dover in the time of Edward the Confessor,\* was then in open quarrel with William the Norman, who kept one of his sons in prison. This Eustace was famed far and wide for his military skill; and his relationship to the sainted King Edward, whose sister he had married, made the English consider him now in the an anatural ally. Forgetting, therefore, their sent a message to the Eustace, promising to put Dover into his hands, if he would make a descent on the coast, and help them to wage war on their Norman oppressors. Eustace most readily accepted the invitation, and, crossing the Channel with a small but chosen band, he landed under favour of a dark night, at a short distance from Dover, where he was presently joined by a host of Kentish men in arms. A contemporary says, that had they waited but two days, these insurgents would have been joined by the whole population of those parts, but they imprudently made an attack on the strong castle of Dover, were repulsed with loss, and then thrown into a panie by the false report that Bishop Odo was approaching them with all his forces. Count Eustace fled, and got safely on hoard ship, but most of his men-atarms were slain or taken prisoners by the Norman garrison, or broke their necks by falling over the cliffs on which Dover Castle stands. The men of

Kent, with a few exceptions, found their way

home in safety, by taking by-paths and roads with

If there had been but one bright national idol one prince or chief of ability or popularity to unite and lead them—the English would have cleared the country of its invaders. At this favourable moment the two sons of King Harold appeared in the west; but though they were nearly a year older than at the time they were passed over unnoticed by the Witan assembled at London, they soon showed that neither of them had the qualities required, or was destined to be the saviour of the Anglo-Saxon nation. Their proceedings would be altogether inexplicable if we did not reflect that they were allied with, and probably controlled by, a host of pirates. These two young men sailed over from Ireland with a considerable force, embarked in sixty ships. They ascended the Bristol Channel and the river Avon, and landing near Bristol, plundered that fertile country. Whatever were the pretexts and claims set forth by the sons of Harold, they acted as common enemies, and were met as such by the English people, who repulsed

them when they attempted to take the city of

Bristol, and soon after defeated them upon the coast of Somersetshire, whither they had repaired

Norman force in those parts, nor was it considered necessary to send one. The whole defence was

made by the English, commanded by their own

with their ships and plunder.

There was no

countryman Ednoth, who fell, with many of his followers, in the battle. The invaders, who also suffered severely, took to their ships, and returned to Ireland immediately after the defeat. In Shropshire, Nottinghamshire, and other parts of the kingdom, both where they had felt the Norman oppression, and where, as yet, they only apprehended it, bothes of English rose in arms, and urged their neighbours to join them. It is related that Earl Coxo, who had appeared at Barking, and been much honoured by William, was slain by his vassals because he refused to head them in an insurrection; but it seems the death of that chief took place before the Conqueror left England, and there is some doubt whether he was really killed by his vassals, or by another English nobleman, his There is, however, no doubt but that the indignation of the people was general, and that, encouraged by the Conqueror's absence, efforts were made, and others contemplated, for throwing off the yoke. Rumours spread that a simultaneous massacre, like that perpetrated on the Danes, was intended; and it was equally natural that the English should make use of such threats in their moments of rage, and that the Normans, conscious of oppression, and well versed in the history of St.

Brice's day, should believe them and tremble at

them. Letter after letter, and message after mes-

sage, were sent into Normandy; but the Conqueror, either because he was insensible to the alarm, or

thought sufficient provocation had not been given,

lingered there for more than eight months. When

at last he departed, it was in hurry and agitation. He embarked at Dieppe on the 6th of December,

and sailed for England by night. On arriving, he

placed new governors, whom he had brought from

their port. The siege which followed lasted eighteen days, and cost William a great number of men; and when the city surrendered at last, if we are to believe the Saxon chronicle, it was because their chiefs had again betrayed the The brave men of Exeter, however, obtaine terms than were then usual the bough they were forced to take the oath, and admit a Norman garrison, their lives, property, and privileges were secured to them, and successful precautions were

taken by the Conqueror to prevent any outrage or

plunder. During the siege we hear of a strong

body of English, in the pay of the Conqueror,

fighting against their own countrymen,—a fatal

example which was soon followed in other parts of

will not swear fealty to this man, who pretends to

be our king, nor will we receive his garrison within

our walls; but if he will receive as tribute the

dues we were accustomed to pay to our kings, we will consent to pay them to him." To this somewhat

novel proposal William said, "I would have sub-

jects, and it is not my custom to take then on such conditions."\* Some of the magistrates and wealthiest

of the citizens then went to William, and, imploring

his mercy, proffered the submission of the city, and gave hostages; but the mass of the population

either did not sanction this proceeding or repented of it, and when William rode up at the head of his

cavalry he found the gates barred and the walls

manned with combatants, who bade him defiance. The Normans, in sight of the men on the ramparts,

then tore out the eyes of one of the hostages they

had just received; but this savage act did not daunt the people, who were well prepared for defence,

having raised new turrets and battlements on the

walls, and brought in a number of armed seamen,

both native and foreigners, that happened to be in

[Book III

Normandy, in his castles and strongholds in Sussex and Kent. On reaching London he was made fully sensible of the prevailing discontent; but with his usual crafty prudence he applied himself to soothe the storm for awhile, deeming that the time had not yet arrived for his openly declaring that the fickle, faithless English were to be exterminated or treated as slaves, and all their possessions and honours given to the Normans. He celebrated the festival of Christmas with unusual point, and invited many Saxon chiefs to London to partake in the celebration. received these guests with smiles and caresses, giving the kiss of welcome to every comer.\* they asked for any thing, he granted it; if they announced or advised any thing, he listened with respectful attention; and it should seem that they were nearly all the dupes of these royal artifices. He then propitiated the citizens of London by a proclamation, which was written in the Saxon language, and read in all the churches of the capital. "Be it known unto yon," said this document, "what is my will. I will that all of you enjoy your national laws as in the days of King Edward; that every son shall inherit from his father, after the days of his father; and that none of mry people do you wrong." William's first public act after all these promises was to impose a tax, which was made more and more burdensome as his power The war of 1068, or what may be called the Conqueror's second campaign in England, opened in the fertile province of Devonshire, where the people, supported by their hardy neighbours of Cornwall, and animated by the presence of the mother and some other relations of King Harold, refused to acknowledge his government, and had prepared to resist the advance of his heutenants. Some of the thanes, to whom the command of the insurrection had been intrusted, proved cowards or traitors; the Normans advanced, burning, and destroying, and breathing vengeance; but the men of Exeter, who had had a principal share in organizing the patriotic resistance, were resolute in the defence of their city. Ever since the days of Athelstan, Exeter had been increasing in trade and consideration, and now it was a well-peopled city, surrounded by a strong wall. Githa, or Editha,

the kingdom. Having ordered a strong castle to be built in the captured town, William returned eastward to Winchester, where he was joined by his wife Matilda, who had not hitherto been in England. At the ensuing festival of Whitsuntide she was publicly crowned by Aldred, the archbishop of York; and as this ceremony, in regard to a king's wife, was contrary to an old law of the Anglo-Saxons (which, however, had been disregarded on some former occasions), it displeased the people, who were further irritated against Matilda by seeing a large share of the confiscated territory in the west assigned to her. the surrender of Exeter the aged Githa, with Harold's mother, had fled there after the battle of several ladies of rank, escaped to Bath, and finding Hastings, and carried with her considerable riches. no sufety there, they fled to the small islands at the In no part of England was the Norman name mouth of the Severn, where they lay concealed more odious, for, young and old, the citizens hated until they found an opportunity of passing over to feeling had been recently displayed by the populace Harold's sons, Godwin and Edmund, with a in a cruel attack made upon some Norman ships vounger brother named Magnus, again came over that were driven upon their coast by a storm. from Ireland about Midsummer, and with a flect When the Conqueror came within four miles of about equal to the one they had brought the preceding year they hovered off the coasts of Devon-· Orderic. to death the whole race of Frenchmen.

shire and Cornwall, landing occasionally and inviting the people to join them against the Normans. Nothing could be more absurdly concerted than these movements. Had they appeared a little earlier, whole Exeter held out, their presence might have been most important, but now the sons of Harold were left to shift for themselves, and having imprudently ventured too far from the shore without any information as to the state of the country, they were suddenly attacked by a Norman force from Exeter, under Earl Beorn, and defeated with great slaughter. It appears they were even ignorant of the facts that the city of Exeter had fallen, and that their mother had fled to a foreign country. Their means were now exhausted, and, wearied by their ill success, their Irish allies declined giving any further assistance to these exiles. The sons of Harold next appeared as suppliants at the court of Sweyn, king of Denmark.

During the spring and early summer of this same year (1068), William established his authority in Devonshire, Somersetshire, and Gloucestershire, and hesides taking Exeter, made himself master of Oxford and other fortified cities which he had left in his rear when he advanced into the West. Wherever his dominion was imposed, the mass of land was given to his lords and knights, and fortresses and castles were erected and garrisoued by Normans and other foreigners, who continued to cross the Chainel in search of employment, wealth, and honours. The meanest of these exotic adventurers,—the least cultivated of these vagabonds,-thought himself entitled to treat the best Englishman with contempt, as a slave and barbarian.

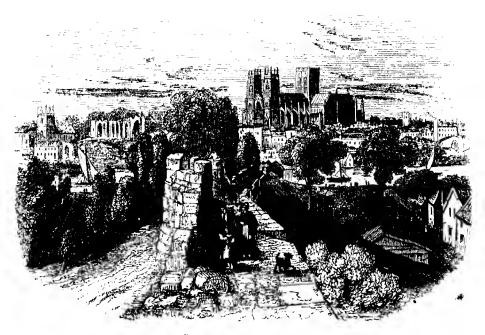

The accounts of the sufferings of the conquered people, as given by the native chroniclers, are condeused in a striking passage of Holmshed:-" He took away from divers of the nobility, and others of the better sort, all their livings, and gave the same to his Normans. Moreover, he raised great taxes and subsidies through the realm; nor anything regarded the English nobility, so that they who before thought themselves to be made for ever by bringing a stranger into the realm, did now see themselves trodden under foot, to be despised, and to be mocked on all sides, insonuch that many of them were constrained (as it were, for a further testimony of servitude and bondage) to shave their beards, to round their hair, and to frame themselves, as well in apparel as in service and diet at their tables, after the Norman manner, very strange and far differing from the ancient customs and old usages of their country. Others utterly refusing to sustain such an intolerable yoke of thraldom as was daily laid upon them by the Normans, chose rather to leave all, both goods and lands, and, after the manner of outlaws, got them to the woods with their wives, children, and servants, meaning from thenceforth to live upon the spoil of the country adjoining, and to take whatsoever came next to hand. Whereupon it came to pass within a while that no man might

travel in safety from his own house or town to his next neighbours, and every quiet and honest man's house became, as it were, a hold and fortress furnished for defence with bows and arrows, bills, pole-axes, swords, clubs, and staves, and other weapons, the doors being kept locked and strongly bolted in the night season, as it had been in time of open war, and amongst public enemies. Prayers were said also by the master of the house as though they had been in the midst of the seas in some stormy tempest; and when the windows or doors should be shut in and closed, they used to say Benedicite, and others to answer Dominus, in like sort as the priest and his penitent were wont to do at confession in the church."

The bands of outlaws thus formed of impoverished, desperate men, were not suppressed for several successive reigns; and while the Norman considered and treated them as banditti, the English people long regarded them in the light of unfortunate patriots. As late as the reign of King John, popular tradition gives some of its brightest colours to Robin Hood and his outlaws who haunted Sherwood Forest; nor was this dangerous sympathy suppressed till the memory of the Saxon supremacy had waxed faint, and the conquering and conquered races, being fused into one mation, enjoyed an equality of laws and rights.

Men of ligher rank and more extended views

were soon among the fugitives from the pale of the Conqueror. When in his conciliating mood, Wilham had promised Edwin, earl of Mercia, one of his daughters in marriage, and flattered by the prospect of such a prize, this powerful brother-inlaw of Harold had rendered important services to the Norman cause; but now, when he asked his reward, the Conqueror not only refused the four bride, but insulted the suitor. Upon this Edwin, with his brother Morcar, absconded from the Norman court and went to the north of England, there to join their incensed countrymen and make one general effort for the recovery of their ancient liberties. They were followed by the good wishes of the paor people of the South; and such of the priests and monks of English race who were not yet dispossessed, secretly offered up prayers for their success in their cells and churches. foreign soldier had as yet passed the Humber; and it was behind that river that Edwin and Morcar fixed the great camp of independence, the most southern bulwark of which was the fortified city of Among the men of Yorkshire and Northumbria they found some thousands of hardy warriors who swore they would not sleep under the roof of a house till the day of victory, and they were joined by some allies from the mountains of Wales and other parts. The practive Conqueror, however, came upon then they were pre-

cester, the latter of which places he almost entirely destroyed. Then crossing the Trent, which be had not seen till now, he fell upon Derby and Not-From Nottingham he marched upon Lincoln, which he forced to empitulate and deliver ho-tages, and thence pressing forward might and main, he came to the river Ouse, near the point where it falls into the Humber. Here he found Edwin and Morcar drawn out to oppose him. The battle which immediately ensued was fierce in the extreme; but, as at Hastings, their superiority in mumber, arms, armour, and discipline, gave the Normans the victory. A great number of the English perished; the rest retreated to York, within the walls of which they hoped to find refuge; but the conquerors following them closely, broke through the walls and entered the city, destroying everything with fire and sword, and massacring all they found, from the boy, as a contemporary authority assures us, to the old man.\* The wreck of the patriotic army fled to the Humber, and descended that estnary in boats; they then turned to the poeth,

hazards, were resolved not to submit to slavery.

farther, built a strong citadel at York, which became their advanced post and bulwark towards the A chosen garrison of 500 kmghts and men-at-arms, with a host of squires, and servantsat-arms, was left at this dangerous post. So perilous indeed was it considered, from the well-known martial and obstinate character of the men that dwelt beyond its walls, that the Normans laboured day and night to strengthen their position, forcing the poor inhabitants of York who had escaped the massacre to dig deep ditches and build strong walls for them. Fearing to be besieged in their turn, they also collected all the stores and provisions they could. At this crisis Aldred, the Archbishop of York, the prelate who had crowned and favoured Wilham, came to his cathedral to celebrate a religious festival. Som after his arrival in the city, he sent to his lands situated near York, for some corn and other provisions, for the use of his own house. his domestics returned with pack-horses and carts loaded with these provisions, they met at the gate of the town the Norman Viscount or Governor of York, surrounded by a great retinue; and though the servants told him they were the Archbishop's people, and that the provisions were for the Archbishop's own use, the Governor caused the corn to be seized and earried to his magazines in the castle. The calmness and accommodating temper of Aldred. were not proof against such an outrage as this. He

whom he presented himself in his pontifical robes, bolding his pastoral staff in his hand. William rose to offer him the kiss of peace; but the prelate stood at a distance and said, "Lasten to me, King William! Then wast a foreigner, and, netwithstanding that, God wishing to pinnish our nation, then obtainedst, at the price of much blood, this king dem of England: then I consecrated thee, I blessed thee, and crowned thee with mine own hand; but now I curse thee—thee and thy race, because then hast made thyself the persecutor of God's chareb and the oppressor of its ministers!" The Year man nobles of William who were present at this strange scene half drew their swords, and would have slam the bishop where he stood, but their master, carmy little for the old Saxon's curse, checked their fing and permitted him to return in peace to York, where he was soon seized with a slow but consuming malady, the offspring, it was unagined, of disappointment and gricf. In spite of his successes in the north, and his firm establishment in the undland counties, where he built castles and gave away carldoms, the Conqueror's throne was still threatened, and the coun-

try still agitated from one end to the other. The English cluefs, who had intherto adhered to his and landed in the country of the Scotch, or in the territory near the borders, which became the places cause, fell off, at first one by one, and then in troops of refuge of all the brave men of the north, who bd not yet des of liberty, or who, at all together, following up their defection with concerted plans of operation against bun. To these was added a fugitive of still higher rank, of whose The victors, who were not prepared to advance custody the Conqueror was very negligent. the mistance of Marleswine, Cospatine, and some other noblemen "who were anxious to avoid King William's rough and borsterous der feared to be put in ward," Edgar Atheling tled by sea into Scotland, taking his mother, Agatha, the widow of Edmund Houside, and his two sisters, Margaret and Christma, with him -These royal fugitives were received with great honour and kindness, and conducted to his castle of Dunfermline by the Scottish monarch, Malcolm Caemnore, who, in the vicissitudes of his early life, had been himself an exile, and had experienced in England the hospitality of Edward the Confessor and of many of his nobility. Edgar's rister Margaret was young and handsome; "and in process of time the said King Malcolm east, such love unto the said Margaret, that he took her to wife." | Some of the English nobles had preceded Edgar to Scotland; many followed him, encouraged by the reception they met with from the king, who was naturally anxious to strengthen limiself against the growing power of William; and these emigrants, and others that arrived from the same quarter on various subsequent occasions, became the stocks of a principal part of the Scottish nobility.

It is probable that William did not mourn much for the departure of the English thanes; but presently he was vexed and embarrassed by the departure of some of his Norman chiefs and many of the soldiers of fortune that had followed lum from These warriors, wearied by the the continent. 4 Grafton \* 1, Stubbs, Cluon,

them and their children; for it appears that few or none of them had as yet thought it sale to bring their families to England. The latter class of complainants were made the subjects of raillery and bitter sarcasm; for William, who had his own spouse with him, found it mesembly that man and wife should wish to be together.\* It was also whispered that those who asked leave to retire

must all be cowards, to think of abandoning their liege lord when in peril and in the midst of foreigncrs. Not counting wholly on the effect of such light artillery, William tried to reanimate their zeal by offers more bountiful than ever, and by promising lands, money, and honours in abundance the moment the conquest of England should be In spite, however, of all these manœuvres, Hugh de Grantmesmi, earl of Norfolk, his brother-in-law, Humphrey Tilleuil, the warden of Hastings Castle, and a great number of others, retired from the service, and recrossed the Channel. The king punished this desertion by immediately confiscating all the possessions they had obtained in our island. Foreseeing, however, that he was about to be surrounded by great difficulties and dangers, he sent his own wife Matilda back to Normandy, that she might be in a place of safety. At the same time, he invited fresh adventurers and soldiers of fortune from nearly every country in Europe; and, allured by his brilliant offers, bands flocked to him from the banks of the Rbine, the Seine, the Loire, the Garonne, and the Tagus from the Alps, and the Italian peninsula beyond the Alps. The reinforcements he thus received must have been very considerable; for in spite of the losses he had suffered in his campaign against Edwin and Morcar, and the constant thinning of his

troops by a partisan warfare, he was enabled to meet a more formidable confederacy than any pre-A.D. 1069. The strong garrison which the Conqueror had left at York could searcely adventure a mile in advance of that post without being attacked by the natives, who lay constantly in ambush in all the woods and glens. The governor, William Malet, was soon fam to declare that he would not answer for the security of York itself, unless prompt succour was sent him. On receiving this alarming news, William marched in person, and arrived before York just as the citizens, in leagne with all the country people of the neighbourhood, were laying siege to the Norman Having raised this siege by a sudden attack, he laid the foundations of a second castle in

last resting-place.

selves now secure in this advanced post, the Normans resumed the offensive, and made a desperate attempt to extend their frontier as far north as Durham. The advance was made by a certain Robert de Comine, to whom William had promised a vast territory, yet to be conquered. This Robert set out from York with much pomp

York, and, leaving a double garrison, returned southward. Soon after his departure, the English

made a second attempt to drive the enemy from

and circumstance, having assumed, by anticipation, the title of Earl of Northumberland. His army was not large, consisting only of 1200 lances; but his confidence was boundless. He crossed the Tees, and was within sight of the walls of Durham, which the Normans called "the stronghold of the rebels of the North,"—when Egelwin, the English bishop of that place, came forth to meet him, and informed him that the natives had vowed to destroy him, or be destroyed, and warned him not to expose himself with so small a force. Comme treated the warning with contempt, and marched The Normans entered Durham, massacring a few defenceless men. The soldiers quartered themselves in the houses of the citizens, plundering or wasting their substance; and the clief himself took possession of the bishop's palace. march of the Normans and all these proceedings had been well noted; and when mght fell, the people lighted signal-fires on the lills, that were seen as far as the Tees to the south, and as far

northward as the river Tyne. The inhabitants

gathered in great numbers, and hurried to Durham

At the point of day they rushed into the city, and attacked the Normans on all sides. Many were

which was burnt to the ground with Robert de Comine and all the Normans in it. The chroniclers relate, that of all the men engaged in the expedition only two escaped. This dreadful reverse called forth a large body of troops from York, who hastened to take vengeance. These Normans advanced with sufficient confidence as far as Northallerton, about midway between York and Durham, but here they halted, as if seized with a panic, and refused to go farther. A report was spread, and believed, at least by the English, that they were struck motionless by supernatural agency—by the power of St. Cuthbert, whose body, after many removals, now reposed in Durham, and who, it was thought, protected his

When the Northumbrians struck the blow at Durham, they were expecting powerful allies, who soon arrived. As we have so often had occasion to repeat, these men, with the inhabitants of most of the Danelagh, were exceedingly fierce and warlike, and chiefly of Danish blood. Many of the old men had followed the victorious banner of the great Canute into England, or had served under his sons, kings Harold Harefoot and Hardicanute; and the sons of these old warriors were now in the vigour of mature manhood. They had always manutained an intercourse with Denmark, and as soon as they saw themselves threatened by the Normans, they applied to that country for assist-The court of the Danish king was soon crowded by supplicants from the Danclagh, from Norwich and Lincoln, to York, Durham, and Newcastle. There were also envoys from other parts of the kingdom, where the Saxon blood predominated, and the sons of King Harold added their efforts to urge the Danish monarch to the invasion of England. At the same time, the men of Northumberland had opened a correspondence with Malcolm Cacumore and his givest Edgar Atheling, and alhed themselves with the English refugees in Scotland and on the border. Even supposing that the sons of Harold made no pretensions to the crown, there must have been some jealousy and confusion in this confederacy, for while one party to it held the weak Edgar as legitimate sovereign, another maintained that by right of succession the king of Denmark was king of England. It seems well established that the Danish monarch, Sweyn Estridsen, held the latter opinion; and the ill success of the confederacy may probably be attributed to the disunion inevitably arising from such clashing interests and pretensions. As soon as the battle of Hastings was known, and before any invitations were sent over, Sweyn had contemplated a descent

Two years passed without anything more being heard of the Danish invasion; but this lapse was probably rather owing to a desire on Swevn Estridsen's side, to gain time in order to make his preparations, than to the effects of the Archbishop's diplomacy; and when in this, the third year after the battle of Hastings, the solicitations of the English emigrants were more urgent than ever, and the men of the north, his natural allies, were up in arms, the powerful Danc dispatched a fleet of 240 sail, with orders to act in conjunction with the King of Scotland and the Northumbrians. army embarked in this fleet was composed of almost as many heterogeneous materials as the mereenary force of William: besides Dancs and Holsteiners, there were Frisians, Saxons, Polcs, and adventurers from other countries, tempted by the

recourse to Adelbert, the archbishop of Bremen,

who, won by persuasion and presents of large sums of

money, undertook the negotiation, and endeavoured

to make the Danish king renounce his project.

CIVIL AND MILITARY TRANSACTIONS. 37 I sons, Harold and Canute, with the expedition, and placed it under the supreme command of their uncle Osheorn, who was accompanied by five Danish chiefs of high renown, and by Christian, the king's bishop. After alarming the Normans in the south-east, at Dover, Sandwich, and Ipswich, the Danes went northward to the Humber, so often ascended by their ancestors, and sailed up that estuary to the Ouse, where they landed about the middle of Angust. It appears that Osbeorn was not able to prevent his motley army from plunder ing and wasting the country. As soon, however, as the Anglo-Danes, the men of Yorkshire and Northumberland, were advised of the arrival of the armament, they flocked to join it from all parts of the country; and Edgar Atheling, with Marlswine, Cospatric, Walthcof, the son of Siward, the great enemy of Macbeth, Archil, the five sons of Carl, and many other English nobles, arrived from the frontiers of Scotland, bearing the consoling assurance that, in addition to the forec they brought with them, Malcolm Cacumore was ad vancing with a Scottish army to support the insurgents. York was close at hand, and they determmed to commence operations by the attack of the Norman fortifications in that city. Archbishop Aldred, who had never recovered from the wrong done lum the preceding year, was in York at the time: as he saw the fierce array advance on that devoted city, he prayed to God to remove him from this world, that he might not witness the total min of his country and the destruction of his church; and he is said to have died of "very grief and anguish of mind," before the confederates entered The Normans had rendered the walls of the town so strong that they defended them seven days : on the eighth day of the siege they set fire to the houses that stood near their citadels, in order that their assailants might not use the materials to fill up the ditches of the castles, and then they shut themselves up within those lines. A strong wind arose, -- the flames spread in all directions; the Minster, or cathedral church, with its famous hbrary, and great part of the city, was consumed; and even within their castles the Normans saw themselves threatened with a horrid death by the fire they had kindled. Preferring death by the sword and battle-axe to being burnt alive, they made a sally, and were slain almost to a man by an enemy far superior in mmber, and inflamed with the fiercest hatred. They had suffered no such loss since the ever-memorable fight of Hastings; 3000 Normans and mercenaries of different races fell; and only William Malet, the governor of York, with his wife and children, Guilbert of Ghent, and a few other men of rank, were saved and carried on board the Danish fleet, where they were kept for ransom. Such parts of the city of York as escaped the conflagration were occupied by Edgar Atheling, who, according to some authorities, assumed the royal title, and exercised the rights of sovereignty,-circumstances, we should think, that could scarcely coincide with the views

HISTORY OF ENGLAND. of the Danes and the pretensions of their king. A

rapid advance to the south, after the capture of York, with no enemy in their rear, might have ensured the confederates a signal and perhaps a decisive success; but the King of Scotland did not

appear with his promised army, and at the approach of winter, which proved unusually severe, the Danes retired to their ships in the Humber, or took

up quarters between the Ouse and the Trent, and spent that long season in sloth and gluttony. William was thus allowed time to collect his forces and bring over fresh troops from the continent. The Conqueror was hunting in the forest of Dean when he received the first news of the catastropbe of York; and then and there he swore, by the splendour of the Almighty, that he would ntterly exterminate the Northumbrian people, nor

ever by his lance in rest, when he had once taken it up, until he had done the deed. In the meantime he attempted, with infinite ait, to concibate the people in the south of England, redressing many of their grievances, and promising them a just and mild rule for the future. Not relying, however, wholly on these managivies, he exacted fresh oaths and hostages. At the same time he opened secret negotiations with Osbeorn, the brother of King Sweyn, and finally succeeded, by means of gold and other present, in inducing lam to agree to withdraw his Danish fleet and army, and to give no more assistance to the Northumbrians. With the earliest spring William took the field, riding at the head of the finest and most numerous cavalry that had even been seen in England, and cansing his infantity to follow by forced marches. As he thus advanced the English rose nearly every where m his rear, recommencing a war on many different points at once. An interior communider would have been confused by this multiplicity of attacks, and inevitably inmed; but William, who, considering times and circumstances, was one of the greatest generals that ever lived, did not suffer his attention to be distracted, and steadily pursued

same moment that the ruthless conqueror was approaching their walls, and that their allies, the Danes, had abandoned them, and were sailing away for the south, where, according to the treacherous compact they had made, they were to be permitted to victual and plinaler the English. Abandoned as they were, and ill provided with defences,—for in their rage they had utterly dedestroyed the two easiles,—they made an obstinate resistance; nor was York taken until many hundreds of English and Normans lay dead together. Edgar Atheling, escaping with his life,

and little clse, fled for a second-time to the court

of the Scottish king. Elated by his victory,

William spent but a short time in ordering and

planning fresh fortifications in York, and then con-

tinued his march northward. His rage had not

moderated in the time that had elapsed, and he

his course to the north, where he knew the great

blow must be struck.

thought it wise and good policy to carry into effect the fearful yow he had made in the forest of Dean. His troops required no exertement from him: the destruction of their comrades at Durham and York in the preceding year, and the loss they had just sustained themselves at the latter city, rankled in their savage minds, and they threw themselves on the territory of Northumbria in a frenzy of vengeance, wasting the cultivated fields, burning towns and villages, and massacring indiscriminately flocks, herds, and men. To accomplish this bayock over a great width of country, they marched in separate columns; and when the natives, rushing from their concealment in the woods and morasse;, externinated some of their scouring parties, such occasional disasters only made the survivors the more jutiless. An English army, commanded by Cospatric, disheartened, disorganised, and very inferior in numbers, retreated before the Normans, and either retired into Scotland or threw itself, into the mountains, being followed by all the population that had strength and activity enough to escape. Egelwin, the Bishop of Durham—the same who had had the interview with Robert de Comine,—assembled the inhabitants of that city, and, like a good shepherd, proposed to conduct his flock to a place of safety, out of the reach of what an old rhyming chronicler calls "Narmans, Burgolouns, thicker, and felons." Leaving their homes to become the prey of the enemy, but carving with them the body or bones of St. Cuthbert, these wretched people followed then bishop across the Tyne to Lands farne, or Holy Island, near the mouth of the Tweed; and the Normans a second time entered Durham, but in such force as to leave them no grounds for apprehending a repetition of the tragedy that had terminated their first visit. Having fortified Durham, which is by nature a strong position, the invaders pushed forward to the Tyne, contimming their work of devastation, and feeling then thirst for blood unslaked. A havock more complete and diabolical was never perpetrated, nor is the relation of any event of those ages sustained by more numerous and perfect proofs. The Norman and French chroniclers and historians join the English in narrating and deploring the catastrophe

Book III.

which, even in those times of violence and blood, seems to have overpowered men's minds with a wild horror and wonderment. William of Mahnsbury, who wrote in the reign of Stephen, about eighty years after, says, "From York to Durham not an unhabited village remained. Fire, slaughter, and desolation made a vast wilderness there, which continues to this day." From Durham north to Hexham, from the Wear to the Tyne, the remorseless Conqueror continued the same infernal pro-Ordenc Vitalis denounces the "feralis occisio," the dismal slaughter; and says that more than a hundred thousand victims perished. "It was a horrid spectacle," says Roger Hoveden, "to see on the high roads and public places, and at the doors of houses, human bodies caten by the worms,

\* Burgundians,

for there remained no one to cover them with a httle carth." The fields in culture were Turned, and the cattle and the corn in the barns carried off by the conquerors, who made a famuse where they could not maint un themselves by the sweed. This hightful scourge was felt in those parts in the months that followed, with a severity never before experienced in England. After eating the flesh of dead horses which the Normans left behind them. the people of Yorkshire and Northumberland, driven to the last extremity, are said to have made many a loathsome repast on human flesh. † Pestilence followed in the wake of famme; and as a completion to this picture of borror, we are informed that some of the English, to escape death by hunger, sold themselves, with their wives and children, as slaves to the Norman soldiery, who were well provided in their citadels and castles with corn and provisions, purchased on the continent with gold and goods robbed from the English.

On his return from Hexham to York, by an imperfectly known and indirect route across the fells, William was well nigh perishing. The snow was still deep in those parts, and the rivers, torrents, ravines, and mountains continually presented obstacles which the Normans had been little accustomed to in the level counties of England. The army fell into confusion, the king lost the track,

i Florent. Wigorn.

and passed a whole night without knowing where he was or what direction his troops had taken. Historians are silent as to his motives for choosing this dangerous road, when a better one lay open for 'mm; but his intention no doubt was to clear the mountains of the English fugitives, who, had they possessed proper information as to his movements, might have attacked his confused and scattered bands, and inflicted a severe punishment. Even as it was, and though no such attack is incutioned (by no means a proof that none happened), William did not reach York without a serious loss, for he left behind him most of his horses, which were said to have perished in the snow; his men also suffered the severest privations. Confiscation now became almost general, and

Confiscation now became almost general, and William openly avowed his determination to despoil and degrade the natives. All property in land, whether belonging to parnotic chiefs or to men who had taken no active part in the conflict, began to pass into the possession of the Normans and other foreigners. Nor was moveable property safer or more respected. From the beginning of the invasion the English had been accustomed to deposit their most valuable effects in the monasteries, in the hope that these sanctuaries would be respected by men who professed to be Christians, and to have a special reverence for such holy places; but now William, emboldened by success, serzed the whole, under the pretext that it belonged to disloyal and

rebellions subjects. His commissioners, who in many places performed their work sword in hand, did not always draw a distinction between the plate and jewels left in deposit and the treasures that belonged to the monasteries themselves, but carried off the church ornaments and the vessels of silver or gold that were attached to the service of the altar. They also removed or destroyed all deeds and documents, charters of miniminities, and evidences of property. The newly-conquered territory in the north, which must long have remained sufficiently unproductive, seeing how it had been wasted and the cultivators of the soil destroyed, was distributed in immense lots. William de Garenne had twentyeight villages; William de Percy more than eighty manors. In Domesday Book, which was drawn up fifteen years after the Norman occupation of them, most of these domains are described as laying fallow or waste. Vast tracts of country to the north of the city of York fell to the lot of Allan the Breton, who erected a castle and other works of defence on a steep hill, nearly surrounded on all sides by the river Swale. In the language of the times, this fortress was intended to protect him and his against the redoubtable attacks of the disinherited English. Like most of the chiefs of the conquering aimy, he gave a French name to the place,—he called it Richemont or Richmount, now Richmond. Dreux Bruère, the chief of a band of

Flemish auxiliaries, had the eastern part of York-

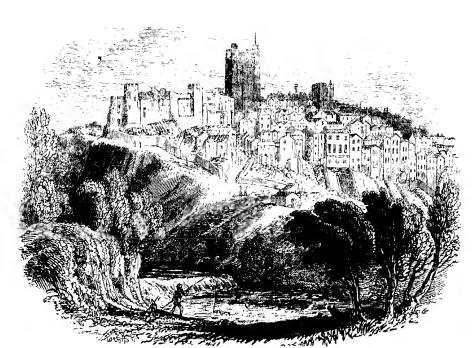

shire, between the rivers and the sea. A story is

told of this man that gives a curious idea of some of

William's followers. He had married a relation of the king's, and this wife he killed in a fit of passion. Before the murder was known, he went to the king and begged him to give him money in lieu of his English estates, as he had an earnest desire to return to his own country. William granted the sum he asked, and did not learn the cause of his hasty departure until it was too late to think of stopping him. The territory of the Fleming was then conferred on Eudes of Champaign, who subsequently married a half-sister of the Conqueror, When Endes' wife was delivered of a son, he represented to the king that his lands were not at all fertile, producing only oats, and prayed he would make him a grant of an estate proper to bear wheat, that he might have wherewith to make wheatenbread for his infant, the king's nephew. King William presented him with some lands to his beart's wish in Lincolnshire. Gamel, the son of Quetel, who came from Meaux, in France, with a troop of his own townsmen, established himself and his companions in lands adjoining the Yorkshire possessions of Eudes of Champaign. And Baam, Sivard, Francon, and Richard d'Estonteville are mentioned as landbolders and neighbours of Gamel of Meaux. The vast domain of Pontefract was the share of Gifbert de Lacy, who soon afterwards extended the Norman conquest in Lancashire and Cheshire, and obtained there estates still more extensive. \* This De Lacy binht Pontefract Castle.

which became at a later age the scene of a fearful

· Thieny.

RICHMOND, Yorkshire

The desperate resistance they had made, the bands of houseless English that still rounced from place to place, made the Normans more than ever sensible of the value of deep ditches and strong stone walls, Every baton erected his castle; and in every populous town there was a strong fortress, where the

successor and lineal descendant of the Conqueror

Normans confined the principal natives as hostages, and into which they could retue in case of an insur-William did not advance faither than Hexham; but some of his captains continued the progress both to the north and to the west, though their tenure of the land was scarcely scenred until some years later, when the mountainous country of Westmorland and Cumberland, and the adjacent part of Northumberland, were reduced by various chiefs The first Earl of Cumberland was a certain Renouf Merchines, who divided the domains and handsome women of the country among his followers, thus following out the feudal system fally established by William. Simon, the son of Thorn, the English proprietor of two rich manors, bad three daughters: one of these Meschines gave to Homphrey, bis man-at-arms, the second he gave to Raonl, mcknamed Tortes-mains, and the third he reserved for his squite, William of St. Paul.—In the north of Northmuberland, Ives. de Vescy took possession of the town of Aluwick, along with the grand-daughter and all the inheritance of a Saxon who had died in battle, Robert de Bruce obtained, by conquest, several manors and the ducs of Hartlepool, the scaport of Durham. Rebert D'Onufreville had the forest of Riddesdale, which belonged to Mildred the Saxon. the son of Akman. On his receiving investiture of this domain, William gave to D'Omfreville the sword he had hunself worn at his entrance into Northumberland, and D'Omfreville swore upon that sword that

their paternal estates. In reality, however, these four men were little better than prisoners, and three of them perished miserably in a very short time. The insurrections which broke out in William's rear during his march to York were partially suppressed by his lieutenants, who suffered some reverses, and perpetrated great cruelties in return.

he would make good use of it to clear the land of

wolves and the enemies of the Conqueror. The nominal government of Northumberland was, how-

ever, intrusted to a native who had recently borne

arms against William. This was Cosputric who came in with Waltheof, the brave son of Siward,

King Harold, and submitted to William for the

second time, being probably induced thereto by

liberal promises from the Conqueror, who then con-

sidered them as the main prop of the English

cause, wanting whom Edgar Atheling would at once fall into insignificance. The reward of Cos-

patric we have mentioned: Waltheof was made

Earl of Huntingdon and Northampton, and re-

ceived the hand of Judith, one of King William's

nicces, and Morear and Edwin were restored to

The garrison of Exeter, besieged by the people of Cornwall, was relieved by Fitz-Osborn; Montacute repulsed the insurgents of Devonshire and Somersetshire; and Ednic the Forester, who took the town of Shrewsbury with the help of the men of Chester and some Welsh, was foiled in his attempt to reduce the castle. The whole of the North-west was, however, in a very insecure state; and the haste with which William marched thither on his return to York from Hexham, scens to denote some greater pend on the side of the Normans than is expressed by any of the annalists. The weather was still inclement, and his troops were fatigned by their recent exertions, their rapid marches and counter-marches in Northumberland, yet be led them amidst storms of sleet and hail across the mountains which divide our island lengthwise, and which have been called, not inappropriately, the Apennines of England. The roads he took as being those which led direct to Chester, were scarcely passable for cavalry, and his troops were annoyed and dishemtened by actual difficulties and prospective hardships and dangers. The country lying on the western sea, on the Mersey and the Dee, was painted in appalling colours; but the soldiers scarcely exaggerated the difficult and mountainous nature of Wales or the fierce vulour of its inhabitants. The auxiliaries, particularly the men of Anjou and Brittany, began to nurmur aloud, and not a few of the Normans, complaining of the hard service to which their chief was exposing them, talked of returning beyond sea. This discontent was overcome partly by promises of reward when the campaign should end, and partly by an affected midifference. "I can do very well without them," said Wilham, referring to the foreign mercenaries; "they may go if they please. I have plenty to follow me, I do not want their services." And then, on the rough way over the wealds, he partook in the fatigues of the common soldiers, marching on foot with them, and faring as they fared. Chester, which, still retained the outer features of a Roman city, and where the Conqueror gazed on Roman walls and gates, then comparatively entire, had not yet been invaded by the Normans. No defence, however, was attempted there; and, with Morear and Edwin, the brothers-in-law of after entering in trample, William proceeded to lay the foundations of a new and strong castle, while detachments of his army reduced the surrounding country. During the Conqueror's stay, Edric the Forester submitted, and was received into

> palace at Winehester, which city became a favonrite abode with him, as it had been with his Saxon predecessors. To retain the newly-conquered province in the north-west, he had left a strong body of troops behind him, under the command of a Fleming named Gherbaud, who became the first Count or Earl of Chester. This Gherbaud \* Orderic.

Edward, the second

HISTORY OF ENGLAND.

they found an opportunity; and the mountaineers from North Wales barassed him incessantly, so that he was glad to resign his command, fiefs, and honours, and return to his own country. Conqueror then granted the earldom of Chester to Hugh d'Avranches, a more warlike and much fiercer commander, who carned, even in that age, the surname of "The Wolf." Not satisfied with defensive operations, the new Earl munediately crossed the Dee, invaded North Wales, made himself master of a part of Fluitsbire, and built a castle at Rhuddlan, thus taking an important step towards the subjugation of the Welsh, a project the Normans never abandoned until it was completed, two

centuries later, by Edward 1. Hugh the Wolf and his ferocious followers, raused to even more than their usual ferocity by the obstinate and fierce resistance they encountered, shed the blood of the Welsh like water, and burnt and wasted their houses and lands. The fearful tragedy of Northumberland and Yorkshire was repeated on a smaller scale in this corner of the island, and famine and pestilence stalked along the banks of the Clwyd, the Dee, and the Mersey as they had The compacted terrotory was apportioned as in the north. A few incidental accounts of these

done by the rivers of the north-eastern coast. measures, that are found in the chroniclers, taken as they occur, may convey a better nation of the Norman system of settlement than any formal discussion of it. Almost as soon as Hugh the Wolf was installed Earl of Chester, he invited over from Normandy one Lenoir or Nigel, a friend of his early days, whom he was anxious to make the partaker of his good fortune on England. Nigel not only came over lumself but brought his five brothers, Hondard, Edward, Volmar, Horsnin, and Volfan with him, having concluded, no doubt, from good reports, that there was plenty of room and promotion for them all. The Earl of Chester gave Nigel the burgh and domains of Hulton on the Mersey, and made him his constable and hereditary marshal, with great privileges, and almost unlimited means of raising money by fines, for he had the right of administering justice himself, with power of life and death, within his district of Hul-Of the booty taken, or to be taken, from the Welsh, all the four-footed beasts were declared to be the share of Nigel, who had moreover the right of pre-emption in the city of Chester, by which he or his servants could insist on being served first of whatever they wanted to buy, provided only the servants of the Earl had not presented themselves as purchasers somer than they. All stray cattle and animals found within the limits of Hulton were his, and Nigel enjoyed the privilege of freely selling at fairs or otherwise, without tax or duty, every species of merchandize except salt and norses. These possessions, rights, and immunities were declared hereditary in Nigel's family on the usual condition of feudal service and fealty

The disturbances on the eastern coast, which had been overlooked, now grew to such importance as to demand attention. Hereward, "England's darlong," as he was called by his admiring countrymen, was lord of Born, in Lincohishire, and one of the most resolute chiefs the Normans ever had to Having expelled the foreigners who enconnter. had taken possession of his patrimony, he assisted bis neighbours in doing the like, and then established a fortified camp in the Isle of Ely, where he raised the banner of independence, and bade defiance to the Conqueror. His power or influence soon extended along the eastern sea-line, over the fen country of Lincolnshire, Huntingdon, and Cambridge; and English refugees of all classes, thanes dispossessed of their lands, bishops deprived of their mitres, abbots driven from their monasteries, to make room for foreigners, repaired from time to time to his "camp of refuge." The jealous fears of the king increased the danger they were mtended to lessen. Though Edwin and Morear remained perfectly quiet, and showed every disposition to keep their oaths of allegiance, he dreaded them on account of their great popularity with their countrymen, and he finally resolved to seize their persons. The two earls received timely notice of this intention, and secreted themselves. When he thought the vigilance of the Normans was lulled, Edwin endeavoured to escape to the Scottish border,

but he was betrayed by three of his attendants, and

fell on the road gallantly fighting against his Norman pursuers, who cut off his head, and sent

it as an acceptable present to the Conqueror. †

Morcar effected his escape to the morasses of Cambridgeshire, and joined Hereward, whose camp

was further crowded about this time by many of

the English chiefs of the north, who had been

driven homeless into Scotland. Among the eccle-

siastics of Northumbria who took this course was

Egelvin, the Bishop of Durham. Even Stigand,

the Primate of all England, but now degraded by

King and Pope, and replaced by Lanfranc, an

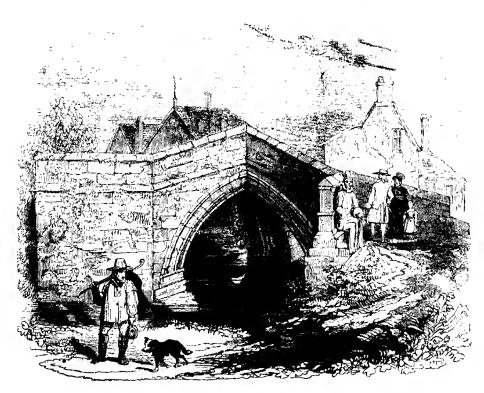

Italian, is mentioned among the refugees of Ely; but his presence there seems to rest on doubtful authority.

William at length moved with a formidable army. The difficulties of this war on the eastern coast were different from, but not inferior to, what the Normans had encountered in the west and the north. There were no mountains and defiles, but the country was in good part a swamp on which no cavalry could tread; it was cut in all directions by rivers, and streams, and broad meres; and the few roads that led through this dangerous labyrinth were little known to the foreigners, and likely to be well defended by the natives, who would fight with many local advantages in their favour. country, too, where the banner of independence floated was a sort of holy land to the English: the abbeys of Ely, Peterborough, Thorney, and Croyland, the most ancient, the most revered of their establishments, stood within it; and the monks, however professionally timid or peaceful, were disposed to resistance, for they well knew that the coming of the Normans would be the signal for driving them from their monasteries. The manks of Croyland, indeed, had already to deplore and resent many wrongs sustained from the invaders. They possessed a house at Spalding, where a part of the brotherhood had resided, and their next

neighbour was a fierce baron, named Taille-bois, from Arfou, who had done them all kinds of mischief,—laming their horses and their oxen, killing their sheep and poultry, robbing their farmers, and assaulting their servants on the highway with swords and staves. After vain attempts to mollify this tyrant with entreaties and presents, the unlucky manks had taken up their beds, and their books, and the sacred utensils, and leaving their habitation at Spalding to the protection of Heaven, and shaking the dust off their feet against that "son of the fire eternal," had returned in no complacent humour to Croyland.\* Taille-bois sent immediately over to Angers for some monks of his own country, whom he put in possession of the house and church at Spalding.

The Normans, surprised among the bogs and the tall rushes that covered them, suffered some severe checks. The sagacious eye of William soon saw that the proper way of proceeding would be by a blockade that should prevent provisions and succour from reaching the Isle of Ely. He accordingly stationed all the ships he could collect in the Wash, with orders to watch every mlet from the sea to the fens; and he so stationed his army as to block up every road that led into the fens by land. When he resumed more active operations he undertook a

• Ingulf.

soldiers, were consumed.

an enemy his armies could never reach, and who probably admired, as a soldier, his wonderful courage and address. Hereward made his peace, took the oath of allegiance, and was permitted by the Conqueror to preserve and enjoy the estates of two miles long, with bridges over the beds of the his ancestors. The exploits of the last hero of Hereword frequently interrupted these Anglo-Saxon independence formed a favourite operations, and in a manner so unorderous, sudden, theme of tradition and poetry; and long after his and mysterious, that the affrighted workmen and soldiers became firmly convinced that he was death the inhabitants of the Isle of Ely showed leagued with the devil, and aided by some necrowith pride the ruins of a wooden tower which they called the eastle of Hereward.

> After the destruction of the camp of refuge in Ely, the Norman forces, naval as well as military,

> proceeded to the north to disperse some bands

which had again raised the standard of independ-

ence, and invoked the presence of Edgar Atheling,

who was enjoying the tranquillity and obscurity for

which he was fitted, in Scotland. After some

bloody skimmshes the confederates were driven

beyond the Tweed; and then William crossed that

river to serze the English emigrants, and punish

Malcolm Caemnore. A Scottish army, which had

been so anxiously expected by the English insur-

gents at York two years before, when its weight in

the scale might have proved fatal to the Normans,

had tardily matched at a moment when the Northumbrian's and people of Yorkshire were almost

exterminated, and when it could do little more than

[Book III.

William, whose philosophy in these matters was not in advance of his age, and who had brought over with him from Normandy a conjuror and soothsayer as an essential part of his army of invasion, was readily induced by Ives Taille-Bois, the persecutor of the monks at Spalding, to employ a sorceress on the side of the Normans, in order to pentralise or defeat the spells of the English. This sorceress was placed with much ceremony on the top of a wooden tower at the head of the works, but Hereward, the "cuming captain," watching his opportunity, set fire to the dry reeds and rushes,—the flames were rapidly spread by the wind, and tower and sorceress, workmen and When the Isle of Elv had been blockaded three months provisions became scarce there. whose profession and vowed duties included frequent fasting were the first to become impatient under privation. The monks of Ely sent to the enemy's camp offering to show a safe passage across the fens if the king would only promise to leave them in undisturbed possession of their houses and The king agreed to the condition, and two of his barons pledged their faith for the execution of the treaty. Under proper guides the Normans then found their way into the 1sle of Ely, and took possession of the strong monastery which formed part of Hereward's line of defence. They killed a thousand Englishmen that either occupied an advanced position or had made a sortic; and then closing round the "camp of refuge," they finally obliged the rest to lay down their arms. Some of these brave men were liberated on paying heavy fines or ransoms; some were put to death; some deprived of their sight; some manned and rendered unfit for war by having a right hand or a foot cut off; some were condemned to perpetual imprisonment:

and in this last category were earl Morear and the bishop of Durham. Hereward, the soul of the confederacy, would not submit, but making an effort which appeared desperate to all, he rushed from the beleaguered camp, and escaped by throwing himself into the marshes where the Normans would not venture to follow him. Passing from fen to fen, he gained the low, swampy lands in Lincolnshire, near his own estate, where he was joined by some friends, and renewed a partisan or guerilla warfare, which cost the Normans many lives, but which could not, under existing circumstances, produce any great political result. At last, seeing the hopelessness of the struggle, he listened to terms from William, who was anxious to pacify

excite the few remaining inhabitants to a hopeless rising, and burn the houses of such as refused to join in it. The want of provisions in a land laid waste soon made the Scots recross the border. avenge this mere predatory inroad, however, William now advanced from the Tweed to the Frith of Forth, as if he intended to sub-line the whole of the "land of the mountain and flood," taking with him the entire mass of his splendid cavalry, and nearly every Norman foot-soldier he could prudently detach from garrison duty in Eng-Some native English, on whose fidelity to lumself or dislike of the Scots he could rely, also followed him by land, while others acted as sailors on board his ships, which sailed close in-shore, and co-operated with him as he marched through the Lothians. The emigrants escaped his pursuit; nor would Malcolm deliver them up; but, intimidated by the advance of an army infinitely more numerous and better armed than his own, the Scottish

king, says the Saxon chronicle, "came and agreed with King William, and delivered hostages, and was his man, and the king went home with all his On his return from Scotland, William was received at Durham by the new bishop, Vaulcher or Walcher, a Lorrainer by nation, who felt so insecure in his diocese that he entreated the king to stay and build a eastle for him. William, who had other business to transact, remained some time, and erected a sort of citadel on the top of the highest hill, in which the prelate might live without fear of During his stay at Durham the king summoned Cospatric to appear before him, and, on the idle ground of old grievances, which had been

CIVIL AND MILITARY TRANSACTIONS.

of Northumberland, for which it appears he had paid a large sum of money. Cospatrie fearing worse consequences, abandoning whatever else he had in England, fled to Malcohn Caemmore, who gave him a castle and lands. The earldom of

CHAP. I.]

Northumberland was conferred on Waitheof, an Englishman like himself, but now the nephew of the Conqueror by marriage with his neice Judith. The Normans had now been seven years in the land, engaged in almost constant hostilities; and at length England, with the exception of Wales, might fairly be said to be conquered. In most abridgments and epitomes of history the events we have related in not unnecessary detail, are so faintly indicated, and huddled together in so narrow a space, as to leave an impression that the resistance of our ancestors after the battle of Hastings was triffing and brief,—that the sangumary drama of the Conquest was almost wholly included in one act. Nothing can be more incorrect than this impression, or more unfair to that hardy race of men who were

the fountain-source of at least nanc-tenths of the blood that flows in the large and generous vein of the English nation. "The successive contests in which the Conqueror was engaged," says a recent historian, with becoming warnith, " ought not to be regarded as, on his part, measures to quell rebellion. They were a series of wars, levied by a foreign prince against unconquered and unbending portions of the Saxon people. Their resistance was not a flame casually lighted up by the oppression of inters,-it was the defensive warfare of a nation who took up arms to preserve, not to recover, their independence. There are few examples of a people who have suffered more for national dignity and legitimate freedom. The Britons are, perhaps, too far from us to admit our fellow-feeling with them. When we stretch out our hands towards their heroes, we scarcely embrace more than a shadow. But let us not distort history by throwing the unincrited reproach of want of national spirit on the Anglo-Saxon, and thus placing an impassable barrier between our sympathy and the founders of our laws and liberties, whose language we speak, in whose homes we dwell, and in whose establish-

ments and institutions we justly glory."\* Not long after his return from Scotland, circumstances imperatively ealled for the presence of William in his continental dominions. His talents as a statesman and warrior are indisputable, yet few men have owed more to good fortune. wrongs and provocations were the same then as now, and policy would have suggested to the people of Maine to exert themselves a year or two hefore, when William, engaged in difficult wars in England, would have been embarrassed by their insurrection on the continent. But they made their great effort just as England was reduced to the quietude of despair, and when William could proeeed against them unincumbered by any other war. \* Sir J. Macl.intosh.

prudent to remove his Norman forces from this island, he collected a considerable army among the English population, and carrying them over to Normandy, he joined them to some troops levied there, and putting himself at their head, marched into the unfortunate province of Maine. national valour which so often opposed him was now excrted with a blind fury in his favour. English beat the men of Maine, burnt their towns and villages, and did as much imschief as the Normans (among whom was a strong contingent from Maine) had perpetrated in England. While these things were passing on the continent Edgar Atheling received an advantageous offer of services and co-operation from Philip, king of France, who at last, and too late, roused lumiself from the strange sloth and indifference with which he had seen the progress made by his overgrown vassal the Duke of Normandy.

Herbert, the last count or national chief, bequeathed

the county of Maine, bordering on Normandy, to

Duke William, who, to the displeasure of the

people, but without any important opposition, took

possession of it several years before he invaded

England. Instigated by Fulk, Count of Anjou,

and vexed by a tyramical administration, the

people of Maine now rose against William, and

expelled the magistrates he had placed over them,

and drove out from their towns the officers and

garrisons of the Norman race. Deeming it im-

events in Maine, the dread inspired in all the neighbouring country, even to the walls of Paris, and William's exhibition of force, were probably the mimediate causes that dispelled Phihp's long sleep. He invited Edgar, with whose impromising character he was probably unacquainted, to come to France and be present at his council, promising him a strong fortress satuated on the Channel at a point equally convenient for making descents upon England or incursions or forays into Normandy. Closing with the proposals, Edgar got ready a few ships and a small band of soldiers, being aided therein by his sister, the queen of Scotland, and some of the Scottish nobility, and made sail for France. His usual bad luck attended him: he had scarcely gained the open sea when a storm arose, and drove his ships ashore on the coast of Northumberland, where some of his followers were drowned and others taken prisoners by the Nor-He and a few of his friends of superior rank escaped and got into Scotland, where they arrived in miscrable plight, with nothing but the elothes on their backs, some walking on foot, some mounted on sorry beasts. After this misfortune, his hrother-in-law, King Malcolm, advised him to seek a reconciliation with Wilham, and Edgar accordingly sent a messenger to the Conqueror,

who at once invited him to Normandy, where he

stead of sailing direct from Scotland, the Atheling,

whose feelings were as obtuse as his intellect, took

his way through England, the desolated kingdom

of his ancestors, feasing at the castles of the Nor-

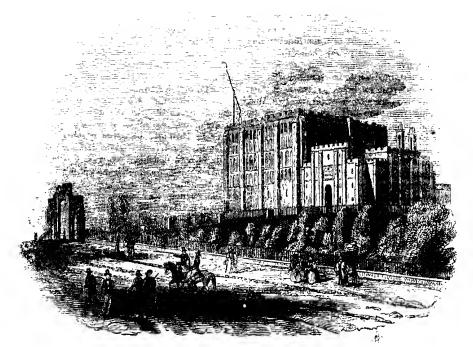

promised proper and honourable treatment.

man invaders as he went along. Insignificant as he was, the English people still loved his name; it was therefore deemed expedient to secure his person, and this was done under a decent semblance by the sheriff of Yorkshire, who met him with a numerous escort at Durham, and accompanied him until he embarked. William received him with a show of kindness, and allotted him an apartment in the palace of Rouen, with a pound of silver a-day for his maintenance; and there the descendant of the great Alfred passed eleven years of his life, oecupying himself with does and horses.

The king, who had gone to the continent to quell one insurrection, was recalled to England by another of a much more threatening nature, planned, not by the English, but by the Norman barons, their conquerors and despoilers, who were either dissatisfied with the rewards they had received, or disgusted by the imperious character, the overbearing, and intermeddling of the king. William Fitz Osborn, the prime favourite and counsellor of the Conqueror, had died a violent death in Flanders, and had been succeeded in his English domains and the earldom of Hereford by his son Roger Fitz-Osborn. This young nobleman negocrated a marriage with Raoul or Ralph de Gaël, a Breton by birth, and Earl of Norfolk in England by the right of the sword. For some reason not explained, this alliance was displeasing to the king, who sent from Normandy to prohibit it. The parties were enraged at this prohibition, which, however, they de-

termined not to obey, and on the day which had been previously fixed for the ceremony Emma, the affianced, was conducted to Norwich, where a wedding-feast was celebrated that was fatal to all who were present at it.\* Among the guests who had been invited, rather for the after-act than to do honour to the bride and bridegroom, were Waltheof, the husband of Judith, sundry barons and bishops of the Norman race, some Saxons who were friends to the Normans, and even some chieftains from the mountains of Wales, with whom their neighbour, the Earl of Hereford, the brother of the bride, had thought proper to cultivate amicable relations. A sumptuous feast was followed by copious libations; and when the heads of the guests were heated by wine, the Earls of Hereford and Norwich, who were already committed by carrying the forbidden marriage into effect, and who knew the implacable temper of William, opened their plans with a wild and energetic eloquenec. They inveighed against the arbitrary conduct of the king,—his harsh and arrogant behaviour to his noblest barons,-and his apparent intention of reducing the Normans to the same condition of misery and servitude as the English, whose wrongs and misfortunes they affected to commiserate. Hereford complained of his conduct with regard to the marriage, saving it was an insult offered to the memory of his father, Fitz-Osborn, the man to whom the Bastard incontestably owed his crown. By degrees the excited

\* Chron Sax.

NURWICH CASTLE

CHAP. L.] CIVIL AND MILITARY TRANSACTIONS assembly broke forth in one general curse against the Conqueror. The old reproach of his birth was revived over and over again. "He is a bastard, a man of base extraction," cried the Normans; "it is in vain he calls himself a king; it is easy to see he was never made to be one, and that God hath him not in his grace."-" He poisoned our Conan, that brave Count of Brittany," said the Bretons. "He has invaded our noble kingdom, and mas-

sacred the lestimate heirs to it, or driven them into exile," cried the English. " He is ungrateful to the brave men who have shed their blood for him, and raised him to a higher pitch of greatness than any of his predecessors ever knew," said the foreign captains; "and what has he given to us conquerors covered with wounds? Nothing but lands naturally steril or devastated by the war; and then, as soon as he sees we have improved those estates, he takes them from us, or diminishes their extent." The guests cried out tunultuously that all this was true, -that William the Bustard was in odium with all men,—that his death would gladden the hearts of many.\* The great object of the Norman conspirators was to gain over Earl Waltheof, whose warhke qualities and great popularity with the English were well known to them; and, when they proceeded to divulge the particulars of their plan, the Earls of Hereford and Norwich allured him with the promise of a third of England, which was to be partitioned into the old Saxon kingdoms of Wessex, Mercia, and With the firmes of wine in his Northumberland. head, and a general ardour and enthusiasm around him, Waltheof, it is said, gave his approval to the conspiracy, which he thought held out a prospect of relief to his own countrymen; but, according to one version of the story, the next morning, "when he had consulted with his pillow, and awaked his wits to perceive the danger whereunto he was drawn, he determined not to move in it," and took measures to prevent its breaking out. A more generally-received account, however, is, that Waltheof, seeing from the first the madness of the scheme, and the little probability it offered of benefiting the English people, refused to engage in it, and only took an oath of secrecy. The whole pro-

any overt act that could be construed into treason;

Fitz-Osborn and Ralph de Gaël, the real heads of

been one of the main causes of his ruin.

the confederacy, were hurried into action before their scheme was ripe, for their secret was betrayed by some one. The first of these earls, who had returned to his government, and collected his followers and a considerable number of Welsh, was checked in his attempt to cross the Severn at Worcester; nor could be find a passage at any other point, as Ours, the Viscount of Worcester, and Wulfstan, the bishop, occupied the left bank of that river with a great force of Norman cavalry, Egelwin, the abbot of Evesham, who, like Wnlfstan, was an Englishman, induced the population of Gloneester to use and co-operate with the king's officers; and Walter de Lacy, a great baron in those parts, soon brought up a mixed host of English and Normans, that rendered the Earl of Hereford's project of crossing the Severn, to cooperate with his brother-m-law in the heart of England, altogether hopeless. Laufranc, the Itahan Archbishop of Canterbury, who acted as viceroy during William's absence, proceeding with the greatest decision, also sent troops from London and Winchester to oppose Fitz-Osborn, at whose head he hurled, at the same time, the terrible sentence of excommunication. In writing to the king in Normandy, the Primate said, "It would be with pleasure, and as envoy of God, that we would welcome you among us; but," added the energetic old priest, "do not harry yourself to cross the sea, for it would be putting us to shame to come and aid us in destroying such traitors and threves." The Earl of Hereford fell back from the Severn; and his brother-in-law, the Earl of Norfolk, left to himself, and unable to procure in time assistance for which he had applied to the Danes, was suddealy attacked by a royal army of very superior force, led on by Odo, the bishop of Bayenx, Geoffrey, bishop of Contance, and Richard de Bienfart and William de Warenne, the two justicaries of the kingdom, who obtained a complete victory, and cut off the right foot of every prisoner they made. The earl retreated to Norwich, garrisoned his castle with the most trusty of his followers, and, leaving his bride to defend it, passed over to Brittany, in hopes of obtaining succonr from his countrymen. The daughter of William ject, indeed, was insane; the discontented barons Fitz-Osborn defended Norwich Castle with great bravery; and when, at the end of three months, she had scarcely a chance of succeeding against the established authority and the genius of William; and eapitulated, she obtained mild terms for her gartheir success, had it been possible, would have rison, which was almost entirely composed of proved a curse to the country,-a step fatally They did not suffer in life or limb, but Bretons. retrograde, - a going back towards the time of the were shipped off to the continent within the term Saxon Heptarchy, when England was fractured into of forty days. The Bretons generally had rendered a number of petty, hostile states. It is quite themselves unpopular at William's court. With the certain that Waltheof never took up arms, nor did true character of their race, they were iraseible, turbulent, factious, and much more devoted to the When they but in his uncasiness of mind, and his confidence head of their clan than to the king. in so dear a connexion, he disclosed to his wife were embarked, Lanfrane wrote to his master, "Glory be to God, your kingdom is at last purged Judith all that had been done in Norwich Castle; of the filth of these Bretons." The king invaded and this confidence is generally believed to have

HISTORY OF ENGLAND.

tion in England; but by the time he arrived there was little left for him to do except to punish the principal offenders. The Earl of Hereford had

been followed, defeated, and taken prisoner; and many of his adherents, Welsh, English, and Normans, hanged on high gibbets, or blinded or mutilated. At a royal court, De Gaël was outlawed, and his brother-in-law, Fitz-Osborn, condemned to perpecual imprisonment and the forfeiture of his property. Scarcely one of the guests at the illangured marriage of Emma Fitz-Osborn escaped with life; and even the inhabitants of the town of Norwich felt the weight of royal vengeance. The last and most conspicuous victim was Waltheof, who had been guilty at most of a misprision of treason. His secret had been betrayed by his wife Judith, who is said, moreover, to have accused him of inviting over the Danish fleet, which now made its appearance on the coast of Norfolk. The motive that made this heartless woman seek the death of her brave and generous husband was a passion she had conceived for a Norman nobleman, whom she hoped to marry if she could but be made a widow. Others, however, although acting nuder different impulses, were quite as urgent as the Conqueror's niece for the execution of the English carl. These were Norman barons who had cast the eyes of affection on his honours and estates,-" his great possessions being his greatest enemics." The judges were divided in opinion as to the proper sentence; some of them maintaining that, as a revolted English subject, Waltheof ought to die; others, that as an officer of the kong, and according to Norman law, he ought only to suffer the minor

punishment of perpetual imprisonment.

an unsuccessful siege to the town of Dol, he was

obliged to retire before an army of Bretons, who

of that great and good earl, Siward, whom Shakspeare has immortalised, was executed on a hill, a short distance from the town of Winchester, at a very early hour in the morning, and in great haste, lest the citizens should become aware of his fate, and attempt a rescue.+ His body was thrown into a hole dug at a cross-road, and tovered with earth in a hurry; but the king was induced to permit its removal thence, and the English monks of Croyland, to whom the deceased earl had been a benefactor, took it up and carried it to their abbey, where they gave it a more honourable sepulture. The patriotic superstition of the nation soon converted the dead warrior into a saint, and the universal grief of the English people found some con-· Daru, Hist.'de la Bretagne. † Orderic gives some curious particulars respecting the execution."

chroniclers? So far from permitting her to marry the man of whom she was enamoured, her uncle William, who was most despotic in these matters, and claimed as part of his prerogative the right of disposing of female wards, insisted on her giving differences of opinion lasted nearly a whole year, her hand to one Simon, a Frenchman of Senlis, a during which the earl was confined in the royal very brave soldier, but lame and deformed; and citadel of Winchester. At length his wife and when the perverse widow rejected the match with other enemies prevailed; the sentence of death was insulting language, he drove her from his presence, deprived her of all Walthcof's estates, and gave pronounced, and confirmed by the king, who is said to have long wished for the opportunity of them to Simon without the incumbrance of such a putting him out of his way. The unfortunate son wife. Cast from the king's favour, and reduced to poverty, she became almost as unpopular with the Normans as she was with the English; and the wretched woman, hated by all, or justly contemned,

[Book III.

solation in giving a ready eredence to the miracles

said to be performed at his tomb. The Anglo-

Saxon hagiology seems to have abounded beyond

that of most other nations in unfortunate patriots

and heroes who had fallen in battle against the

invaders of the country. We may excuse the

superstition for the sake of the patriotism; but it

was of course far otherwise with the Conqueror,

who took harsh measures against the English

abbot of Croyland for publishing the miraculous

facts, and preaching about them to those who

visited his house to weep and pray over Waltheof's

grave. A council of Norman bishops and barons

assembled at London accused the abbot of idolatry,

degraded him from his dignity, and sent him as a

simple monk or recluse, to be shut up in Glaston-

bury abbey, which was far away from Croyland,

and governed by Toustam, a Norman, noted as being "crucitissimus abbas" (a most cruel abbot).

But, in spite of the decisions of the Norman council,

the ecclesiastical chief of Croyland was still a true

man in the eyes of the English, and Earl Waltheof

remained a saint in their estimation. Even when

forty years had passed, and the government of the

abbey, which had been held by a succession of

foreigners, fell to a certain Geoffrey, a native of

Orleans, the miracles began again at the tomb of the

English chief, and the people flocked thither in

great numbers, heedless of the mockery and msults

of the Norman monks of Croyland, who maintained

that Waltheof was a felon and a traitor, who had

justly merited his fate.\* And what became of the

widow of the brave son of Siward,-of the "m-

famous Judith," as she is called by nearly all the

corners of England, seeking to hide her shame in remote and secluded places. † The Normans had been gradually encroaching on the Welsh territory, both on the side of the Dec and on the side of the Severn, and now William in person led a formidable army into Wales, where he is said to have struck such terror that the native princes performed feudal homage to him at St. David's, and delivered many hostages and Norman and English prisoners, with which he returned as Orderic, Vital.—Florent, Wigorn.—Ingulph.

occupied. The Scots again crossed the Tweed and the Tyne, and much harassed the Norman barons.

CHAP. I.]

At the approach of a superior army they retired; but Wilham's officers did not follow them, and the only result of the expedition, on the king's side, was the founding of the city of Newcastle-upon-Tyne. The impression made upon Scotland by the Conqueror, when he had marched in person, must have been of the slightest kind, and his circumstances never permitted him to return. a.d. 1077-9. He was now wounded by the sharp tooth of filial disobedience, and obliged to be frequently, and for long intervals, on the contment, where a fierce and unnatural war was

waged between father and son. When William first received the submission of the province of Maine (the subsequent and unfortunate insurrection of which we have mentioned), he had promised the inhabitants to make his eldest son, Robert, their prince; and before departing for the conquest of England he stipulated, that in case of succeeding in his enterprise, he would resign the duchy of Normandy to the same son. So confident was he of success, that he permitted the Norman chiefs who consented to, and legalised the appointment, to swear fealty and render homage to young Robert as their future sovereign. But all this was done to allay the jealousy of the king of France and his other neighbours, uneasy at the prospect of his vastly extending power; and when he was firmly seated in his conquest, and had strengthened his hands, William openly showed his determination of keeping and ruling both his insular kingdom and his continental duchy. Grown up to man's estate, Robert claimed what he considered his right. " My son, I wot not to throw off my clothes till I go to bed," was the homely but decisive answer of his father. Robert was brave to jashness, ambitious, impatient of command; and a young prince in his circumstances was never vet without adherents and counsellors to urge him to those extreme measures on which they found their own hopes of fortune and advancement. was suspected of fanning the flames of discontent in Brittany as well as in Maine, and to have had

an understanding with the king of France, when

that monarch frustrated William's attempt to seize

the fugitive Breton Raoul de Gael, and forced the

king of England to raise the siege of Dol. Some

circumstances which added to the number of the

unnatural elements already engaged made Robert

declare himself more openly. In person he was less

favoured by nature than his two younger brothers

William and Henry, who seemed to engross all

their father's favour, and who probably made an

improper use of the nickname of Courte-heuse,\*\*

and his court were staying in the little town of L'Aigle, William and Henry went to the house of a certain Roger Chaussiègue, which had Leen allotted to their brother Robert for his lodging, and installed themselves, without his leave, in the upper gallery or balcony. After playing for a time at dice, "as was the fashion with military

men,22 they began to make a great noise and uproar, and then they finished their boyish pranks

by emptying a pitcher of water on the heads of Robert and his comrades, who were passing in the court below. Robert, naturally passionate, probably required no additional incentive; but it is stated, that one of his companions, Alberic de Grantmesnil, a son of Hugh de Grantmesml, whom King William had formerly deprived of his estates in England, instigated the prince to resent the action of his brothers as a public affront, which could not be borne in honour. Robert drew his sword and ran up stairs, vowing he would wipe out the insult with blood. A great tumnIt followed, and the king, who rushed to the spot, had much difficulty in quelling it. very night Robert fled with his companions to Rouen, fully determined to raise the standard of revolt. He failed in his first attempt, which was to take the castle of Rouen; and soon after, some of his warmest partisans were surprised and made prisoners by the king's officers. The prince escaped across the frontiers of Normandy into the district of Le Perche, where Hugh, nephew of Aubert le Ribaud, welcomed him, and sheltered him in his castles of Sorel and Reymalard. By the mediation of his mother, who seems to have been fondly attached to him, Robert was reconciled to his father; but the reconciliation did not last long, for the prince was as impatient for authority as ever; and the young counsellors who surrounded him found it unseemly and altogether abominable that he should be left so poor, through the avarice of his father, as not to have a shilling to give his faithful friends who followed his fortunes. † Thus excited, Robert went to his father, and again demanded possession of Normandy; but the king again refused him, exhorting him at the

 <sup>&</sup>quot; Ibique super solarium (sieut militibus mos est) tesseris ludere copernut"—Ibid.
 † Ordoric.

same time to change his associates for serious old men like the royal comsellor and prime numster, Archbishop Lanfrauc. "Sire," said Robert, bluntly, "I came here to claim my right, and not to listen to sermons—I heard plenty of them, and tedions ones too, when I was learning my grammar;" and then he added, that he msisted on a positive answer to his demand of the duchy. The king wrathfully replied that he would never give up Normandy, his native land, nor share with another any part of England, which he had won with his own toil and peril. "Well, then," said Robert, "I will go and bear arms among strangers, and perhaps I shall obtain from them what is icfused to me by my father." He set out accordingly, and wandered through Flanders, Lorraine, Gaseony, and other lands, visiting dukes, counts, and rich burgesses, relating his gricvances, and asking assistance; but all the money he got on these electrosynary circuits he dissipated among minstrels and jugglers, parasites and prostitutes, and was thus obliged to go again a begging, or borrow money at an enormous interest. Queen Matilda, whose maternal tenderness was not estranged by the follies and vices of her son, contrived to remit him several sums, when he was in great distress. William discovered this, and sternly forbade it for the future. But her heart still yearning for the prodigal, the queen made further remittances, and her secret was again betrayed. The king then reproached her in butter terms for distributing among his enemies the treasurcs he gave her to guard tor himself, and ordered the arrest of Samson, her messenger, who had earried the money, and whose eyes he yowed to tear out as a proper punishment. Samson, who was a salvation both of body and soul." F

384

Breton, took to flight, and became a monk "for the After leading a vagabond life for some time, Robert repaired to the French court; and King Philip, still finding in him the instrument he wanted, openly espoused his cause, and established hun in the castle of Gerberoy, on the very confines of Normandy, where he supported himself by plundering the neighbouring country, and whence he corresponded with the disaffected in the duchy, Knights and troops of adventurers on horseback flocked to share the plunder and the pay he now had to offer them: in the number were as many Norman as French subjects, and not a few men of King William's own household. Burning with rage, the king crossed the Channel with a formidable English army, and came in person to direct the siege of the strong castle of Gerberoy, where he lost many men in fruitless operations, and from sorties made by the garrison. With all his faults, Robert had many good and generous qualities, which singularly endeared him to his friends when

· Orderic.

his strong eastle "on the highest hill," soon united to his episcopal functions the political and military government of Northumberland. The admirers of the carl-bishop boasted that he was equally skilful in repressing rebellion with the edge of the sword and reforming the morals of the English by elo-

his advantage with a death-stroke, recognised his

HISTORY OF ENGLAND.

father, and, instantly dismounting, fell on his knees, craved forgiveness with tears, and helping him to his saddle, saw him safely out of the mclee which now thickened. The men who were coming up to the king's assistance, and bringing a second horse

for him to mount, were nearly all killed. - William rode away to his camp on Robert's horse, smarting with his wound, and still cursing his son who had so sensonably mounted him.\* He relinquished the siege of Gerberoy in despair, and went to Rouen, where, as soon as his temper permitted, his wife and bishops, with many of the Norman nobles, laboured to reconcile him again to Robert. For a

long time the iron-hearted king was deaf to their

entreaties, or only irritated by them. "Why,"

cried he, "do you solicit me in favour of a traitor

who has seduced my men, - my very pupils in war,

whom I fed with my own bread, and invested with the knightly arms they wear?" † At last he yielded,

and Robert, having again knelt and wept before

him, received his father's pardon, and accompanied him to England. But even now the reconciliation

on the part of the unforgiving king was a mere matter of policy, and Robert, finding no symptoms

but had not extirpated his natural feelings. One

day, in a sally from his castle, he chanced to engage

in single combat with a stalwart warrior clad in mail, and concealed, like himself, with the visor of

his helm. Both were valiant and well skilled in

the use of their weapons, but, after a fierce combat,

the voice of the fallen warrior, who shouted for

assistance, the prince, who was about to follow up

Robert wounded and unhorsed his antagonist.

the whole province, ventured, on being robbed by some of Walcher's satellites, to lay his complaint before the bishop. Shortly after making this acensation, Liulf was murdered by night in his mimorhouse, near the city of Durham, and it was well proved that one Gilbert, and others in the bishop's service, were the perpetrators of the foul deed. "Hereupon," says an old writer, "the malice of the people was kindled against him, and when it was known that he had received the murderers into his house and favoured them as before, they stomached the matter highly." Secret meetings were held at the dead of night, and the Northmubrouns, who had lost none of their old spirit, and were absolutely driven to madness, because, among other causes of endearment, Lmlf had married the widow of Earl Siward, the mother of the unfortunate Earl Walthcof, resolved to take a sanguinary vengeance. Both parties me by agreement at Gateshead;\* the hishop, who protested his innocence of the bemicide, in the pomp of power, surrounded by his retainers; the Northumbrians, in lumble guise, as if to petitron their lord for justice, though every man among them carried a sharp weapon hid onder his gar-The bishop, alarmed at the number of English that continued to flock to the place of rendezvous, retired with all his returne into the church. The people then signified in plain terms that, unless he came forth and showed himself, they would fire the place where he stood. As he did not move the threat was executed. Then, seeing the smoke and flames arising, he caused Gilbert and his accomplices to be thrust out of the Church. The people fell with savage joy on the unrederers of Liulf, and cut them to pieces. Half suffocated by the heat and smoke, the bishop himself wrapped the skirts of his gown over his face and came to the threshold of the There seems to have been a moment of hesitation, but a voice was heard among the crowd, saying, "Good rede, short rede! Slay ye the bishop!" and the bishop was slain accordingly + The foreigners had nothing left but the alternative of being burnt alive or perishing by the sword. The hishop's chaplain seemed to give a preference to the former death, for he imgered long in the burning church; but, in the end, he was compelled by the raging fire to come out, and was also slain and hacked to pieces-" as he had well deserved," adds an old historian, " heing the main promoter of all the mischief that had been done m the country." Tof all who had accompanied the bishop to the tragical meeting at Gateshead, only two were left alive, and these were menials of English birth. Above a hundred men, Normans and Flemings, perished with Walcher. § The conspirators attacked the castle at Durham; but finding it well defended by a numerous garrison, and altogether too strong for them, they gave up the siege the fourth day, and dispersed.

A.D. 1082. William intrusted to one hishop the

office of avenging another. His half-brother, Odo, the licrce bishop of Bayenx, marched to Durham with a immerous army. He found no force on foot to resist him, but he treated the whole country as an insurgent province, and making no distinction of persons, and employing no judicial forms, he beheaded or mutilated all the **n**ien Le **c**ould find in their houses. Some persons of property Lought their lives by surrendering everything they pos-By this exterminating expedition Odo obtained the reputation of being one of the greatest "dominators of the English;" but it seems to have l cen the last he commanded, and disgraced with crucity, during the reign of William. This churchman, besides being bishop of Bayeux in Normandy, was Earl of Kent in England, and held many high offices in this island, where he had accumulated enormous wealth, cluefly by extertion, or a base selling of justice. For some years a splendid dream of ambition, which he thought he could realise by means of money, mereased his rapacity. There were many instances in those ages of kings becoming monks, but not one of a Catholic priest becoming a king. Profanc crowns being out of his reach, Odo aspired to a sacred one,—to the tiara, that triple crown of Rome which gradually obtained, in another shape, a homage more widely extended than that pard to the Cæsars. His dream was cherished by the predictions of some Italian astrologers, who, hving in his service, and being well paid, assured him that he would be the successor of Gregory VII., the reigning pape. Odo opened a correspondence with the eternal city by means of English and Norman pilgrims, who were constantly flocking thither, bought a palace at Rome, and sent rich presents to the senators. His project was not altogether so visionary as it has been considered by most writers, and we can hardly understand why his half-brother, William, should have checked it, unless indeed his interference proceeded from his desire of getting possession of the bishop's Tea years before the Conqueror invaded England, Robert Guiscard, one of twelve heroic Norman brothers, had acquired the sovereignty of the greater part of the e beautiful countries that are now included within the kingdom of Naples. The Norman lance was dreaded in all the rest of Italy, and, with a Norman pope established at Rome, the supremacy of that people might have been extended from one end of the Peninsula to the The bishop of Bayenx had some reason for counting on the sympathy of his powerful countrymen in the south, the close neighbours of Ronie; and the influence of gold had been felt before now in the college of cardinals and the elections of It is quite certain that a considerable number of the Norman chiefs entered into Odo's views, and when he made up his mind to set out for Italy in person, a brilliant escort was formed for "Hugh the Wolf," the famous Earl of Chester, who had a long account of sin to settle if he considered the butchering of Euglish and Welsh as crimes, was anxious to go to Rome, and joined

this expedition, which had been prepared in great secreey, and being resolute in his determination of stopping it, he instantly set sail for England. surprised the aspirant to the popedom at the Isle of

HISTORY OF ENGLAND.

Wight, seized his treasures, and summoned him before a conneil of Norman barons hastily assembled at that island. Here the king accused his halfbrother of "untruth and simster dealings,"-of having abused his power both as viceroy and judge, and, as an earl of the realm, of having maltreated the English beyond measure, to the great danger of the common cause,— of having robbed the churches of the land, -and, finally, of having seduced and

the bishop, with some considerable barons, his

friends, and much money.

attempted to earry out of England, and beyond the Alps, the warriors of the king, who needed their services for the safe keeping of the kingdom. Having exposed his grievances, William asked the council what such a brother deserved at his bands? No one durst answer: "Arrest him, then!" cried the king, "and see that he be well looked to!" If they had been backward in pronomicing an opinion, they were still more averse to lay hands on a bishop; not one of the council moved, though it was the king that ordered them. William then advanced himself, and seized the prelate by his robe. "I am a clerk,-a priest," cried Oda. "I am a minister of the Lord: the pope alone has the right of judging me!" But his brother, without losing his hold, replied, "I do not arrest you as bishop of Bayenx, but as Earl of Kent." \* Odo was carried forthwith to Normandy, and, instead of crossing the Alps and the Apenumes, was shut up in the dungeon of a castle. Some of the worst erimes imputed to Odo had been commutted at the order and for the service of his brother, but William probably found a relief in laying as much of the

guilt as he could on another's shoulders; and the bishop was so universally detested by the English people, that the king became almost popular among them by the punishment he awarded. Soon after imprisoning his brother, William lost his wife, Matilda, whom he tenderly loved; and after her death, it was observed, or fancied, he hecame more suspicious, more jealous of the authority of his old companions in arms, and more avaricious than ever. The coming on of old age is, however, enough in itself to account for such a change in such a man. After a lapse of ten years, the Danes were again heard of. The fleet and army which had co-operated so badly with Edgar Atheling and the Northumbrians, and so shamefully deserted them in the hour of need, when the Conqueror marched upon York, returned to Denmark a shattered and dishonoured wreck, having been assailed by tempests on their way. Sueno Estridsen disgraced and banished Osbern, the commander-in-chief of the expedition, who was his

own brother, charging him with corrupt and faithless conduct. He then assembled a second fleet

· Chron. Sax .- Florent .- Malmab .- Orderic .

to prevent their landing or assisting the patriots. The flect then returned to Denmark with no more success, but with less dishonour, than the one that had preceded it. In a short space of time both Sueno and his legitimate son Harold departed this life. Canute the Dane, who was illegitimate, like William the Norman, then ascended the throne, and though he ended it as a saint he began his reign like a warrior, and laid claim to England as successor of his namesake Cannte the Great. Not relying wholly on the strength of Denmark, he applied to the Norwegians for assistance, after the fashion of old times, not forgetting to remind them of the glory the forefathers had obtained in England. Olaf, or Olave, surnamed the Peaceful, was then king of Norway. A meeting between the two kings took place upon the river Gotha-Elf, near Konungahella (or Kongbell), at that time the capital of the Norwegian kingdom. Olave approved of the enterprise as a just one, and promised to furnish sixty ships, but declined taking any further part in it, affirming that Norway could no longer furnish such an armament as had followed his father Hardrada to the Humber; and that he, Olave, was far from being such a general as Hardrada. Olave must have remembered the fearful catastrophe of Stamford-bridge, the generosity he experienced from Harold when a captive in his hands, and the vow he took to that unfortunate king to maintain constant faith and friendship with the English.\* is probable, however, that he would not consider a war made on the Normans in England as a breach of that vow; and that the narrow scale of his cooperation was really owing to the cause he assigned to Canute,-namely, that the strength of Norway had been exhausted by Hardrada's fatal expedition. In another quarter to which he applied Canute received more liberal promises; his father-in-law, Robert, Earl of Flanders, engaging to join him with six hundred ships. The united armament, it was calculated, would amount to a thousand sail. Olave sent his sixty ships with sufficient promptitude; but we have not discovered the state of preparation of the Earl of Flanders, who possibly had promised more than he could perform. Delays of various kinds arose; and when Canute had fixed the day for sailing, he discovered that his own brother, the governor of Sleswic, who was engaged to accom-

pany him to England, had secretly withdrawn from the fleet to his government, intending to take ad-

vantage of his absence, and seize the Danish throne.

He was apprehended, and sent in chains to Flan-

ders, there to be kept in safe prison: but all this

caused still further delay, and the traitor left many partisans in the ficet. These men, among whom

it appears were some officers of high rank, reported

was provided with a maritime force quite sufficient

[Book III.

among the mariners and soldiers that the provisions for the voyage would be found insufficient; and many left their ships from the dread of being starved at sea. There was also the discouragement of bad weather, contrary winds, and inauspicious omens; and the gold of the wealthy king of England is said to have been again employed in Denmark. Desertion at last took place to such an extent that Canute, abandoned by his own, was left with only the Norwegian fleet; and thus the last invasion from the Baltic with which England was

threatened was wholly finstrated.\* The intention of Canute, his alliances and preparations,—of all of which he was well informed,—kept William in a state of anxiety for nearly two whole years, and were the cause of his laving fresh burdens upon his English subjects. He revived the odious Dane-gelt; and because many lands and manors which had been charged with it in the time of the Auglo-Saxon kings had been specially exempted from this tax when he granted them in fief to his nobles, he made up the deficiency by raising it upon the other lands to the rate of six shillings a hide. The money he thus obtained, with part of the treasures he had amassed, was employed m hiring and bringing over foreign auxiliaries; for though he could rely on an English army when fighting against Frenchmen, or the people of Normandy, Maine, and Brittany, he could not trust them at home; and he well knew that many of them on the eastern and north-eastern shores would join the Danish invaders heart and hand, instead of opposing them. He therefore collected, as he had done before, men of all nations; and these came across the Channel in such numbers that, according to the chroniclers, people began to wonder how the land could feed so many hungry These hordes of foreigners sorely oppressed the natives, for William quartered them throughout the country, to be paid as well as sup-They were mostly foot-soldiers, which implies that they were men of a very low and rude condition; for at this period soldiers of fortune of any pretension served only on horseback. One of the bands which he thus engaged belonged to Hugh, a brother of the French king; hut this was probably of a class superior to the rest.

To complete the miseries inflicted upon England at this time, William ordered all the land lying near the sea-coast to be Iaid waste, so that, if the Danes should land, they would find no ready supply of food or forage.

The Conqueror had often felt the want of a maval force, but he had not the same genius for maritime as for military affairs; and it requires more time to make good sailors than to make good soldiers. Knowing, however, that to encourage commerce was the best means of fostering a may, he repeatedly invited foreigners to frequent his ports, promising that they and their property should be perfectly secure. But he did not live to possess

a navy of his own. The spirit of Englishmen, who were more prone to the sea than his Normans, was depressed under his iron rule; nor did this country make any approach towards her naval supremacy until several reigns after.

Another domestic calamity affleted the latter

years of the Conqueror,-for he saw a violent

jealousy growing up between his favourite sons,

William and Henry. Robert, his eldest son, continued an exile or fugitive; and Richard, his second son in order of birth (but whom some make illegitimate), had been gored to death by a stag\* some years before, as he was hunting in the New Forest; and he was noted by the old English annalists as being the first of several of the Conqueror's progeny that perished in that place,— "the justice of God punishing in him his father's dispeopling of that country." Perhaps no single act of the Conqueror inflicted more misery within the limits of its operation, and, certainly, none has been more bitterly stigmatised than his seizure and wasting of the lands in Hampshire, to make himself a himting-ground. lake most of the great men of the time, who had few other annisements, William was passionately fond of the chase. The Anglo-Saxon kings had the same taste, and left many royal parks and forests in all parts of England, wherein he might have gratified a reasonable passion; but he was not satisfied with the possession of these, and resolved to have a vast hunting-ground "for his insatiate and superfluous pleasure" in the close neighbourhood of the royal city, Winchester, his favourite place of residence. In an early part of his reign he therefore seized all the southwestern part of Hampshire, measuring thirty miles from Salisbury to the sea, and in circumference not much less than mucty unles. This wide district, before called Ytene or Ytchtene (a name yet partially preserved), was to some extent uninhabited, and fit for the purposes of the chase, abounding in sylvan spots and coverts; but it included, at the same time, many fertile and cultivated ma ors, which he caused to be totally absorbed in the surrounding wilderness, and many towns or villages, with no fewer than thirty-six mother or parish churches, all which he demolished, and drove away the people, making them no compensation. According to the indisputable authority of Domesday-Book, in which we have an account of the state of this territory both before and after its "afforestation," the damage done to

private property must have been immense. In an

extent of nearly minety miles in circumference, one hundred and eight places, manors, villages,

or hamlets suffered in a greater or less degree.

Some melancholy traces of these ancient abodes of

the Anglo-Saxons are still to be found in the

recesses of the New Forest, and have been de-

taire, have profer ed a disbellef of the early listory of the New Forest, and because some native writers, including even Dr. Warten, who was " maurally disposed to chirg to the traditions of antiquity, fancying there were no existing times or traces of such desolation, have doubted whether William destroyed villages, castles, and churches, though that demolition is recorded by chroniclers who wrote a very short time after the event, and is proved beyond the reach of a doubt by Domesday-Book. Hany other proof were necessary, it ought to be found in the universal tradition of the people in all ages, that on account of the unusual crimes and cruelties committed there by William, God made the New Forest the death-s cue of three princes of his own blood. The seizme of a waste or wholly uninhabited district would have been

nothing extraordinary: it was the sufferings of the

people, who were driven from their villages,—the

wrongs done the clergy, whose churches were

destroyed, that made the deep and meffaceable

cularged the field of his own pleasures at the

expense of his subjects, he enacted new laws, by which he prohibited hunting in any of his forests,

and rendered the penaltics more severe than ever

The office of how hearer for the New Forest is now, of comise, a smeeme, and it is almost purely New Forest is now, of comes, a smeeme, and it is almost purely benoring, the salary being faity shiftings in the year and one buck in the season. In his oath of office the how-beater swears, "to be of good behaviour towards his Mejesty's wild beasts," if See notes to "The Red King," a spirited poem, in which the manners and costaine of the period are carefully preserved. Mr. Rose justly observes, "That this cannot be considered as one of these "bistorical doubts," the solution of which involves nothing beyond the mere disentanglement of an intreate knot. It may be considered as making one of a series of acts of training membed.

considered as making one of a series of acts of tyratiny, unvarianshed with any plea which might pullide or disguise its enormity, and, as such, forming a enrious feature in the history of manners." According to most of the old writers some monasteries were also

destroyed. As the Saxon buildings were chiefly of wood, it is natural that the traces hill of them should be slight.

forest laws, which were executed with rigour against the English, caused great misery, for many of them depended on the chase as a chief means of subsistence. By including in his royal domain all the great forests of England, and insisting on his right to grant or refuse permission to hunt in them, William gave sore offence to many of his Norman nobles, who were as much addicted to the sport as hunself, but who were prohibited from keeping sporting dogs, even on their own estates, unless they subjected the poor ammals to a mutilation of the fore-paws, that rendered them unfit for hunting. From their first establishment, and through their different gradations of "forest laws" and "game laws," these jealous regulations have constantly been one of the most copions somees of dissension, litigation, violence, and bloodshed. Towards the end of the year 1086, William summoned all the clucks of the army of the Couquest, the sons of these chiefs, and every one to whom he had given a fief, to me:t him at Salisbury. All the barous and all the abbots came, attended with men-at-arms and part of their vassals; the whole assemblage, it is said, amounting

to 60,000 men. The chiefs, both lay and church-

men, took again the oath of allegiance and homage to the king; but the assertion, that they rendered the same to Prince William, as his successor, seems to be without good foundation. Shortly after receiving the c new pledges, William, accompanied by his two sons, passed over to the contireat, taking with him "a mighty mass of money fitted for some great attempt," and being followed by the numberless curses of the English people. The enterprise he had on hand was a war with France, for the possession of the city of Mantes, with the territory situated between the Epte and the Orse, which was then called the country of Vexin. William, at first, entered into negotiations for this territory, which he claimed as his right; but Plaho, the French king, after amusing his rival for a whole with quibbles and sophisms, marched troops into the country, and sceretly authorised some of his barons to make incursions on the frontiers of Normandy. During the negotiations William fell sick, and kept his bed. As he advanced in years he grew excessively fat, and, spite of his violent exercise, his indulgence in the pleasures of the table had given him considerable rotundity of person. On the score of many grudges, his hatred of the French king was intense; and Philip now drove him to frenzy, by saying, as a good joke among his courtiers, that his cousin William was a long while lying in, but that no doubt there would be a fine churching when he was delivered. On hear-

ing this coarse and insipid jest, the conqueror of

England sweep by the most terrible of his oathsby the splendour and both of Christ-that he would be churched in Notre Dame, the cathedral of Paris, and present so many wax torches, that all France should be set in a blaze.\* It was not until the end of July (1087) that he was in a state to mount his war-horse, though it is asserted by a contemporary that he was convalescent before then, and expressly waited that senson to make his vengeance the more dreadful to the country. The corn was almost ready for the sickle, the grapes hung in rich, ripening clusters on the vines, when William marched his eavalry through the corn-fields, and made his soldiery tear up the vines by the roots, and cut down the pleasant trees. His destructive host was soon before Mantes, which was either taken by surprise and treachery, or offered but a feeble resistance. At his orders, the troops fired the unfortunate town, sparing neither church nor monastery, but doing their best to reduce the whole to a heap of ashes. As the Conqueror rode up to view the rum he had made, his horse put his fore-feet on some embers or hot conders, which caused him to swerve or plunge so violently, that the heavy rider was thrown on the high pummel of the suddle, and grievously binised. The king dismonified in great puin, and vever more put foot, in string. † He was carried slowly in a litter to Ronen, and again laid in his bed. The bruze had produced a rupture, and being in a bad habit of body, and somewhat advanced in years, it was soon evident to all, and even to himself, that the consequence would be fatal. Being disturbed by the noise and bustle of Rouen, and no doubt desirons of dying m a holy place, he had houself carried to the monastery of St. Gervas, outside of the city walls. There he hugered for six weeks, surrounded by doctors who could do him no good, and by priests and monks, who, at least, did not neglect the opportunity of doing much good for others. Becoming sensible of the approach of death, his heart softened for the first time; and though he preserved his kingly decornin, and conversed calmly on the wonderful events of his life, he is said to have felt the vamity of all human grandeur, and a keen remorse for the crimes and cruckies he lind committed. He sent money to Mantes, to rebuild the churches be had burned, and he ordered large sums to be paid to the churches and monasteries in England; " in order," says an old chronicler, "that he might obtain remission for the robberies he had committed there." It was represented to him, that one of the best means of obtaining mercy from God was to

the crown of England,' said the dying monarch, "I bequeath it to no one, as I did not receive it, like the duchy of Normandy, in inheritance from my father, but acquired it by conquest and the shedding of blood with mine own good sword. The succession to that kingdom I therefore leave to the decision of God, only desiring most fervently that my son William, who has ever been dutiful to me in all things, may obtain it, and prosper in it." "And what do you give unto me, O my father?" impatiently cried Prince Henry, who had not been mentioned in this distribution. "Five thonsand pounds' weight of silver out of my treasury," was his answer. "But what can I do with five thousand pounds of silver, if I have neither lands nor a home?" "Be patient," replied the king, "and have trut in the Lord; suffer thy elder brothers to precede thee -thy time will come after then's " Hemy went straight, and drew the silver, which he weighed with great care, and then firmshed hunself with a strong cofter, well protected with locks and iron bindings, to keep his treasure in. William left the king's bed-side at the same time, and, without waiting to see the breath out of the old man's body, hastened over to England to look after his crown. About sunrise, on the 9th of September, the Conqueror was for a moment roused from a stupor into which he had fallen by the sound of bells: he eagerly inquired what the noise meant, and was answered that they were tolling the hour of prime in the church of St. Mary. He lifted his hands to heaven, and saying, " I recommend my soul to my Lady Mary, the holy mother of God," instantly expired. The events which followed his dissolution show mercy to man; and at length he consented to the instant release of his state-prisoners, some of not only give a striking picture of the then unwhom had pined in dungeous for more than settled state of society, but also of the character twenty years. Of those that were English among and affections of the men that waited on princes and conquerors. William's last faint sigh was the signal for a general flight and scramble. The knights, priests, and doctors who had passed the night near him, put on their spurs as soon as they · Orderie.

saw him dead, mounted their borses, and galloped off to their several homes, to look after their property and their own interests. The king's servants and some vassals of mmor rank, left behind, then proceeded to rifle the apartment of the arms, silver vessels, linen, the royal dresses, and everything it contained, and then were to horse and away like From prime to tierce,\* or for about three hours, the corpse of the mighty conqueror, abandoned by all, lay in a state of almost perfect nakedness on the bare boards. The citizens of Ronen were thrown into as much consternation as could have been excited by a conquering enemy at their gates: they either ran about the streets asking news and advice from every one they chanced to meet, or busied themselves in concealing their movables and valuables. At last the clergy and the monks thought of the decent duties ownig to the mortal remains of their sovereign; and, forming a procession, they went with a crucifix, burning tapers,

• The chroniclers, who were all manks of pirests, always count by the and the other canonical hours, as vers, names, respens, &c. The chirch service, called prime, or prima, and which immediately succeeded malins, began about six a m, and lasted to tierce, of tertia, which commenced about once a m and incense, to pray over the dishoneared body for the peace of its soul. The archbishop of Rouen ordamed that the king should be interred at Caen, in the church of St. Stephen's, which he had built and royally endowed. But even now it should secm there were none to do it honour; for the immute relator of these dismal transactions, who was living at the time, says that his sons, his brothers, his relations, were all absent, and that of all his officers, not one was found to take charge of the obsequies, and that it was a poor knight who lived in the neighbourhood who charged himself with the trouble and expense of the funeral, " ont of his natural good nature and love of God." The body was carried by water by the Seine and the sea to Caen, where it was received by the abbot and monks of St. Stephen's; other eliurchmen and the inhabitants of the city joining these, a considerable procession was formed; but as they went along after the coffin a fire suddenly broke out in the town; laymen and clerks ran to extinguish it, and the brothers of St. Stephen's were left alone to conduct the king to the church Even the last burial service did not pass undisturbed. The neighbour-

work already laid by the Anglo-Saxons, -his survey

and register of Domesday, the greatest civil opera-

tion of his reign,—the changes his invasion produced

in the language and manners of this country, -will all be discussed under their proper heads. His

character may be deduced from his deeds-from

ing bishops and abbots assembled for this ceremony. The raise had been performed; the bishop of Evreux had pronounced the panegyrie, and the body was about to be lowered into the grave prepared for it in the church between the altar and the choir, when a man, suddenly rising in the crowd, exclaimed, with a loud voice, "Bishop, the man whom you have praised was a robber; the very ground on which we are standing is mine, and is the site where my father's house stood. He took it from me by violence, to build this church on it. I reclaim it as my right; and in the name of God, I forbid you to bury him here, or cover him with my globe." The man who spoke thus boldly was Asselme Fitz-Arthur, who had often asked a just compensation from the king in his lifetime. Many of the persons present confirmed the truth of his statement; and, after some parley, the bishops paid him sixty shillings for the grave alone, engaging, at the same time to procure him the full value of the rest of his land. The body, diesed in royal robes, but without a coffin, was then lowered into

church, and his dispute with the pope about investitures,—his establishing the feudal system in England, of which, however, he found a ground-

and the assembly dispersed.\*

the details we have given, to which we have little to add. No prince of the time equalled him, either as a general or a politician; and he surpassed them all in the difficult art of bending men's wills, and achieving great things with a turbulent nobihty intractable to every one else. His own temper was naturally fiery; and when he had nothing to gam by dissimulation, or to fear from those he insulted, he gave the rems to his passion, and completely forgot that dignity and majesty of demeanour which was in part imate, but still more assumed, to impose upon the herd. A domestic anecdote gives a good notion both of the violence of his temper and his love of good cating. He was nice and currons in his repasts, that one day when his prime favounte, William Fitz-Osborn, who, as damfer, or steward of the household, had the charge of the table, served him with the flesh of a crane only half roasted, he was so highly exasperated, that he lifted up his fist, and would have

struck him had not Odo warded off the blow. One of the writers of the Saxon Chronicle, who says he

" looked on him, and somewhile lived in his herd," describes him as being a very stern man, and so

hot and passionate, that no man durst gainsay his ! will; as one who took money by right and unright, falling into great avarice, and loving greediness withal, not recking how sinfully his officers got money of poor men, or how many unlawful things they did. He was, however, religiously inclined, after the fashion of the age; and whatever might be the schemes of ambition, or the butcheries in which he was engaged, he never failed to hear the mass of

his private chaplain in the morning, or to say his

prayers at night. Dynasties have been changed, and provinces won by war, but William's attempt against England was the last great and permanent conquest of a whole nation achieved in Europe. The companions of his conquest became one people with those they subdued; his power was transmitted to his posterity; and after all the changes and revolutions that have happened in the course of seven centuries and a half, the blood of the reigniog family is still kindred t→ his.

## WILLIAM II.—SURNAMED RUFUS.

GREAT SPAN OF WILLIAM RUFUS

Red, who left his father at the point of death, was informed of his decease as he was on the point of embarking at Wissant, near Calais. The news only made him the more anxious to reach England, that he might, by the actual scizure of the succession, set at defiance the pretensions of any other clamant to the crown. Arriving in England, he secured the important fortiesses of Dover, Pevensey, and Hastings, concealing his father's death, and pretending to be the bearer of orders from him. He then hastened to Winchester, where, with a proper conviction of the efficacy of money, he claimed his father's treasures which were deposited in the castle there. William de Pont-de-l'Arche, the royal treasurer, readily delivered him the keys, and Rufus took possession of sixty thousand pounds in pure silver, with much gold and many precions stones. His next step was to repair to Lanfranc, the primate, in whose hands the destinies of the kingdom may almost be said to have at that moment been. Block, a confidential messenger, had already delivered a letter from the deceased king, commending the cause and guidance of his son William to the archbishop, already disposed by motives both of affection

William Rufus, or William the

and self-interest in favour of William, who had been his pupil, and for whom he had performed the sacred ceremonies on his initiation into knight-It is stated, however, that Lanfranc refused to declare hunself in favour of Rufus till that prince promised, upon oath, to govern according to law and right, and to ask and follow the advice of the primate in all matters of importance. It appears that Lanfranc then proceeded with as much activity as Rufus could desire. He first bastily summoned a council of the prelates and barons, to give the semblance of a free election. The former he knew he could influence, and of the latter many were absent in Normandy. Some preferred William's claim and character upon principle, and others were sileneed by his presence and promises. Though a strong feeling of opposition existed, none was shown at this meeting; and Lanfrane erowned his pupil at Westminster on Sunday, the 26th of September, 1087, the seventeenth day after the Conqueror's death.

William's first act of royal authority speaks little in his favour either as a man or a son ;—it was the imprisonment of the unfortunate Englishmen whom his father had liberated on his death-bed. Earls Morcar and Wulnot, who had followed him to

RUNG C. P. S. Chat

Cagband in the hope of obtaining some part of the estates of their fathers, were arrested at Winchester, and confined in the castle. The Norman state prisoners, however, who had been released at the sine time by the Conqueror re-obtained possession of their estates and honours. He then gave a quantity of gold and silver, n part of the treasure found at Winchester, to "Otho, the goldsmith," with orders to work it into ornaments for the tomb of that father whom he had abandoned on his death-bed.

When Robert Courtehose heard of his futher's death he was living, an impoverished exile, at Abbeville, or, according to other accounts, in Germany. He, however, soon appeared in Normandy, and was joyfully received at Rouen, the capital, and recognised as their duke by the prelates, barons, and chief men. Henry, the youngest I rother of the three, put himself and his five thousand pounds of silver in a place of safety, waiting events, and being fully resolved to avail himself of any means, no matter how dishonon mable in themselves, or ruinous to his brothers, that should offer him the chance of gaining either the toyal crown or the ducal coronet.

It was not perhaps easy for the Conqueror to make any better arrangement, but it was in the highest degree unlikely, under the division he had made of England and Normandy, that peace should be preserved between the two brothers. Even if the unscrupulous Rufus had been less active, and

VOL. I.

the personal qualities of Rol ert altogether different from what they were, causes independent of the two princes threatened to lead to mevitable hostilities. The great barons, the followers of the Conqueror, were almost all possessed of estates and fiefs in both countries: they were naturally uneasy at the separation of the two territories, and foresaw that it would be impossible for them to preserve their allegiance to two masters, and that they must very soon resign or lose either their ancient patrimomes in Normandy or their new acquisitions in England. A war between the two brothers would at any time embarrass them as long as they held territory under both. The time, also, was not yet come to reconcile them to consider their native Normandy as a separate and foreign land. short, every inducement of interest and of local attachment made them wish to see the two countries united under one sovereign; and their only great difference of opinion on this head was, as to which of the two brothers should be that sovereign; some of them adhering to William, while others insisted that, both by right of birth and the honourableness, generosity, and popularity of his character, Robert was the proper man to have both realms. A decision of the question was inevitable; and the first step was taken, not in Normandy, to expel Robert, but in England, to dethrone William. Had he been left to himself, the elder brother, from his love of case and pleasure, would in all probability have remained satisfied with his duchy, but he was

and destroyed by the English cruisers, that the

[Book III.

repeating how unjust and disgraceful to him it was to see a younger brother possess a kingdom while he had only a duchy,-by Norman nobles that went daily over to him complaining of the present state of affairs in England, - and by his uncle Odo, the bishop of Bayeux, who moved with all his ancient energy and fierceness in the matter, not so much out of any preference of one brother to the other, as out of his hatred of the primate Lanfranc, whom he considered as the chief cause of the disgrace, the imprisonment, and all the misfortunes that had befallen him in the latter years of the Conqueror, and whose great credit at court, and power in the new government, excited his jealousy. The bishop was a formidable partisan, a man framed to be the leader of a conspiracy: he had many friends among the most powerful of the barons; but so abhorred was he by all classes of English, that it may be doubted whether he did not rather weaken than strengthen the party he Robert promised to come over with an army in

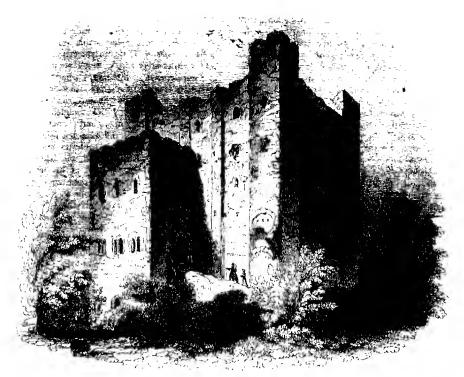

beset on all sides by men who were constantly

embraced. all haste, and Odo engaged to do the rest. At the Easter festival the Red King kept his court at Winchester, whither he had invited all the great Odo was there with his friends, and took that opportunity of arranging his plans. From the festival he departed to raise the standard of Robert in his old earldom of Kent, while Hugh de Grantmcsnil, Roger Bigod, Rohert de Mowbray, Roger de Montgomery, William bishop of Durham, and Geoffrey of Coutance, repaired to do the like in their several fiefs and governments which lay in the east, in the west, and the north. A dangerous rising thus took place simultaneously in many parts of England; but the insurgents lost time, and turned the hearts of the English inhabitants from them by paltry acts of depredation, while the army from Normandy, with which Robert had promised to come over, and which Odo, who was in Kent, was instructed to look out and provide for upon the south coast of England, at a certain time appointed, was slow in making its appearance. Courtehose, a slave to his habitual indolence and indecision, was, as usual, in great straits for money; but those who acted for him had raised a considerable force in Normandy, and but for the adoption, by the new king, of a novel measure, and a confidence timely placed in the natives, England would have been again desolated by a foreign army. Rufus, on learning the preparations that were making for this armament, permitted his English subjects to fit out cruisers; and these adventurers, who seem to have been the first that may be called privateers, rendered him very important service; for the Normans, calculating that there was no royal navy to oppose them, and that when they landed they would be received by their friends and confederates, the followers of Odo and his party, began to cross the Channel in small companies, each at their own convenience, without concert or any regard to mutual support in case of being attacked on their

But Rufus was also greatly indehted to another measure which he adopted at this important crisis. Before the success of the privateering experiment could be fully ascertained, secing so many of the Normans arrayed against him, he had recourse to the native English: he armed them to fight in their own country against his own countrymen and relatives; and it was by this confidence in them that he preserved his crown, and probably his life. He called a meeting of the long-despised churs of the Anglo-Saxon blood,—of those few men having influence over the national mind, who had survived the slow and wasting conquest of his father: he promised that he would rule them with the best laws they had ever known; that he would give them the right of hunting in the forests, as their forefathers had enjoyed it; and that he would reheve them from many of the taillages and odious tributes his father had imposed. These promises were indifferently kept in the sequel, but the English people certainly benefited somewhat by the king's difficulties, and commenced from this moment an improvement in condition and consideration, which continued, on the whole, progressive "Contested titles and a under his successors. disputed succession," as Sir James Mackintosh has remarked, "obliged Rufus and his immediate successors to make concessions to the Anglo-Saxons, who so much surpassed the conquering nation in numbers; and these immediate sources of terrible evils to England became the causes of its final dehverance." Flattered by his confidence, the thanes and franklins who had been summoned to attend him zealously promoted the levy; and when Rufus proclaimed his ban of war in the old Saxon form,-"Let every man who is not a man of nothing, § whether he live in hurgh or out of burgh, leave his house and come,"-there came thirty thousand stout Englishmen to the place appointed for the Kent, with the Sussex coast, was the most vulnerable part of the island, and Odo, the king's uncle, the most dangerous of his enemies; Rufus

therefore marched against the bishop, who had strongly fortified Rochester Castle, and then thrown himself into Pevensey, there to await the arrival of the tardy and never-coming Robert, siege of seven weeks, the bishop was obliged to surrender this stronghold, and his nephew granted him life and liberty, on his taking an oath that he would put Rochester Castle into his hands, and then leave the kingdom for ever. Relying on his solemn yow, Rufus sent the prelate with an inconsiderable escort of Norman horse from Pevensey to Rochester. The strong castle of Rochester Odo had intrusted to the

care of Eustace, Earl of Boulogne, who was devoted, like himself, to the eldest son. When now reciting the set form of words, be demanded of the earl the surrender of the castle, Eustace, pretending great wrath, arrested both the bishop and his guards as traitors to King Robert. The scene was well acted, and Odo, trusting to be sereened from the accusation of perjury, remained in the fortress to continue the struggle. His loving nephew soon embraced him with a close environment, drawing round him a great force of English infantry and foreign cavalry. But the castle was strong and well garrisoned, for 500 Norman knights, without counting the meaner sort, fought on the battlements; and after a long siege, the place was not taken by assault, but forced to surrender either by postilential disease or famine, or probably by both. English, who had shown great ardour during the siege, would have granted no terms of capitulation; but the Norman portion of William's army, who had countrymen, and many of them friends and relations in the castle, entertained very different sentiments, and at their earnest instance, though not without difficulty, the Red King allowed the besieged, without any exceptions, to march out with their arms and horses, and freely depart the land. The unconscionable bishop of Bayeux would have included in the capitulation a proviso that the king's

army should not cause their hand to play in sign of victory and triumph as the garrison marched out, but this condition was refused, the king saying in great anger he would not make such a concession for 1000 marks of gold. The partisans of Robert then came forth with banners lowered, and the king's music playing the while. As Odo appeared, there was a londer crash; the trumpets screamed. and the English, scarcely able to keep their hands from his person, shouted as he passed, "Oh! for a halter to hang this perjured, nuirderous bishop!" It was with these and still worse imprecations that the priest who had blessed the Norman army at the battle of Hastings departed from England never more to enter it.\*

Having disposed of Odo, Rufus found no very great difficulty in dealing with the other conspirators, who began to curse the procrastination of Robert, and to see pretty clearly that he was not the man to re-unite the two countries, or give them security for their estates and honours in both. Roger Montgomery, the powerful Earl of Shrewsbury, was detached from the confederacy by a peaceful negotiation; others were won over by blandishments: the hishop of Durham was defeated by a division of William's army, and the bishop of Worcester's English tenants, adhering

HISTORY OF ENGLAND.

A few of them received a pardon, but the greater part were attainted, and Rufus bestowed their In the course of the following year (1089), Lan-

English estates on such of the barons as had done him best service. franc, who was in many respects a great and a good man, departed this life. A change was immediately observed in the king, who showed himself more debauched, tyrannical, and rapacious

than he had been when checked by the primate's virtues and abilities. He appointed no successor to the head office in the church, but seized the rich

revenues of the archbishopric of Canterbury, and spent them in his unboly revelvies. Lanfranc had been, in fact, chief minister as well as primate of the kingdom. As minister, he was succeeded by a Norman clergyman of low birth and dissolute habits, but gifted with an aspiring spirit, great readiness of wit, engaging manners, and an imhesitating devotion to the king in all things.

had first attracted attention in the English court of the Conqueror as a skilful spy and public informer. His name was Ralph, to which, in his capacity of minister, and through his violent measures, he soon obtained the significant addition of le Flambard, or the destructive torch. His nominal offices in the court of the Red King were, royal chaplain, treasurer, and justiciary; -his real duties, to raise as much money as he could for his master's extravagant pleasures, and to flatter and share his He was ingeniously rapacions, and seems almost to have exhausted the art of extortion. Under this priest the harsh forest laws were made a source of pecuniary profit; new offences were invented for the multiplication of fines; another survey of the kingdom was begun, in order to raise the revenues of the crown from those estates which had been underrated in the record of Domesday;\* and all the bishoprics and abbeys that fell vacant by death were left so by the king, who drew their revenues and applied them to his own use, racking the tenants and vassals on the church-hands so as they had never been racked before. These latter proceedings could hardly fail to indispose the monastic chroniclers, and the character of the Red King has in consequence come down to us darkened with perhaps rather more than its real depravity. There is, however, no reasonable ground for doubting that he was a licentions, violent, and rapacious king, nor (as has been well observed) is there either wisdom or liberality of sentiment in excusing his rapacity because it comprehended the

A.D. 1090. The barons who had given the preference to Robert having failed in their attempts to deprive William of England, the friends of William now determined to drive Robert out of Normandy, which country had fallen into a state of complete awarchy through the imprudent conduct of the new The turbulent barons expelled Robert's troops from nearly all the fortiesses, and then armed

people in those violent times.\*

clergy, who, after all, were the best friends of the

their vassals and made war with one another on their own private account. Many would have preferred this state of things, which left them wholly independent of the sovereign authority, to any other condition; but those of the great lords, who chiefly resided in England, were greatly embarrassed by it, and resolved it should cease By treachery and bribery, possession was obtained of Aumale, or Albemarle, St. Vallery, and other Norman fortresses, which were forthwith strongly garrisoned for Rufus. Robert was roused from his lethargy, but his coffers were empty, and the improvident grants of estates he had already made left him scarcely anything to promise for future services; he therefore applied

for aid to his friend and feudal superior, the French king, who marched an army to the confines of Normandy as if to give assistance, but marched it back again on receiving a large amount of gold from the English king. At the same time the unlucky Robert nearly lost his capital by a conspiracy; Comm, a wealthy and powerful burgess, having engaged to deliver up Rouen to Reginald de Warenne for King Rufus. In these difficulties Robert claimed the assistance of the cautious and crafty Henry. Some very singular transactions had already taken place between these two brothers. While Robert was making his preparations to invade

session of the Cotentin country, which comprehended nearly a third part of the Norman duchy. Dissensions followed this unequal bargain, and Robert on some other suspicious, either threw Henry into prison for a short time, or attempted to arrest him. Now, however, the youngest brother listened to the call of the eldest, and joined him at Rouen, where he chiefly contributed to put down the conspiracy, to repulse King William's adherent, Reginald de Warenne, who came up with 300 choice knights, and to take Conan, the great burgess, prisoner. The mild and forgiving nature of Robert was most averse to capital punishment, and he condemned Conan to a perpetual imprisonment; but Henry, some short time after, took the captive to the top of a high tower on pretence of

England, Henry advanced him 3000%, in return

for which slender supply he had been put in pos-

that it was not fitting that a traitor should escape condign punishment.\*

A.D. 1091. In the following January William Rufus appeared in Normandy, at the head of an army, chiefly English. The affairs of the king and duke would have now come to extremity, but Robert again called in the French king, by whose mediation a treaty of peace was concluded at Caen. Rufus, however, gained almost as much by this treaty as a successful war could have given him. He retained possession of all the fortresses he had acquired in Normandy, together with the territories of Eu, Aumale, Fescamp, and other places; and secured, in addition, the formal renunciation on the part of Robert of all claims and pretensions to the English throne. On his side, William engaged to indemnify his brother for what he resigned in Normandy by an equivalent in territorial property in England, and to restore their estates to all the barons who had been attainted in Robert's cause. It was also stipulated between the two parties that the king, if he outlived the duke, should have Normandy; and the duke, if he outlived the king, should have England; the kingdom and duchy thus in either ease to be united as under the Conqueror: and twelve of the most powerful harons on each side swore that they would do their best to see the whole of the treaty faithfully executed-"a strong proof" observes Hume, "of the great independence and authority of the nobles in those ages.'

Orderic,-Malms

The family of the Conqueror were not a family of love. No sooner were the bonds of fraternal concord gathered up between Robert and William, than they were loosened between them and their younger brother Henry, whose known abilities and decision of character began to inspire jealous apprehensions in the breast of Rufus. The united forces of the duke and king proceeded to take possession of his castles; and Henry was obliged to retire to a fortress on Mount St. Michael, a lofty rock on the coast of Normandy, insulated at high water by the sea. In this almost impregnable position he was besieged by Robert and William. Most of the old historians delight in telling a story to show the difference between the characters of these two kinsmen. Mount St. Michael afforded no fresh water; the besieged had neglected to supply themselves elsewhere, and were reduced to feel the insufferable anguish of thirst. When Robert heard of Henry's distress, he permitted some of his people to go and take water, and also sent him a supply of wine for his own table. William reproved him for this ill-timed generosity; but Robert replied, "How can I suffer my brother to die of thirst? Where shall we find another brother when he is gone?"\* Another aneedote of the same time is told of Rufus. As he was riding one day alone near the fortress, he was attacked by two soldiers in Henry's pay, and dismounted. One of the men raised his dagger to dispatch him, when

 William of Malmsbury is the first leller of this story among the chroniclers.

MOUNT ST. MICHAEL, NORMANDY.

Rufus exclaimed, "Hold, knave! I am the king of England" The soldier suspended his blow, helped the king to rise and mount, excusing his own conduct, on the ground of being ignorant of his quality. " Make no excuse," replied Rufus; " thou art a brave knight, and henceforward wilt fight under my banner." The story, in conclusion, says the man entered the king's service. In the end, Prince Henry was obliged to capitulate and evacuate the strong fortress of Mount St. Michael. He obtained with difficulty permission to retire into Brittany: he was despoiled of all he possessed, and wandered about for two years, with no better attendance than grim poverty, one knight, three squires, and a chaplain. But in this, the lowest stage of his fortunes, he impressed men with a notion of his political abilities; and he was invited by the inhabitants of Damfront to take upon himself the government of that city.

Duke Robert accompanied the king to England, to take possession of those territories which were promised by the treaty. During his stay Rufus was engaged in a war with Maleolm Caenmore, who, while William was absent in Normandy, had invaded England, and "overrun a great deal of it," says the Saxon Chroniele, "until the good men that governed this land sent an army against him and repulsed him." On his return, William collected a great force both naval and military, to avenge this insult; but his ships were all destroyed before they reached the Scottish coast. The Eng-

lish and Scottish armies met, however, in Lothian, in England, according to the Saxon Chronicle-at the river called Scotte Uatra (perhaps Scotswater), says Ordericus Vitalis—and were ready to engage, when a peace was brought about by the mediation of Duke Robert on one side, and his old friend Edgar Atheling on the other. "King Malcolm," says the Saxon Chronicle, "came to our king, and became his man, promising all such obedience as he formerly rendered to his father; and that he confirmed with an oath. And the King William promised him in land and in all things whatever he formerly had under his father." By the same treaty, Edgar Atheling was permitted to return to England, where he received some paltry court appointment, and "exhibited the unseemly sight of the representative of Alfred, fed on the crumbs that fell from the table of a Norman tyrant."\*

Returning from Scotland, Rufus was much struck with the favourable position of Carlisle; and, expelling the lord of the district, he laid the foundation of a castle, and soon after sent a strong English colony from the southern counties to settle in the town and its neighbourhood. Carlisle, with the whole of Cumberland, had long been an appanage of the elder son of the Scottish kings; and this act of Rufus was speedily followed by a renewal of the quarrel between him and Malcolm To accommodate these differences, Caenmore. Malcolm was invited to Gloucester, where William

\* Sir J. Mackintosh, Hist. Eng

was keeping his court; but before undertaking

this journey the Scottish king demanded and ob-

tained hostages for his security-a privilege not

granted to the ordinary vassals of the English

CIVIL AND MILITARY TRANSACTIONS.

CHAP. I.

Malcolm was required by Rufus to do him right, that is, to make him amends for the injuries with

which he was charged, in his court there, or, in other words, to submit to the opinion and decision of the Anglo-Norman barons. Malcolm rejected the proposal, and said that the kings of Scotland had never been accustomed to do right to the kings of England, except on the frontiers of the two kingdoms, and by judgment of the barons of both. He then hurried northward, and, having raised an army, burst into Northumberland, where he soon

afterwards fell into an ambush, and was slain, together with Edward, his eldest son. This double calamity is said to have caused the death of the Scottish queen, Margaret, Edgar Atheling's sister; she died four days after (16th November, 1093). Duke Robert had returned to the continent in disgust, at having pressed his claims for the promised indemnity in England without any success. He afterwards dispatched messenger after messenger from the continent, but still William would give up none of his domains. At last, in 1094, Robert had recourse to a measure deemed very efficacious in the court of chivalry. He sent two

heralds, who, having found their way into the presence of the Red King, denonneed him before his cluef vassals, as a false and perjured knight, with whom his brother, the duke, would no longer hold friendship. To defend his honour, the king followed the two heralds to Normandy, where, hoping at least for the majority of voices, he agreed to submit the matters in dispute to the arbitration of the twenty-four barons, who had sworn to do their best to enforce the faithful observance of the treaty of The barons, however, decided in favour of Robert; and then William, who would not be bound by an award unfavourable to himself, appealed to the sword. The campaign which opened went so much in favour of the Red King, that Robert was again obliged to apply for assistance to the king of France; and Philip once more marched with an army into Normandy. Rufus then sustained some serious losses; and trusting no longer to the appeal of the sword, he resolved to buy off the French king. He sent his commission into England for the immediate levying of 20,000 men. By the time appointed these men came together about Hastings, and were ready to embark, " when suddenly there came his lieutenant with a counterorder, and signified to them, that the king, minding to favour them, and spare them for that jour-

ney, would that every of them should give him

ten shillings towards the charges of the war, and

thereupon depart home with a sufficient safe con-

retreat, which was much more rapid than his ad-The next summer he entered the mountams with a still more numerous army, and was again forced to retire with loss and shame.

had not imitated the wise generalship of Harold; and his heavy Norman cavalry was ill suited for

such a warfare. He turned from Wales in despair,

but ordered the immediate erection of a chain of

do than to commit themselves to the fortune of the

sea and bloody success of the wars in Normandy."\*

The king's heutenant and representative on this oecasion was Ralph Flambard; and he and that

20,000 soldiers, or half of them, should be able to

pay ten shillings a piece; † but still some consider-

able sum was raised, and King Philip accepted it, and withdrew from the field, leaving Robert, as he

had done before, to shift for himself. Rufus would

then in all probability have made himself master of

Normandy, had be not been recalled to England

riance between the two brothers, "after their accustomed manner," began to invade the English

marches, taking booty of cattle, and destroying,

killing, and spoiling many of the king's subjects, both English and Normans. Laying siege to

the castle of Montgomery, which had been erected

on a recently occupied part of Wales, they took this castle by assault, and slew all whom they

found within it. Before William could reach the

scene of action all the Welsh were in arms, and

had overrun Cheshire, Shropshire, and Herefordshire, hesides reducing the isle of Anglesea. To

chastise them, he determined to follow them, as

Harold had done before, quite through their own country; for he saw that the Welsh "would not

join battle with him in the plain, but kept themselves still aloof within the woods and marshes,

and aloft upon the mountains: albeit, oftentimes when they saw advantage they would come forth,

and taking the Normans and the English unawares,

kill many, and wound no small numbers." § Sti-

mulated, however, by the example of Harold, who

had penetrated into the inmost recesses of Wales,

the Red King still pursued them by hill and dale;

but by the time he reached the mountains of Snow-

don, he found that his loss was tremendous, and "not without some note of dishonour," began a

demned to perpetual imprisonment, and died in a dungeon of Windsor Castle, about thirty years

HISTORY OF ENGLAND.

not wanting. At the head of the disaffected was Robert Mowbray, Earl of Northumberland, a most powerful chief, who possessed 280 English manors. His long-continued absence from court created suspicion, and he is said to have committed several illegal acts in his government, militating against the royal authority. The king published a decree that every baron who did not present himself at court on the approaching festival of Whitsuntide should be outlawed. The festival came and passed without any tidings of the Earl of Northumberland, who feared he should be cast into prison if he went to the south, his demand for hostages for his safety having been refused, as a privilege to which the earl, as an ordinary vassal of the crown, could not pretend. The king then marched with an army into Northumberland, and after taking several of his less important fortresses, shut up the carl within the walls of Bamborough Castle. Finding he could neither besiege nor blockade this impregnable place, he built another castle close to it, in which, leaving a strong garrison, he returned to the south. The new castle, which was hastily constructed of wood, was called "Malvoisin," (the bad neighbour,) and such it proved to Earl Mow-Being decoyed from his safe retreat by a feigned offer of placing the town of Newcastleupon-Tyne in his hands, he was attacked by a large party of Normans from Malvoisin, who lay in wait for him. The earl, with thirty horsemen, his only retinue, fled to the Monastery of St. Oswin, at Tynemouth. The sanctuary was not respected; but Mowbray and his few followers defended it with desperate valour for six days, at the end of which the earl, sorely wounded, was made prisoner. But Bamborough Castle was even more valuable than the person of this noble captive, and the Red King, who had laid the snare into which the earl had fallen, had also arranged the plan upon which the captors now acted. They carried Mowbray to a spot in front of his easile, and invited his countess, the fair Matilda, to whom he had been married only a few months, to a parley. When the countess came to the outer walls, she saw her husband in the hands of his bitter enemies, who told her they would put out his eyes before her face unless she instantly delivered up the eastle. It was searcely for woman to hesitate in such an alternative: Matilda threw open the gates. Within the walls of Bamborough the king's men found more than they expected, for Earl Mowbray's licutenant betrayed to them the whole secret of the conspiracy, the object of which was to place upon the throne of England Stephen, Count of Aumale, nephew of the Conqueror and brother to the infamous Judith. The extensive conspiracy included, amoug others, William Count of Eu, a relation of the king's, William of Alderic, the king's godfather, Hugh, Earl of Shrewsbury, Odo, Earl of Holderness, and Walter de Lacey. The fates of

these men were various: Earl Mowbray was con-

after; the Count of Eu rested his justification on the issue of a duel, which he fought with his accuser in the presence of the king and court, but being vanquished in the combat, he was convicted, according to the prevailing law, and condemned to have his eyes torn out, and to be otherwise mutilated.\* William of Alderic, who was much esteemed and lamented, was hanged; the Farl of Shrewsbury bought his pardon for an unmense sum of money; the Earl of Holderness was deprived of all he possessed and imprisoned; the rest escaped to the continent, leaving their estates in England to be confiscated—It appears that part at least of the lands thus forfeited remained for some time without masters, and without culture; but the revenue officers, that the king might not suffer, continued to raise on the town or the district to which the vacant property appertained the whole of the taxes as before. The people of Colchester rendered most grateful thanks to Eudes Fitz-Hubert, the governor of their town, for his having taken, in his own name, some of the estates of the disinherited Normans, and consented to pay all the fiscal demands made on those lands. Ap. 1096. At a moment when the Red King had successfully disposed of all his enemies in England, and was in a condition to renew the war in Normandy, his thoughtless brother resigned that duchy to him for a sum of money. The Christians of the west, no longer content to appear at Jerusalem as despised and ill-treated pilgrims, with beads and crosses in their hands, resolved to repair thither with swords and lances, and conquer the whole of Palestine and Svria from the The subject of the Crusades, one of the infidels. most interesting that engages the attention of the historian in the middle ages, will be treated of more appropriately in our account of the religion of the times, which was the direct source of those enthusiastic and long-enduring enterprises. It will suffice here to state, that the preaching of Peter the Hermit, the decisions of the council of Clermont, and the bulls of Pope Urban II., had kindled a warlike flame throughout Europe, and that all classes of men considered taking a part in the holy war as the surest means of obtaining glory in this world and eternal happiness in the next. Duke Robert had early enlisted in the crusade, engaging to take with him a numerous and well-armed body of knights and vassals, but, wanting money, "no news to his coffers," he applied to his brother the Red King, who was always as expert in the employment of gold as of arms, and who now readily entered into a bargain, which was concluded on terms most advantageous to himself. For the sum of 10,000l. the duke resigned the government of Normandy to his brother. This act is generally considered by historians not as a sale, but as a

mortgage, which was to expire in five years. But

it is almost idle to talk of conditions in such a

strange transaction, which could have left Robert

but a slight chance of ever recovering his dominion

from his unscrupulous brother, had Rufus lived.

CHAP. 1.]

When the bargain was struck, William was almost as pennyless as Robert, but he was a much greater adept in the art of wringing money from his suhjects. According to an old historian, to make up this sum with dispatch, "he did not only oppress and fleece his poor subjects, but rather with importunate exactions, did, as it were, flea off their skins. All this was grievous and intolerable, as well to the spirituality as temporality, so that divers bishops and abbots, who had already made away with some of their chalices and church jewels to pay the king, made now plain answer that they

CIVIL AND MILITARY TRANSACTIONS.

were not able to help him with any more; unto whom, on the other side, as the report went, the king said again: 'Have you not, I beseech you, collins of gold and silver full of dead men's bones?" "" meaning the shrmes wherem the relies of samts were enclosed. The Red King maintained that such exactions as these were not sacrilegious, inasmuch as the money so raised was to go to maintain wars against infidels and enemies of Christ. The pretext was specious, but rather transparent, for it was his brother who was to spend the money in the holy war, while he was to receive a most usurious interest for it, even taking nothing into account but the immediate revenue of Normandy.

Soon after receiving his 10,000%, Robert de-

parted joyfully for Palestine, flattering himself with

a splendid futurity; and then William, indulging in the less fantastic prospect of near and solid advantages, sailed to the continent to take immediate possession of Normandy and its dependencies. He had long held many of their fortresses, his partisans among the nobility were numerous and powerful, and he was received by the Normans without opposition. But it was far otherwise with the people of Maine, who burst into a universal msurrection, and by rallying round Helie, Lord of La Flêche, a young and gallant adventurer, who had some claim to the country himself, gave Rufus much trouble, and obliged him to carry over an army from England more than once. About three years after Robert's departure the brave Helie was surprised in a wood with only seven knights in company, and made prisoner by one of the English king's officers. Rufus marched into Maine soon after at the head of a large force of horse; but the French king and the Count of Anjou interfering, he was induced to negotiate, and Helie obtained his liberty by delivering up the town of Mans. The people continued to dislike the sway of their new master, and the Lord of La Fleche, after offering his services, was unnecessarily irritated by William. In the following year (1100), as the Red King was hunting in the New Forest, a messenger from

beyond sea arrived with intelligence that Helie had

surprised the town of Mans, and was besieging the Norman garrison in the castle, being aided therein

Holinshed.—Speed.—The old authorities are Eadmer, Orderic, Matt. Paris, and W. Malmeb,

VOL. 1.

but they were probably not versed in Scripture, and made no such answer, but, obeying their orders, put to sea, and safely landed their royal passenger at Barilem on the following day. The news of his landing sufficed to raise the siege of the eastle of Mans, and Helie, thinking he must have come in force, dismissed his troops and took to flight. The Red King then barbarously rayaged the lands of his encious; but being wounded while laying siege to an insignificant castle, he returned suddenly to England, which he was destined not to leave again. William's lavish expenditure continued on the increase; but by los exactions and irregular way of

dealing with church property, he still found means

for gratifying his extravagance, and enjoyed abroad the reputation of being a rich as well as a powerful

by the inhabitants, who had again recognised han

as their lawful chief. In bravery, prompt decision,

and rapidity of movement, William was httle infe-

rior to his father, the Conqueror. He instantly

turned his horse's head, and set off for the ucarest

seaport. The nobles who were limiting with him

reminded him that it was necessary to call out

troops, and wait for them. "Not so," replied

Rufus; "I shall see who will follow me; and, if I

understand the temper of the youth of this king-

dom, I shall have people enough." Without

stopping or turning he reached the port, and em-

barked in the first vessel he found. It was blow-

ing a gale of wind, and the sailors entreated him to

have patience till the storm should abate. "Weigh

anchor, hoist sail, and begone," cried Rufus;

"did you ever hear of a king that was drowned?"\*

An old writer intimates that the mariners might

have replied, "Yes, Pharaoh with all his host;"

king. William, Earl of Potetiers and Duke of Guienne, caught the prevailing passion for the Crusades, and in order to be enabled to carry a respectable force to Palestine, he also offered to mortgage his dominions to the King of England. Rufus, as cager as ever for territorial aggrandiscment, accepted the offer, and even began to raise the money. But the great creditor, whose demands are often as sudden as they are irresistible, closed this new account before it was well opened. Popular superstition had long darkened the peopled its glades with horrid spectres.

shades and solitudes of the New Forest, and fiend himself, it was said and believed, had appeared there to the Normans, announcing the punishment he had in reserve for the Red King and his wicked counsellors. The accidents that happened in that chase, which had been so barbarously obtained, gave strength to the vulgar belief. In the month of May, Richard, an illegitimate sou of Duke Robert, was killed while hunting in the forest by an arrow, reported to have been shot at random. This was the second time that the Con-

queror's blood had been poured out there, and

men said it would not be the last time. On the

keep, a lunting-seat in the forest,\* with a goodly train of knights. A reconciliation had taken place between the two brothers, and the astucious Henry, who had been some time in England, was of the gay party. The circumstances of the story, as told by the monkish chroniclers, are sufficiently remark-At the dead of might the king was heard myoking the Blessed Viigin, a thing strange in him; and then he called aloud for lights in his chamber. His attendants ran at his call, and found him disturbed by a frightful vision, to prevent the return of which he ordered them to pass the rest of the night by his bedside, and divert him with pleasant talk. As he was dressing in the morning an artisan brought him six new arrows; he examined them, praised the workmanship, and keeping four for himself, gave the other two to Sir Walter Tyriel, otherwise called, from his estates in France, Sir Walter de Poix, saying, as he presented them, "Good weapons are due to the sportsman that knows how to make a good use of [

them." \* The tables were spread with an abundant collation, and the Red King ate more meat and drank even more wine than he was wont to His spirits rose to their highest pitch; his companions still passed the wine-cup, whilst the grooms and huntsmen prepared their horses and bounds for the chase; and all was boisterously gay in Malwood-keep, when a messenger arrived from Serlon, the Norman Abbot of St. Peter's, at Gloucester, to inform the king that one of his monks had dreamt a dream foreboding a sudden and awful death to him. "The man is a right monk," cried Rufus, "and to have a piece of money he dreameth such things. Give him, therefore, an hundred pence, and bid him dream of better fortune to our person." Then turning to Tyrrel, he said, "Do they think I am one of those fools that give up their pleasure or their business because an old woman happens to dicam or sneeze? To horse, Walter de Poix!"

The king, with his brother Henry, William de Breteinl, and many other lords and kinglits, rode into the forest, where the company dispersed here and there, after the manner used in hunting; but Sir Walter, his especial favourite in these sports, remained constantly near the king, and their dogs hinted together. As the sim was sinking low in the west a hart came bounding by, between Rufus and his comrade, who stood concealed in the thickets. The king diew his bow, but the string broke, and the arrow took no effect.

\* Orderic Vital.

DEATH OF RUFUS -Burney.

quarry, raised his bridle-hand above his eyes, that he might see clear by shading them from the glare of the sun, which now shone almost horizontally through the glades of the forest; and at the same time, being unprovided with a second bow, he shouted, "Shoot, Walter!—shoot, in the devil's name!" \* Tyrel drew his bow, -the arrow departed, was glanced uside in its flight by an intervening tree, and struck William in the left breast, which was left exposed by his raised arm. fork-head pierced his heart, and with one groan, and no word or prayer attered, the Red King fell and expired. Sir Walter Tyrrel ran to his master's side, but, finding him dead, he remounted his horse, and, without informing any one of the catastrophe, galloped to the sca-coast, embarked for Normandy, whence he fled for sanctuary into the dominions of the French king, and soon after departed for the Holy Land. According to an a old chronicler, the spot where Rutus fell had been the site of an Anglo-Saxon church which his father, the Conqueror, had pulled down and de-

ruins, into a sign of the displeasure of Heaven that he had received Christian burial.\*

The second king of the Norman line reigned thirteen years all but a few weeks, and was full of health and vigour, and only forty years of age when he died. That he was shot by an arrow m the New Forest,—that his body was abandoned and then hastily interred,—are facts perfectly well authenticated; but some doubts may be entertained as to the precise circumstances attending his death, notwithstanding their being minutely related by

writers who were living at the time, or who flou-

• Dr. Miluer, Hist, Winchest,

rished in the course of the following century. Sir Walter Tyrrel afterwards swore, in France, that he did not shoot the arrow; but he was probably anxious to relieve himself from the odmin of killing a king, even by accident. It is quite possible, indeed, that the event did not arise from chance, and that Tyrrel had no part in it. The remorseless ambition of Henry might have had recourse to murder, or the avenging shaft might have been sped by the desperate hand of some Englishman, tempted by a favourable opportunity and the traditions of the place. But the most charitable construction is, that the party were intoxicated with

3 F 2

STONE, in the New Forest, marking the site of the Oak-tree against which the Arrow of Sh Walter Tyriel is said to have glanced.

the wine they had drunk at Malwood-keep, and that, in the confusion consequent on drunkenness, the king was lit by a random arrow.

The Red King was never married; and his example is said to have induced all his young courtiers to prefer the licentions liberty of a single In describing his libertinism, the least hemous charge of the monkish historians is, that he respected not the virtue of other men's wives, and was "a most especial follower of lemmans." For the honour of Imman nature we hope the picture is overcharged; but there are proofs enough to convince us that but little order or decorum reigned in the court of Rufus. On the contrary, indeed, all writers agree in their accounts of the dissolute manners of his honsehold and adherents. His rapacity is equally unquestionable; but this charge is partially alleviated by his taste and magnificence, which were beneficial to the nation. He did not spend all his money in his

wars, his foreign schemes, his pleasures and debaucheries, but devoted large sums to the building of royal palaces, and to some works of great public utility.

HENRY I.—SURNAMED BEAUCLERK.

A.D. 1100. Henry was not unopposed in the first step he took to secure the crown. While he was imperiously demanding the keys of the royal treasury, and the officers in whose charge they were placed were hesitating whether they should deliver them or not, William de Bretenil, the royal treasurer, who had also been of the fatal hunting party, arrived with breathless speed from the forest, and opposed his demand. "You and I," said he to Henry, "onght to remember the faith we have pledged to your brother, Duke Robert; he has received our oath of homage, and, absent or present, he has a right to this money." Henry attempted to shake the fidelity of the treasurer with arguments,

GREAT SEAL OF HENRY 1

at William de Bretenil resolutely maintained that Robert was the lawful sovereign of England, to whom, and to no one else, the money in Winchester Castle belonged. The altereation grew violent, and Henry, who felt he had no time to lose, drew his eword, and threatened immediate death to any that should oppose him. He was supported by some 1 weiful barons who happened to be on the spot, or who had followed him from the forest, and whose terour he had seemed beforehand. De Bretend we left almost single in his honourable opposition, the domestics of the late king taking part against fam and Henry seized the money and crowng wels before his eyes. Part of the money scenis to have been distributed immediately among the barons and churchmen at Winchester; and the Saxon Chronicle says that "the witan who were then mgh at hand chose him to be king." immediately gave the bishopric of Winchester to Hemy Gifford, a most influential adherent, and then proceeded with all speed to London, where he made a skilful use of his treasures, and was proclaimed by an assembly of noblemen and prelates, no one challenging his title, but all acknowledging his consummate abilities and fitness for government. On Sunday, the 5th of August, only three days after the death of Rufus, standing before the altar in Westminster Abbey, he promised God and all the people to annul all the unrighteous acts that took place in his brother's time; and after this declaration, Maurice, the bishop of London, consecrated him king. † Anselm, the archbishop of Canterbury, who, according to ancient rule, should have performed the ceremony of the coronation, had been driven out of the kingdom some three Years before; and the archbishopric of York had been left vacant for some time. A popular recommendation, which had, no doubt, great influence, was, that Henry was an Englishman, born in the country,\* and after the Conquest; and some of his partisans set up this circumstance as being in itself a sufficient title to the crown. But be himself, in a charter of liberties issued on the following day, and diligently promulgated throughout the hand, represented himself as being crowned "by the mercy of God, and by the common consent of the barons of the kingdom."

The claims of Duke Robert were not forgotten; but Henry, who " had aforchand trained the people to his humour and vein, in braiging them to think well of him," Irid also caused to be reported, as a certain fact, that Robert was already created king of Jerusalem by the Crusaders, and would never leave the Holy Land for an ordinary kingdom. Although the law of succession remained almost as loose as under the Saxon dynasty, and the crown of England was still, in form at least, an elective one, Henry, who, moreover, was bound by oaths to his elder brother Robert, seems himself to have been conscious of a want of validity or security in his title, and to have endeavoured to strengthen his throne by reforms of abuses and by large concessions to the nation. Such is almost invariably the course pursued by intrusive kings; and hence usurpations, though they may be productive of war and suffering, are not always to be considered as unmixed cyils. The charter of liberties passed by Henry on his accession, as forming an important feature in our progressive law and government, will be treated of elsewhere. It will suffice for the course of this narrative to state, that he restored all the rights of the church, promised to require only moderate and just reliefs from his vassals, to exercise his powers in wardships and

Henry was born at Selby, in Yorkshire, A.D. 1070, in the fourth year of his father's reign as king of England.

only to the amendments made in them by his father. "So general was the confidence in the

the laws of King Edward the Confessor, subject

hsh birth, determined to esponse an English wife This marriage is a most important historical event, being a step made towards that indermixture and fusion of the two races which destroyed, at a much earlier period than is generally imagined, the odious distinction between English and Normans. It is also exceedingly interesting in some of its details, and particularly those which have been transmitted by the pen of Eadmer, who was hving at the time, and who, as an Eoglishman himself, cutertained a lively sympathy for the fortimes of the young princess. The lady of Lieury's choice was, to use the words of the Saxon Chronicle, "Maud, daughter of Midcelm, king of Scots, and of Margaret, the good queen, the telation of King Edward, and of the right kingly kin of England." This descendant of the great Alfred had been sent from Scotland at a very early age, and committed to the care of her aunt Christina, Edgar Atheling's second sister, who was abbess of Wilton, or, as others say, of Rumsey, in Hamipshire. As she grew up, several of the Norman captains aspired to the honour of her hand was asked in marriage by Alan, the lord of Richmond; but Alm died before he could receive any answer from the king. William de Garenne, cail of Surrey, was the next sinter, but the marriage was not allowed by Rufus, to whom, and not to the young lady or her relations, these several demands were made. A contemporary writer; says, he knows not why the marriage with the earl of Surrey did not take place; but the policy of forbidding a union between a powerful vassal and a princess of the ancient royal line is evident; and the Red King, like his father, held it as part of his prerogative to give or refuse the hands of his fair subjects. When proposals were made on the part of King Henry, the fair Saxon, not being dazzled with the prospect of sharing with a Norman the throne on which her ancestors had sat for

mg, and the shedding of human blood know no end." When her slow consent was obtained, another impediment was raised by a strong Norman party, who neither liked to see an English woman raised to be their queen, nor the power of then king confirmed by means which would endear him to the native race, and render him more and more independent of the Normans They asserted that Maude, who had been brought up from her rufancy in a convent, was a nun, and that the had been seen wearing the veil, which made her for ever the spouse of Christ. Such an obstacle would have been insurmountable; and as there were some securing grounds, for the report, the celebration of the marriage was postpoued, to the great joy of those who were opposed to it † Anselm, the archbishop of Canterbury, who had returned from Italy at the pressing invitation of the new king, was a zealous promoter of the manriage for his soul was kind and benevoleid, and he was interested in favour of the Euglish people; but, when he heard the reports which were circulated, he declared that nothing could induce him to unite a min to a carnal husband. The archbishop, however, determined to question the maden herself; and Matilda, or Mande, in reply, denied she had ever taken the vows, or even worn the yeal of her free will; and she offered to give full proof of this before all the prelates of England. A sperch which Eadmer puts into her month is a curious specimen of *naïveté*, and a proof of the brutahty of the Norman soldiers towards the females of the conquered race. "I must contest," she said, "that I have sometimes appeared yealed; but listen to the cause: in my fost youth, when I was hving under her care, my aunt, to save me, as she said, from the last of the Normans, who attacked all females, was accustomed to throw a piece of black stuff over my head; and when 1 refused to

cover myself with it she treated me very roughly.

In her presence I wore that covering, but as soon

as she was out of sight I threw it on the ground,

and trampled it under my fect in childish anger."

To solve this great difficulty, Anselm called a council of hishops, alibots, and monks, who met in the

city of Rochester. Witnesses summoned before

this conneil confirmed the truth of Matilda's words. Two archdeacons, who had been sent to the con-

vent where the young lady was brought up, deposed that public report, and the testimony of the

nuns, agreed with her declaration. At the moment

when the council was to deliberate on its verdict the archbishop retired, to avoid any suspicion of

biassing their decision. This decision, given una-

refage in the convent out of fear of the soldiers of the great William, reclaimed and obtained their liberty." On Sunday, the 11th of November, the narriage was celebrated, and the queen was crowned with great pomp and solemnity. But so wisely cautious was the prelate, and so anxions to dissipate all suspicious and false reports, that before pronouncing the maptal benediction, he mounted on a bench in front of the church-door,

that Robert had obtained the crown of Jernsidem and thought not of returning to England, he knew right well that another than he had been elected sovereign in the Holy Land, and that, his brother was actually in Europe, and on his way back to Normandy, in which country he arrived within a month or six weeks after the death of Rufus. The improvident Dake had greatly distinguished him-

self in the conquest of Palestine and the taking of

Jernsalem, performing produgies of valour, which

were only surpassed, in later times, by Richard

Cœur de Lion, and even showing, it is said, great

cloquence when called upon to speak in the councils

of the crusaders, and admirable unhtary talents

when commanding in the field— He was also pre-

conment among the crusading princes and chiefs

variality, generosity, and wit. In the February following Henry's coronation a good rope was conveyed to the bishop hid in the bottom of a huge, wine flagon. His guards drank of the wine until their senses forsook them; and then Ralf, under favour of the night, and by means of the rope, desecuded from his prison window and escaped.

the conquest of England; and as Dake Robert advanced into the land, he was everywhere met by Norman barons and nobles of Norman descent, who

ruled even more absolutely in Apulia than did their brethren in our island. At every fendal castle the Duke was hailed and welcomed as a countryman, n friend, a hero, a crusader returning with victory, whom it was honourable to honour; and so much

was their hospitality to the taste of that thoughfless prince that he largered long, and well pleased on his way. Of all these noble hosts was none more noble, or more powerful than William Count of Conversano: he was the son of Geoffrey, who was nephew of Robert Guiscard, the founder of the Norman dynasty in Naples: his vast possessions

408

lay along the shores of the Adriatic, from Otranto to Bari, and extended far m-land in the direction of Lucama and the other sea. He was, in short, the most powerful lord in Lower Apulia castle, which stood on an emmeuce surrounded by ohye groves, at a short distance from the Adriatic, had many attractions for the pleasure-loving and susceptible son of the Conqueror. There were minstrels and jongleurs; there were fine horses and hounds, and hawks, m almost royal abundance; and the vast plains of Apulia, with the forests and mountains that cucompass them, offered a variety, of the finest sport. But there was an attraction even greater than all these in the person of a beantiful maiden, the young Sibylla, the daughter of his host the Count of Conversano Robert became

enamoured, and such a suitor, who, besides his other ments, was sovereign Duke of Normandy, with a prospect of possessing the royal crown of England, was not likely to be rejected. Robert received the hand of Sibylla, who is painted as being as good as she was fou, together with a large sum of money as her dowry. Happy in the present, careless of the future, and little thinking that a man so young as his brother the Red King would die, he Imgered several months in Apulia, and finally travelled thence without any eagerness or speed, and at the critical moment when the English throne fell vacant his friends bordly knew when they might expect him. On his arrival, however, m Normandy, he appears to have been received with great joy by the people, and to have obtained peaceful possession of the whole of the country with the exception of the fortresses surrendered to Rufus, and which were now held for Henry. He made no secret of his intention of prosecuting his claim on Eugland; but here again he lost time and threw away his last remaining chaice. He was proud of showing his beautiful bride to the Normans, and,

same discontent at the separation of the duchy and kingdom which had appeared on the accession of William Rufus. If the nobles had been manimous in their preference of Robert as sovereign of the country, on either side the Channel where they had domains, the dispute about the English throne must have been settled in his favour; but they were divided, and many preferred Henry (as they had formerly done Rufus) to Robert. The friends of the latter, however, were neither few nor powerless: several of high rank crossed the Channel from Eagland to urge him to recover the title which belonged to him in virtue of the agreement formerly

barons, whose secrets were betrayed to him, began to tremble on the throne he had so recently acquired. These fears of the Normans threw him more than ever on the support of the Euglish people, whom he now called his friends, his faithful vassals, his countrymen,—the best and bravest of men,—though his brother, he insidiously added, treated them with seorn, and called them cowards and gluttons \* the same time he paid diligent court to Archbishop Auschn, who, by the sanctity of his character and his undeniable virtues and abilities, exercised a great influence in the nation. As Anselm was an Italian and a chirchman, it may be believed that he gladly obtained the large concessions made to the Pope by the trembling king; but from the earnestness with which he embraced the cause of Henry we are also entitled to assume that he saw good and landable reasons for supporting the existing settlement of the crown, and the averting of a civil war is no questionable merit. If anxious to extend the privileges of the church, he was scarcely with his usual imprudence, he spent her fortune in less so to establish the liberties of the people; and feasting and pageantry. Ralph Flambard was the to him, as the representative of the nation, Henry first to wake him from this splendid but evanescent swore to maintain the charter he had granted at dream, and at the earnest suggestion of the fugitive his coronation, and faithfully to fulfil all his enbishop-minister he prepared for immediate war, gagements. knowing it was vain to plead to Henry his priority The effect of all this was, that the bishops, the of birth, his treaty with Rufus, or the oaths which common soldiers, and the native English, with a Henry himself had taken to him. It may be curious exception, stood firmly on the side of doubted, seeing the character of the factious nobles \* Matt. Paris.

Henry, who could also count among the Norman

mobility Robert de Mellent, his chief numster, the

Earl of Warwick, Roger Bigod, Richard de Red-

vers, and Robert Fitz-Hamon, all powerful barons, as his unchangeable adherents. The exception against him, on the part of the native English, was among the sailors, who, affected by Robert's fame, and partly won over by the fugitive Bishop of Durham, described with the greater part of a fleet which had been hastily equipped to intercept the Duke on his passage, or oppose his landing. Robert sailed from Normandy in these very ships, and, while Henry was expecting him at Pevensey, on the Sussex coast, reached Portsmonth, and there Before the two armies could meet some landed. of the less violent of the Normans from both parties had interviews, and agreed pretty well on the necessity of putting an end to a quarrel among countrymen and friends. When the hostile forces fronted each other, there was a wavering among his Normans; but the English continued faithful to Hemy, and Anschn threatened the invaders with excommunication To the surprise of most men, the duke's great expedition ended in a limited peace and a scennigly affectionate reconciliation between the two revals, after which the eredulous Robert, who indeed seemed destroed to be the dupe of his craffy brothers, returned peaceably to the confinent, resouncing all claim to England, and having obtained a yearly payment of 3000 marks, and the cession to hun of all the eastles which Henry possessed in Normandy—It was also stipulated, that the adberents of each should be fully pardoned, and restored to all their possessions, whether in Normandy of in England; and that neither Robert nor Henry should thenceforward encourage, receive, or protect the enemies of the other. There was another clause added, which, even without counting how much older he was than Henry, was not worth to Robert the piece of parchment it was written upon : - it imported that if either of the brothers died without legitimate issue the survivor should be the hen to his dominions. To this clause, as to its counterpart in the former treaty signed at Caen, between Robert and Rufus, twenty-four barons, twelve on each side, gave the solemn mockery of their oaths. Robert was searcely returned to Normandy when Henry began to take measures against the baions, his partisans, whom he had promised to pardon; and his craft and cunning enabled him to proceed for some time without committing any mainfest violation of the treaty. He appointed spics to

Iterry began to take measures against the batons, his partisans, whom he had promised to pardou; and his craft and cunning enabled him to proceed for some time without committing any manifest violation of the treaty. He appointed spies to watch them in their castles, and artfully sowing dissensions among them, and provoking them to breaches of the law, he easily obtained from the habitnal violence of these unpopular chiefs a plausible pretence for his prosecutions. He summoned Robert de Belesme, Earl of Shrewsbury, to answer to an indictment containing forty-five serious charges. De Belesme appeared, and, according to custom, demanded that he might go freely to consult with his friends and arrange his defence; but he was no VOL. 1.

sooner out of the court than he mounted his horse and galloped off to one of his strong castles. king summoned him to appear within a given time under pain of outlawry. The Earl responded to the summons by calling his vassals around him and preparing for open war. This was meeting the wishes of the king, who took the field with an army consisting in good part of English infantry, well disposed to do his will, and delighted at the prospect of pumshing one of their many oppressors. He was detained several weeks by the siege of the castle of Arundel, the garrison of which finally capitulated, and then, in part, escaped to join their Earl de Belesme, who, in the mean time, had strongly fortified Bridgenorth, near the Welsh frontiers, and strengthened himself in the citadel of Shrewsbury. During the siege of Bridgenoith the Normans in the king's service showed they were averse to proceeding to extremities against one of the noblest of their countrymen, and some of the carls and barous endeavoured to put an end to the war by effecting a reconcilement between Robert de Belesme and the sovereign. "For," says a cotemporary writer, "they thought that the victory of the king over Earl Robert would enable him to make them all bend to his will."\* They demanded a conference, and an assembly was held in a plain near the royal camp. A body of Euglish infantry posted on a hill close by, who knew what was in agitation among the Norman chiefs, ened out, " Do not trust in them, King Henry; they want to lay a snare for you. We are here; we will assist you and make the assault. Grant no peace to the traitor until you have him in your hands abye or dead "' The attempt at reconciliation failed,—the siege was pressed and Bridgenorth fell. The country between Bridgenorth and Shrewsbury, where the Earl made his last stand, was covered with tlinck wood, and infested by his scouts and archers. The English infantry cleared the wood of the enemy, and cut a convenient road for the king to the very walls of Shrewsbury, where de Belesme, reduced to despair, soon capitulated He lost all his vast estates in England, but was permitted to retire into Normandy on taking an oath he would never beturn to the kingdom without Henry's permission. His rum involved that of his two brothers, Arnulf de Montgomery and Roger, Earl of Lancaster, and as the king's hands became strengthened, the prosecution and condemnation of all the barons who had been favourable to Robert followed. by one nearly all the great nobles, the sons of the men who had achieved the conquest of England, were driven out of the land as traiters and outlays, and their estates and honours were given to "new men," to the obscure followers of the new court. So scrupulous was Duke Robert in observing

men," to the obscure followers of the new court.

So scrupulous was Duke Robert in observing the treaty, that on the first notice of De Belesme's rebellion he ravaged the Norman estates of that nobleman; considering himself, in spite of former ties of friendship, as bound so to do by the chause which stipulated that neither brother should encoundered.

rage the enemies of the other. He was soon, how-

ras soon, howhe had square

he had squandered everything on his return from Italy; yet still some brave men ralhed around him out of affection to his person, or in dread and hatred of his brother, and Henry found it impos-

sible to complete his rum in this campaign.

In the following year (1106) the king re-ap-

peared in Normandy with a more formidable army

and with still more money, to raise which he had

ernelly and arbitrarily distressed his English sub-

[Book III.

jects; for by this time his charter had become worthless, and he had broken nearly every promise he made at his coronation. About the end of July he laid siege to Tenchebray, an important place, the garnson of which, incorruptible by his gold, made a faithful and gallant resistance. Robert, when informed that his friends were hard pressed, promised to march to their relief, ensue what might, and on the appointed day, prost true to his word, as was usual with him in such matters, be appeared before the walls of Tenchebray, where Henry had concentrated his whole army. As a soldier Robert was far superior to his brother, but his forces were numerically inferior, and there was treachery in the camp. As brave, however, as when he fought the Paymm and mounted the breach in the Holy City, he fell upon the king's army, threw the English infantry into disorder, and had bearly won the victory, when De Belesme basely fled with a strong division of his forces, and left lum to mevitable defeat; for a pame spread among the troops that remained, and all men thought they were betrayed. After a last and most brilliant display of his valour as a soldier, and his conduct as a commander, the duke was taken prisoner, with four hundred of his knights. "This battle," observes old John Speed, "was fought, and Normandy won, upon Saturday, being the vigil of St. Michael, even the same day forty years that William the Bastard set foot on England's shore for his conquest; God so disposing it (saith Mahusbury) that Normandy should be subjected to England that very day, wherein England was subdued to Normandy." The fate of the captives made at Tenchebray, or taken after that battle, or who voluntarily surrendered, was various: some received a free pardon, some were allowed to be ransomed; and a few, among whom were the Earl of Mortaigne and Robert de Stuteville, were condemned to perpetual imprisoument. The ex-earl of Shrewsbury, the false De Belesme, was gratified with a new grant of most of his estates in Normandy; and the exbishop-minister Ralph Flambard, who had been moving in all these contentions, obtained the restoration of his English see, by delivering up the town and castle of Lisieux to King Henry.

remarkable incident in the victory of Tenchebray is, that the royal Saxon, Edgar Atheling, was

among the prisoners. Duke Rober had on many

decasions treated him with grea indness and

liberality; and, as in some of their qualities the two princes resembled each other, there seems to

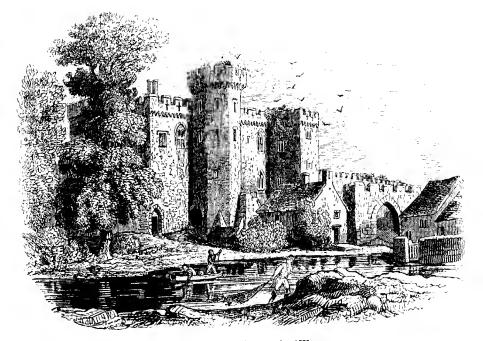

have been a lasting sympathy and affection between

ever, made sensible that the real erime of all the outlaws, in Henry's eyes, was the preference they had given to him; and following one of those generons impulses to which his romantic nature was prone, he came suddenly over to England, and put himself completely in the power of Herry, to intercede in favour of the unfortunate barons. crafty king acceived him with smiles and brotherly embraces, and then placed spies over him to watch all his motions. Robert, who had demanded no hostages, soon found be was a prisoner, and was glad to purchase his liberty by renouncing his annuity of three thousand marks. He then returned to Normandy, and, in self-defence, renewed his friendship with the barons exiled from England, accepting among others the services of De Belesme, who was still a powerful lord, as he possessed above thirty castles of different londs or Normandy Henry now most impudently pretended that Robert was the aggressor, and declared the peace between them was for ever at an end. The simple truth was, that Robert was completely at los merey, and he had resolved to unite the duchy to his kingdom. Normandy, indeed, was in a deplorable state, and Robert, it must be said, had given, and continued to give, manifold proofs of his inability to manage a factious and intriguing nobility, or to govern any state as states were then constituted. He was, indeed, "too trusting and merciful" for his age; and his generous virtues were more fatal to him than the vices or defects which stamed his moral character.\* He had, however, relapsed into his old irregularities after losing the beautiful Silvilla, who died in 1102, leaving an infant son, the only issue of their brief marriage. His court was again thronged with vigabond jougleurs, loose women, and rapacious favourotes, who plundered hum of his very attire, -- at least this sovereign prince is represented as lying in bed at times from want of proper clothes to put on when he should rise. much more serious evil for the country was, that his pettiest barous were suffered to wage war on each other and inflict all kinds of wrong and month on the people. When Henry first raised the mask he declared himself the protector of Normandy against the bad government of his brother; and there were many, as well nobles as of the commonalty, who were glad to consider him in that light. He called on Robert to cede the duchy for a sum of money or an annual pension. "You have the title of chief," said he; "but in reality you are no longer a chief, seeing that the vassals who ought to obey you set you at nought "† The duke indignantly rejected the proposal; on which the king crossed the seas with an army, and, "by large distributions of money carried out of England," won many new partisans, and got possession of many of the fartresses of Normandy. The duke, on the other hand, had now nothing to give to any one, for, in his thoughtless generosity and extravagance, . William of Malmsbury says, "He forgot and forgave too much."

According to some accounts Edgar had them followed Robert to the Holy Land; \* but this is at the least doubtful, and the Saxon Chronicle represents him as having joined the duke only a short time before the battle of Tencheliacy, where he charged with the Norman chivalry. This was Ins last public appearance. He was sent over to England, where, to show the Norman king's contempt of hun, he was allowed to go at large. At the intercession of his niece, the Queen Mand, Henry granted limi a trifling pension; and this survivor of so many changes and sangumary revolutions passed the rest of his life in an ol-cure but trangual solitude in the country. So perfect was the oblivion into which he fell, that not one of the chromolers mentions the place of his residence or records when or how he ilied. The fate of his frend Duke Robert, who had much less apathy, was infinitely more galling from the beginning, and his captivity was soon accompanied with other atrocities. He was committed a prisener for life ! to one of his brother's castles. At first his keepers, { appointing a proper guard, allowed him to take air and exercise in the neighbouring woods and fields. One day he seized a horse, and breaking from his goard, did his best to escape; but he was presently pursued, and taken in a moras-, wherein his

This detestable order was executed by a method which had become horribly common in Italy the during these ages, and which was not unknown in other countries on the continent. A basia of copper or non, made redhot, was held close over the victim's eyes till the organs of sight were scared and destroyed. The wretched prince byed twenty-eight years after this, and died in Cardiff Castle in 1135, a few months before his brother Henry. He was nearly eighty years old, and had survived all the chiefs of name who resented Jerusalem from the Saraccus. Matthew of Paris tells a fouching anecdote of his captivity. One day, when some new dresses were brought to him from the king, in examining them by his touch he found that one of the garments was torn or rent m the scam: the people told have that the king had tried it one and found it too tight for him. the prisoner threw them all far from him, and

412 exclaimed, "How, then, my brother, or rather my

traitor, that craven clerk who has deprived me of my all, imprisoned me, blinded me, now holds me at so mean a rate-I, who had so much honour and renown, that he makes me alms of his old clothes, as if I were his valet." It seems to have been an established custom for kings to give dresses to their state prisoners at certain festivals

in the year; and it is related of Fitz-Osborn that he lost his only chance of enlargement by treating a suit sent him by the Compueror with disrespect. As another trait of manners we may mention

here, that Duke Robert was made prisoner at Tenchebray by Galdrie, King Hemy's chaplain, who was promoted to the bishopric of Llandail for this clerical piece of service. This martial prelate's end was, however, in keeping with the circumstances of his promotion; for, having exasperated the people of Llandaff with his tyranity and violence, they set upon him in a field and killed him, with five of his canons.

In getting possession of Robert's person Henry

capital, submitted to the conqueror, and Falaise surrendered after a short resistance. At the latter

became master of all Normandy.

place William, the only son of Sibylla and Duke Robert, fell into his bands. When the child, who was then only five years old, was brought into the presence of his uncle, he sobbed and cried for mercy. It could not escape the king's far-reaching calculations that this boy's legitimate claims might cause him future trouble; but Henry, as if making a violent effort to rid himself of evil thoughts, suddenly commanded that he should be removed from him, and given in custody to Helie de St. Sach, a Norman noble, on whom, though he had married an illegitimate daughter of Duke Robert, he thought he could rely. He soon, however, repented of this arrangement, and sent a force to surprise the castle of St. Saen, and secure the person of young William. Helie fled with his pupil, and they were both honourably received at all the neighbouring courts, where the beauty, the innocence, the early misfortunes, and claims of the boy, gained him many protectors. The most powerful of these friends were Louis the Sixth, commonly called Le Gros, and Fulk, Earl of Anjou, who were reasonably apprehensive of the increasing power of his uncle on the continent. As William Fitz-Robert, as he was called, grew up, and gave good promise of being a valiant prince, they espoused his cause more decidedly, Louis engaging to grant him the investiture of Normandy, and Fulk to give, him his daughter

at every point along the frontiers of Normandy.

He lost towns and castles, and was alarined at the

same time by a report, true or false, that some

friends of Duke Robert had formed a plot against his life. So great was his alarm, that for a long mandy, and in which the interests of William Fitz-Robert were overlooked. These advantages were obtained by giving the estates and honours of the faithful Hehe de St. Sach to Fulk, Earl of Anjou, and by stipulating a marriage between his only son, Prince William of England, and Matilda, another daughter of that earl. The previous contract between Fitz-Robert and Sibylla was broken off, and the Earl of Amon agreed to give no more aid or countenance to that young prince These arrangements, so advantageous for Henry, were not made without great sacrifices of money on the part of the English people; and some years before they were concluded the nation was made to bear another burden. By the feudal customs the king was entitled to levy a tax for the marrying of his eldest daughter; and (A.D. 1110) Henry affianced the Princess Matilda, a child only right years old, to Hemy V., Emperor of Germany. The high nominal rank of the party, and the general poverty of the German emperors in those days, would alike call for a large dowry; and Henry V drove a hard bargain with his brother (and to-be father-m-law) of England. The marriage portion seems to have been principally raised by a tax laid upon land at the rate of three shillings per hide, and the contemporary histories abound in complaints of the harsh manner in which instant payment was exacted. The stipulated sum was at length placed in the hands of the emperor's ambassadors, who conducted the young lady into Ger-

many, where she was to be educated. If the

English people suffered, they were regaled by a fine spectacle; for it is said that never was sight seen

more splendid than Matilda's embarkation. The

graver of the impressions, however, remained, and

it was remembered to her disadvantage, many

years after, how dear her esponsals had cost the

time he never slept without having a sword and

brickler by his bed-side. When the war had lasted

two years Henry put an end to it by a skilful treaty,

in which he regamed whatever he had lost in Nor-

[Book III.

About this time Henry checked some incursions of the Welsh, the only wars waged in the interior of England during his reign, and, causing a strong army to follow them into their fastnesses, he gained several advantages over the mountaineers. despaired, however, of reducing them to his obedience, and was fain to content himself with building a few castles a little in advance of those erected by the Conqueror and the Red King. He also collected a number of Flemings who had been Sibylla in marriage as soon as he should be of proper driven into England by the misfortunes of their age. Before that period arrived circumstances occurown country, and gave them the town of Haverred (A.D.1113) that harried them into hostilities, and fordwest, with the district of Ross, in Pembrokethe Earl of Flanders having been induced to sanc-They were a brave and industrious people, tion, if not to join their league, Henry was attacked skilled in manufacturing woollen cloths; and, mcreasing in wealth and numbers, they maintained themselves in their advanced post, in spite of the long efforts of the Welsh to drive them from it. But a subject which occupied the mind of the English king much more than the con-

William, to whom he confidently and proudly looked as to one who was to perpetuate his lineage and power. Having already made all the barons and prelates of Normandy swear fealty and do homage to the boy, he exacted the same onths in England at a great council of all the bishops, earls, and barons of the kingdom, held at Salisbury;

and being still pursued by the dread of the growing popularity on the continent, and the just claims, of his nephew Fitz-Robert, he artfully laboured to get him into his power, making use, among other means, of the most entiring promises, - such as the immediate possession of three great earldones in England. But that prince would never trust the gaoler of his father; and his cause was again supported by powerful friends, whose appre-

hensions were anew excited by the ambition of the English king. (AD 1118) At a moment when the most formidable confederacy that ever threatened him was forming on the continent, Henry lost his excellent consort, Maud the Good, who must indeed have "died with the sad reflection that she had sacrifixed herself for her race in vain;" \* and in about a month after he suffered a loss, which be probably felt unich more, in the death of the Earl of Mellent, the ablest instrument of his ambition, the mos' skilful of all his munsters, who had so managed his foreign politics as to obtain the reputation of being the greatest statesman in Europe. Henry's want of good faith had lurried on the storm which now burst upon him. He had secretly assisted his nephew Theobald, + Earl of Blois, in a revolt against his fendal superior and liege lord, the French king,—he had broken off the mutch agreed upon between his son William and the Earl of Anjou's daughter Matilda,—and he had behed many of the promises made to the Norman barons in his hour of need. The league that was formed against him, therefore, included many of his own disaffected Norman subjects, Louis of France, Fulk of Anjou, and Baldwin, Earl of Flanders, the last-mentioned having fewer interested motives, and a purer affection for the gallant son of Duke Robert, than any of the others. The beginning of the war was altogether unfavourable to the allies, and King Louis, at one time, was forced to beg a suspension of hostilities. Then fortune veered, and King Henry lost ground; but, after a succession of reverses, his better star prevailed, and he was made happy by the death of Baldwin, Earl of Flanders, the soul of the confederacy, who died of a wound received at the siege of Eu. Being thus relieved from one of his formidable enemies,

side they fought, as forming part of a brotherhood, every member of which, except in certain predicaments, was to be treated with respect, they suffered little more than if they had been engaged m jousts and tom naments. The engagement which. closed this war, and which was more decisive than any fought during the course of it, is an amusing specimen of these kinghtly encounters On the 20th of Angust, and 1119, Knig Louis, with four hundred knights, and King Heiay, with five hundred knights, met, more by accident than by any design on either side, in the vicinity of the town of Novon. Vizors were lowered, trimpets sounded, lances couched, and a brilliant charge made by the French chivalry headed by Fitz-Robert, or, as he was now generally called, "William of Normandy." This young prince broke through Henry's first rank, and penetrated to his uncle, who was struck twice on the head by William Crispm, Count of Evreux, a valuant knight, but, as the king wore a steel helmet of the best quality, he received little many. After a gallant contest the French were defeated, leaving

the royal standard and one hundred and forty

knights in the hands of the victors. When the

dead were counted they were found to amount to

three knights! The king of France and young

William of Normandy had their horses killed under

them, but they escaped on foot. This boasted

battle, which deserves to be remembered, was called the battle of Brenville. The French excused their

overthrow by saying that King Henry set upon

King Louis "when he was not aware, and his

knights were all out of order and array;" adding,

also, "that King Henry had a far greater number than the French king had." The Anglo-Normans

or English (for the latter designation was already

common) maintained that the victory had been won

"in the open field royally;" but their superiority

in number seems unquestionable. The battle was

followed by a display of chivalrous courtesies.

Henry sent King Louis a war-horse splendedly

caparisoned, and his son made presents to William

of Normandy: the prisoners were hospitably enter-

tained, and dismissed on the payment of proper knightly ransoms. All this, though it only included

which make us slindder. Henry had married Juliana, one of his illegitimate children, to Eustace of Bretenil, of whose fidelity he afterwards doubted. He exacted us hostages two children, the daughters of Juliana and Eustace, and, as a pledge on his own part, ordered Harene, one of his officers, to place his son in the hands of Enstace. In a moment of rage the brutal lord of Execus tore out the eyes of the son of Hache, and sent him back to his father. Hareac demanded justice, and Henry coolly told him he might retaliate on the daughters of Eustace and Juliana, the king's own grandchildren; and this the barbarian did forthwith, by putting out their eyes and cutting off their In this horrid wreck of the strongest affectious and feelings of human nature, Juliana -attempted the life of her own father, by discharging an arrow at his breast with her own hands.\* Soon after the battle of Brenville an end was put to the war, now only maintained on one side by Louis, through the prosessorthy mediation of the Pope, t who, however, laboured in vain to pro-

the higher classes, was an immense improvement on the savage practices of cather times; but the

civilization of chivalry was at all times somewhat

superficial and nucertain in its operation, and

during this very war atrocities were committed

By this treaty of peace Henry was to preserve undisturbed and unquestioned possession of Noimandy; and his pride was saved by Louis consenting to receive the homage due to him for the duchy from the son instead of the father. This son, who was in his eighteenth year, had received the oaths of the Norman nobles, as also the band of lns bride, a cluld only twelve years old, whose father, Fulk of Anjou, had given her a considerable dower. King Henry, elated by success, now resolved to return triumphantly to England. The place of embarkation was Barfleur, where Rufus had landed after his stormy passage and impious daring of the elements. The double retinue of the king and prince royal was most numerous, and some delay was caused by the providing of accommodation and means of transport for so many noble personages; among whom were counted we scarcely know how many illegitmente cluldren and mistresses of the king. On the 25th of November (A.D. 1120), however, all was ready, and the sails were joyonsly bent as for a short and pleasant voyage. Thomas Fitz-Stephen, a mariner of some repute, presented himself to the king, and tendering a golden mark, said, - "Stephen, son of Evrard, my father, served yours all his life by sea, and he it was who steered

and gentle wind from the south, reached the English coast in safety on the following morning. The prince was accompanied in the Blanche-Nef, or White Ship, by his half-brother Richard, his half-sister the Lady Marie,\* Countess of Perche, Richard earl of Chester, with his wife, who was the king's niece, her brother, the prince's governor, with a host of gay young nobles, both of Normandy and of England, one hundred and forty in number, eighteen being ladies of the first rank; all these and their retinues amounting, with the ciew, to about three hundred persons. On such occasions it was initial to regale the mariners with a little wine, but the prince and the young men with him improdently ordered three whole casks of wine to be distributed among the men, who "drank out their wits and reason." The captain had a sailor's pride in the speed of his craft and the qualities of his crew, and, though hours passed away, he procure a mitigation of the severity exercised on Duke mised to overtake every slup that had sailed before him. The prince certainly did not press his de-Robert, and a proper settlement for his son William. parture, for he spent some hours on deck in feasing and dancing with his company. A few prodent persons quitted the disorderly vessel, and went on Night had set in before the Blanche-Nef started from her moorings, but it was a bright moon-light, and the wind, though it had freshened somewhat, was still fair and gentle. Fitz-Stephen, proud of his charge, held the helm; every sail was set, and, still to increase the speed, the fifty sturdy mariners, encouraged by their boyish passengers, plied the oar with all their vigour. As they proceeded coastwise they got engaged among some rocks at a spot called Ras de Catte (now Ras de Catteville), and the White Slap struck on one of these with such violence on her larboard side, that several planks were started, and she instantly began to fill. A cry of alarm and horror was raised at once by three hundred voices, and was heard on board some of the king's ships that had gained the high sea, but nobody there susproted the cause. Fitz-Stephen lowered a boat, and putting the prince with some of his companions in it, advised them to row for the shore, and save themselves. This would not have been difficult, for the sea was smooth, and the coast at no great distance; but his sister Marie had been left behind in the ship, and her shricks touched the heart of the ship in which your father sailed for the conquest the prince,-the best or most generous deed of † Calixtus II. He was related by marinage to King Henry, and personally visited that sovojeginawho, among other signal alselhoods, assured him that his brother Robert was not a prisoner, but entertained in a samptious manner in one of the royal castles, where he whose life seems to have been his last. He ordered the boat to be put back to take her fh; but such \* By some writers this lady is called Mand, and by others Adele Adults. The name of her mother is not mentioned. Richard was or Adela. Site King, I beg you to grant me

the same office in fief: I have a vessel called the

Blanche-Nef, well compped, and manned with fifty skilful mariners." The king replied that he

had already chosen a vessel for himself, but, that in

order to accede to the prayer of Fitz-Stephen, he

would confide to his care the prince, with his com-

pamons and attendants. Henry then embarked,

and setting sail in the afternoon with a favourable

enjoyed as much liberty and amusement as he desired.

I See aute, p. 401. Most of the old historians are of opinion that the drowning of the nephew was a judgment provoked by the presumption of the ancle,

numbers leaped into it at the same time as the lady, that it was upset or swamped, and all in it perished. The ship also went down with all on Only two men escaped by rising and clinging to the main-yard, which floated, and was probably detached from the wreck: one of these was a butcher of Rouen, named Berold, the other a young man of higher condition, named Godfrey, the son of Gilbert de l'Aigle - Fitz-Stephen, the unfortunate captain, seeing the heads of two men chinging to the yard, swam towards them. " And the king's son," said he, "what has happened to him ?" "He is gone! neither he, nor his brother, nor his sister, nor any person of his company, has appeared above water." "Wee to me," cried Fitz-Stephen; and then phinged to the bottom. The night was cold, and the young nobleman, the

hausted, and after holding on for some hours let go the yard, and, recommending his poor companion to God's mercy, sunk to the bottom of the sea. The butcher of Rouen, the poorest of all those who had embuked in the White Ship, wrapped in his sheep-skin coat,\* held on till morning, when he was seen from the shore, and saved by some fishermen, who took him into their boat; and from him, being the sole survivor, the circumstances of the featul event were learned. The tidings reached England in the course of the following day, but no one would venture on communicating them to the king. For three days the counters concealed the fact, and at last they sent in

DEATH OF PRINCE WILLIAM AND HIS SISTER.-RIGAUD.

terfeit passion," fell at his feet, and told him that

just judgment of the Almiighty; and they thought this notion was strengthened by the circumstances of the wreck, which happened in no storm or tempest, but m screne weather, and on a tranquil sea. † They recalled the threat of the arrogant youth, and his designs against the English people. Henry of Huntingdon exclaims, "He was thinking of his future reign and greatness; but God said it shall not be thus, thou improus, it shall not be; and it so fell out that his brow, instead of being girded with the crown of gold, was beaten against the rocks of the ocean," The hornd accusations made against Rufus and his conflicts are renewed against Prince William and has associates by a startling if not convincing number of contemporary writers; and we fear no historical scepticism or charity can remove the doubt of his having been a dissolute and deprayed youth. As Henry was now deprived of his only legitimate son, he was east upon new plans for the securing of his various states in his family. the same time, the same event seemed to brighten the prospects of his nephew, William of Normandy, whose friends certainly increased soon after the demise of the herr apparent. A carcumstance connected with the marriage of the drowned prince hastened and gave a colour of just resentment to one declaration in favour of Fitz-Robert. former friend Fulk, Earl of Anjou, demanded back from Henry his daughter Matalda, together with the dower be had given to Prince William

thunderbolt among the Norman lords before they were prepared. - It cost him, however, more than a year to subdue this revolt; but then he made the Norman leaders of it prisoners, and induced the Earl of Anjou once more to abandon the cause of his intended son-m-law. Some time before effecting this peace, Henry, m the vain hope of offspring, which he thought must destroy the expectations of his nephew, espoused Adelais, or Alice, daughter of Geoffrey, Duke of Louvnin, and micee to the reigning pope, Calixtus II. This new queen was young, and very beautiful, but the inarriage was not productive of

any issue; and after three or four years had passed, the king formed the bold design of settling the crown of England and the ducal coronet of Normandy on his daughter Matilda, who had become a widow in 1124, by the death of her husband, the Emperor Henry V. We call this design a bold one, because it was opposed to the customs and feelings then prevalent in all Europe, and most especially so in our country and the neighbouring continental states, where a female reign was unknown, and a she-king regarded as a preposterous anomaly degrading to the warlike nobles and the clireadry that propped the throne. Accordingly, at the first blush of the business, the Auglo-Norman barons expressed their astonishment and disgust; but Henry's power was now so absolute in England, that they durst not then venture to oppose it; and he purchased the acquiescence of the most formidable among them, with money, lands, and promises. On the solemn day of Christmas (x.p. 1126) there was a general assembly in Wurdsor Castle, of the bishops, abbots, barons, and all the great

tenants of the crown, who, for the most part acting against their inward conviction, unanimously declared the ex-empress Matilda to be the next heir to the throne, in the case (now not problematical) of her father's dying without legitimate male issue. They then swore to maintain her succession—the elergy swearing first, in the order of their rank, and after them the larty, among whom there seems to have been more than one dispute touching precedence.\* The most remarkable of these disputes, as being an index to hidden aspirations, was that for priority between Stephen, Earl of Boulogne, and Rohert, Earl of Gloucester. Stephen was the king's nephew, by the daughter of the Conqueror, Henry's sister, Adela: Robert, on the other side, was the king's own son, but was of illegitimate birth; and the delicate point to be decided was, whether precedence was due to legitimacy of birth or to nearness of blood—or, in other words, which of the two-the lawfully begotten nephew of a king, or the unlawfully begotten son of a king-

CIVIL AND MILITARY TRANSACTIONS.

its claim from a bastard, the question was decided by the assembly in favour of the nephew, Stephen, who accordingly swore first. The question had not arisen out of the small spirit of courtly form and efiquette; the disputants had higher objects. They contemplated perjury in the very preliminary of their oaths. Feeling, in common with every baron present at that wholesale swearing, that the succession of Matilda was insecure, they both

looked forward to the crown; and on that account each was anxious to be declared the first prince of the blood. The same year that brought Matilda to Fugland, saw Fulk, the Earl of Aujon, depart for the Holy Land, it being his destroy to become a very indifferent king of Jerusalem Having marked the

sign of the sacred cross on his shield, his belinet, and other arms, as also on his saddle and the bridlerem of his horse, he renounced the government of

the province of Anjon to his son Geoffrey, surnamed Plantagenet, on account of a custom he had of wearing a sprig of flowering broom t in lus cap like a feather. Henry had many times felt the hostile power of the carls of Anjon, and various political considerations induced him to conclude a marriage between his daughter Matilda and Geoffice, the son of Fulk. The ex-empress, though partly against her liking, consented to the match, which was negotiated and concluded with great secrecy The barons of England and Normandy pretended that the king had no right thus to dispose of their future sovereign without previously consulting them; they were generally dissatisfied with the proceeding, and some of them openly declared that it released them from the obligations of the oath they had taken to Matilda. This argument was made more cogent, when death relieved them from the dread of the power and ability of Henry, who disregarded their present murmurs, and congratulated himself on his policy, which united the interests of the house of Amou with those of his own. The marriage was cele-Lrated at Ronen, in the octaves of the feast of Whitsuntide, 1127, and the festival was prolonged during three weeks. Henry, somewhat despotically, ordered everybody to be merry. On the first day, heralds, in full costume, went through the streets and squares, crying this singular proclamation: "In the king's name, let no man here present, whether an inhabitant or a stranger, rich or poor, noble or relain, be so bold as to withdraw himself from the royal rejoicings, for, whosoever taketh not part in the diversions and games will be held guilty of an offence towards his lord the king." I But rejoice as he might, Henry felt that the succession of his daughter could never be secure, if sacta e ners signum —Onderne. † In old French Genest (now Genêt), from the Latin genista. † Script. tion, the countries of Pontoise, Chaumont, and the  ${
m Vex}_{
m in}$ , on the borders of Normandy. Soon after this advantageous settlement, Charles the Good, earl of Flanders, successor to Buldwin, the steady Iriend of the son of Duke Robert, was mindered in a church at the very fact of the altar. The long of France entered Flanders as bege lord, and with the consent of the people, to pumish the sacrilegious munderers; and having done this, he, in virtue of his fendal suzeranity, conferred the carldon upon William of Normandy, who had accompanied him in the expedition, and who, had such claims been allowed, had a good bereddary right to it as the representative of his grandboother, Matilda, who was daughter of Earl Baldwin of the old legitimate line. The Flemish people offered no opposition to their new earl; and King Loms, with his army, departed, in the gratifying conviction that he had

secured a stable dominion to his gallant young

brother-m-law, and placed lum in a situation the most favourable for the conquest of Normandy, or

at least for the curbing of that ambition in the

English king, which continued to give micasiness

to Louis. This imeasuress could not fail of being

increased by the union between the Norman line

and the house of Anjon, which took place at this

very time. But the French army had scareely

left the country, when the Flemish people, distin-

guished even in that age by their turbulence, broke

out into revolt against their new earl, and asked

and received assistance from King Henry. A re-

speciable party, however, adhered to William, who

had many qualities to ensure respect and love. In

the field he had a mamfest advantage over the illdirected insurgents, who then invited Thiedrik, or

Therry, landgrave of Alsace, to put himself at

their head. Thierry gladly accepted their invita-

tion. He advanced a claim to the succession on

the ground of his descent from some old chief of

his nephew survived him; and he applied himself with all his craft to effect the ruin of that young

man, who, at the moment, occupied a position that made him truly formidable. At the late peace,

the French king had not abandoned his interests

like Fulk, the earl of Anjon; on the contrary,

Lows mysted him again to his court, and soon after, in ben of Sibylla of Anjou, gave him the

hand of his queen's sister, and with her, as a por-

417

the country; and Henry, who found in him the instrument he wanted, sent him money, and engaged to support him with all his might. treacherons surrender of Lisle, Ghent, and other important places in Flanders, immediately followed; but William, who had the courage and unlitary skill of his unfortunate father, without any of his indolence, completely defeated his antagonist, Thierry, under the walls of Alost. unfortunately, however, in the moment of victory, he received a pike wound in the hand, and this being neglected, or improperly treated by ignorant surgeons, brought on a mortification. conveyed to the monastery of St. Omer, where he died on the 27th of July, 1128, in the twenty-sixth nary vicissitudes. In his last moments, he wrote to his unnatural uncle, to implore mercy for the Norman barons who had followed his fortunes. Henry, in the joy of his heart, granted the request of his deceased nephew, who left no children to prolong the king's inquietude, or serve as a tallying point to the disaffected nobles. We are not informed whether the tidings of William's brief greatness were conveyed into the duageon of Cardiff Castle, to solace the heart of his suffering father, or whether the news of his early death, which so soon followed it, was in mercy concealed from the blind old man. To work out his purposes, Henry had bestated

year of a life which had been subject to extraordi-

at no treachery, no bloodshed, no crime, and yet the infatuated man fondly boped to end his days in tranguillity. The winding up of his story is little more than a succession of petty farmly jais and discords—the very bathos of ambition and worldly grandeur. His daughter Matilda, presumme on the imperial rank she had held, and being naturally of a proud, imperious temper, soon quantilled with her husband: a separation took place; Matilda returned to England, and her father was occupied during many months with these family disputes, and in negotiating a peace between man and wife. At length, a reconciliation was patched up, and Matilda returned to her husband. The outh-breaker, her father, thought be could never exact oaths enough from others; and before his daughter left England, he made the prelates and barons again swear fealty to her. Henry, who, in spite of these precantions, well knew the chances to which Matilda would be exposed, ardently longed for a grandson, whom he hoped to see grow up; but for six years he was kept ameasy and unhappy by the unfruitfulness of the marriage In March, 1133, however, Matilda was delivered, at Mans, of her first child, Henry, styled Fitz-Umpress, who was afterwards Henry II of England. At the birth of this grandson the king again convoked the barons of England and Normandy, and made them recognise as his successors the children of his daughter, after hum, and after her. The nobles consented in appearance, and, being accustomed to the taking of oaths which they meant to break, swore fealty afresh, not only to Matilda, but to her infant son, and the rest of her progeny as yet onborn. The ex-empress gave birth to two more princes, Geoffiev and William, in the course of the two following years; but even a growing family failed to endear her husband to her; she quarelied with him on all possible occasions; and as her father took her part, whether right or wrong, she kept his mind almost constantly occupied with their dissensions. Under these circumstances, it was not natural that Geoffrey Plantagenet should prove a loving and dutiful son-in-law; he de-

manded immediate possession of Normandy, which he said Henry had promised him; and when the king refused, he broke out into threats and insults. Matilda, it is said, exerted her malignant and inge-

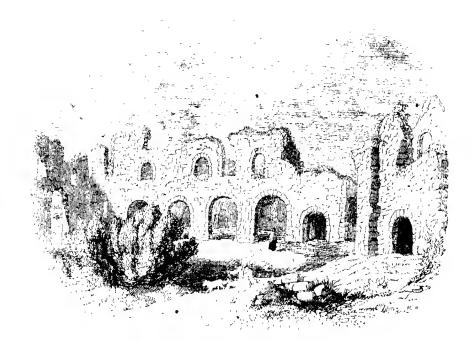

own husband and father. The four last years of Henry's reign, which were spent wholly abroad, were troubled with these domestic broils. length an incursion of the Welsh demanded his presence in England; and he was preparing for that journey, when death despatched him on a longer one. His health and spirits had been for some time visibly on the decline. On the 25th of November, "to drive his grief ioway, he went abroad to hunt." Having pursued his sport during the day, in the woods of Lions-la-Forêt, in Normandy, \* he returned home in the evening " somewhat amended," and, being hingry, "would need. eat of a lamprey, though his physician ever coun-selled him to the contrary." The lamprey or lamprevs he are brought on an indigestion; and the indigestion a fever on the third day, despating of his recovery, he sent for the Archbishop of Rouen, who administered the sacrament and extreme mortion; and, on the seventh day of his allness, which was Sunday, December I, A.D. 1135, he expired at the midnight hour. He was in his sixerseventh year, and had reigned thirty-five years and four months, wanting four days. By his will be left to his daughter Matilda and her heirs for ever, all his territories on either side the sea; a d he desired that when his lawful debts were dicharged, and the liveries and wages of his retainers paid, the residue of his effects should be distirbute4 among the poor. He seems to have died in anger with his son-in-law, for the name of Geoffrey Plantagenet was not mentioned in his They kept the royal bowels in Normandy, and deposited them in the church of St. Mary, at Rouen, which his mother had founded, but the boily was conveyed to England, and interced in Reading Abbey, which Henry had built him eff The best encumstances attending his body reign

nious spirit in widening the breach between her

were, the peace be maintained in England, and a partial respect to the laws which his vigorous government imposed on his haughty and ferocious barons. If regard is had only to success, and no attention paid to the wickedness of the means, he was certainly a great politician. Considering the times, extraordinary care had been taken of his education; his natural abilities were excellent; and so exect was his progress in the philosophy and literature of the age, that his contemporaries honored him with the name of Beau-clere, or the fine scholar. Hemy of Huntingdon, who knew han well, calls ham the murderer of many men, the violator of his oaths; and regards him as one of those princes who cause royalty to be considered as a crime. The same contemporary writer has left us his character as differently painted by his friends and by his enemies. According to the first,
